PREFACE.

PERHAPS for American readers the most interesting article in this volume is that on the "Navy of the United States," written by a naval officer. It is supplementary to the similar article in the "Annual Cyclopædia" for 1888, and comes down to date with a complete description of our naval force, actual and building. In the articles on Chili and the United States the reader may see how near we came to having use for a powerful navy in the year 1891. The census article of 1890 is supplemented by another in this volume, showing the results of the latest compilations at the Census Office; and the articles on such States of the Union as have any considerable colored population contain tables showing census by races.

The Canadian articles are illustrated with a double-page colored map of the Northwest Provinces, which with the map of the Maritime Provinces in the volume for 1889, and that of Ontario in the volume for 1890, covers all of British North America except the province of Quebec.

The article "Cities, American, Recent Growth of," describes sixty-four cities, some of which have sprung up in the wilderness within two or three years. An article on the "Earth, Area and Population of," gives the latest computations of the geographers.

The approaching anniversary of the discovery of the continent is noted by an interesting illustrated article on "Columbus's First Landfall," as well as by the description, under "United States," of the preparations at Chicago for the great World's Fair. How the question of participating in that enterprise was debated in some of the States, and what has been done by each, may be read in the State articles.

The recent advances in photography are set forth by Alexander Black, an enthusiastic photographer and student of the art. Ballooning as it is to-day is described by Prof. Samuel A. King, the most experienced of American aeronauts, who has made three hundred ascensions. The efforts to produce rain by artificial means are detailed under that title by Col. Charles L. Norton; and many things in the way of material improvements will be found under the title of "Patents."

In the way of moral reform much, it is hoped, has been done by the legislation in many States requiring temperance education in the public schools; and a history of the movement is contributed to this volume by the Rev. Joseph Cook, the well-known lecturer. The student of literature will find much to

interest him not only in the regular literature articles, but in the special articles on Lowell, Lytton, and Melville, the discussion of "New Dictionaries," by Prof. March, and the description of Oahspe, the Spiritualist bible; and the student of art will, of course, turn to "Fine Arts in 1891."

Among the regular articles of interest and importance are: In science, "Astronomy," "Chemistry," "Physiology," "Physics," "Metallurgy," "National Academy of Science," and the account of meetings of the several "Associations for the Advancement of Science"; in religion, those showing the year's growth in the various churches; in finance and commerce, the "Financial Review of 1891," "United States Finances," "Commerce and Navigation of the United States," and the treasury and debt statement in articles on various countries.

Among the special articles not already mentioned, "Archæology," "Farmers' Congress," "Hudson River, Improvements in," and "Manual Training" are noteworthy. The personal articles include, besides the three authors mentioned above, one on Speaker Crisp, of the United States House of Representatives, one on Gen. Sherman, one on Gen. Johnston, one on Jules Grévy, one on Gen. Von Moltke, one on Sir John A. Macdonald, one on Meissonier, the painter, and an unusually large group of sketches—under the title "Obituaries"—of eminent men who passed away during the year. The dead of the year 1891 include Carl I, of Württemberg, Kalakaua I, of Hawaii, Pedro II, of Brazil, and Tama-sese, of Samoa—besides the two ex-Presidents, Balmaceda, of Chili, and Grévy, of France; the princes Baudouin and the two Bonapartes; the statesmen, Parnell, Earl Granville, Bradlaugh, W. H. Smith, Windthorst, Sir John Macdonald, Madhava Rao, Hannibal Hamlin, Windom, and J. E. McDonald; the clergymen, Freppel, Magee, Rotelle, Simon, Crosby, Gilmour, Loughlin, Preston, and Wadhams; the authors, Kinglake, Lytton, Boisgobey, the two Lowells, Lossing, and Parton; the inventors, Lebel, Hobbs, and Maynard; the soldiers, Sherman, Johnston, Moltke, Boulanger, Connor, and Sibley; the naval officers, Porter, Carter, Pattison, and Ingraham; the players, Barrett, Florence, Sullivan, Fisher, Edwards, Emmet, Emma Abbott, and Mrs. Forrest; the artists, Meissonier and McEntee; the scientists, Leidy, Le Conte, Winchell, Hilgard, and Ferrel; the philanthropists, Pratt, Mrs. Stuart, and the Duke of Devonshire. Other interesting characters, in themselves or in their circumstances, here sketched are P. T. Barnum, Mrs. Hopkins-Searles, Mrs. Polk, Madame Blavatsky, Albert Pike, Charles Devens, Thomas J. Conant, and Samuel D. Burchard.

The illustrations are more numerous than in any other volume of the series. They include two colored plates, besides the large map, three fine engravings on steel, and an unusual number of vignette portraits in the text. Pains have been taken to profit by the suggestions of those who habitually use this series for reference to improve the regular articles in some details, and it is hoped that the present volume will exhibit an advance in keeping with the time.

NEW YORK, *April 19, 1892.*

CONTRIBUTORS.

Among the Contributors to this Volume of the "Annual Cyclopædia" are the following :

THE ANNUAL CYCLOPÆDIA.

A

ABYSSINIA, an empire in eastern Africa. The present sovereign, called the Negus, is Menelek II, formerly King of Shoa, who proclaimed himself Emperor of Ethiopia on the death of Johannes, who was killed in a battle with the Soudanese dervishes in 1889. The country is ruled by feudal chiefs, who pay taxes and owe military service to the Emperor. There is an ancient code of law which sets limits to the royal prerogative. The Negus maintains a mercenary army independent of the retainers of his vassals, which he has armed with modern rifles.

Area and Population.—The area of the Empire of Abyssinia, or Ethiopia, is estimated at 244,000 square miles, embracing the kingdoms of Tigré, Lasta, Amhara, and Gojam, forming Abyssinia proper, the Kingdom of Shoa, the coast lands of Danakil, the territory of the Issa and other tributary Somali tribes, and the dependencies of the Bogos, Mensa, Habab, Beni-Amer, and other subject tribes in the north. The total population is estimated at 7,360,000. The inhabitants of Tigré, Amhara, and Shoa, who are the conquering and ruling element, are the Ethiopians, of Semitic origin, emigrants in early times from Arabia. They were converted to Christianity in the fourth century, and still practice the rites of the Alexandrian Church. The *abuna*, or head of the national Church, receives investiture from the Coptic Patriarch of Alexandria. The name Abyssinia is derived from the Arabic designation of the people, *Habash* ("mixed"), indicating the various intermixtures of Arabian, Hamitic, and negro blood that are found in different parts of the country.

Education is in the hands of the clergy, who instruct a limited number of children in choral singing, recitations from the Bible, grammar, and poetry. The ceremonial of the Abyssinian Church combines Christian observances with many rites borrowed from Judaism. The Hebrew Sabbath and the Christian Sunday are held equally sacred; circumcision is practiced, and Jewish ceremonies and restrictions regarding food are enforced.

There are numerous towns, the largest of which, Ankober, capital of Shoa, has 7,000 inhabitants.

Productions and Commerce.—Although the country is fertile, there is little tillage. The

people are pastoral, raising large herds of cattle, besides sheep and goats. Among the vegetable products are indigo, which grows wild, coffee, cotton, dates, sugar-cane, and grapes. The chief exports are gums, skins, mules, ivory, and butter. What external trade there is passes through Massowah.

The Italian Protectorate.—In return for arms and other aid given by the Italians to Menelek while he was contending against rival claimants for the throne, he made a treaty on May 2, 1889, which was construed on the part of the Italian Government as giving a protectorate over the country. After the Negus had conquered Tigré and was established on the throne he sent an envoy to Italy, Degiac Makonen, who confirmed and strengthened the compact by signing a treaty for mutual protection in October, 1889. When Count Salimbeni, who was appointed Italian minister resident at the Abyssinian court, arrived at Ankober the Emperor Menelek denied that he had accepted an Italian protectorate or bound himself to make the Italian Government his intermediary in all dealings with other powers and to give the preference to Italians if he wished to make commercial or industrial concessions to foreigners. Count Antonelli, who had negotiated the original treaty, was sent out in October, 1890, as a special envoy to bring about a settlement of the question. He was unable to induce Menelek to change his attitude, and on Feb. 11, 1891, he broke off negotiations and returned with Count Salimbeni to the coast, bringing away also all the Italian residents in Shoa and Harrar. The Emperor Menelek, who had contracted a loan of 2,000,000 francs in Italy, sent gold to pay the installments as they fell due. The feud between the chief Debeb and the other rival claimants for the throne who were defeated by King Menelek ended in a combined attack of Mangascia and Ras Alula and their retainers on the camp of Debeb on Sept. 29, 1891, and the rout of the last-named, who was killed.

A Russian Expedition.—The Russian Foreign Office has watched with keen interest the successes and setbacks of the Italians in Abyssinia. The Atchinoff expedition was furthered by only two or three members of the Russian ministry, and was not approved by the Minister

of Foreign Affairs or the Minister of War, who had no confidence in the "Hetman of the Free Cossacks." The Minister of War, Gen. Vannoffsky, arranged with a more trustworthy agent, Lieut. Mashkoff, a native of the Caucasus who had served in the army there. With a companion, a Montenegrin named Zlatytshanin, Mashkoff went to Abyssinia, taking presents for the Negus and some of the chiefs, was received as a military representative of the Czar, visited Antoto, Ankober, and other cities, gathered much information about the country, and returned to Russia in the beginning of 1890. The Negus complained to the Russian officer of the Italians, accusing them of bad faith, and appealed for the assistance of the Czar to enable him to maintain his independence. This was the beginning of a secret intercourse between the Russians and Menelek, which Atchinoff, who preceded Mashkoff, was unable to establish because his credentials were unsatisfactory, and he was therefore warned to leave the country.

The ground for the special interest of Russia in Abyssinia is the affinity between the orthodox and the Coptic forms of Christianity, both being offshoots from the Alexandrian Church. About the time when the Italians established themselves on the Red Sea coast and revealed the intention of bringing Abyssinia into their sphere of influence, the Russian Government began to assume the rôle of religious protector of the Copts, similar to that of the French Government in relation to the Syrian Christians. For four years past a mass has been celebrated in the Coptic cathedral at Cairo by the patriarch, decked in Muscovite orders, on each birthday of the Czar. The French at Oboek and in Egypt, while their officials have observed toward the Italians a correct though not sympathetic attitude, have privately assisted the efforts of the Russians to establish intimate relations with Abyssinia. After conferring with the Russian ministers and with the Czar, Lieut. Mashkoff set out in the summer of 1891 on another expedition to Abyssinia, not ostensibly political, but scientific, under the auspices of the Geographical Society of St. Petersburg. He was accompanied by Zlatytshanin, a Russian monk named Tikhon, a sacristan, and a son of Gov. Vsevoloshsky, of Tamboff. His intention was to arrive in Abyssinia in the rainy season, push on to Ankober, and thence to Antoto, where the king holds his court, and from there make excursions to various districts of the kingdom, to the Galla country, and perhaps to the region of the Blue Nile and the Soudan. The monk Tikhon is said to have a letter from the patriarch at Cairo authorizing him to officiate in the Abyssinian churches. The leader of the expedition expects to make a commercial treaty and acquire territorial and mining concessions that will lead to the industrial employment of Russian capital and to an active exchange of Russian cotton goods, rifles, spirits, and salted meats for gold, which is abnormally abundant in Abyssinia and the Galla districts, ivory, of which great quantities are stored, and the gums and other commercial products of the region.

Before the departure of the expedition Baron Marochetti, the Italian ambassador at St. Petersburg, questioned M. de Giers as to its purpose. The Russian Minister of Foreign Affairs

replied that the Russian Government recognized Abyssinia as an independent kingdom, and assumed that the Negus had a right to receive whomever he will, and could not therefore acknowledge the right of any foreign government to demand explanations regarding Mashkoff's mission so long as it did not constitute a clear violation of existing treaties, but that, in a friendly way, he could assure Baron Marochetti that the primary object of the expedition was scientific.

Anglo-Italian Delimitation Treaty.—Protocols signed at Rome on March 24 and April 15, 1891, demarkate the respective spheres of influence of England and Italy in eastern Africa. The line of demarkation, starting at the mouth of the Juba, follows the channel of the river up to 6° of north latitude, leaving Kismayu and its territory in the English sphere. It follows the sixth parallel as far as 35° east of Greenwich, and then runs along that meridian up to the Blue Nile. The sphere of influence reserved to Italy is bounded on the north and on the west by a line drawn from Ras Kasar on the Red Sea to the point of intersection of the seventeenth parallel, north, with the thirty-seventh meridian, east. The line, having followed that meridian to 16° 30' of north latitude, is drawn from that point in a straight line to Sabderat, and thence southward to a point on the Gash 20 English miles above Kassala, and rejoins the Atbara at 14° 52' of north latitude. The line ascends the Atbara to the confluence of the Kor Kakamot, whence it follows a westerly direction till it meets the Kor Lemsen, which it descends to its confluence with the Rahad. Having followed the Rahad as far as the intersection of 35° of east longitude, the line identifies itself in a southerly direction with that meridian, until it meets the Blue Nile, saving ulterior amendment of details, according to the hydrographic and orographic conditions of the country. The Italian Government shall be at liberty, in case of being obliged to do so by the necessities of the military situation, to occupy Kassala and the adjoining country as far as the Atbara. Such occupation shall not abrogate the rights of the Egyptian Government over the territory, which shall only remain in suspense until the Egyptian Government shall be in a position to reoccupy the district.

AFGHANISTAN, a monarchy in central Asia, dividing the British Empire in India from the Russian possessions in Turkistan. The reigning sovereign is the Ameer Abdurrahman Khan, who was placed on the throne by the British, who invaded the country in 1879 and deposed Yakub Khan in consequence of the massacre of their envoy and his followers. They had in the previous year captured Cabul, the capital, and put to flight Yakub's father and predecessor, Shere Ali, and afterward withdrawn their forces. In 1890 the British troops were again withdrawn beyond the Khaibar Pass, and from Candahar to Quetta, a treaty of alliance having been made with Abdurrahman by which he was allowed a subsidy of \$50,000 a month from the Indian treasury and engaged in his relations with foreign powers to follow the advice of the Governor-General of India. The Indian Government supplies him with the munitions of war, and he has lately organized an army, independ-

ent of the tribal levies. The regular infantry is said to number 8,000, and the entire military force 50,000 men.

Area and Population.—The country is divided into the four provinces of Cabul, Afghan Turkistan, Herat, and Candahar, and the districts of Shignan and Badakhshan. The population is about 4,000,000, the Ghilzais numbering about 1,000,000, the next most numerous tribe being the Tadjiks, who are found in various parts of the country following agriculture and industrial trades, after which come the Duranis, the Aimaks and Hazaras, who are of Tartar descent, and the Uzbecks.

Productions and Commerce.—The soil in most parts of Afghanistan is irrigated, and produces a summer crop of wheat, barley, or legumes, and an autumn crop of rice, millet, or maize. The country abounds in *asafetida*, which is largely exported to India, in madder, and the castor-oil plant, and in many kinds of fruit of excellent quality, on which many of the inhabitants mainly subsist, and which in a preserved state is exported in large quantities. The mineral products are copper, lead, iron, gold, and precious stones. The chief manufactures are carpets, felt, silk, and sheepskin *postins*. The imports from India in 1889-90 were £813,450, and the exports to India £346,214, showing a marked improvement in trade, which was due to the cessation of internal disturbances. Transit dues imposed by the Ameer prevent the importation of English or Indian goods into the populous parts of the country north of Cabul. The duties on Russian imports are relatively much lighter. The Ameer is making efforts to establish manufactures in his country. Trade with Russia and Bokhara fell off in consequence of the late depression in Afghanistan; but still commercial relations with Russia are becoming closer, and at the last fair in Nijni-Novgorod Afghan merchants and goods were seen for the first time.

Political Situation.—After suppressing the rebellion of Isak Khan in 1888, Abdurrahman remained till the autumn of 1890 mostly at Mezar, the chief place of Afghan Turkistan, for the purpose of organizing the administration and crushing out the hostile elements, which he did with relentless cruelty. Yet without the friendly offices of the Russian authorities, who gave Isak Khan a sumptuous asylum at Samarcand, but afterward removed him to Tashkend in order to check his intrigues, and who co-operated with the Ameer in his efforts to replace pillage and violence with commerce and peaceful industry, the Afghan ruler would not have succeeded in gaining the good-will of the Uzbecks of Khulm Atshe, Shiborgan, Maimene, and Andkhoi, and in permanently holding in check the adherents of Isak. In requital for their amicable support the Russians received important trade concessions. Caravans from Merv and Samarcand were granted free ingress into Herat, Mezar, and Maimene, although no English merchant is permitted to visit Candahar or Cabul for trading purposes. The Uzbecks, Turcomans, Tadjiks, Kizilbashs, and Aimaks, who inhabit the region north of the Hindu-Kush, look upon the Russians as their protectors against the Afghan oppressors; and the Ameer of Cabul, in his

subservience to Russia, is governed by the fear that his northern neighbors may at any time disrupt the empire that he has struggled hard to establish with the aid of more than £1,000,000 of English money. The Indian Government does not venture to tax him with disloyalty, or even to demand permission to extend the Pishin Railroad to Candahar, where an English army could flank a force seeking to invade India through Afghanistan. The railroad terminates now at the outlet of the Kojak tunnel, in "a hole in the wall," as it has been described, whence it is impossible to extend it 70 miles to Candahar without provoking a fresh war with Afghanistan, which would throw the Afghans into the arms of Russia. Such an eventuality was anticipated when the scientific frontier of northwestern India was determined on, to complete which Candahar will be necessary. This system of defense, that was adopted as the alternative of a strong and friendly Afghanistan which should serve as a bulwark against Russia, entailed an increase of £4,000,000 in the annual military expenditures of India, and the increase has now risen to £6,000,000, exceeding the cost of the Afghan war. The Ameer, who would consider an English advance to Candahar a more serious menace to his power than a Russian occupation of the conquered province of Herat, protested vigorously when the terminus of the British line was established at Chaman, asserting that it lay within his territory.

The Russian Transcaspian line, the starting-point of which is to be transferred from Uzun Ada on the Caspian to Krasnovodsk, which is a superior port farther to the north, runs for 400 miles in a southeasterly direction parallel to the mountain range that forms the boundary of Persia to Dushak, and then turns in a northeasterly direction and crosses the sand desert to Merv and the Oxus, and terminates at Samarcand, its total length being 900 miles. The oasis of Merv is being made by irrigation as fruitful as it was in ancient times. At Dushak the Russian railroad is in closest proximity to Meshed, the capital of the rich Persian province of Khorassan, as well as to the famous Afghan fortress of Herat, and a branch line is being constructed in the direction of Sarakhs, which is only 100 miles from Meshed and 170 miles from Herat.

Some Anglo-Indian military critics deprecate the abandonment of the plan of having a friendly Afghanistan as a buffer against Russian invasion, because there are some hundreds of passes through the mountains into India, to fortify and garrison all of which would transcend the resources of the Indian Empire. Both Russian and British military explorers have recently visited the Pamir and Kashgar and attempted reconnaissances in Tibet. The Indian Government has sought to gain the friendship of the predatory inhabitants of Kundjut by paying them a subsidy. Capt. Younghusband, leading a so-called scientific expedition to the Pamir and Kashgar, was warned by the Russians not to enter the Little Pamir, which borders on Chinese Turkistan. He found, in August, 1891, that a Russian outpost was established in that region, which the British assert to be a part of Afghanistan, while the Russians claim that the Ameer never held effective dominion over the Pamirs.

On information sent by him to Gilgit, a force of Goorkhas outnumbering the Russian guard was sent into the Pamir, and the Russians withdrew to avoid a collision.

The Alichur, or Great Pamir, and the Little Pamir are bleak and desolate table-lands, 10,000 to 14,000 feet above the level of the sea, bounded on the north by Russian territory, on the east by Kashgaria, a Chinese province, on the west by Afghanistan, and on the south by Chitral, Gilgit, and Jassin, Himalayan states under British protection. The boundary between the British and the Russian spheres of influence has not been marked out in this region, as it has before the gates of Herat on the northwestern frontier of Afghanistan. Since the delimitation in the west the British have extended their dominion over Cashmere and the frontier Hill states bordering on the Pamir, an English military agent has been stationed at Kashgar with the assent of the Chinese Government, the Chinese have laid claim to sovereign rights over parts of the Pamir, and the Ameer has reduced semi-independent tribes in the east of his dominions and conquered districts outside his former boundaries. His *rapprochement* toward Russia is said to have resulted in the renunciation of his rights over the khanate of Wakhand and of all claims to the Pamir steppes. The Russians have sent out so-called scientific expeditions, sometimes attended with Cossack guards, which have explored the Alichur and the Little Pamir up to the British frontier. Col. Gromtchevski in 1889 overpowered an Afghan detachment that was sent to arrest him, and by means of presents induced the officers of a Chinese outpost at the confluence of the Aksu and the Istigh to let him proceed to Kashgar. He found the Kilik Pass over the Hindu-Kush mountains exceedingly easy, and received a friendly welcome in the Hill state of Hanza-Nagyr. Afghan outposts turned him back at the Baroghil Pass, and Col. Nisbet, English resident in Cashmere, warned him away from Ladak. The Russian Government has several times invited the English Government to demarkate the frontier in the Pamir region. The Russians claim the greater part of the Pamir by reason of an agreement made between Prince Gortchakoff and Lord Clarendon in 1872 and restated in the delimitation treaty, which makes the Oxus the boundary between the spheres of influence of the two countries up to its source. Notwithstanding this agreement, the Russian authorities have recognized Shignan and other tracts over which the Ameer was found to exercise effective sovereignty north of the Oxus as Afghan territory. The English have assumed that the river flowing from Lake Victoria in the Alichur plateau is the principal head-stream of the Oxus. This the Russians hold to be a mistake, because the Aksu, rising in a lake in the Little Pamir, is much longer and carries a greater volume of water. The geographical expeditions of Gromtchevski, Greshimailo, and others were followed in 1891 by one of a more plainly political character, led by Prince Galitzin and accompanied by a strong Cossack escort, which started from Osh, in the Russian province of Ferghana, formerly the khanate of Khokand. Capt. Younghusband and Lieut. Davison, who attempted to recon-

noitre after the arrival of the Russians, were formally prohibited from entering the region claimed by Russia. The Russians dispute the right of China to the posts of Engghen, Irkistam, and Ulukchat, and all the passes west of Kashgar, insisting on the frontier conceded by Yakub Khan in his negotiations with Prince Kuro-patkin.

ALABAMA, a Southern State, admitted to the Union Dec. 14, 1819; area, 52,250 square miles. The population, according to each decennial census since admission, was 127,901 in 1820; 309,527 in 1830; 590,756 in 1840; 771,623 in 1850; 964,201 in 1860; 996,992 in 1870; 1,262,505 in 1880; and 1,513,017 in 1890. Capital, Montgomery.

Government.—The following were the State officers during the year: Governor, Thomas G. Jones, Democrat; Secretary of State, J. D. Barron; Treasurer, John L. Cobbs; Auditor, Cyrus D. Hogue; Attorney-General, William L. Martin; Superintendent of Public Instruction, John B. Harris; Commissioner of Agriculture, Reuben F. Kolb, succeeded in September by Hector D. Lane; Railroad Commissioners, Henry R. Shorter, Levi W. Lawler, W. C. Tunstall; Chief Justice of the Supreme Court, George W. Stone; Associate Justices, David Clopton, Thomas N. McClellan, Thomas W. Coleman, and R. W. Walker, who was appointed by the Governor in May, pursuant to the act of Feb. 12, 1891, providing for an additional justice of this court.

Finances.—The balance in the State treasury on Oct. 1, 1890, was \$332,561.17. For the fiscal year 1890-'91 the State tax rate of four mills produced revenue insufficient to meet the current State expenses, and the balance on Oct. 1 of this year was therefore slightly reduced from the figures above given. In 1891-'92 the rate will be four mills for regular State expenses, and one half-mill additional to raise money for Confederate pensions, pursuant to the act passed this year.

Railroads.—The valuation of railroad property for 1891, as fixed by the State Board of Assessment, was \$46,797,928.26, an increase of \$3,459,146.79 over 1890. There were 3,177 miles of railroad reported for assessment, an increase of 110 miles over 1890.

Banks.—The thirty national banks of the State held, on May 4, resources amounting to \$14,766,442, of which loans and discounts were \$8,765,694. Their combined capital stock amounted to \$4,329,000; their surplus fund to \$1,029,657; their undivided profits to \$742,493; their issue of bank notes to \$1,094,330; and individual deposits to \$6,260,527.

Coal.—The coals of Alabama embrace all the bituminous varieties, such as gas, coking, block, splint, and cannel. Mining of coal was begun in this State about 1853, but the total output did not reach 100,000 tons until 1876. The production for the census year 1880 was 323,972 tons, valued at \$476,911 at the mines. The product for the calendar year 1889 was 3,378,484 tons, valued at \$3,707,426. The average number of persons employed during the year, including superintendents, engineers, mechanics, and clerical force, was 6,762, and the amount of wages paid was \$31,175,356.

Population by Races.—The following table shows the white and colored population of the

several counties in 1880 and in 1890, according to the Federal census.

The population of the State in 1890 also included 40 Chinese and 750 Indians.

Iron Ore.—The following statistics respecting the iron-mining industry of Alabama for the year 1889 are reported by the Federal Census Bureau: Number of mines reporting, 48; number producing, 45; amount of ore produced, 1,570,319 long tons; value of product, \$1,511,611; total shipments from the mines, 1,526,982 long tons; value of shipments, \$1,457,314; capital invested in iron mining, \$5,244,902 (of which the value of land is \$4,258,645); total number of

employés, 3,081; total wages paid, \$995,222; total cost of producing one long ton of iron ore, 82 cents. In the amount of iron ore produced Alabama stands second among the States, while the cost of production is lower than in any other State. Since 1880 the total product has increased from 171,139 long tons to 1,570,319 long tons, or about 817 per cent., and the capital invested from \$536,442 to \$5,244,902.

Legislative Session.—The General Assembly, which convened at Montgomery on Nov. 11, 1890, completed its sessions on Feb. 18, 1891, having taken a month's recess over the Christmas holidays. Early in the session a contest arose between rival Democratic candidates for the seat in the United States Senate held by James L. Pugh. Senator Pugh sought a re-election, his competitors being Commissioner of Agriculture Reuben F. Kolb, ex-Gov. Thomas Sear, and ex-Gov. Thomas H. Watts. On the first ballot in the Democratic caucus, on Nov. 18, Pugh received 42 votes, Kolb 42, Sear 32, and Watts 11. Thirty-one caucus ballots were taken without a choice, the last standing Pugh 52, Kolb 34, Sear 24, and Watts 11, after which the contest was transferred to the General Assembly. In that body, on Nov. 28, Senator Pugh secured a re-election on the second joint ballot, receiving 90 votes to 39 for ex-Gov. Watts. Among the noteworthy laws of the session is an act requiring all railroads, other than street railroads, to provide equal but separate accommodations for the white and colored races, by furnishing two or more passenger cars for each train, or by dividing each car by a partition. A new pension law authorizes the annual levy for six years of a State tax of one half-mill on each dollar of taxable property, the proceeds to be divided, pursuant to the provisions of the act, among maimed and needy Confederate soldiers and sailors and the widows of their deceased comrades, no applicant receiving more than \$50 annually. An act for the improvement of the convict system provides for a commission, consisting of the Governor, the Board of Inspectors of Convicts, and one other person to be appointed by the Governor, which shall purchase land, erect buildings, and procure machinery, live stock, and other appliances, to furnish employment for convicts not leased or worked under contract, provided not more than \$10,000 be expended under this act before Oct. 1, 1892. The commission is also directed to investigate the subject of working all convicts on State account at all such industries as it may think desirable, and shall prepare a bill for the next General Assembly creating a new and complete convict system, providing for the employment of all convicts on State account as soon as practicable, and providing also for a reformatory prison for juvenile convicts, if the latter institution shall seem desirable. The same commission is authorized to sell the tract of land known as the State farm and to turn the proceeds into the treasury. An act to regulate the mining industry establishes a board of examiners, consisting of an inspector of mines and two mining engineers to be appointed by the Governor for two years, which shall examine and give certificates of fitness and service to mine bosses. After one year from the passage of the act, no person

other than those already acting as mine bosses shall be employed as such, unless he have a certificate from the board. The Inspector of Mines is further required to visit all underground mines at least once in three months, to examine them, and order such changes as are needed to secure the health and safety of miners. His orders may be enforced by the courts. The act applies only to mines where more than 20 persons are employed.

The oyster industry was regulated by an act that forbids the taking of oysters by non-residents of the State, prohibits the export of oysters in the shell except during a single month, requires the use of oyster tongs and nothing else in their taking, and imposes a license tax of ten cents a barrel on all oysters taken in the State.

Provision was made to establish the Quarantine Board of Mobile Bay, which is authorized to take land and erect at the entrance of Mobile Bay the buildings, wharves, and other structures necessary for a quarantine station. It shall make quarantine regulations, and shall cause every incoming vessel to be inspected by its officers. The sum of \$25,000 was appropriated on condition that Mobile County contribute the remainder of the total amount needed to complete the necessary buildings, and further undertake to pay the cost of maintaining the station above the income derived from quarantine fees.

The State was redistricted for members of both branches of the General Assembly, and the following new congressional districts were established: First District, counties of Marengo, Choctaw, Clarke, Monroe, Washington, and Mobile; Second District, Montgomery, Pike, Crenshaw, Covington, Butler, Conecuh, Escambia, Baldwin, and Wilcox; Third District, Lee, Russell, Bullock, Barbour, Dale, Henry, Coffee, and Geneva; Fourth District, Dalton, Chilton, Shelby, Talladega, Calhoun, and Cleburne; Fifth District, Lowndes, Autauga, Tallapoosa, Elmore, Macon, Coosa, Chambers, Randolph, and Clay; Sixth District, Sumter, Pickens, Greene, Tuscaloosa, Lamar, Fayette, Marion, and Walker; Seventh District, De Kalb, Marshall, Etowah, Cullman, St. Clair, Wilson, Cherokee, and Franklin; Eighth District, Jackson, Madison, Limestone, Morgan, Lauderdale, Lawrence, and Colbert; Ninth District, Jefferson, Bibb, Hale, Perry, and Blount.

The State Supreme Court was enlarged from four to five members. The office of Commissioner of Agriculture, heretofore filled by appointment of the Governor, was declared elective, and provision was made for an election in 1892 and every second year thereafter to choose an incumbent. Following the precedent set by the General Assembly of 1889, the legislators appropriated \$350,000 annually for the public schools in 1891 and 1892. A school for deaf, dumb, and blind children of the negro race, called the Alabama School for Negro Deaf Mutes and Blind, was established at Talladega, on a site given to the State, and \$12,000 were appropriated for buildings. The Ladies' Memorial Association of Montgomery secured \$10,000 from the State to aid in completing a monument to the Confederate soldiers, after being refused by the preceding General Assembly. An appropriation of \$12,500 was granted for the purchase of land and the erection of buildings for farm purposes near the Alabama Insane Hos-

pital, whereon some of the inmates may be employed; and \$10,000 was given to the Medical College of Alabama at Mobile for remodeling the buildings and purchasing apparatus. For each of the years 1891 and 1892 the expenditure of \$13,500 on an encampment of the State troops was authorized.

Other acts of the session were as follow:

To incorporate the Confederate Association of Alabama.

To incorporate the cities of Girard, Ozark, Asheville, and Bridgeport.

To provide for the sale or lease of school indemnity lands, certified to the State by the United States, and for the disposition of the proceeds.

To establish new charters for the cities of Birmingham and Decatur.

To prohibit the sale, furnishing, or giving to any minor under eighteen years of age of cigarettes, tobacco, or cigarette paper, or any substitute therefor.

Authorizing the issue of \$450,000 in bonds by the city of Birmingham for internal improvements.

Authorizing the issue of \$400,000 in bonds by the city of Montgomery for constructing water works.

Providing that, when any person dies leaving no husband or widow or children, or their descendants, but leaving parent or parents, his or her property shall pass to both parents in equal portions, or if only one parent is alive, half shall go to him or her and half to the brothers and sisters and their descendants; provided that, if there be no such relatives, the whole shall go to the surviving parent.

Imposing upon each peddler of clocks a State license tax of \$500, and a county license tax of \$250 for each county in which such business is carried on.

To provide for the teaching in the public schools of physiology and hygiene, with special reference to the effects of alcoholic drinks, stimulants, and narcotics upon the human system.

Extending the scope of the geological survey of the State.

To provide for the apportionment of the school fund to the various townships and school districts according to the entire number of children of school age.

Increasing the amount of time which the Governor may deduct for good behavior from the sentence of prisoners.

To provide for the legal examination of dead bodies of persons believed to have been poisoned.

To prohibit the payment or allowance of claims against the estates of decedents, which have been barred by the statute of limitations in the life of such decedent.

To prevent justices of the peace and notaries public from sentencing defendants to hard labor for costs.

To punish persons who keep cock-pits, or who publicly fight cocks.

To dispose of lands bid in by the State for taxes.

To establish the legal weights of agricultural products.

To prohibit pools, trusts, or combines to regulate or control the prices of products, goods, wares, and merchandise, and imposing penalties for violations of the act.

Giving to every mechanic, firm, association, corporation, or other person who shall work on or furnish material, fixtures, engine, boiler, or machinery for any building, article, improvement, or utility on land, or for altering, repairing, or beautifying the same, a lien therefor on such building, article, improvement, or utility, and on the lot of land on which the same is situated, and also a lien for costs, including a reasonable attorney's fee, not to exceed \$25.

Establishing at Springville a school of industrial arts and sciences for the destitute children of Confederate soldiers and sailors, known as the Confederate Children's Industrial School, to be under State control, but supported by private funds.

Providing that not fewer than fifty State or county convicts shall be hired to one person, or kept at one prison, except at the coal mines, where not fewer than one hundred shall be kept at one prison and worked at one place, women being in all cases separated from men.

Education.—For the year ending Sept. 30, 1890, the State Superintendent of Education reports the following public-school statistics for ten of the thirteen separate school districts in the State, and for the counties outside of the separate districts:

ITEMS.	Counties.	Districts.
Pupils enrolled, white.....	180,495	3,291
Pupils enrolled, colored.....	111,643	2,466
Average attendance, white.....	105,661	2,799
Average attendance, colored.....	69,507	1,443
Number of white schools.....	4,131
Number of colored schools.....	2,174
Male teachers, white schools.....	2,566
Male teachers, colored schools.....	1,387
Female teachers, white schools.....	1,500
Female teachers, colored schools.....	683
Average monthly pay, white teachers.....	\$22 04
Average monthly pay, colored teachers.....	\$21 05
Average school year in days.....	69

The total receipts of the State school fund during the year were \$495,164.84, from which the sum of \$455,658.01 was apportioned to the several counties and school districts, the remainder being devoted to the normal schools and expenses of superintendence. An enumeration of the school population at the beginning of the school year showed 295,766 white children and 226,925 colored; total, 522,691. A similar enumeration in 1891 showed 307,653 white and 239,893 colored; total, 547,546.

The numbers of pupils enrolled at the normal schools during the year 1889-'90 were as follows: State Normal College, Florence—normal department, 231; training school, 105. Livingston Normal School, 120. Troy Normal College, 282. Jacksonville Normal School, 183. Huntsville Normal and Industrial School, 258. Tuskegee Normal and Industrial Institute—normal department, 447; training school, 110. Montgomery Normal School—normal department, 371; preparatory department, 457.

World's Fair Convention.—No appropriation was made by the General Assembly of 1890-'91 to secure a representation of the State at the World's Columbian Exposition in 1893. The legislators resentfully refused to take any action upon this subject so long as the Republicans in Congress continued to press the bill for the regulation of congressional elections. After that bill had been defeated in Congress, a measure appropriating \$30,000 for the exposition, which was introduced and passed in the Senate, was defeated in the lower house. Under these circumstances a convention was called, under private auspices, to meet in Montgomery in the latter part of May, and to provide means for securing a fund for a suitable State exhibit. At this convention it was decided to incorporate a company, known as The Alabama World's Fair Association, with a capital stock of \$25,000, which could be increased to \$100,000, and to invite popular subscriptions at the rate of \$1 a share. The officers of this company were authorized to expend the money so collected in procuring a proper exhibition of the resources of the State at

the exposition. A committee of women was appointed and authorized to call a convention of women not later than Dec. 1, at which provision should be made to obtain an exhibit of the industries of Alabama women. It was further resolved

That this convention request the Commissioner of Agriculture of this State, by and with the approval of the Governor, to expend not exceeding \$10,000 of the fund in the treasury of the State to the credit of the Department of Agriculture not otherwise appropriated in accordance with the code, to illustrate the resources of this State at the Columbian Exposition.

Resolved, further, That not less than \$50,000 shall be raised by private subscription or otherwise for the same purpose.

Political.—Although there was no general election this year, the political history of the State was not without interest. A serious breach had been made in the Democratic ranks as a result of the contest of 1890. On one side were the supporters of Reuben F. Kolb, Commissioner of Agriculture, a leader of the Farmers' Alliance, who had lost the gubernatorial nomination in 1890 by only a few votes, and who later was defeated as a candidate for United States Senator. On the other side were the old Democratic leaders, who opposed the efforts of Kolb to obtain control of the party by the aid of the Farmers' Alliance. The Democratic State Committee met early in July and appointed a committee, which later in the month issued an address to the people urging the formation of local Democratic clubs and the necessity of loyal support to the party. Later in the year speakers were sent out to combat the Alliance doctrines. The sub-treasury scheme, advocated by the Alliance, was specially denounced. Soon after his inauguration Gov. Jones ordered an investigation into the official conduct of Commissioner Kolb. In April he received a report from the examiner declaring that the accounts of the office were loosely kept, and that evidence had been found to show that the commissioner and his clerks had charged the State for railroad fares when they actually rode on free passes. No action was taken on this report, and it seems not to have injured the popularity of Kolb with the Alliance. But when, on Sept. 1, his term of office expired, he was not reappointed by the Governor, who named Hector D. Lane as his successor. Kolb then refused to vacate the office, claiming that the General Assembly had deprived the Governor of his appointive power over the office by the act of this year making it elective, and providing for the election of an incumbent at the general election in 1892. A suit against him was at once brought by Lane in the probate court of Montgomery County, in which the judge decided that the appointment of Lane was void. An appeal was taken to the State Supreme Court, where arguments were made on Sept. 23. On Oct. 5 a majority of the court rendered a decision overruling the lower court and declaring the appointment of Lane to be valid, on the ground that the act by its terms did not take effect till the next general election in 1892, and that, meanwhile, the Governor, acting under the old law, had power to appoint a successor to Kolb at the end of his term. The minority opinion, signed by two judges, held that the act took effect at once upon its passage, taking away the

power of appointment by the Governor; that Kolb was thereby ousted from office as soon as the act was passed, and that a special election should have been called to fill the vacancy. In either case the decision was adverse to Kolb, and Commissioner Lane, in accordance with the majority opinion, proceeded to discharge the duties of the office.

ANGLICAN CHURCHES. Property and Revenues of the Church of England.—A

return has been published of the property and revenues of the Church of England as presented to Parliament by the Ecclesiastical Commissioners. It shows that the aggregate annual income of the Church amounts to £5,753,557, of which £5,469,171 are derived from ancient endowments, and £284,386 from private benefactions since 1703. The lands, tithe rent-charges, and other sources of income held by the occupants of archiepiscopal and episcopal sees have produced a gross total of £87,827 from ancient endowments and £11,081 from private benefactions since 1703. Cathedral and collegiate churches are credited with property to the yearly value of £192,460, the whole of it from ancient endowments. The holders of ecclesiastical benefices receive from various enumerated sources a gross income of £3,941,057 from ancient endowments and £272,605 from private benefactions since 1703. The total gross Church income in the hands of the Ecclesiastical Commissioners is £1,247,827, subject to deductions for outgoings to an unstated amount, and subject further to permanent charges in favor of bishops, chapters, archdeacons, and incumbents, amounting, "with other liabilities," to more than £950,000 a year. Of this sum, £597,000 are paid to incumbents as augmentation grants, and the rest to bishops, chapters, and archdeacons. The governors of Queen Anne's Bounty hold a capital sum of £4,456,124, the income from which has been included in the return of incomes received by the holders of ecclesiastical benefices. They also hold certain lands in the county of Lancaster producing a gross rental of about £700 a year. To these sums must be added, as property belonging to the Church, the archbishops' and bishops' residences, with a total ratable value of £11,151; the residence houses attached to cathedral and collegiate churches, £18,928; and 11,667 parsonage houses, rated at £518,054. Of the cost of the last, more than two thirds may be regarded as derived from private benefactions and from payments made by the clergy out of their incomes.

Convocation of Canterbury.—The Convocation of Canterbury met for the dispatch of business at Westminster, Feb. 4. The upper house considered a draft of a proposed bill for the amendment of the Marriage Act, and sent it to the lower house and the House of Laymen. The bill is intended to meet the existing difficulties in the definition of the residence of parties publishing banns of marriage, and in other ways to facilitate marriage. Under it the clergy will be relieved from the duty of inquiring as to residence. A form for admitting converts from the Church of Rome and for restoring those who have relapsed was approved. A report on sisterhoods and deaconesses was adopted. It recognizes their value and importance, assumes that the Church should extend its care and guidance

to them, and defines conditions on which those who enter them, being not less than thirty years of age, may undertake life-long engagements to their work, but prescribes against any interference with the freedom of individual sisters to dispose of their property as they may see fit. The resolutions concerning deaconesses declare that "deaconesses having, according to the best authorities, formed an order of ministry in the early Church, and having proved their efficiency in the Anglican Church, it is desirable to encourage the formation of deaconesses' institutions and the work of deaconesses in our dioceses and parishes," and provides that deaconesses shall be admitted in solemn form by the bishop with benediction by laying on of hands; that there shall be an adequate term of preparation and probation; that they may be released from their obligations by the bishop of the diocese in which they were admitted; that license to serve in any parish may be given by the bishop at the request of the incumbent to any deaconess employed therein; that their dress should be simple and distinctive; that they should not pass from one diocese to another without the written permission of both bishops; and that special care should be taken to provide for every deaconess sufficient time and opportunity for the strengthening of her own spiritual life. Resolutions were also passed declaring that the time had come "when the Church can with advantage avail herself of the voluntary self-devotion of brotherhoods, both clerical and lay, the members of which are willing to labor in the service of the Church without appealing for funds to any form of public support." The house further advised that a wide elasticity was desirable in the rules and systems of such brotherhoods; that they should work in subordination to the authority of the bishop of the diocese, and should be employed only under the sanction of the incumbent or curate in charge in each parish; that members of them, after an adequate term of probation, might undertake life-long engagements, subject to release, for cause shown, by the bishop; and that the statutes of the community should be under the sanction of the bishop. The lower house adopted a resolution asking the upper house to take steps for adjusting the differences between the Anglican bishop in Jerusalem and the Church Missionary Society, and for "strengthening the catholic relations of the Church of England with the orthodox churches of the East, and rendering renewed and vigorous support to the mission among the Mohammedans of Palestine." The differences referred to as existing at Jerusalem grew out of charges published by the bishop in Jerusalem that some of the Church missions in Palestine were prosecuted by methods at variance with ecclesiastical principles and usage, and likely to hinder the growth of closer union between the English and Orthodox Eastern Churches; to which the Church Missionary Society replied, affirming and maintaining its methods.

The Houses of Convocation met, for the second time in the year, April 28. In the upper house the resolutions on education adopted by the lower house in 1890 were concurred in. The lower house resolved that if clause 2 of the Church Discipline bill should be adopted unaltered, Her

Majesty be prayed to grant Convocation power to frame a canon which should enable the Church authorities to deprive criminous clerks of their ecclesiastical preferments. The House of Laymen approved of the Clergy Discipline bill, but suggested that it be amended so that the sentence of deprivation should be the act of the Church rather than of the state; discussed the subject of religious instruction in the schools; asserted the need of better religious provision for work-houses; and directed inquiry into the methods by which Christians of all denominations may co-operate in that work, "so as to bring the whole power of Christianity to bear upon the social improvement of the people."

Convocation met again June 30. A petition was presented and received in the upper house for a committee to consider the desirability of altering the amended Act of Uniformity so as to extend its provisions to the Sunday services, or to permit the same elasticity in ritual on Sunday that is allowed other days of the week. Thereby the requirements might be met of parishes where the bulk of the population is estranged from the Church. A motion according to the terms of this petition was rejected in the lower house. The resolutions adopted by the lower house in May, 1890, on the subject of education were taken up, and such of them as were still timely were concurred in. They welcome the code of 1890 considered as a whole, particularly in view of the recognition it gives to the importance of children's moral training and discipline, the method of its distribution of parliamentary grants to a school, its provisions for improvement in the character of the instruction given, and the arrangements for increasing the efficiency of small inland schools; declare that the new code must fail of its purpose unless an act is obtained to provide for an enlargement of the 17s. 6d. limit, and for the exemption of public elementary schools from local rates; and seek further information regarding the moral and religious training of day students. Satisfaction was expressed that the bill put no new restriction on religious teaching, and did not interfere with the management of Church schools; and the power of the house was pledged to secure adequacy of the grants given by the state in lieu of school fees. The report of the joint committee on the Free Education bill, comprising recommendations concerning details relative to the Government allowances to schools and to the payment of fees, was presented and considered. The bill was also discussed in the lower house and the House of Laymen.

Missionary Societies.—The one hundred and ninetieth annual meeting of the Society for the Propagation of the Gospel in Foreign Parts was held April 30. The Archbishop of Canterbury presided. The society had received during the year from all sources £164,382, or £26,000 more than in any previous year of its history, and by its enlarged means it had been enabled to extend its operations very widely. The first bishop had been consecrated for Chota Nagpur, India; the mission in New Guinea had been begun; the Bishop of Corea with a staff of missionaries had begun their work in that country. The number of ordained missionaries, including eight bishops, on the society's lists was 660, viz., in Asia, 220; in Africa, 142; in Australia and the Pacific,

17; in North America, 215; in the West Indies, 34; and in Europe, 32. Of these, 127 were natives laboring in Asia and 29 in Africa. There were also in the various missions about 2,800 lay teachers, 2,600 students in the society's colleges, and 38,000 children in the mission schools in Asia and Africa.

The ninety-second annual meeting of the Church Missionary Society was held May 5. Sir J. H. Kennaway, M. P., presided. The total receipts for the year, including those for special funds, had been £247,737. The expenditures had been £239,208, of which £15,656 were covered by the Nyanza, Soudan, extension, and other special funds applicable to the society's general work. The report showed that 79 missionaries had been added to the roll, and referred, among other matters, to the Anglo-German agreement, which had definitely committed Uganda, Usoga, and other fields to British influence; to the progress of the Imperial British East Africa Company in opening up the country; to a readiness displayed by many Mohammedans to hear the Word of God in Persia, Mesopotamia, and Palestine, and to the difficulties which had arisen in connection with work in Palestine; to the fact that at the recent National Congress in India 40 members were Christians; to the plans for a new mission in the remote western province of Sz-chuen, to be begun by a pioneer party under Rev. J. H. Horsburgh; to the presence in the new Japanese Parliament of 14 Christians, and the election of one of them to the presidency of the lower house.

The complete report shows that the society occupied 327 stations—viz., 44 in West Africa, 13 in eastern equatorial Africa, 1 in Egypt and Arabia, 11 in Palestine, 2 in Persia, 109 in India, 17 in Ceylon, 8 in Mauritius, 23 in China, 11 in Japan, 36 in New Zealand, 43 in northwest America, and 9 in the north Pacific. It employed 4,358 missionaries, pastors, teachers, etc., of whom 655 were Europeans, 30 Eurasians, etc., and 3,673 natives. The whole number of native Christian adherents was 195,463, of whom 50,005 were communicants, and 10,491 persons had been baptized during the year. There were also 1,720 schools, with a total of 70,311 native pupils.

Curates' Augmentation Fund.—According to the report made at its annual meeting, June 18, the receipts of this fund for the year had been £8,724, or nearly £600 more than those of the preceding year. The sum of £6,808 had been paid in advance to 150 curates, whose average service was twenty-eight years and whose average stipend was £126 a year. The object of the fund was to give to licensed curates who had been in active work for upward of fifteen years grants of £50 in augmentation of their stipend, to be continued as long as they remained curates. The number of curates who had served the Church for that period was about 1,200. The fund was unable with its present grants to give aid to more than 125. The average stipend of curates who had been twenty-five years in holy orders was £118. The report asserted that this fund was the only society in England that provided a fixed and certain income for the unbeneficed clergy, and it was the only one that directly helped the older curates and the Church and offered a better prospect to those entering the ministry.

Liberation Society.—The annual meeting of the Society for the Liberation of Religion from State Patronage and Control was held in London, May 6. Sir G. Trevelyan, M. P., presided, and made an address vindicating the necessity of the society taking part in political activity. He mentioned as the chief matter in which the society was now immediately interested the contemplated institution of free education, and he urged his hearers to be watchful to secure a real exemption from fees in all the grades of the public schools, and to have the elementary schools, in the villages as well as in the great cities, placed under a real and not a nominal popular control.

The Church House.—The foundation-stone of the Church House was laid June 24 by the Duke of Connaught, with the assistance of the Duke of Westminster, the Archbishop-designate of York, the Archbishop of Canterbury, and the Bishops of London and Carlisle. The Duke of Westminster, in presenting the building, said that the corporation looked forward to the time when it would be regarded as a central institution of supreme value to the Church at home and to all English-speaking churches throughout the world. The Bishop of London anticipated that it would become a center of communication between all the different branches of the Church; and the Bishop of Carlisle that it would do more than anything else to bring together all the clergy and laity of all sections of the Anglican Church, including the American Church.

The Church Association.—The twenty-sixth annual meeting of the Church Association was held in London, May 3. The report noticed as among the events of the year bearing upon the objects of the association, the faculties granted by the Chancellors of Hereford and Gloucester for the removal of "altar" crosses and candlesticks where the clergy and parishioners concurred in desiring it; the confirmation by the Chancellor of Chichester of the ruling of Chancellor Kempe that what are called "side altars" are now illegal in the Church of England, and that no faculty could lawfully issue for their erection; the opinion given at the request of the Bishop of Gloucester by Chancellor Jeune, that a bishop had no power to forbid the removal of the Lord's table at service time; the institution of a second suit in order to bring before the House of Lords the fact that idolatrous worship had been publicly paid before the graven images set up at St. Paul's; and the prosecution of the Bishop of Lincoln. But notwithstanding certain admissions, the judgment of the archbishop's court in this case, as a whole, seemed so utterly at variance with the decisions of the Privy Council in previous suits that an appeal was at once seen to be inevitable. A resolution was passed deploring "the episcopal pressure put upon English missionaries laboring in foreign lands to prevent their witnessing against the departures from the faith by the Eastern and other churches which are recognized as corruptives in the XIXth of the XXXIX Articles of Religion to which all missionaries have solemnly subscribed," and urging the committees of all evangelical missionary societies in connection with the Church of England "strenuously to resist every kind of interference which

might compel her faithful members to seek other channels and agencies than her own for the preaching of the Gospel as a witness unto all nations."

The Church Union.—The thirty-second annual meeting of the English Church Union was held in London, June 9. Viscount Halifax presided, and considered in his address the likeness between the conditions under which the union met now and those under which the leaders of the Oxford movement took counsel just fifty years before. They welcomed the decision of the Archbishop of Canterbury in the case of the Bishop of Lincoln, because, for the first time since those matters had been made the subject of legal proceedings, they had had a judgment which had recognized the fact of the continuous existence of the Church of England. The report showed that 4,032 communicants had joined the union in 1890, making the present number of members 32,975. Resolutions were passed regretting the adoption of free education, "as calculated to widen still further the sacred tie between parent and child, and to injure, if not to destroy, the position of voluntary schools"; giving to the Rev. J. Bell Cox assurance of sympathy and support; and pledging the union to work for the repeal of the law which compels the clergy to allow the use of their churches for the marriage of divorced persons.

The Case of the Bishop of Lincoln.—The court of the Archbishop of Canterbury gave its decision, Jan. 21, in the case of the prosecution against the Bishop of Lincoln for offenses in ritual. The complaints against the defendant included charges that when celebrating the holy communion, on certain specified occasions, he had allowed two lighted candles to stand upon (or apparently upon) the communion table; had added water to the wine and administered it so mixed; had before the consecration prayer stood in what is called the eastward position; had during the consecration prayer stood so that certain "manual acts" could not be seen; had allowed the hymn "O Lamb of God" to be sung after the consecration; had made the sign of the cross at the absolution and benediction; and had taken part in what is referred to in the articles as the "ceremony of ablution"—which acts, it was alleged, were all and each of them contrary to the law. The bishop pleaded that the acts which were done by him or with his sanction were not any of them illegal; that he had no wish or intention to prevent the communicants present from seeing him break the bread and take the cup into his hands.

Concerning the charge of mixing water with the wine, the court decided that mixing in and as part of the service is against the law of the Church, but found no ground for pronouncing the use of a cup mixed beforehand to be an ecclesiastical offense. To the charge of ablution, the bishop had answered that, in the disposition of the elements which he had made after administering them to the communicants, "the remains of that which was consecrated were completely and reverently eaten and drunken in accordance with the rubric" The court was not able to hold that any minister who, after the service was ended and the benediction given, in order that no part of the consecrated elements

should be carried out of the church, cleansed the vessels of all remnants in a reverent way without ceremony or prayers before finally leaving the holy table, would have subjected himself to penal consequences by so doing. In this case it would have been illegal to vary the service by making the "ceremony of ablution" charged in the articles, or the like, appear to be part of it, but the evidence did not show that this was done. The charge of standing in the eastward position in the first part of the communion service was dismissed, on grounds developed in reviewing the legislation on the subject. Respecting the charge of standing with his back to the people while breaking the bread for the communion, the court decided that "in the mind of a minister there ought to be a wish and intention to do what has to be done, not merely no wish or intention not to do it; that in this case he must not hide the acts by doing what must hide them; that he must not be so indifferent as to what the result of what he does may be as to do that which is certain to make them invisible." The court ruled, therefore, that the bishop had mistaken the true interpretation of the order of the holy communion in this particular, and that the manual acts must be performed in such wise as to be visible to the communicants properly placed. The singing of the anthem "O Lamb of God" was held to be on a par with the singing of any other hymn that might be selected and allowed at that part of the service, and therefore not to be an illegal addition to it. As to the use of lighted candles, the court did not find sufficient warrant for declaring that the law is broken when they are standing on the holy table continuously through the service, "nothing having been performed or done which comes under the definition of a ceremony by the presence of two still lights alight before it begins and after it ends." Finally, the court found that there was no justification either in direction or usage for making the sign of the cross in giving the final benediction; that the action was a distinct ceremony, not "retained," since it had not previously existed; and that therefore it was a ceremony additional to the ceremonies of the Church "according to the usage of the Church of England." "This ceremony," the court declared, "is also an innovation which must be discontinued." In some observations on the case after the conclusion of the judgment, the court said that it had not only felt deeply the incongruity of minute questionings and disputations on great and sacred subjects, but desired to express its sense that time and attention were diverted thereby from the Church's real contest with evil and building up of good both by those who gave and by those who took offense unadvisedly in such matters.

The archbishop afterward, Dec. 6, addressed a letter to the archdeacons and rural deans of the province, explaining, according to the wishes of certain of the clergy, the bearing of the decision upon their own services. He asked them, first, to consider the disproportion between those points of ritual which had been contested and the grand characteristics in which all agree of the English eucharistic service; to consider the vital importance of peace, charity, and unity; and to consider the ruling principle of St. Paul's life and counsel,

that not all that is lawful is expedient, that the feeling of the flock of Christ is the substance and evidence of expediency, and, according to St. Paul's example, to limit choice by expediency, and to abstain not only from the parade of their convictions, but "from the very use of them when surrounded by eyes that would be pained and spirits that would suffer at sight of what seemed their dangerous advance." He had no fear that men were in danger of being led to the Church of Rome. Each of the conclusions of the court, the archbishop added, relies on the whole chain of the history of each observance, and the dogma that the English Church is a true, faithful branch of the Church Catholic. The conclusions reached were "simply the decision that such or such an act is or is not, expressly or by implication, forbidden by the law of our Church, or is or is not, in immediate or ultimate consequence, actually penal by the law as it now stands. It is evident that decisions of this character are far from throwing the weight of the court's authority upon the side of any act which it does not find to be illegal."

The case was carried by the promoters of the suit on appeal to the judicial committee of the Privy Council, and came up in that court June 10. The appellants sought the reversal of such parts of the judgment of the archbishop's court as were in favor of the bishop, and the pronouncing of such sentence of monition against the bishop as the ecclesiastical law provided, and they also applied for an order as to costs. They contended that the offenses alleged against the bishop were contrary to the acts of uniformity and the laws ecclesiastical, and infringing the statutes of Edward VI, etc., still unrepealed, besides having been held to be illegal by the judicial committees in the cases of "Westerton *vs.* Liddell," "Martin *vs.* Mackonochie," "Hibbert *vs.* Purchas," "Clifton *vs.* Ridsdale," and others; and they asserted, on the authority of those judgments, that the mixing of water with the sacramental wine and the administration of the mixed chalice, the ceremony of ablution, the eastward position, the singing of the "Agnus Dei," and the burning of candles on the communion table when not required for light were illegal, and had, as such, been condemned, and that in these respects the archbishop's judgment was erroneous.

The St. Paul's Reredos.—In the case of the Queen *vs.* the Bishop of London, in the Queen's Bench Division, a mandamus was applied for to command the Bishop of London to allow a second representation to be prosecuted, under the Public Worship Regulation Act of 1874, against the reredos in St. Paul's, while an application was already pending on appeal before the House of Lords. The two complaints or representations were different, in that in the first one it was alleged that the "sculptured images" in the reredos tended to encourage superstitious reverence, and in the second one it was alleged that they had in fact encouraged and led to such superstitious reverence, and that acts of superstitious reverence had, in many instances, been actually committed. The judgment of the court, which was given Nov. 14, 1890, turned upon the question whether the two representations were or were not substantially identical. On this the judges were divided, and the application for a

mandamus therefore failing, the practical result was favorable to the bishop. The case was carried up to the Court of Appeal, where a decision was given, Dec. 2, against the applicants for a mandamus and in favor of the bishop. Lord-Justice Esher defined the question in the case to be whether the judgment in the former case, which had been carried to the House of Lords, governed the present. The allegations in that case, it was true, were different, but the reasons of the judgment governed the present. It had been decided that to obtain a mandamus to the bishop it must be shown that he had declined jurisdiction or had acted in excess of it. This had not been shown in the present case. The other judges, Lord-Justice Lopes and Lord-Justice Kay, concurred in this opinion, holding that the question here was whether the bishop had honestly and fairly considered all the matters in the case. It appeared to him that the bishop had attended to all the circumstances, to everything he ought to consider. The case was carried upon appeal to the House of Lords, where, involving substantially the same points, it was argued together with the original appeal referred to in the proceedings related above. A decision was given by the Lord Chancellor representing this tribunal, Lord Bramwell and Lord Herschell concurring, July 20, affirming the decision of the Court of Appeal in favor of the Bishop of London, and dismissing the appeal, with costs. The decision does not touch the merits of the *reredo*, but simply affirms the discretion of the bishop and sustains the use he made of it.

The Church Congress.—The Church Congress met at Rhyl, Wales, Oct. 5, under the presidency of the Bishop of St. Asaph's. Discussions opposing the movement for the disestablishment of the Church in Wales were a prominent feature in the proceedings. The address of the presiding bishop was largely devoted to this subject. He had questioned statements by Mr. Gladstone that the Church in Wales was the Church of the few and the rich, and the non-conformists were not contented, and had received a reply from that gentleman corroborating his assertions. The Archbishop of Canterbury undertook to show that the Church in Wales was not an alien body forced upon the people by a conquering nation, but was a lineal descendant of the Church originally established in Wales. The first two topics of the stated discussion also bore on the same subject. They were: "Church Revival in Wales: its Rise, Progress, and Future Prospects," discussed by Canon Bevan, the Dean of St. Asaph's, Sir Robert Cunliffe, and the Bishops of Chester, Ripon, Llandaff, and Bedford, and "The Church in Relation to Nonconformists: the Points of Agreement and Difference, and the Possibilities of Co-operation," by the Rev. H. A. James, Earl Nelson, the Rev. J. Morgan, Mr. G. Harwood, and the Archbishop of York. The other subjects considered in the Congress, with the persons who made the opening addresses upon them, were: "The Work of the Church in the Poorest Quarters of our Cities," by the Bishop of Bedford; "In Industrial and Mining Districts," the Bishop of Wakefield; "And how to extend her Work in Connection with State Agencies and Voluntary Organizations," the Rev. A. H. Bayne; "Criticism of Holy Script-

ure, and the Church's Gains thereby in the Confirmation of her Witness," Prof. J. J. Lias; "Juster Statement of Truth," Rev. Prof. Ryle; "Confronting New Problems," Archdeacon Wilson; and "The Historical Accuracy of the Bible," Theo. G. Pinches; "Foreign Missions: Qualification of Missionary Agents, and the Best Means of obtaining them," Mr. Athelston Riley; "Reflex Benefits on the Church at Home," Bishop Blythe, of Jerusalem; and "The Society System and its Improvement," Rev. W. R. Churton; "Church Education: its Present State, and how to improve it in Universities and Public Schools," Rev. J. H. Maude, of Hartford College, Oxford, and Prof. Rendall, of University College, Liverpool; "Intermediate and Grammar Schools," Archdeacon Edmonds, of St. David's College, and Principal Gent, of St. Mark's College; "Elementary Schools" and "Church Training Colleges, Residential and Day," Principal Reichel, of the University College of North Wales. Papers on church music, English and Welsh, were read, with illustrative examples, by the Rev. Owen Jones, the Rev. C. R. Stewart, and Mr. E. Griffith. The subject of "The Divine Personality, and the Bearing of the Same on the Individual Life," was discussed by the Rev. J. H. Bernard, Canon Moberly, and Sir George Stokes. On the last day's sessions of the Congress the subject of "Aids to the Life of Godliness, their Place and Use," was discussed under the headings of "Prayer," by Archdeacon Howell; "Meditation," by the Rev. Principal Chavasse; "Fasting," by the Rev. W. Lock; "Almsgiving," by Mr. T. Ll. Murray; and "Holy Communion," by the Rev. C. J. Ridgeway. The second subject was the "Parochial System," under three headings: "Deficiencies, and how to meet them," by the Rev. Cecil Hook; "Its Relation to the Diocese," by the Dean of Manchester; and "Its Relation to Church Societies," by the Rev. the Hon. C. J. Littleton.

ARCHÆOLOGY. American. Who were the Mound-Builders?—The thesis that the mound-builders were Indians is sustained by Mr. Gerard Fowke, who argues that the civilization attributed to them is exaggerated, and that they had few, if any, resources not possessed by modern Indians, and were really no further advanced than the most intelligent of the tribes; and, on the other hand, that many of the Indian tribes were settled and organized agricultural peoples, living in similar conditions to those which it is assumed must have surrounded the mound-builders. The author also cites traditions existing among the Indians of tribes who built mounds. His views were controverted in the "American Antiquarian," which, while it admitted that the Indians built mounds, held that there were other and more extensive mound-builders before them. Dr. Cyrus Thomas has shown, from surveys of the circular, square, and octagonal earthworks of Ohio, that the geometrical accuracy of those structures has been exaggerated. While some of the square and circular works closely approximate regularity, none of them are perfect, and the octagons are less regular. There is nothing in them or connected with them contradictory to the theory of their Indian origin, except that a few of them nearly approached true geometrical figures. It is admitted that Indians can lay out true circles of moderate size, and

that they are less able now to perform many things which necessity formerly compelled them to practice.

The Ruins of Fort Ancient.—A description of Fort Ancient, on the Little Miami river, in Warren County, Ohio, which is asserted to be the greatest of all prehistoric earthworks in the Mississippi valley, has been published by Mr. Warren K. Moorehead, based upon surveys made by himself with Mr. Gerard Fowke and Mr. Clinton Cowen. The fort is situated on a plateau close to the river bank, at a height of 260 feet above low water and about 900 feet above the level of the sea. Its irregular contour is 18,712 feet in length, but a diameter drawn from north to south is only 4,993 feet long. The structure consists of two large inclosures, called the old and new forts, connected by a narrow passageway, at the southern end of which, where it is narrowest, is the "Great Gateway." Opposite this, at about one third the length of the passage, is the "Crescent Gateway." The space between these gateways is called the "Middle Fort," and appears to have been the strongest part of the work. Many graves, skeletons, and remains of human work were found in and around the fortifications, and evidences of an ancient village site in the valley. The whole convinces the author that the work was built for defense, and that it was a rallying point for a large population inhabiting a district of considerable extent, and was often the scene or witness of fierce battles. A high opinion is expressed of the ability of the constructors—of their patience in carrying, with their imperfect machinery, so large a work to completion; of their judgment in selecting the site, "the best for the purpose which the Ohio valley offers"; of the skill with which the walls are carried around the entire inclosure; of the care with which weak and exposed points were strengthened; and of other features of their engineering. Their skulls also indicate the possession of a higher intelligence than the majority of the tribes whom the settlers of western Ohio found there. Mr. Moorehead believes that they were Mandans. The site of Fort Ancient has been bought by the State of Ohio, and will be preserved as a public park.

The Mounds of Tennessee.—The name "stone-grave men" is applied by Mr. John P. Thruston, of the Tennessee Historical Society, to a race whose dead were placed in box-shaped graves made of stone slabs, often constructed with much care. A hundred or more of these graves are occasionally found, arranged in tiers or layers, in a single burial mound, with utensils and treasures deposited in them which tell much of the conditions of their domestic life. The remains of forts, villages, and settlements of the same people have been discovered in considerable numbers. The inscribed stones, idols, images, totems, potteries, pipes—of chipped stone, smooth stone, copper, bone, and shell—betoken an artistic taste and technical skill beyond those of our Indians and of the mound-builders of the States farther north, and are more on the level of the best New Mexican work. Some finely finished large flints, designated as scepters, and ceremonial implements are remarkable. The most remarkable articles, however, are shell gorgets, carved with intricate figures in which the human form may be

discerned, the style of which suggests Mexican and Central American work. One of them, from the MacMahon mound, Sevierville, represents two human figures in combat, and is regarded as the highest example of aboriginal art ever found north of Mexico. A unique stone in the collection of the Tennessee Historical Society has engraved upon it the representation of a group of mound-builders, with their banners, weapons, costumes, and manner of dressing the hair fully shown. The relics afford evidence of a trade that was perhaps coextensive with the continent. The author's study of the ancient houses suggests comparison with those of the Mandans.

Palaeolithic Implements in America.—In Prof. Otis T. Mason's survey of the archaeology of the Potomac region, stone implements are represented as found in profusion in the fresh-water portion of the lower Chesapeake drainage. But while polished axes are found here and there, the polished implement is the exception, not the rule, especially on the higher ground. The chipped implements have also a ruder appearance than those from regions where finer varieties of stones are accessible. Mr. Thomas Wilson has found evidence of two periods of occupation of the region—the one palaeolithic and ancient, the other neolithic and modern. The camp sites along the water courses yield many chipped arrow heads, spear heads, knives, polished implements, soapstone vessels, and pottery; while the hills back from the river, wanting in these, furnish coarser, flaked *artefacts*, mixed with broken implements and spalls. Mr. Wilson describes the palaeolithic instruments of the District of Columbia and the United States generally as always chipped, never polished, almond-shaped, oval, or sometimes approaching a circle; having their cutting edges at or toward the smaller end, while neolithic stones have them toward the broad end; as frequently made of pebbles with the original surface sometimes unworked in places; and as exceedingly thick when compared with their width. They were usually made of quartz, quartzite, or argillite, while the neolithic man used any material that could be ground to a smooth surface. They are not known to have been used by the American Indians, who when found by Europeans were in the neolithic stage. Not one of the Indian monuments that have been explored has yielded palaeolithic implements. The articles found in the District of Columbia are of the same type as palaeolithic implements found in the Trenton gravels at Little Falls, Minn., in Jackson County, Ind., at Claymont, Del., and at Loveland, Ohio; and all together contribute to prove that a palaeolithic period existed in the United States.

Man in the Glacial Age.—Some important facts are adduced by Prof. G. Frederick Wright as having come to light during the past two years bearing upon the connection of man with the ice age in North America. One of these is the discovery of the clay image that was found in a well at Nampa, Idaho, described in the "Annual Cyclopædia" (1889, page 18). Another is the finding, by W. C. Mills, of a flint implement of palaeolithic type in the gravels of the Tuscarawas river at Newcomerstown, Ohio, fifteen feet below the surface of the glacial terrace border-

ing the valley at that place. The implement has upon it the patina characteristic of the genuine flint implements of great age in the valley of the Somme, and is recognized as having all the features of a true palæolith. It is represented in the engraving (one fourth the real diameter) by the

THE SMALLER IS THE PALÆOLITH FROM NEWCOMERSTOWN, OHIO, THE LARGER FROM AMIENS (FACE VIEW).

side of a palæolith from the valley of the Somme, of which it is an exact counterpart. The third fact is the discovery, by C. McTarnahan and J. H. Neal, respectively—one a surveyor, the other a mining superintendent—of two mortars of stone in the undisturbed gravel under the lava of Table mountain, Cal., the same formation in which the Calaveras skull was found. The mortar found by Mr. McTarnahan was about one hundred feet below the surface. Other objects of human manufacture were found by Mr. Neal in the same gravel, and a pestle by Clarence King about twenty years ago.

Ancient Mining Works.—Writing of the antiquity of the aboriginal mining works in North America, Prof. John S. Newberry says that the ancient copper mines on Lake Superior were abandoned not less than four hundred years ago, for the heaps of rubbish around the pits were covered with forest trees of the largest size. The old copper mines of North Carolina, and the quarries of serpentine in the

Alleghanies, show like evidence of antiquity. Pits observed in the ground around Titusville, Pa., proved to be relics of the excavations of primeval oil gatherers, and in one of them an old well was found which had been cribbed up with timber, and contained a ladder like those

which have been found in the old copper mines of Lake Superior. Traces of a similar well have been observed at Enniskillen, Canada, and depressions in the surface like those on Oil Creek have been noticed at Mecca and Grafton, Ohio. Ruins of an ancient lead mine exist on the Morgan farm, near Lexington, Ky., in the form, where they have not been disturbed, of an open cut from 6 to 10 feet wide, of unknown depth, now nearly filled with rubbish. On either side of this trench the material thrown out forms ridges several feet in height, and these are overgrown with large trees.

A Curious Earthwork.—An earthwork at Foster's Station, on the Little Miami river, described by Prof. F. W. Putnam, is remarkable for a ridge, more than half a mile long, from 20 to 50 feet wide, and from 8 to 10 feet deep, of well-burned clay, and including masses of burned limestone, clinkers, charred logs, and heaps of ashes of from 1 to 40 bushels. To have burned all this clay must have required a heat like that of a Bessemer furnace. The rim of burned stuff is backed by an escarpment of well-laid stone wall, which probably once extended down to the water.

Mounds in Dakota.—Thirty-nine mounds in North Dakota, examined by Henry Montgomery, consist of 1 beacon mound, 36 burial mounds, and 2 mounds designated as artificial. The burial mounds were of two kinds: The ordinary, consisting of a circular, rounded, or conical heap of earth, clothed with grass, and rising generally to a height of several feet above the surrounding level and containing one or more vaults symmetrically disposed. The skeleton was generally found in a crouching posture, with its back against the wall and face toward the center. Charred poles were encountered in digging for the vaults. The second kind had no wood and no burial chambers, and the bones in them were broken and scattered. A third kind of mound, hardly distinct enough for separate classification, contained a layer of clay that seemed to overlie many human skeletons.

Mounds in Manitoba.—The Winnipeg mound region, Manitoba, includes a district 400 miles long from east to west, and running from the international boundary north to at least latitude 50°. About 60 of the mounds

have been seen and 10 opened by Prof. George Byles, of Manitoba College. Numerous skeletons were exhumed, with large quantities of charcoal, red and yellow ochre, and birch-bark charcoal; and of manufactured articles, stone implements, scrapers, gouges, chisels, axes, mauls, conjurer's tubes, gaming stones; breast ornaments, whistles, beads, etc., of bone; articles of shell and horn; fish spears, pottery, copper implements; and near one skeleton two lumps of arsenical pyrites. All mounds were circular, and all on prominent headlands, and the majority contained skeletons. Some of them were thought to date from the beginning of their central parts, four hundred years back.

England. Excavations at Silchester.—The first discovery of traces of the remains of Roman occupation at Silchester, the Roman Calleva Atrebatum, near Reading, were made in 1833, when a series of baths were discovered and relics were recovered representing the whole period of the Roman domination from the time of Caligula till the evacuation of the island in the reign of Arcadius. Excavations were next begun in 1864, by the Rev. J. Gerald Joyce, which revealed the forms of some of the Roman houses. A more thorough system of excavations was begun in June, 1890, on the estate of the Duke of Wellington. Besides the plans of houses and lines of streets, large patches of mosaic floors were found, rooms heated by hypocausts of various construction; fragments of painted wall plaster, showing that the rooms were richly decorated with color; a series of shallow refuse pits which yielded dry rubbish, with potsherds, bones, etc., occasional coins, objects of bronze, and fragments of glass vessels. In one pit were about 50 objects in iron, with a perfect scale-beam of bronze. The iron articles furnished, with one exception, the largest series of tools yet found in Britain, including chisels, axes, hammers, gouges, anvils, files, a rasp, a carpenter's large plane, a pair of blacksmith's tongs, a pair of pincers, plow-coulters, a curiously shaped shoe of the kind usually called a hippo-sandal, and several objects of doubtful use, all in a good state of preservation, with the edges of the cutting-tools still sharp. A well was lined throughout with oak boarding, ingeniously dove-tailed together, and fragments of the wooden bucket and a curious metal vessel at the bottom. One of the most interesting objects was a gridiron, or portable cooking stove, unique in England. In the re-

gion of the forum were a basilica, a hall 280 feet long, having an apse at one end and an aisle clearly marked by the site of pillars; three great chambers on the west side of it; on the east side the forum with its public office; and on the south and the north rows of shops. A perfect ground plan of a villa was laid bare. It embraced a cloister built round three sides of a quadrangle, the fourth side remaining open, with a small garden inclosed, while a larger garden lay outside. Behind the cloister were large rooms for summer and winter use, of which the latter were warmed by hot-air pipes connected with underground stoves, which could be seen. Behind these chambers was another cloister, and at the back were the domestic offices. The wall, the whole of which is nearly complete, is 2,670 yards long, and incloses a polygonal area of 100 acres. It was built

DISCOVERIES AT SILCHESTER, ENGLAND.

without tiles, and was composed of alternate layers of bonding stones, mortar, flints, etc. The gates were recessed. The excavations were continued during the season of 1891, with discoveries of other objects, including bronze bucket handles,

a bronze saucepan, a bronze figure of a goat; the remains of buildings that seem to have been constructed round an open square or garden; and facts which, as a whole, give valuable additions to our knowledge of Romano-British building, and show the differences between the town houses of Silchester and the country houses or villas; while both differ in a remarkable way from the typical Roman house as seen in Italy.

The Altar of Vinovia.—The Roman site called Binchester, on the banks of the river Wear, near Bishop Auckland, Durham, represents the ancient Vinovia. Some interesting discoveries

ROMAN TILE, FOUND AT SILCHESTER, ENGLAND.

were made there a few years ago by Mr. John Pond. In the last year an altar has been unearthed in a state of excellent preservation. It is 4 feet 3 inches high by 1 foot 2½ inches long, and 1 foot ¼ inch broad, and has sculptured on its sides the four principal sacrificial implements, the "recuris," or axe, the "culter," or knife, the "patera," or dish, and the "prefericulum," or jug. It also bears an inscription which has been made by expanding the abbreviated words to read—*Jovi Optimo Maximo, et Matribus Ollototis, sine Transmarinis, Pomponius Lonatus, Beneficiarius Consulis, Pro Salute sua et suorum, Votum solvit libenti animo.* From the titles given to the mother goddesses, who were favorite objects of worship at Vinovia, it is conceived that the consular beneficiaries and others who erected the altar came from Olot, in the northeast of Spain, near the Mediterranean Sea and the frontier of France.

Rome and Italy. A Memorial of Horace.—A flattened column or oblong slab was uncovered during the excavations for the Tiber embankment, on which is inscribed the official record of the public games celebrated by Augustus in the year 17 B. C. The decree of the Senate and the regulations enforced by the executive committee are followed by a list of the necessary prayers and sacrifices and the order of contests. Then comes an announcement that a choir of twenty-seven youths, and as many maidens, will sing the "Carmen Seculare," written by Quintus Horatius Flaccus.

In the same locality the workmen have dis-

covered twenty-five additional fragments of the great map of the old city which formerly stood in the forum of Augustus. When this map was destroyed by fire or earthquake many of the pieces were thrown into a heap of broken building materials, and finally found their way into the walls of the old Alfieri palace, which have now been unearthed. The Minister of Public Instruction has ordered excavations to be made in search of further fragments of the map.

Remains of Public Works.—Portions of the viaduct (on the line of the road now called the Lungaretta) traced by Æmilius Paulus, in the sixth century of the city, across the lowlands of the Trastevere, in correspondence with the bridge of Æmilius Lepidus (the Ponte Rotto, or Ponte di Santa Maria, destroyed in 1886), have been discovered under the Piazza di San Crisogono. The structure rests on piers 6 metres wide, 2.25 metres thick, and the arches are a little more than 3 metres in diameter. It is built of blocks of red tufa, well squared and joined without cement. A pier or landing-place some five hundred feet above the bridge of St. Angelo, discovered in the prosecution of works for widening the Tiber, is supposed to have been constructed for a landing-place for the marbles used in the buildings of the Campus Martius and of the Pincian and Quirinal Hills. It is a raised causeway, built of blocks of tufa, laid crosswise without cement, and coated with an outside facing of travertine. On each side of the causeway are landings nearly level with the water, of concrete, faced with a palisade of oaken beams, the palisade being faced on the inner side with sheets of lead.

A Group of Statuary.—A colossal head of archaic workmanship, found in the gardens of Sallust and kept in the Ludovici museum, and heretofore described as a "head of Juno, in the old style," has been identified by Profs. Petersen and Benndorf as having been probably the statue that was worshiped in the temple of Venus Erycina (founded A. V. C. 512). It is connected by them with a "parapet" of Parian marble found in the same neighborhood in 1887, on which are the three bas-reliefs, (a) a veiled female figure in the act of burning incense, (b) a naked female figure in the act of playing the double flute, both sitting on a pillow or small mattress, and (c) a young female figure emerging from the water with the help of two female attendants. The piece was explained by Petersen as belonging to the throne on which the statue of Venus Erycina or Sallustiana was seated. Petersen supposed the central bas-relief (c) to represent the birth of Venus, and the side pieces as personifying (a) the sacred and (b) the profane love. He has caused a restoration to be made in plaster of the figure and of the throne, and the two fit together perfectly.

A Roman Bride's Treasures.—In the tomb of Crepereia Tryphæa, near the ancient gardens of Rome, the occupant of which was indicated by the wreath of myrtle leaves in the coffin to have been a bride, was found a doll of oak wood, about a foot long, well jointed, and having a body carved with unusual care and fidelity to nature. It wore a head-dress of the style that prevailed in the age of the Antonines and like that of the first Empress Faustina. Various ornaments and remains of articles of clothing were

also in the coffin, including the myrtle wreath, which had been preserved by the water that filled the grave and had acquired nearly the consistency and hardness of parchment; a clasp of silver, very much oxidized, and decorated with a vervain pattern; and several gold rings, one of which had a bezel of smooth dark glass, a second with an onyx setting bearing the name Feiletus in relief, and the third an intaglio of red jasper on which were engraved two hands clasped and holding ears of wheat—a symbol of marriage. To a gold ring in the left hand of the doll is soldered an elegant miniature key, while in its right hand is another pair of rings. A clasp is set with an amethyst engraved with a design of a winged griffin pursuing a doe—symbols of Apollo and Diana—and to it are appended two delicate chains with ivy-leaf pendants. There were also an amber hair-pin, two small combs, earrings, a necklace, and two mirrors.

The Tombs of Syracuse.—The excavations made by the Italian Government in the Hellenic and prehistoric necropolises in the neighborhood of Syracuse have brought to light a large number of tombs, with ornamented pottery of most primitive forms, bronzes, among which are swords dagger-shaped like those of Mycenæ, and bone ornaments of a peculiar character. Some tombs were found with the entrance or *dromos* closed by a stone slab with ornamentation sculptured in relief in a strange exotic style, perhaps Phœnician. The finding of earthworks and objects presenting the genuine Mycenæan type is evidence of the extension of Mycenæan culture to this island.

Greece. Archæological Schools at Athens.—The oldest of the established institutions for the prosecution of archæological research in Hellenic lands is that of France, the *École Française* at Athens, which was founded in 1846. It belongs to the French Government and is supported by it, and is under the direction of distinguished scholars. The Imperial German Archæological Institute, founded twenty-three years after that of France, is supported by the German Government. It has been the agency through which some of the most valuable discoveries in the history of Greek archæological research have been made, the most important of which are those at Olympia. The American School of Classical Studies was founded by the American Archæological Institute, and was opened under the auspices of some of the leading American colleges in 1882. It is intended to afford a center for the final higher study, by graduates of American colleges, of classical antiquity, and to be a directory for the exploration of ancient sites. It aims to help artists and architects who resort to Greece for study, and makes provision for special students. It occupies a handsome building on the southern slope of Mount Lycabettus, which was procured and furnished by the contributions of friends in the United States. Instruction is afforded gratuitously. The school

was at first presided over by a director chosen for one year from the various colleges in the United States associated with the school; but in 1888 the plan was modified, and, while an annual director continued to be appointed, the office of chief or permanent director was established, and Dr. Charles Waldstein, then director of the Fitzwilliam Museum and Professor of Archæology in the University of Cambridge, England, was chosen to fill it. Previous to 1890 the school had carried on excavations at eight sites in Greece, with important results; while previous to this the American Archæological Institute had made some interesting and important excavations at Assos, in Asia Minor. The British School of Archæology was founded in 1886, and had twelve students in attendance at its last session. It is supported by subscriptions, and gives courses of lectures and conducts excavations. In past years it has explored the antiquities of the island of Cyprus. The chief objective point of its researches in 1890-'91 was the site of Megalopolis, in western Arcadia, the city founded by Epaminondas.

The Temple at Delphi.—The Archæological Institute of America and the American School at Athens negotiated during 1890 with the Greek Government for the concession of the site of Delphi and the privilege of excavating there. The concession was made conditional on the payment of \$80,000 as an indemnification for the expropriation of the village of Castri, which stands upon the site and would have to be re-

OLD ROMAN WALLS, SILCHESTER, ENGLAND.

moved. Delay was incurred in obtaining the subscriptions to this fund, but the amount was made up, and the friends of the scheme believed, in November, 1890, they had secured the concession, when it was given to the French school.

Relics at Plataea.—In the work of the American School at Plataea, which was completed in April, 1890, the site was thoroughly surveyed; the walls, which are more than two and a half miles in circumference, were measured, and a paper on the topography of the battle-field of Plataea was

ROMAN ALTAR, FOUND AT BINCHESTER, DURHAM, ENGLAND.

prepared, to be illustrated by a new map. Excavations were carried on at several points within and without the city walls; but neither of the three important temples of Athene, Here, and Demetri was discovered. Among the interesting inscriptions brought to light was a slab containing a part of the famous edict of Diocletian, "De Pretiis Rerum Venalium," a part of the preamble of which, in Latin, had been found in the previous year. The present part, which was of the body of the edict, was in Greek. It concerns the price of textiles, and gives prices that had been hitherto unknown. Another inscription records dedications on the part of women to a goddess, and contains many female names.

The Tombs at Eretria.—The American School gave its attention, in 1891, to the exploration of Eretria in the island of Euboea, a city mentioned by Homer, destroyed by Darius in the Persian war, B. C. 490, and subsequently rebuilt; after which it became the seat of an important school of philosophy, under Menedemus, a pupil of Aristotle. The theatre was found to have a stage approximately nine feet high, with five rooms in the rear of it. It was between fifty and sixty feet long, and about seven feet wide. In front of the stage building was a low, narrow platform, with an arch through the middle extending to the third of the five rooms; while a smaller arch ran from the center

of the orchestra circle toward the stage. The survey of the walls proved that the new city occupied the same ground as the old. The tombs in the cemetery were of all epochs. In some cases as many as four were found made one upon another, the succeeding ones having been built without regard to their predecessors. In the Byzantine graves the articles found, which had been deposited with the bodies, were potteries of coarse material and workmanship. The Roman tombs were built of slabs of stone, were well constructed, and contained, besides vases of glass and clay of not great value, golden rings, earrings, necklaces, bracelets, and silver trinkets. The Grecian graves contained vases, terra-cotta figures and masks, and gold and silver ornaments; and the lowest, or archaic graves, contained only archaic vases. In one grave, of a group of six, were found lying upon the breast of the skeleton a mass of two ounces of gold cut into two hundred leaves of ivy and oak, on which the veins of the natural leaf were plainly represented. Besides this were found in the same group, which seemed to constitute a family tomb, Grecian vases; a terra-cotta mask of the god Pan; terra-cotta statuettes; seven crowns of gold; two specimens of the stylus; a gold ring with a lion rampant as a seal; earrings composed of doves swinging in a hoop of gold, with eyes of precious stones, feathers of granulated gold work, precious stones set in the wings and the breasts, and the feathers of the tail so arranged as to move with the swinging of the pendant; and a number of white vases, or *lekythoi*, of the kind hitherto regarded as peculiar to Athens. An inscription on one of the graves gave the name of the occupant as [B]IOTH [A]PIXTOTEAOT, or Biote, daughter of Aristotle. The gold pen in the grave next to this, and belonging to the same family, might be regarded as denoting that its occupant's profession had been literary. The question arose whether this family was that of the great philosopher Aristotle. The facts make this seem possible, but do not afford clear evidence. Aristotle died at Calchis, the adjoining city to Eretria; and a terra-cotta statuette found in the tomb agrees with the description given by Christodorus of a statue of Aristotle which he saw in a gymnasium at Constantinople, "standing with its hands folded together." There is, however, no evidence that Aristotle was buried at Eretria instead of Calchis, although the graves run almost continuously between the two cities. There were, moreover, several Aristotles in antiquity, and the name Biote is not historically known as that of any member of Aristotle's family. The daughter named by Aristotle in his will was Pythias, child of his wife Pythias. But there is no evidence that he had not such a daughter. Dr. Waldstein believes that the tomb is that of the philosopher.

Ruins of Megalopolis.—The principal work of the British School during 1890 and 1891 was performed in Megalopolis. In addition to the discovery of a stoa with a triple line of columns, and an altar adjoining it, a large theatre in good preservation was partially dug out, the front row of seats or *ὀρθοί* of which bore inscriptions of the classical period. These seats were long benches, nine in number, one corresponding to each *κῆρυς* or wedge of the auditorium. Each

was provided with an arm at either end; and they had high backs, slightly curved, and fitting comfortably to the back of the sitter. The benches were separated by eight gangways leading to the *καλυμνες* above, while there was also a *καλυμνη* at either end. Below the benches was a channel to carry off the water, and beyond that a raised stone border bounding the orchestra. The discovery of steps leading up from the orchestra was at first regarded as indicating that the theatre had a raised stage; but these steps were afterward found to have formed no part of the original plan, and the idea of a raised stage has been abandoned. But it is believed that a raised stage was added at a later date. Another building which has been cleared is supposed to have inclosed the temple of Zeus Sôtêr.

The Tomb at Vaphio.—The village of Vaphio, near the Homeric towns of Amyclæ and Pharis, southeast of Sparta, is marked by a tumulus resembling in external appearance the structures called the treasuries of Mycenæ. This tomb was explored in 1889 by Mr. Tsoundas, under the direction of the Greek Archæological Office. A high interest is attached to the tomb, because its date can not be later than the eighth century B. C., and it is supposed to be one or two hundred years older. In it were found a collection of funeral offerings, consisting of vases of metal and clay, ornaments of gold and silver, bronze arms, domestic utensils, and stones engraved in an archaic style. The chief objects of interest are two gold cups, ornamented with cattle designs in *repoussé* work, in a style which was first observed in vessels found at Mycenæ, but with an excellence of conception and a fidelity to nature not previously remarked in any work of archaic Greek art. The design on one of the cups portrays a hunting scene in a hilly and rough country, where men clothed in drawers and high shoes are hunting wild bulls. One of the bulls has been caught in a large net attached to two trees, and is lifting up his head in his struggles to extricate himself. On the left a bull is dashing furiously away from the scene, overthrowing two of the hunters in his fury; while on the right a third bull is galloping away, with his heels thrown high up into the air. On the other cup is a representation of tame cattle. A man holds in his hand a rope which is passed around the leg of a captive bull, while farther on are three bulls standing quietly in their pasture. The drawing in both designs is spirited and inspired by a high artistic sense, but is marked by devices to represent distance in the absence of perspective, and by exaggerations in the attitudes of the animals, that stamp it as of an archaic period.

The Sculptures at Lycosura.—The labors of the Grecian Office of Excavations, under the directory of M. Kavvadias, at Lycosura, in Arcadia, were rewarded by the discovery, in the temple of Despœna, of the remains of what seem to be the works described by Pausanias as constituting the group of seated figures of Demeter and Despœna seated, with Artemis and Anytus standing beside them, by the artist Damophon, of Messene—a contemporary of Scopas, Praxiteles, and Lysippus—of whom no work was known to be extant. The pieces discovered include a female head of colossal size; another female head

and a male bearded head (of the type of Poseidon), also colossal, but rather smaller; various fragments of colossal statues, including hands holding the attributes (a torch, a snake) described by Pausanias; a large fragment of drapery with figures in relief, representing female and male forms changed into different animals (a ram, an ass, a horse, etc.); a Nereid on a sea monster; winged forms, one of which holds a torch; dolphins, eagles, and other birds; fragments of the feet of a marble throne; and four female forms terminating in double tails of snakes or fishes, apparently the supports of a throne or table.

Recovered Greek Works.—A number of literary works of great interest have been recovered through the examination of papyri in the British Museum. One of the most important of these is a copy, nearly complete, except as to the beginning and the last chapter, of the work on the Constitution of Athens, which was ascribed by ancient authors to Aristotle. It is written on the *verso* or wrong side of a papyrus, the *recto* or right side of which is occupied with a private current account of the eleventh year of the Roman Emperor Vespasian, which, together with the style of the writing, fixes the date of the copy as not very far from that time. The trea-

ROMAN DOLL AND TOILET ARTICLES.

tise on the constitution of Athens is one of 158 works containing accounts of the constitutions of various states which were drawn up by Aristotle, or under his direction, as materials for studies in constitutional history. It consists of

63 short chapters, 41 of which contain a chronological sketch of the development of the Athenian constitution, while the others are occupied with the account of the official duties of the magistrates and public bodies that existed in the time of the author. The existing text casts light on the obscure period of the kings and the legislation of Draco and Solon and their successors, and continues to the restoration of the democracy after the reign of the thirty tyrants, in B. C. 403. The genuineness of the work appears to be satisfactorily established. It has been published in the Greek text and in *fac simile*, and has been subjected to critical examinations.

Among other classical Greek documents found among the papyri are considerable fragments of the Antiope of Euripides, parts of another copy of Plato's *Phædo*, and fragments of the writings of the poet Herodas, or Herondas, which had not been known before.

vided for the appointment of European inspectors to secure the preservation of the monuments, and has promulgated regulations concerning the making of excavations and the disposition of the relics found.

The Pyramid and Temple of Medum.—Mr. W. M. Flinders Petrie's examinations of the pyramid of Medum, made and completed during the early months of 1891, have proved it to be the structure of Senefru, of the third dynasty, and therefore the oldest dated pyramid. With it is connected, still in good condition, the only pyramid temple yet found entire, also pronounced by Mr. Petrie the oldest dated building in the world. It was reached by digging to the depth of from 40 to 60 feet in the rubbish which had accumulated around the pyramid. It is joined to the east face of the pyramid, and has a front about 30 feet wide and 9 feet high, with a door in the south end of the face. A passage, parallel to the front and 20 feet long, leads to the cham-

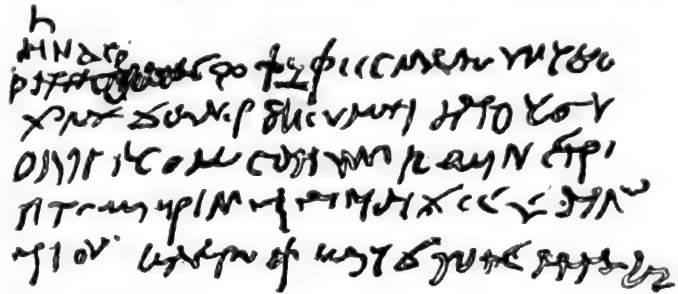

Egypt. Protection of Egyptian Monuments.—Anxious attention has been given to the danger of destruction to which many of the Egyptian monuments are exposed, either from the action of the weather or the washings of the Nile, or from the depredations of native speculators in relics. The foundations of the temple of Luxor are threatened by the stream of the Nile, the temple of Karnak is in danger, and some of the tombs and other structures have been robbed of paintings and sculptures. A memorial was addressed to the Egyptian Government toward the end of 1890 on behalf of the Society for the Preservation of Egyptian Monuments, and signed by 650 persons, asking the appointment of an official inspector to whom the care of the ruins should be intrusted. The report of the society, made July 14, 1891, related certain steps that had been taken in these matters. In consequence of these and other representations, the Egyptian Government has pro-

vided for the appointment of European inspectors to secure the preservation of the monuments, and has promulgated regulations concerning the making of excavations and the disposition of the relics found. Hence a wide doorway leads into the open air court, which is built against the face of the pyramid. The altar of offerings, which is plain, stands in the middle of the court, with an obelisk 13 feet high, rounded at the top and uninscribed, on either side of it. The walls of the temple, which is itself plain and uninscribed, are marked with the *graffiti* of visitors who came to it during the twelfth and eighteenth dynasties. The base of a statuette was found which had been dedicated to the gods of a town, Tat-snefru, by a woman named Snefru-khati. The structure of the pyramid was examined. It consists of a small stone mastaba, heightened and built around repeatedly until there were 7 steps of construction. Over all these a continuous slope of casing was added, so that the pyramid appeared with one long face from the top to the ground. The tombs had been plundered in ancient times, evidently by persons who understood their plans and ar-

rangements; but from some tombs, containing only bodies which had not been disturbed, a dozen complete skeletons were collected for study and for comparison of the types of Egyptians supposed to be of the earliest historical reign with those of later ages. Instead of being buried full length, as all the later Egyptians appear to have been, these bodies were crouched, many of them with the knees up to the chin. Crouched bodies in large earthen jars are said also to have been found at Gizeh, but to have been all destroyed. The bodies were always on the left side, with the face turned toward the east and the head to the north, without the accompaniments of funeral vessels or head-rests; but a few scraps of charcoal were found about the body. Full-length burial seems to have been practiced, too, at the same period, with funeral vessels of diorite and alabaster and head-rests. Mr. Petrie suggests that the two methods may mark distinct races—the aborigines and the conquerors—not yet fused together. The pottery of the fourth dynasty, of which a considerable quantity was found, differs from that of all later periods, and the discovery completes our historic knowledge of the pottery of Egypt. The survey of the place and the exact measurement of the pyramid are regarded by Mr. Petrie as showing that in this structure, as in the pyramid of Khufu, the proportions of the radius to the circle, or 7 to 22, prevail in the relations of height to circuit. The mode employed for laying out buildings was discovered in the course of the work. To found a mastaba with sloping sides on uneven ground, a wall (L shape) was built outside of each corner. Levels on that were drawn a cubit apart; red vertical lines on the walls defined the width of the building at the ground level; and black lines, drawn sloping down outward from the red at ground level, defined the planes of the faces. From this arrangement it was easy to start the work, no matter how uneven the foundation.

Excavations at Heracleopolis Magna.—The exploration of Heracleopolis Magna, on the site now known as Hanassieh, composed M. Naville's work for the spring season of 1891. The results were disappointing, in that no works were found attributable to the period of the three dynasties—the eighth, ninth, and tenth—when the city was the capital of the empire. In the necropolis the tombs had been plundered, and reused in later times for interments of bodies belonging to the poorer classes. Here and there were a few relics of former occupants, such as a piece of the handsome funerary cloth on which the weighing of the soul was painted, fragments of papyri, and pieces of limestone hieroglyphic tablets which were assigned to the eighteenth and nineteenth dynasties. Numerous wooden and terra-cotta tablets were found, and coarse *ushabti*s, some of which were simply little sticks on which nose and eyes had been indicated with

ink, and the name written in hieratic. On the site of the city proper, besides remains of Roman buildings and Coptic churches, a structure was found which seems to be the remains of the vestibule of one of the side entrances of the Egyptian temple. They consist of six columns, 17 feet high—one of them complete—with sculptures representing Rameses II making offerings, and the name of Menephthah in the intervals, while

FAC-SIMILE FROM FIRST PAGE OF ARISTOTLE'S TREATISE ON THE CONSTITUTION OF ATHENS.

the architraves supported by the columns were cut in a building with the cartouches of User-tesen II, of the twelfth dynasty. The vestibule was open on the water side. A few remaining layers of stones on the other sides bore an inscription recording the dedication of the building by Rameses to Hershefi, or Arsaphes (a form of Osiris), whose figure is sculptured on two of the columns. A sitting statue of Rameses II, of heroic size, in red limestone painted red, with blue and yellow striped head-dress, and dedicated to Arsaphes; a red granite statue, of natural size, without any name: a group of much-weathered kneeling figures; and a headless statue of Rameses II, symmetrical with the former one, but broken, in the opposite corner to it, were also found. Bases of columns more than 4 feet in diameter were seen *in situ*, and a few stray blocks bearing hieroglyphic signs were found. Otherwise, the whole temple had been destroyed. This temple apparently corresponds with the one described in the Harris papyrus as one of the chief temples of Egypt, to which Rameses II gave slaves.

A Collection of Priestly Mummies.—In excavating to the eastward of the temple of Queen Hatasu, at Deir-el Bahari, a pit was found containing 163 mummies, which, like the royal mummies discovered in 1881, appeared to have been removed from their tombs and concealed here—it is supposed, as in the case of the royal mummies—during the twenty-second dynasty, about 966 B. C. The coffins were of the twenty-first dynasty, and contained mummies of the priests of Ra-Amun and their families. They were deposited in a corridor some 10 or 12 feet high and 250 feet long, which was reached by a shaft 45 feet deep. The bodies were usually laid in triple coffins, some of which had been gilded, and were piled upon one another with a confusion that indicated haste. With them were baskets of flowers, funeral offerings, and seventy-five wooden statuettes inclosing papyri. The hope that was entertained at first, that these papyri might furnish valuable information, was

disappointed. They contained little else than funeral rituals.

Two wooden statues of Isis and Nephthis were found in the galleries. They were 38½ inches high, and alike except in the features of the face; were carved with correct anatomical ap-

FIGURES DISCOVERED AT THEBES.

preciation and artistic feeling, symmetrically proportioned, and in expressive attitudes. The wood was covered with a coating of color, the flesh being painted with a light-yellow ochre; the head coverings and robes white, with dark-red fillets and ribbon ornaments; the necklets, amulets, and bracelets two different greens; and the borders of the robes, near the feet, red and blue. The eyebrows and lids were dark blue, the eyeballs black, and the outlines of the nostrils, lips, and ears were delicately shown in red.

Egyptian Dogs.—In a paper on the dogs of ancient Egypt, Mr. Maspero speaks of cemeteries of dogs and their mummies at Syout, Sheikh-Fadl, Feshn, and Sakkarah, and describes one of the mummies, which has recently been opened by the German Herr Beckmann. It was a harrier, about eighteen months old, of which only the skin and bones were left, with remains of muscular tissue reduced to dust. Over the wrappings of bitumenized linen had been placed a thin mat of dried reeds, bound with cords of twisted grass. Over the part of the bundle thus made up which answered to the body was cast a network of fine cloth, so arranged as to delineate parallel rows of superposed squares along its length. The head was covered by a pasteboard mask, reproducing the physiognomy of the animal as far as possible. It was painted dark brown, except around the eyes, lips, and nostrils, which were white. The half-opened mouth showed the points of the teeth, and the ears rose above the head. Mr. Maspero suggests that it is desirable to study these dog mummies before they are destroyed, in order to determine their species and learn their anatomical structure, and what changes, if any, it has undergone.

Miscellaneous.—An inscription called the Minean inscription—No. 535 in Halévy's list—recording a battle between the south Egyptian people Madoy, and the Egyptians (Misr), or rulers and inhabitants of the Delta, is interpreted by Dr. Edward Glaser, from some of its allusions, as a contemporary record pointing to the presence of the Hebrews in the Delta during the Biblical period of their sojourn in Egypt.

In a stone discovered by Mr. Wilborn at Luxor mention is made of seven years of want in consequence of the failure of the inundations of the Nile and of the attempt of the sorcerer Chit-net to overcome the calamity. This record is treated by Herr Brugsch as evidence of the existence of a tradition of a famine corresponding with the one described in Genesis in connection with the story of Joseph. The stone is of late date.

A picture of Rameses II dedicating the edifice to Amun Ra, found on one of the walls of his temple at Luxor, furnishes a representation of the completed building. Both the great obelisks are shown, and the four masts with their flags displayed, and six colossi—two seated and four standing—outside of the pylons.

Palestine. The King of Salem.—From the study of tablets from Tel-el-Amarna relating to the affairs of southern Palestine Prof. A. H. Sayce has found that the local name of the deity worshipped "in the mountain of Jerusalem," according to Ebed-tob, the governor of the city in the time of the eighteenth dynasty in Egypt, was Salim. This reveals the origin of the name of Jerusalem itself. A cuneiform tablet has already informed us that *uru* signifies *city*, the Assyrian *alu*; *uru-Salim*, or Jerusalem, must therefore be "the city of Salem," the god of peace. We can thus understand why Melchizedek, the royal priest, is called "King of Salem" rather than of Jerusalem; and we may see in the title "Prince of Peace," conferred by Isaiah on the expected Saviour, a reference to the early history of the city. In the letters sent by Ebed-tob to Egypt, he says that he had succeeded to his royal dignity not by right of inheritance, nor by the appointment of the Egyptian king, but by virtue of an oracle of the god who is called in Genesis El Elyôn. A comparison is suggested by this account of his priestly-royal tenure, with the characterization of Melchizedek in Hebrews vii, 3. At the same time he was a tributary and "vassal" of Egypt, and the district of which Jerusalem was the capital, which extended on the west to Mount Seir and Rabbah, and on the south to Keilah and Carmel, was the "country of the king" of Egypt, who had established his name in it "forever."

Babylonia. Discoveries by Dr. Peters at Niffer.—Dr. Peters, of the American expedition to Babylonia, has communicated to Mr. Theodore G. Pinches the discovery at Niffer of two stamps of Naram-Sin and two of his father, Sargon I; three door sockets with votive inscriptions of Sargon of Agade; and several inscriptions of another king, apparently of about the same age with Sargon I (B. C. 3800), who seems to be unknown. In this inscription Mr. Pinches reads the name Erimus or Urumus. The same name occurs on some fragments from Sippara (or Abuhabbah), which Dr. Jensen has copied. These discoveries prove that the city of Niffer was one

of the oldest in Babylonia—a fact which is corroborated in the new Akkadian story of the creation, where Niffer is the first city mentioned by name. Among the finds from the temple of Bel are a number of votive inscriptions on lapis-lazuli, agate, and a chalk-like white stone, so soft that it had to be covered with a kind of enamel. They were all found in one room, in a series of booths or shops before the temple; had all been contained in one box; and were in various stages of completion, showing that this was the shop of a vender or manufacturer of objects of this kind. The inscriptions on the bulk of these belong to Kurigalzu, son of Burnaburiash, but the largest and most important of the series bears the name of a king of Babylon, which Mr. Pinches reads Kadasman-Turgu. Another similar name, Kadasman-Bel, occurs on an agate tablet of the same series. These give us the names of two Kassite kings, one wholly, the other partially, new.

Akkadian Account of the Creation.—A tablet found by Mr. Pinches among those collected by Mr. Hormuzd Rassam at Konyunjik, containing on the reverse an incantation for the purification of the great temple tower E-Zida, or Birs Nimrud, has on the obverse an account of the creation. The text, according to Mr. Pinches, may be divided roughly into sections of about ten lines each. The first section describes the time when nothing was, neither the "glorious house of the gods," neither plants, nor cities, nor houses, and not even the abyss (Hades) nor Eridu (probably a type of paradise) existed. The second section describes the making of Eridu, with its temple E-sagila, which had been founded within the abyss. Then were made Babylon, the gods, the spirits, the land, the abode of the gods, and mankind. The third section treats of the creation of animals, plants, and trees, the Tigris and Euphrates, etc.; and the fourth and last remaining section records the building of cities and houses. Merodach figures as the principal creator and constructor of all things.

Africa. Ruins of Zimbabue.—The cyclopean ruins of Zimbabue, in Mashonaland, South Africa, were discovered and visited several years ago by the German traveler Mauch, and are illustrated, from his notes, in Baines's works on "The Gold Fields of South Africa." They were visited again, and are described by a correspondent of the London "Times," a member of the British South Africa Company's expedition, in the summer of 1890. They are situated close to the edge of the Mashonaland plateau, at the base of a precipitous granite "kopje," or knoll, which is inhabited by one of the Mashona tribes. They are surrounded by an outer wall, running apparently round the entire kopje, which could not be traced for more than half a mile on account of the high grass and jungle. Next, are indications of a second and inner wall, which also could not be traced for any great length. Then, amid the remains of many small circular buildings, and 300 yards southwest of the base of the kopje, is "a high wall of circular shape, from 30 to 35 feet high, forming a complete inclosure of an area 80 yards in diameter. This wall (about 10 feet in thickness at the base, and tapering to about 7 or 8 feet at the top) is built of small granite blocks, about twice the size of an ordinary brick, beautifully hewed and dressed, laid in perfectly even courses,

and put together without the use of a single atom of cement. This strange inclosure is entered on its eastern side by what at first sight appears to be a mere gap in the wall; but which closer examination reveals to be what was once evidently a well-defined narrow entrance, as shown clearly by the rounded-off courses. Inside the building itself (which is most difficult to examine thoroughly, owing both to the dense undergrowth and the presence of quantities of trees hundreds of years old, which conceal traces of, seemingly, a series of further circular or elliptical walls), and close to the entrance and outer wall, here 30 feet high, stands a conical-shaped tower or turret, 35 feet in height and 18 feet in diameter at the base, built of the same granite blocks and consisting of solid masonry. Lastly, . . . on the southeast front of the wall and 20 feet from its base runs a zigzag scroll, one third of the distance round, composed of the same-sized granite blocks placed in diagonal positions."

The ruins were visited in 1891 by Mr. Theodore Bent, who found the remains of a temple adorned with phallic emblems, a phallic altar, and fragments of blue and green pottery.

ARGENTINE REPUBLIC, a federal republic in South America, having a Constitution modeled after that of the United States. The President is elected for six years. The Congress consists of a Senate of 28 members, two from each province, and a House of Representatives containing 86 members voted for directly by the people and serving four years. One half of the House is renewed every two years, and one third of the Senate every three years. Every member of either house draws a salary of \$8,400 per annum. The Vice-President presides over the Senate, and succeeds to the presidency in case of a vacancy. On the resignation of President Juarez Celman, on Aug. 6, 1890, Dr. Carlos Pellegrini, then Vice-President, assumed the office for the remainder of the term, which expires

Oct. 12, 1892. Each province elects its Governor and Legislature, and can levy taxes and contract debts and legislate on all matters not reserved to Congress by the Constitution. The Cabinet in the beginning of 1891 was composed of the following members: Minister of Foreign Affairs, E. Costa; Minister of Finance, Vicente Fidel Lopez; Minister of Education and Minister of Justice, Juan Carballido; Minister of War, N. Levalle; Minister of the Interior, Gen. Roca.

Area and Population.—The area of the self-governed provinces is 515,700 square miles, and their population is estimated at 3,916,492. The territories have an area of about 609,386 square miles, and 170,000 inhabitants. Buenos Ayres, the capital, with its suburbs, had in July, 1890, a population of 556,160, more than one quarter being foreigners. The immigration in the past six years has been nearly 1,200,000. About three fourths of the settlers are of Italian nationality, one tenth are Spaniards, one twelfth are French, and the rest of various nationalities.

Finance.—The revenue for 1890 was estimated at \$74,370,000, namely, \$48,000,000 from customs, \$3,950,000 from municipal taxes, \$7,700,000 from banks, \$6,050,000 from stamps and the post-office, and \$8,670,000 from other sources. The total expenditures were estimated at \$67,881,884, apportioned as follow; Interior, \$16,237,406; finance administration, \$25,989,893; instruction, \$9,517,026; military expenditure, \$9,507,839; the navy, \$4,029,440; foreign affairs, \$2,600,280. The actual expenditures exceeded the revenue by \$31,000,000, and in 1891 a deficit of \$22,000,000 was looked for, to avoid which the President issued a decree reducing salaries in the civil departments and in the army and navy, which was approved by Congress.

The Army and Navy.—There is a standing army of 5,585 men and officers. Able-bodied men under forty-five are enrolled in the militia, which numbers 236,000.

The naval forces in 1890 comprised 1 ironclad frigate, 2 deck-protected cruisers, 2 monitors, 7 gunboats, 2 transports, 7 dispatch boats, 1 torpedo school ship, and 8 torpedo boats, of which 4 are armed with spar torpedoes. The "Almirante Brown" is plated with 9 inches of steel-faced armor, and mounts six 11½-ton breech-loading Armstrongs in her central battery, 1 in the bow, and 1 in the stern. A deck-armored cruiser of 3,200 tons, completed in England in 1891, showed in her trials a mean speed with natural draught of 21½ knots, with 9,000 horse-power developed by two vertical 4-cylinder engines working independent screws. She is named the "25 de Mayo." Her armament consists of two 8-inch breech-loading guns, eight 5-inch quick-firing guns, twenty-four quick-firing guns of smaller calibers, and three 18-inch torpedo guns.

Commerce.—The breeding of cattle and sheep is the most important industry. Agriculture is carried on extensively, about 6,000,000 acres being under cultivation, yielding a product valued in 1890 at \$100,000,000, the exports for the first six months amounting to \$31,865,000. The wheat area in 1889 was 2,580,000 acres. The exports of wool in 1889 were of the value of \$56,709,774; of hides and skins, \$27,352,949; of wheat, \$1,596,446; of Indian corn, \$12,977,721. The

total exports of animal products were \$89,282,715 in value; of agricultural products, \$16,936,547; of manufactured products, \$11,946,366; of mineral products, \$1,629,160; of forest products, \$793,257; of other products, \$2,228,012: total merchandise exports in 1889, \$122,815,057. The imports of textile goods and apparel were \$32,229,422 in value; of iron manufactures, \$24,727,113; of railroad and telegraph supplies, \$24,173,749; of food substances, \$18,350,904; of beverages, \$15,301,607; of timber, \$12,106,858; of coal and oil, \$7,593,810; of glass and pottery, \$6,658,646; of chemicals, \$4,756,797; of all other articles, \$18,670,978: total merchandise imports, \$164,569,884.

The exports to the United States, mainly hides and wool, in 1890 were \$5,401,697, compared with \$5,454,618 in 1889; the imports from the United States, consisting chiefly of railroad material, agricultural implements, machinery, lumber, petroleum, and cotton, were \$8,887,000 in 1890, against \$9,293,008 in 1889.

The financial disturbance of 1890 caused a large diminution in the volume of imports, chiefly in luxuries, while the exports have remained steady. The decrease of imports is partly due to the protective tariff and the growth of native industries.

Railroads.—The Argentine Republic has the completest system of railroad communications of any South American country. There were 5,798 miles in operation and 4,840 miles building in 1890. The cost of the completed lines was \$249,907,796. The receipts for 1889 were \$35,250,907 and the expenses \$24,420,152. The panic of 1890 caused railroad construction to fall off greatly; but many of the lines were already completed or nearly completed. The extension of the Buenos Ayres and Rosario line to Tucuman connects the capital with one of the most productive of the provinces. The Transandine line to connect the Argentine system with the Chilean is expected to be finished before 1894, though several long tunnels will have to be cut through hard rock.

Financial Crisis.—During the Celman régime, which ended in the financial crash followed by the revolution of July, 1890, the national treasury was robbed of \$500,000,000. The National and Provincial banks were left insolvent, having lent the money of their depositors on unsubstantial security to politicians and their friends. For three years before the economical collapse London banking houses, and Continental houses to a smaller extent, found profit in raising money from investors in Europe to start all kinds of new undertakings in Argentina, and even dealt largely in *cedulas*, which were secured loosely on real estate. The vast quantity of European gold that was poured into the country was an incentive to wild speculation and a temptation to political jobbery. President Pellegrini and the Union Civica were supported in their efforts to retrieve the financial disaster by the best classes of the people. For this it was necessary not only to make the public income and expenditure balance by economy and fresh taxation, but to rehabilitate the bankrupt public banks. An extraordinary session of Congress was called toward the end of 1890. Measures proposed by the Government were a 10-per-cent. tax on the prof-

its of private banks and 2 per cent. on their deposits; 7 per cent. on the profits of all undertakings supported by foreign capital, railroads and meat-freezing companies excepted; and a tax of 20 per cent. on the interest of *cedulas*. The last-named tax was proposed by the provincial government in lieu of a conversion scheme which the foreign and native holders of *cedulas* would not accept. The taxing of private banks would have the effect of giving the Government the use of cash for current needs, even if it drove the foreign banks out of business, since people would then be compelled to deposit in the state banks. The foreign, and especially the English, bankers were popularly blamed for precipitating the financial catastrophe. The foreign bank managers resisted the special tax on deposits. To the tax on the profits of foreign enterprises, which affected American insurance companies, the United States objected on the ground that it was a violation of international obligations.

Deposits withdrawn from the Provincial Bank of Buenos Ayres left it on March 5 with no money in its vaults. Determined to save the state banks, Dr. Pellegrini applied to the foreign banks, but they refused assistance. The Minister of Finance then proposed a new emission of paper money, two dollars to be issued against a gold reserve of one dollar. This suggestion and the knowledge of the critical condition of the banks caused gold, which had fluctuated between 250 and 300, to leap to 387. It was no longer officially quoted in terms of paper money. On Nov. 24, 1890, when it had risen to 345 and bull speculators offered 350, the Bolsa or hall of exchange was broken up by the crowd and the police closed its doors. After they were again opened for business the Government decreed that quotations should henceforth be posted, according to the plan adopted in Chili and Brazil, in shillings, francs, or marks, at the rates of foreign exchange. The dangers of trifling further with the currency were so apparent that bankers, capitalists, and merchants proposed the alternative plan of an internal loan, which the Government willingly accepted. To prevent the formal failure of the Provincial Bank, the 6th of March and the succeeding day were declared public holidays, and the suspension was prolonged by new decrees till the 14th. The private banks came to the assistance of the Government on the condition that the taxes on foreign capital should be removed. The proposed new loan of \$100,000,000, bearing 6 per cent. interest, with 2 per cent. sinking fund, was offered at 75. The friends of the late Government denounced the plan and called for a fresh issue of bank notes. Consequently only \$41,000,000 was subscribed, \$23,000,000 by Argentinians and \$18,000,000 by the foreign banking houses. The suspension of payments of the Provincial Bank and the National Bank was ordered till the 1st of June, the Government assuming their liabilities, depositors being allowed the option of taking internal bonds for their deposits. The ministers elaborated a plan for the fusion of them both into a new institution to be called the Bank of the Republic. The Government stopped work on harbor improvements and state railroad construction in consequence of its financial difficulties. Interest was defaulted on *cedulas* of which the coupons

were payable on April 1. Congress was opened on May 9 with a message from President Pellegrini, giving reasons against a new issue of paper, and recommending a silver instead of a gold basis for the currency. Gov. Costa, of Buenos Ayres, having refused to accede to the proposed fusion of the two state banks, the Government brought in a bill for the creation of a new national bank with a capital of \$50,000,000, of which \$30,000,000 should be in paper and \$20,000,000 in gold. Authority was asked to assume the notes of provincial banks on their giving up their guarantee bonds and specie reserves.

The indefinite extension on June 1 of the suspension of the state banks was the cause of a panic, and this gave occasion for a concerted run on the private banks. Gold leaped up to 450. The Bank of Italy paid \$13,000,000 over its counter in two days, and then closed its doors. The French Bank of the River Plate, the new Italian Bank, the Commercial Bank, and the Spanish Bank suspended. The London and River Plate Bank had drawn from Rio de Janeiro and Montevideo reserves sufficient to meet all demands. On June 11 both houses of Congress passed over the President's veto a bill granting a *moratorium* or general suspension of all debts and obligations to pay money on demand or at fixed dates, with the exception of taxes, for six months. Two days later the period was reduced to three months, and on Aug. 12 the *moratorium* was repealed, after the Senate had voted a bill creating the new Bank of the Argentine Nation to liquidate the old National Bank and take over its privileges, for which purpose a new issue of \$50,000,000 was authorized. The redemption of the coupons on National *cedulas* was postponed for a year. An agreement was made with the European creditors through a number of their representatives, called the Rothschild committee, whereby the Argentine Government is relieved from the immediate payment of the debt charges falling due in the next three years, the interest being funded and added to the principal of the debt, which will increase the annual interest by \$4,000,000 when the payment of interest is resumed. A proposal to issue \$45,000,000 of forced paper currency for the foundation of the National Argentine Bank was agreed to by the House of Deputies, but on Oct. 14 the bill was defeated in the Senate.

Political Disturbances.—The friends of the deposed Administration, who were disposed to lay the blame for the financial distress upon European financiers, and who charged the President and the Union Civica with accepting extortionate terms and truckling to the foreign creditors, still formed an active political organization, and were very numerous in Cordova and the districts that had supported the late President Celman. The question as to who should succeed Dr. Pellegrini in the presidency agitated the country, as the elections were to be held in the following year. Gen. Roca and the other leaders of the Union Civica fixed on Gen. Mitre as their candidate, and he came from Europe in March, 1891, to plan the canvass and advise with the men in power on the political and financial situation. Political disturbances had already broken out. On Feb. 14 a conspiracy was discovered in the city of Buenos Ayres which was said to have

for its object the assassination of members of the Government. Officers who had sided with Celman in the revolution of 1890 were ordered to the frontier, and forty of them left the country. On Feb. 19 a boy attempted to kill Gen. Roca, grazing his neck with a bullet as he rode in his carriage. On the day following a state of siege was declared in the capital. A riot occurred in Cordova, in which the troops took part. The movement was begun at Santa Rosa, and spread to Jalumbra, Rio Cuarto, and the capital of the province, the whole of which was placed under martial law. In elections for deputies in Buenos Ayres the Government gained several seats. The siege was raised on March 15, before the elections were over. A conspiracy among the police of the capital was promptly put down. The navy and a part of the army were opposed to the Mitre-Roca coalition, and the hope that Gen. Mitre would harmonize the parties was found to be groundless.

On May 1 Gen. Roca resigned his post as Minister of the Interior, and was succeeded by José Zapata. On May 22 a new insurrection occurred in Cordova, which was suppressed by the troops after a street fight of eleven hours, during which 25 persons were killed. Minister Zapata declared in Congress that this revolt was a part of a general plot to convulse the republic. In June the Province of Catamarca was the scene of an insurrection which was mainly due to local causes and was successful, the provincial authorities being supplanted by a provisional government. A few days later Gov. Rojas, of Santiago del Estero, who was accused of nepotism, was deposed by a popular rising, and Gorostiaga, the former Governor, was reinstated. The troops interfered in both provinces and restored the legitimate authorities. Owing to dissensions between the Liberal and the Radical sections of the Union Civica Gen. Mitre in the autumn renounced his candidature for the presidency, and he and Gen. Roca formally withdrew from active political life. During the elections in October rioting and loss of life occurred in the cities of Tucuman and Cordova.

ARIZONA, a Territory of the United States, organized Feb. 24, 1863; area, 113,020 square miles. The population, according to each decennial census, was 9,658 in 1870; 40,440 in 1880; and 59,620 in 1890. Capital, Phenix.

Government.—The following were the Territorial officers during the year: Governor, John N. Irwin, Republican; Secretary, Nathan O. Murphy; Treasurer, John Y. T. Smith, succeeded by William Christy; Auditor, Thomas Hughes; Attorney-General, Clark Churchill, succeeded by William Herring; Superintendent of Public Instruction, George W. Cheyney; Commissioner of Immigration (until the abolition of the office in February, by act of the Legislature), John A. Black; Railroad Commissioners, appointed in June, pursuant to an act of the sixteenth Legislature, H. B. Lighthizer, E. B. Gage, G. W. Beecher, and J. S. O'Brien; Chief Justice of the Supreme Court, Henry C. Gooding; Associate Justices, Joseph H. Kibbey, Richard E. Sloan, and Edward W. Wells. Judge Wells was appointed early in the year, pursuant to the act of Congress approved Oct. 1, 1890, providing for a fourth justice for the Territorial court.

Finances.—The total bonded debt of the Territory on Jan. 1 was \$621,000, and the floating debt, represented by unpaid warrants, \$124,442.19, making the total indebtedness \$745,442.19. On Sept. 12 the bonded debt had been reduced to \$606,000, while the floating debt had increased to \$190,030.53, making a total of \$796,030.53. Although a tax of 71 cents for Territorial purposes was levied this year on each \$100 of valuation, its proceeds were insufficient to defray current Territorial expenses, pay interest on the debt, and meet such of the principal as matured. A constant increase of unpaid warrants therefore results.

In addition to the Territorial debt, there is a county debt, bonded and floating, of \$2,175,604.74, and a city debt, bonded and floating, of \$182,987.80.

The total assessed valuation of the Territory for 1891 was \$28,270,466.28, an increase of \$220,231.55 over the valuation for 1890. Included in the assessment were 3,364,868 acres of land, valued at \$4,602,121; improvements thereon, valued at \$2,302,214.20; city and town lots, valued at \$1,972,252; improvements thereon, valued at \$2,347,424.50; 720,940 cattle, valued at \$5,970,597.35; 288,727 sheep, valued at \$320,597.28; 47,912 horses, valued at \$1,188,168.45; 1,757 mules valued at \$58,973; 1,083 miles of railroad, valued at \$6,145,008.02.

Legislative Session.—The sixteenth Territorial Legislature began its regular session on Jan. 19, and adjourned on March 19. Both branches were controlled by Democrats, the Council standing 8 Democrats, 4 Republicans, and the House 17 Democrats, 7 Republicans. An act was passed providing for an election of delegates, on the second Tuesday of May, to a constitutional convention, which should meet at Phenix on the first Monday of September following and prepare a constitution for the proposed State of Arizona. The number of delegates was limited to twenty-two. The constitution so prepared must be submitted to a vote of the people.

A ballot-reform act provides that all ballots cast in elections for public office shall be printed and distributed at county expense, except that ballots in local elections shall be printed and distributed at the expense of the city, town, or village. Nominations of candidates for office may be made by the convention or caucus of any political party that polled at the last election for Territorial or county officers at least 1 per cent. of the entire vote cast in the Territory or county, or by nomination papers signed by voters residing within the district for which the nomination is made equal in number to at least 1 per cent. of the total vote cast in such district at the last preceding election. The ballots shall be printed on white paper, and shall contain the names of all candidates duly nominated. Each ballot shall be indorsed with the words "Official ballot," which shall be followed by the name of the district or precinct in which the ballots are to be used and the date of election. Each ballot shall also have on its back the *fac simile* of the signature of the chairman of the Board of Supervisors, with his official title. Each polling place shall be furnished with a sufficient number of voting booths, containing shelves on which the voters may mark their ballots screened

from observation. A guard rail shall be so constructed that only persons inside can approach within six feet of the booths or the ballot-boxes, but neither of these shall be hidden from the view of persons just outside the rail. Voting shall be done by marking a cross opposite the name of the candidate to be voted for, or by writing in a name and marking a cross opposite thereto. The voter, after marking his ballot in the booth, shall fold it so as to conceal his choice, and hand it to the election officer. The top of each ballot shall be partially separated from the remainder by a perforated line, and on this top or stub the election clerk shall write his name and the number of the voter in the order in which he voted, which number shall also be entered on the check-list.

The act does not apply to school elections, nor are its provisions enforceable until the first Monday in June, 1892.

An act limiting railroad fares prevents railroad companies from charging passengers over six cents for each mile or fraction thereof which they are carried, except that in no case shall the minimum fare be less than twenty-five cents. The rate chargeable for children under ten years shall not exceed three cents for each mile or fraction thereof. Baggage up to 150 pounds in weight shall be carried free for each passenger. An act to encourage railroad construction exempts from taxation for twenty years the property of all railroads hereafter built without subsidies, provided actual construction begins within one year after the passage of the act, and proceeds at the rate of fifty miles of track each year, and provided other requirements of the act are complied with.

Another act provides for the appointment of four railroad commissioners, two from each party, holding office for two years, who shall make an annual report to the Governor.

The Governor was given power to remove any Territorial officer appointed by him or his predecessor, whether with or without the consent of the Legislative Council, whenever in his judgment the best interest of the public service will be promoted. Provision was made for organizing, for the protection of the southern frontier, a company of armed horsemen, consisting of three officers and twenty men, to be known as the Arizona Rangers, a special part of whose duty it shall be to pursue and punish marauding Indians and other malefactors. An annual Territorial tax of six cents on each \$100 is to be levied to provide money for the equipment and support of these troops.

The new funding law for the Territory, passed by Congress in June, 1890, was re-enacted, with additional provisions necessary to carry it into full effect. The annual tax to be levied for completing the buildings for the Territorial University, at Tucson, was reduced from three fourths to one half of a mill annually. A department for the education of the deaf, dumb, and blind was added to the institution, to be organized whenever five persons who are admissible shall apply for instruction. Subject to the approval of Congress, an act was passed creating a Board of World's Fair Managers for Arizona, and appropriating \$30,000 for their use in securing a proper exhibit of the resources of the Ter-

ritory at Chicago in 1893, the sum to be borrowed at 5 per cent. for twenty years.

The offices of Commissioner of Immigration and of Territorial Geologist were abolished. The county of Coconino was created out of the northerly and easterly portions of Yavapai County.

Amendments were made to the jury law, so that in civil cases and in misdemeanor trials where twelve persons form the jury a verdict may be given by the concurrence of three fourths. Other acts of the session were as follow :

Changing the time of meeting of the Legislature to the second Monday of February in 1893, and every second year thereafter.

To provide for the establishment of a board of horticultural commissioners in any county on petition of residents thereof, and to empower such board to protect the county against the importation, propagation, and spreading of insects injurious to fruit and vines.

Limiting the time within which executions may issue to five years after rendition of judgment.

Authorizing incorporated cities, towns, and villages to dispose of vacant land.

Consolidating offices and reducing expenses in cities which cast a total vote of less than 600 at the November election in 1890.

Revising the mechanics' lien law.

Detaching certain lands from Yavapai County and annexing them to Gila County.

To prevent the sale of fire-arms, ammunition, and liquors to Indians.

To prohibit the licensing of gambling at any *festa*, or in any park, or on any race track or fair ground, or adjacent thereto, or in any public place frequented by women or minors.

Making the Friday following the first day of February in each year a holiday, to be known as Labor Day.

Authorizing school districts to issue bonds for the purpose of building school-houses and of liquidating outstanding indebtedness.

Amending the act of 1889 so that precinct and district offices in the Territory may be held by persons who can not read and write in the English language. Territorial and county offices can not be held by such.

Exempting from taxation for ten years all sugar-beet factories built within one year.

Repealing the close-herd law.

To prohibit the sale of intoxicants to minors and drunkards, and to prohibit the sale of cigarettes to children under sixteen years of age.

Providing for the appointment of live-stock inspectors, who shall inspect all stock about to be killed for sale or to be shipped or driven from the Territory, and to make sure that such stock is not stolen.

Providing a new law regulating the care of the indigent sick by the several counties.

Giving to persons who cut or cord wood, cut, saw, or skid logs, cut, saw, hew, or pile ties, a lien thereon for labor.

Education.—The following table shows the educational progress of the Territory for the past eight years :

YEAR.	Receipts.	Expenditures.	Schools.	Children.	Average attendance.	Teachers.
1883. . .	\$101,890 02	\$77,997 85	104	9,860	2,554	98
1884. . .	205,901 28	161,861 57	121	9,860	3,287	143
1885. . .	186,666 12	138,164 83	137	10,219	3,226	131
1886. . .	159,956 14	135,030 39	150	10,219	3,507	150
1887. . .	120,044 88	117,004 74	169	10,803	3,602	175
1888. . .	157,707 03	130,212 14	184	10,803	3,849	191
1889. . .	179,782 85	150,543 41	197	12,588	4,298	199
1890. . .	201,288 70	177,488 88	219	12,582	4,702	240

In 1890, 93 men and 147 women teachers were employed, their respective monthly salaries being \$82.45 and \$74.45.

There is a Normal School at Phenix, supported by the Territory, at which 42 students were enrolled on the first day of this year. Buildings for a Territorial University at Tucson are in process of erection.

Indians.—The Indian population of the Territory on June 30, 1890, was as follows: Colorado River Agency, Mojaves, 640; Pima and Maricopa Reservation, Pimas, 641; Pima Reservation on Gila River, Pimas, 3,823; Maricopa Reservation, Maricopas, 315; Papago Reservation and roaming Indians, Papagos, 5,163; San Carlos Agency (Cayotero, San Carlos, Tonto, and White Mountain Apache), Apaches, 2,121; Mojave Reservation, Mojaves, 551; Yuma Reservation, Mojaves, 240; White Mountain Apache Reservation, Apache, 1,920; living outside of the reservations, 1,326; total, 16,740.

Irrigation.—The total area in Arizona on which crops were raised by irrigation in the census year ending June 30, 1890, was 65,821 acres, or 102.8 square miles, less than one tenth of 1 per cent. of the entire area of the Territory. The aggregate number of farms was 1,448, and of these, 1,075, or 74 per cent., depended upon irrigation, the remaining 26 per cent. being stock ranches, or farms high in the mountains, where crops can be raised by what is known as "dry farming." The average size of irrigated farms, or rather of the irrigated portions of farms on which irrigation was practiced, was 61 acres.

Taking all the counties in the Territory, with their varying conditions, the average cost of water right was \$7.07 an acre.

The agricultural and irrigable land of Arizona is in the southwestern half of the Territory.

The acreage at present under irrigation may be regarded as approaching the maximum possible with the present supply of water and methods of using it.

Constitutional Convention.—Pursuant to the act of March 19, Gov. Irwin issued his proclamation calling a general election for the second Tuesday of May, at which delegates should be chosen to a constitutional convention appointed to meet at Phenix on the first Monday of September. At this election 17 Democrats and 5 Republicans were chosen. The convention met at the appointed time, and continued in session through Oct. 2, on which day a complete constitution was adopted and signed. This instrument contains no test oath or other provision to prevent Mormons in the Territory from voting, but declares bigamy and polygamy to be felonies, and provides for their punishment as such. Other important provisions are as follow:

No lottery shall ever be permitted.

The right of way over mountain passes and through cañons is granted to all upon such terms and regulations as may be prescribed by law.

The railroads are declared to be public highways.

The legislative power shall be vested in a Senate and House of Representatives, which shall be designated the Legislature of the State of Arizona.

Senators shall be elected for four years, and Representatives for two years.

Each county shall have at least one Senator and one Representative, but at no time shall the number

of members of the House of Representatives be less than twice, nor greater than three times, the number of members of the Senate. The Senate and House of Representatives first elected in pursuance of this constitution, shall consist of twelve and twenty-four members respectively.

No legislative session after the first shall exceed sixty days. The Legislature shall meet biennially on the second Tuesday of January next succeeding the election of its members.

No appropriation shall be made for charitable, industrial, educational, or benevolent purposes to any person, corporation, or community not under the absolute control of the State, nor to any denominational or sectarian institution or association.

The city of Phenix shall be the seat of government; but the people may by vote change the seat not oftener than once in ten years.

Eight hours shall constitute a day's labor on all State works.

All natural streams and lakes within the boundaries of this State capable of being used for the purposes of navigation or irrigation are declared to be the property of the State.

The common-law doctrine of riparian water rights shall never be applied in this State.

The right of individuals or corporations to construct reservoirs and impound and appropriate the surplus and flood waters for sale, rental, domestic stock, or any beneficial purpose, shall never be denied.

Provision was made for submitting this constitution to a vote of the people on the first day of December of this year.

The Lost Laws.—Under this term are included eleven acts of the fifteenth Territorial Legislature, which for more than a year were supposed to be lost, and the validity of which is not yet fully established. The fifteenth Legislature having continued in session more than sixty consecutive days after the day of its first session, a question at once arose whether its sessions after the sixty consecutive days were legal; or, in other words, whether the law of Congress limiting legislative sessions to sixty days meant sixty consecutive or sixty legislative days. Gov. Zulick, to whom these eleven acts were transmitted for approval on March 21, 1889, which was the sixtieth consecutive day of the session, taking the view that the legal session must expire on that day, decided neither to approve nor return them, but to allow them to fail through the expiration of the session. He accordingly deposited them in a desk in the executive office, and a few days later turned over all official papers and the office to his successor, Gov. Wolfley. The acts remained unnoticed in the Governor's office until Nov. 9, 1890, when a demand was made upon the acting Governor for a copy of one of these laws alleged to be in his possession, and on examination of the records of the office the eleven were found. Meanwhile, the validity of the action of the Legislature after the expiration of the sixty consecutive days had been brought in question before the Territorial Supreme Court, and in March, 1890, a decision had been rendered declaring the session to be legal until sixty days of actual legislative session had expired. Under this decision the entire session of the fifteenth Legislature (which did not adjourn till April 10) was legal; and as the Governor had held these laws for a period of ten days, during which the Legislature was legally in session, they became laws without his approval. They were there-

fore printed by the Territorial Secretary and published for the first time in 1891, with the laws of the sixteenth Legislature. Steps have been taken to bring the question of their validity, and therefore the validity of the later action of the fifteenth Legislature, before the final tribunal, the United States Supreme Court. Until its decision is rendered they remain in force by virtue of the decision of the Territorial Court. The more important of these laws are the following:

Amending the law in relation to jurors and juries.

To establish a compulsory school law in and for the Territory.

To provide for the further erection and maintenance of the University of Arizona.

Prohibiting the carrying on of certain business within the limits of incorporated cities on Sunday.

Providing for attachments on real estate and personal property.

ARKANSAS, a Southern State, admitted to the Union June 15, 1836; area, 53,850 square miles. The population, according to each decennial census since admission, was 97,574 in 1840; 209,897 in 1850; 435,450 in 1860; 484,471 in 1870; 802,525 in 1880; and 1,128,179 in 1890. Capital, Little Rock.

Government.—The following were the State officers during the year: Governor, James P. Eagle, Democrat; Secretary of State, B. B. Chism; Auditor, W. S. Dunlop; Treasurer, Robert B. Morrow; Attorney-General, William E. Atkinson; Superintendent of Public Instruction, Josiah H. Shinn; State Land Commissioner, C. B. Myers; Chief Justice of the Supreme Court, Sterling R. Cockrill; Associate Justices, Burrill B. Battle, Simon P. Hughes, William E. Hemingway, and, W. W. Mansfield, who was elected on Jan. 26 to fill the vacancy caused by death of Justice M. H. Sandels, Nov. 12, 1890.

Education.—The following public-school statistics for the years ending June 30, 1889, and June 30, 1890, are reported by the State Superintendent of Public Instruction:

ITEMS.	1889.	1890.
Children of school age, white.....	297,675	297,904
Children of school age, colored.....	106,714	107,083
Number enrolled, white.....	153,770	154,259
Number enrolled, colored.....	56,382	51,003
Teachers employed, male.....	4,108	No report.
Teachers employed, female.....	1,587	No report.
Wages paid teachers.....	\$830,040 76	\$869,599 50
New school-houses erected.....	289	274
Total expenditures for school purposes.....	\$967,608 60	\$1,016,776 26

Charities.—On Nov. 30, 1888, there were in the State Lunatic Asylum 411 patients, of whom 161 were white males, 168 white females, 40 colored males, and 42 colored females. During the year succeeding, 95 patients were admitted and 96 discharged, while during the year beginning Nov. 30, 1889, 88 were admitted and 88 discharged, leaving 410 remaining on Nov. 30, 1890, of whom 160 were white males, 167 white females, 44 colored males, and 39 colored females. Additional accommodations at this institution were provided for by the General Assembly this year. At the State School for the Blind the total enrollment in 1888-'89 was 144 pupils, and in 1889-'90, 165. At the Deaf Mute Institute 143 pupils were enrolled for the two years ending June 30, 1890.

Population by Races.—The following table shows the white and colored population of the several counties in 1880 and in 1890, according to the Federal census:

COUNTIES.	WHITE.		COLORED.

* Formerly Dorsey County.

The State also contained, in 1890, 131 Chinese and 304 Indians.

Finances.—The following figures are taken from the latest report of the State Auditor: General revenue fund, balance on Oct. 1, 1888, \$778,937.91; total receipts for the two years succeeding, \$909,747.93; total expenditures, \$1,261,114.54; balance on Oct. 1, 1890, \$427,571.30. Common-school fund, balance on Oct. 1, 1888, \$439,766.24; total receipts for the two years, \$625,858.32; total expenditures, \$802,441.02; balance on Oct. 1, 1890, \$263,183.54. Permanent school fund, balance on Oct. 1, 1888, \$266,368.38; total receipts for the two years, \$14,127.42; total payments, \$6,293.98; balance on Oct. 1, 1890, \$274,201.82. Sinking fund, balance on Oct. 1, 1888, \$2,924,501.72; total receipts for the two years, \$113,514.12; total payments, \$102,733.09; balance on Oct. 1, 1890, \$2,935,282.75. Special sinking fund, balance on Oct. 1, 1888, \$136,830.23; total receipts for the two years, \$312,172.21; total payments, \$3,227.31; balance on Oct. 1, 1890, \$445,775.13. The balance in all funds in the treasury on Oct. 1, 1890, aggregated \$4,799,733.46. For 1890 the State tax rate was two mills for the general fund, two mills for schools, and one mill for the sinking fund, a total of five mills; for 1891 the rate was two and one fourth mills for the general revenue fund, two mills for schools, one half mill for the sinking fund, and one fourth mill for pensions.

The bonded State debt on Oct. 1, 1890, consisted of principal, \$2,092,100; overdue interest, \$2,884,897.50; total, \$4,976,997.50. This is an increase of \$114,982.50 over the total for Oct. 1, 1888, notwithstanding the fact that the State has meanwhile redeemed \$395,415 of its debt. The discrepancy is explained by the fact that the State authorities have recently discovered the existence of \$3,000 5-per-cent. bank bonds and \$252,000 6-per-cent. funding bonds of the series of 1870, both of which were supposed to have been long since redeemed and canceled, as stated in memoranda in the Treasurer's office. It appears, however, that these securities have always been held by the United States as valid demands against the State, and are so reported by the Secretary of the Treasury. Large arrears of interest are due thereon, making the total discovered liability of the State about \$500,000. In addition to the bonded debt there is a floating indebtedness of \$27,959.13 in the form of certificates of indebtedness issued under section 3167 of Mansfield's "Digest," for redemption of which no provision has been made.

Legislative Session.—The twenty-ninth General Assembly met on Jan. 12, and adjourned on April 4. Early in the session United States Senator James K. Jones was re-elected for the full senatorial term by the following vote: Senate, Jones 26, D. E. Barker 2; House, Jones 80, Jacob Triebler 12, Barker 2, J. F. Sellers 1. A secret-ballot law was enacted at this session. It provides that all ballots used in any presidential, congressional, State, district, county, township, or municipal election, either general or special, shall be furnished at the county expense by a board of county election commissioners, except that ballots used exclusively in municipal elections shall be furnished by this board at municipal expense. The ballots shall all be alike, shall be printed in plain type, and shall contain the names of all candidates duly nominated. A

convention or caucus or any organized political party may nominate candidates, or they may be nominated by certificates signed by not fewer than ten nor more than fifty electors, if the nomination is made for any township or ward of a city or town, and by not less than fifty nor over one thousand electors in other cases. At each polling place there shall be provided one booth or compartment for each one hundred electors, or fraction of one hundred, voting thereat in the last preceding election. Each booth shall be fitted with a table, shelf, or desk for the convenience of electors, and its walls shall be of wood, so constructed as to enable each elector to enter and prepare his ballot free from the interference of any person. The booths shall be placed at least five feet apart. No person shall be permitted under any pretext to come nearer than fifty feet of any door or window of any polling room, except as provided in the act. Each elector upon entering the polling room shall be given one ballot, on the back of which at least one of the election judges shall write his name or initials. On receiving his ballot the elector shall forthwith, without leaving the polling room, retire alone to one of the booths and prepare his ballot by scratching off, erasing, or crossing out the names of all candidates except those for whom he may wish to vote, writing in any name that is not printed where he would have it, or that is not printed on the ballot at all. In the case of a constitutional amendment or other question, as, for instance, "For License" or "Against license," the elector shall cross out parts of his ballot in such manner that the remaining parts shall express his vote.

After preparing his ballot the elector shall fold it so as to conceal the face thereof, and so as to show the name or initials of the judge on the back, and shall hand it to the receiving judge. The latter shall call out the name of the elector and the number of the ballot, shall write the number on the ballot, and shall deposit it in the box in the sight of the elector, who shall immediately leave the room and go beyond the fifty-foot limit. No ballot shall be received from any elector, or deposited in the ballot-box, which does not have the name or initials of at least one of the judges indorsed on it. No officer of election shall do any electioneering on election day. No person shall do any electioneering in any polling room, or within one hundred feet of any polling room, on election day.

No elector shall be allowed to occupy a booth or compartment for the purpose of voting for a longer time than five minutes.

Another act requires all railroad companies to provide equal but separate and sufficient accommodations for the white and African races, by furnishing two or more passenger coaches for each train, and to provide separate waiting rooms for each race of equal and sufficient accommodations at all passenger stations. On all lines less than 25 miles long, separation of the races by dividing each car by a partition may be allowed. Persons in whom there is a visible and distinct admixture of African blood shall, for the purposes of this act, be deemed to belong to the African race; all others, to the white race.

An act to pension disabled Confederate soldiers and sailors, and the widows of their deceased com-

rades who were killed in the service, authorizes the annual payment of \$100 to totally disabled veterans, and various sums down to \$25 to others, according to the extent of their disability, widows receiving the last-mentioned sum. To raise money for these claims, a tax of one fourth of a mill on the dollar is to be levied annually for the next two years, from the proceeds of which \$10,000 shall be annually deducted and applied to the erection and maintenance of a home for ex-Confederate soldiers. If after this deduction the fund derived from this tax shall be insufficient to meet the claims presented, a pro-rata distribution of the sum available shall be made among the claimants.

An act in the interest of public education authorizes the State Superintendent of Public Instruction to establish six district normal schools for white teachers, one in each congressional district, and two normal schools for colored teachers, to appoint a principal for each school, and to arrange a suitable course of study. Each school shall hold annually a session of three consecutive months of twenty days each, to which only teachers and intending teachers shall be admitted. The sum of \$2,000 was appropriated for each of the next two years, to be used only in paying the salaries of instructors.

The State was redistricted for members of Congress as follows:

First District—Sharp, Randolph, Clay, Lawrence, Green, Craighead, Mississippi, Poinsett, Jackson, Woodruff, Cross, Crittenden, St. Francis, Lee, and Phillips—15.

Second District—Drew, Bradley, Cleveland, Jefferson, Grant, Dallas, Hot Spring, Lincoln, Saline, Garland, Montgomery, Polk, Scott, and Sebastian—14.

Third District—Desha, Chicot, Ashley, Calhoun, Union, Ouachita, Columbia, Nevada, Clark, Pike, Hempstead, Lafayette, Miller, Little River, Sevier, and Howard—16.

Fourth District—Pulaski, Perry, Conway, Pope, Yell, Logan, Johnson, Franklin—8.

Fifth District—Crawford, Washington, Benton, Carroll, Madison, Newton, Boone, Searcy, Van Buren, Faulkner—10.

Sixth (new) District—Marion, Baxter, Fulton, Izard, Stone, Independence, Cleburne, White, Lonoke, Prairie, Monroe, Arkansas—12.

Provision was made for submitting to the people at the next general election an amendment to the State Constitution, requiring the following qualifications for voting: First, the payment of a poll tax within the year preceding the election; Second, residence in the State twelve months, in the county six months, and in the precinct or ward one month next preceding any election.

The Penitentiary commissioners were requested to procure all available information respecting the management of State prisons in the several States, and to report to the next General Assembly with suggestions as to the future management of the State Penitentiary.

A resolution was adopted favoring the election of United States Senators by popular vote. The annual State tax upon liquor dealers was increased from \$200 to \$300.

An increase was made in the State tax for general purposes from 2 to 2½ mills, the tax for schools remaining at 2 mills, while the tax to be levied for the sinking fund was reduced from 1 mill to ½ mill.

Provision was made for appropriating from the sinking fund during the next two years \$300,000 for the purchase of State bonds.

The sum of \$85,000 was appropriated for additional buildings at the State Insane Asylum sufficient to accommodate 300 patients.

Action upon a bill appropriating \$100,000 to secure representation of the State at the World's Columbian Exposition was postponed till final action upon the Lodge bill by Congress, and after that event the sum to be appropriated was reduced to \$25,000, and the bill was finally defeated.

Other acts of the session were as follow:

To prohibit gaming with minors.

Declaring that the lien of a mortgage or other incumbrance shall not extend to the increase or offspring of an animal subject to such lien.

Requiring insurance companies before doing business in the State to execute a bond with sureties in a sufficient sum, on which persons having claims against such companies may sue for satisfaction.

Changing the penalty for robbery to imprisonment for not less than three nor more than twenty-one years.

Legalizing all marriages heretofore solemnized by any regularly ordained minister or priest.

Establishing the Arkansas State Board of Pharmacy.

To make express companies and all other common carriers the agents of the seller when they carry intoxicating liquors in C. O. D. packages, and to make the place of delivery the place of sale.

Providing a new law with reference to quieting titles.

To punish persons who engage in prize fights either with or without gloves, or who act as second or referee, or otherwise participate in such fights.

Fixing the number of members of the State House of Representatives, and apportioning them.

Defining the line between the counties of Yell and Perry.

Accepting the act of Congress of 1890, appropriating money for the support of colleges of agriculture and mechanic arts in the several States, and apportioning eight elevenths of the money so appropriated to the Arkansas Industrial University at Fayetteville (for whites), and three elevenths to the Branch Normal College at Pine Bluff (for colored).

To incorporate the Ex-Confederate Association of Arkansas.

To change the boundary lines between Yell and Logan Counties.

To authorize the redemption of lands sold for taxes after they have been deeded to the State.

To establish chancery courts in the counties of Drew, Arkansas, Ashley, Desha, and Chicot.

Appropriating \$5,000 for additional buildings at the Arkansas School for the Blind.

Appropriating \$5,000 for a mechanical and agricultural department at the Branch Normal College of the Arkansas Industrial University.

Requiring all railroad and express companies to provide all trains with stage planks not less than eight feet in length, to be used in unloading baggage from said trains, and prohibiting the employes of such companies from tumbling baggage from the car doors or otherwise roughly handling the same so as to cause breakage or injury.

Politically the members of each House were divided as follow: Senate, Democrats 28, Union Labor and Republicans 3; House, Democrats 77, Union Labor and Republicans 12.

Penitentiary.—For the year ending Jan. 1, 1890, the population of the State Penitentiary shows the following changes: Convicts on Jan. 1, 1889, 577; received or recaptured during the

year, 393; discharged, died, or escaped, 295; remaining on Dec. 31, 1889, 675. The report for the year ending Jan. 1, 1891, is as follows: Convicts on Jan. 1, 1890, 675; received or recaptured during the year, 349; discharged, died, or escaped, 334; remaining on Dec. 31, 1890, 690. Of the number remaining on the last date all but 90 were employed outside of the Penitentiary walls, 310 being engaged at farming, 140 at farming and cutting wood, 75 at cutting wood, and 75 in railroad building. They were stationed at nine different localities. The present convict lease expires on May 7, 1893, but although there is great dissatisfaction with the lease system, the General Assembly did nothing this year toward its abolition, except to appoint a committee to investigate the subject of prison management. Any change from the lease system will involve the construction of a new Penitentiary building.

The Woodruff Defalcation.—Late in 1890 rumors were current that the retiring State Treasurer, William E. Woodruff, had been using the public funds for private purposes, and would not be able in January to turn over to his successor the full amount with which he was chargeable. Gov. Eagle, in his message to the General Assembly on Jan. 13, recommended that a joint investigating committee of both Houses be appointed. A resolution providing for such a committee, consisting of two members from the Senate and three from the House, was promptly passed, and the investigation was begun on Jan. 24. Treasurer-elect Morrow had taken control of the office one week before the latter date. The joint committee made its first report to the General Assembly on Feb. 12, in which it said that Woodruff could not produce nor account for \$63,740.57 due from him to the general revenue fund of the State, and recommended that legal proceedings be taken against him. Six days later his bondsmen came to his assistance and paid over the full amount of the shortage. The General Assembly, however, acting upon the recommendation of the committee, passed a resolution directing the Governor to suggest to the proper officers the necessity of beginning criminal proceedings against the delinquent official, and on Feb. 27 he was arrested. Bail was furnished for his appearance at the next term of the court. Meanwhile, in addition to the joint investigating committee, a joint standing committee on Treasurer's and Auditor's accounts, which is regularly appointed at each session, had been examining the condition of the Treasurer's office with the aid of experts, and about March 15 it made a report to the General Assembly, in which it claimed to find a further shortage of \$69,288. On April 4, just before the close of the session, the joint investigating committee made its final report, in which it placed the additional shortage of Woodruff at only \$25,724.06. As neither committee had made an exhaustive investigation, an act was passed on the same day authorizing the State Debt Board to take up the investigation, and complete the work in a thorough manner. This board consisted of the Governor, Auditor, and Secretary of State, but the last named, being a bondsman of the ex-Treasurer, declined to serve. The other two members entered upon their du-

ties on April 23, and, going back to a period prior to the ex-Treasurer's term, proceeded to make an exhaustive examination of all the transactions of the office. In this investigation the ex-Treasurer was represented by J. L. Bay, an expert, who attended nearly all the deliberations of the board, and who from time to time, in order to make up any deficiencies, tendered to the board securities which the ex-Treasurer had still retained in his hands. On Aug. 17, while the board were still engaged in its work, State Treasurer Morrow caused the arrest of Bay on the charge that he had abstracted certain scrip and other securities to the amount of \$100,000 from the custody of the Treasurer, to be used to offset the indebtedness of Woodruff to the State. The foundation of this charge proved to be that Bay had taken these securities from a box belonging to the State and placed them in another box in the same vault. A trial of the case resulted in the discharge of the prisoner on Sept. 17. On Sept. 30 the State Debt Board published its final report, in which the shortage in securities was found to be as follows: State scrip, \$20,526.57; bond scrip, \$5,011.34; 6-per-cent. funding bonds, \$24.19; 6-per-cent. funding bond coupons, \$11,150.86; county scrip, \$314.02; State scrip (contingent), \$101,780.01. Total shortage, \$138,789.95.

The ex-Treasurer, through his agent, Mr. Bay, had tendered to the board scrip and other securities of a face value largely in excess of this shortage, but they were not accepted as a proper tender. The courts must pass upon the legality of these tendered securities before the exact amount of the shortage can be known.

Late in June an indictment against the ex-Treasurer was found by the grand jury of Pulaski County, but his trial was postponed to await the findings of the investigating board. It began on Oct. 19, and after a long and somewhat dramatic course ended late in the month in a disagreement of the jury.

To protect the State against further defalcations, the General Assembly this year passed an act requiring the Governor to appoint secretly, at least once each year, one or two expert accountants, whose duty it shall be to examine and report the condition of the Treasurer's office. They shall be sworn to keep their appointment secret until they appear in the office to begin the examination.

World's Fair Convention.—The General Assembly of this year having adjourned without providing for representation of the State at the World's Columbian Exposition in 1893, Gov. Eagle issued a proclamation on May 26, calling a convention of delegates from the several counties to meet at Little Rock on Aug. 5 and devise means of raising money to secure a creditable exhibit of the State at the exposition. At this convention forty counties were represented by over 200 delegates. A resolution requesting the Governor to call an extra session of the General Assembly, for the purpose of passing a World's Fair appropriation bill, was voted down. It was then decided to incorporate a company, called "The Arkansas World's Fair Association," with a capital stock of \$100,000, divided into 50,000 shares of \$2 each, to which popular subscriptions should be invited. The

officers of this company were authorized to provide for the erection of suitable buildings at the exposition and to superintend the exhibit of the State therein, being assisted by a board of lady managers. The company is empowered to begin operations whenever \$10,000 of its stock has been subscribed.

Election.—To fill the vacancy on the Supreme Court bench caused by the death of Justice M. H. Sandels in November, 1890, Gov. Eagle issued a call late in December for a special election to be held on Jan. 26 following. The Democrats, in State convention at Little Rock, on Jan. 8, nominated W. W. Mansfield after taking over thirty ballots, his competitors being M. T. Sanders, R. H. Powell, B. T. Du Val, and H. G. Bunn. No other party ventured to nominate an opposition candidate. The election, therefore, evoked no popular interest, only 25,414 votes being cast, of which Mansfield received 25,057.

ASSOCIATIONS FOR THE ADVANCEMENT OF SCIENCE. American.—The fortieth meeting of the American Association was held in Washington, D. C., beginning on Aug. 19 and ending on Aug. 25, 1891. The officers of the meeting were: President, Albert B. Prescott, Ann Arbor, Mich. Vice-presidents of sections: A, Edward W. Hyde, of Cincinnati, Ohio; B, Francis E. Nipher, of St. Louis, Mo.; C, Robert C. Kedzie, of Agricultural College, Mich.; D, Thomas Gray, of Terre Haute, Ind.; E, John J. Stevenson, of New York; F, John M. Coulter, of Bloomington, Ind.; G, Joseph Jastrow, of Madison, Wis.; I, Edmund J. James, of Philadelphia, Pa. Permanent Secretary, Frederick W. Putnam, of Cambridge, Mass. General Secretary, Harvey W. Wiley, of Washington, D. C. Secretary of the Council, Amos W. Butler, of Brookville, Ind. Secretaries of the sections: A, Frank H. Bigelow, of Washington, D. C.; B, Alexander MacFarlane, of Austin, Texas; C, Thomas H. Norton, of Cincinnati, Ohio; D, William Kent, of New York City; E, W. J. McGee, of Washington, D. C.; F, Albert J. Cook, of Agricultural College, Mich.; H, William H. Holmes, of Washington, D. C.; I, Bernhard E. Fernow, of Washington, D. C. Treasurer, William Lilly, of Mauch Chunk, Pa.

Opening Proceedings.—On Nov. 13, 1890, 153 members had been elected, and on April 23, 1891, 19 additional names were passed on. Likewise, at a meeting of the council held on Aug. 17, 99 members were added to the list, and again, at a council meeting held on Aug. 18, 9 more names were added, bringing the total membership up to 2,215. These preliminary meetings of the council were held in order to pass on the various papers to be presented before the sections, and in other ways to arrange the programme for the week. The opening exercises were held in the law-lecture room of Columbian University, and the gathered scientists were called to order on the morning of Aug. 19 by President Goodale, who then introduced President Prescott. The new presiding officer briefly acknowledged the high honor conferred on him, and then presented Edwin Willits, the assistant Secretary of Agriculture, who made welcome the association to Washington with an eloquent address. The association was then more specially

welcomed to the Columbian University by its president, James C. Welling. Both of these addresses were appropriately responded to by President Prescott. The permanent secretary then made

ALBERT B. PRESCOTT.

several formal announcements, and presented his financial statement for the year ending Aug. 1, showing the total receipts to have been \$7,443.08. There was a balance left, after deducting expenditures of the year, of \$1,040.92. The balance of the Research fund is \$5,254.27. Of this the association has the right to appropriate the interest to any current work of research. The general secretary announced that the council recommended that the sections meet Wednesday, Thursday, Friday, and Saturday, from 10 to 12 A. M. and from 2 to 5 P. M. Also, that the council recommended that the amendment to the constitution proposed last year—that no one who is secretary of a section be eligible to the office of vice-president until one year after his term of office as secretary—do not pass. The report was adopted. The council reported adversely on three other proposed amendments, respectively: that no person should be eligible to election to fellowship at the same meeting at which he is elected a member; that no fellow should be eligible to election to council until one year after he has qualified; and that the annual dues be \$5, instead of \$3. This action was approved of by the association. The council reported favorably on an amendment providing for "foreign associates," only it struck out the words "foreign associates" and substituted the term "corresponding members." The amendment provides for fifty such members, to be designated by the council from scientists not residing in America. After some discussion the proposed amendment as reported by the council was adopted.

An invitation from the Southern Interstate Immigration Bureau to attend the Southern Exposition at Raleigh, N. C., in October, was read.

Address of the Retiring President.—Dr. George L. Goodale's subject was "The Possibilities of Economic Botany," and he illustrated it by examples of the useful plants which mankind may hope to employ in the near future. Speculation is rife as to the coming man; there-

fore we have a right to make conjectures as to the plants he will probably use. The cereal grains will probably remain with comparatively little change, except in the direction of better varieties for milling. To show how well understood are the methods of improving plants, Dr. Goodale said that if all the present cereals were swept out of existence our experiment stations could probably replace them by other grasses within half a century. The methods are selection and hybridization. New vegetables may be reasonably expected from Japan, that country which has already sent us many choice plants in all departments, and it is likely that some of the present vegetables which are much neglected will come into greater favor and be improved. The fruits of the future will tend more and more toward becoming seedless, just as pineapples, bananas, and some oranges are now. There is no good reason why we should not have seedless raspberries, strawberries, and blackberries, and also raise, by cutting, plums, cherries, and peaches free from stones. The useful cabinet woods and timbers, the fibers, tanning materials, gums, rubbers, and other economic products from plants were taken up in order, and the possible improvements were described. There is little doubt that synthetical chemistry will add to its triumphs many more products to those formed by plants, and this will diminish the zeal with which some of our economic plants will be cultivated. The coming fashions in florists' plants are to be in the direction of flowering branches and dwarfed plants, such as dwarfed cherries and magnolias. The old favorites will largely keep their places. Forage plants for our deserts were discussed, and reference was made to the danger of introducing pests from foreign countries. An example of this danger is afforded by sweetbrier in Australasia, which runs wild over much arable land in certain districts. The study of improvement in plants is now carried on in a judicious manner by the Agricultural Department and by the experiment stations. But there is also needed a series of gardens in different parts of our country where experiments can be carried on in a thorough manner in hybridizing and selection. The Arnold arboretum and the Shaw garden were spoken of as good illustrations of what is needed, but the desirability of establishing an institution on a scale commensurate with the wants of our country was pointed out, and the hope was expressed that such an establishment should not be governmental or academic.

Proceedings of the Sections.—There are eight sections, each of which is presided over by a vice-president. Immediately after the adjournment of the first general session the members of the different sections meet in the rooms assigned to them and organize. Their next duty is the election of one fellow to the council, followed by the election of three fellows, who, with the vice-president and the secretary, form the sectional committee; the election of a member or fellow to the nominating committee; the election of three members or fellows to act with the vice-president and secretary as the sub-committee to recommend to the nominating committee the vice-president and secretary of the next meeting. These duties having been performed, the

secretaries of the sections report to the general secretary, who then prepares with the sectional committees the programmes for the ensuing sessions. After the recess on the first day the reading of the vice-presidential addresses takes place.

Sections.—*A. Mathematics and Astronomy.*—This section was presided over by Prof. Edward W. Hyde, of the University of Cincinnati, Ohio, who chose "The Evolution of Algebra" as the subject of his address. He gave a concise presentation of the history of algebra, extending from before the Christian era to the present time, and foretelling the future of the science. The earliest traces of algebraic knowledge, he said, were in ancient Egyptian manuscripts. Records of an almost prehistoric Egyptian mathematician named Ahmes, who lived and figured and died some hundred years before Christ, were referred to as showing that this pioneer in algebra had left behind him evidence that he had performed geometrical and some algebraical problems. Scarcely anything is known of the mathematics of ancient Egypt. Among the early Greeks, before the Christian era, geometry was cultivated extensively, but very little in the way of algebra was done till about 400 A. D. Then the foundation of the algebraic science was laid by Diophantus of Alexandria. Algebra has been classified by Nesselmann as rhetorical, synopicated, and symbolical. In the first stage algebraic work was purely by reasoning in words. In the synopicated method abbreviations were introduced and used instead of words. The symbolical stage is the present one. Arbitrary characters show what was once represented by spoken words and later by abbreviations of written words. Most of the work of the early algebraists was in the rhetorical stage. Diophantus used particular characters for unknown quantities, a character for "minus," and represented addition by juxtaposition. The square and cube of the unknown quantity were represented by contractions of the words "power" and "cube." Diophantus was greatly hampered by having but one character to represent the unknown quantity, though he accomplished remarkable results by his ingenuity and the skill with which he made the necessary combinations. Algebra was early cultivated in India. The first Indian methods of which moderns know were those of Arya Bhatta, who lived six centuries before Christ. He wrote works on arithmetic, algebra, geometry, trigonometry, and astronomy, stating his rules and propositions in verse. His work was purely of the rhetorical style. The only other ancient Indian mathematician of whom moderns know was Brahma Gupta, whose period was about A. D. 700. He also figured in verse, the name of his work, Englished, being "The System of Brahma in Astronomy." These Indian writings are interesting as being the source whence the Arabs derived their first knowledge of algebra. They absorbed from the Greeks, through the translations of Euclid and others, a knowledge of geometry, mechanics, and astronomy, but there seems to have been no translation of the works of Diophantus till after they themselves had already made considerable progress. It was from the Arabs that western Europe derived its first knowledge of mathematics. Concerning the future of algebra, he said: "We have now traced

the development of our subject from its earliest beginning, then along the ancient period when it was in the rhetorical stage, approaching at intervals here and there the syncopated, then on to the revival of learning after the dark ages. We have seen the comparatively rapid progress through the syncopated stage to the purely symbolical stage, where it was at last in a shape suitable for the astounding progress of the last two hundred years. Finally, in the present century, we have noted the approach of multiple algebra from different and independent sources, whose value is the glorious future."

The following-named papers were read before the section:

"On a Digest of the Literature of the Mathematical Sciences," by Alexander S. Christie; "Latitude of the Sayre Observatory," by C. L. Doolittle; "The Secular Variation of Terrestrial Latitudes," by George C. Constock; "Groups of Stars, Binary and Multiple," by George W. Holley; "Description of the Great Spectroscope and Spectrograph constructed for the Halstead Observatory, Princeton, N. J.," and "Note on Some Recent Photographs of the Reversal of the Hydrogen Lines of Solar Prominences," by John A. Brushhear; "On a Modified Form of Zenith Telescope for determining Standard Declinations," and "On the Application of the 'Photochronograph' to the Automatic Record of Stellar Occultations, particularly Dark-limb Emissions," by David P. Todd; "The Zodiacal Light as related to Terrestrial Temperature Variation," by Oray T. Sherman; "On the Long-period Terms in the Motion of Hyperion," by Ormond Stone; "Standardizing Photographic Film without the Use of a Standard Light" and "Exhibition and Description of a New Scientific Instrument, the Aurora-Inclinometer," by Frank H. Bigelow; "The Tabulation of Light-curves: Description, Explanation, and Illustration of a New Method," and "Stellar Fluctuations: Distinguished from Variable Stars; Investigation of its Frequency," by Henry M. Parkhurst; "On Certain Space and Surface Integrals," by Thomas S. Fiske; "The Fundamental Law of Electromagnetism," by James Loudon; "Method of Controlling a Driving Clock," by Francis P. Leavenworth; "On the Bitangential of the Quintic," by William E. Heal; "Parallax of α Leonis," by Jefferson E. Kershner; also, in joint session of Sections A and B, "Principles of the Algebra of Physics," by Alexander Macfarlane.

B. Physics.—The presiding officer of this section was Prof. Francis E. Nipher, of Washington University, St. Louis, Mo. He discussed the "Functions and Nature of the Ether of Space."

In former days the reasons given for the existence of ether do not seem conclusive now. For years it was taught that light was an elastic pulsation in an incompressible jelly-like medium. Some of the mathematical deductions of Green he could only reconcile with the observed phenomena by making the ether incompressible. In 1865 Maxwell proposed his theory that light was an electric displacement in a plane at right angles to the line of propagation. Maxwell's theory met with great favor, and afforded simple and natural explanations for phenomena which had previously been clouded by rather strained assumptions. In 1888 Sir William Thomson brought a powerful re-enforcement to the elastic theory. He showed that the compression wave might be got rid of in the theory by making the velocity of the compression wave zero instead of infinity. Thomson found that this assumption did not involve an unstable condition of the

medium, and that therefore it was admissible. It was also shown at once by Thomson, Willard Gibbs, and Fitzgerald that this new suggestion placed the elastic and electric theories on the same logical basis if the ether was considered incompressible in the electric theory and to have a rigidity zero for a compression wave in the elastic theory. The showing of light in space occupied by matter shows that the ether within must be less elastic than that in free space. It is certainly difficult to understand what there can be in the molecules of matter which can increase the density of an incompressible medium. The beautiful experiment of Michelson and Morley shows apparently that the ether at the surface of the earth moves with it. It is dragged along as if it were a liquid. The field of a steel magnet is, however, a rotational phenomenon. It is a spin which is maintained permanently without the expenditure of energy. It seems, therefore, that the resistance to shear which shows itself in the adhesion of the ether to the moving earth must be a rigidity due in some way to motion. Other experiments of Michelson and Morley on the motion of light in moving columns of water have been taken as proof that the ether in water is condensed to nine sixteenths of its volume in air. The ether in water certainly behaves as if it were more dense, but it is another matter to say that it is so. It is still a mathematical fiction which covers a gap in our knowledge of the ether. He thought that the experiment should be repeated with water at rest within a tube which should be mounted on elastic supports in a moving railway car. The water tube and the observer's seat should be rigidly connected, and swung on dampened spring supports from the top and sides of the car. The question to be settled is whether the ether or any part of it is at rest in space, and does it sweep through the interior of bodies which move through it, as wind sweeps through the leaves and branches of a tree. This form of the experiment is the one contemplated by Eisenlohr's analysis leading to Fresnel's formula, and it is capable of great variations in the conditions of experiment. Whatever its results may be, it promises to add greatly to our knowledge of the physics of the ether.

The following-named papers were then read before the section:

"On the Logarithmic Mean Distance between Pairs of Points in any Two Lines," by William Hoover; "A New Method for measuring the Expansion of Solids," by Edward W. Morley; "Measurement of the Expansion of Jessup's Steel by a New Method," by Edward W. Morley and William A. Rogers; "Statement of the General Law determining the Fusing and Boiling Point of any Compound under any Pressure as Simple Function of the Chemical Constitution of the Same," by Gustavus Hinrichs; "The Calculation of the Boiling Point of a Liquid under any Pressure"; "Determination of the Discontinuity of the Fusing Points of Paraffins by Means of Analytical Mechanics"; "A Scheme for a Science of Color," by William Orr; "Note on Magnetic Measurements at Ohio State University" and "Notes on Rotating Contact Methods of Measurement of Variable Electric Magnitudes," by Benjamin F. Thomas; "The Periodicity of the Aurora," by Major A. Veeder; "Some Forms of Carbon and Alkaline Storage Batteries" and "The Tangent Galvanometer as a Voltmeter," by W. M. Stine; "Do Tornadoes whirl?" and "Artificial Rain," by Henry A. Hazen; "Observations with a

New Photometer," by Nelson H. Genung and Frederick J. Rogers; "Magnesium as a Source of Light," by Frederick J. Rogers; "Note on the Measurement of Resistances by Alternating Currents," "The Nature of Counter-electromotive Force," and "What should be our Fundamental Units?" by Brown Ayres; "Behavior of Silver Emulsions under Long Exposure to Light" and "Color Photography by Lippmann's Process," by Charles B. Thwing; "On the Nomenclature for Physical Units, by Alexander Macfarlane; and "Some Experiments in Atmospheric Electricity," by Alexander MacAdie.

C. Chemistry.—This section was presided over by Prof. Robert C. Kedzie, who fills the chair of Chemistry at the Michigan State Agricultural College. His subject was "Alchemy."

Alchemy is often called the forerunner of chemistry, and out of its broken columns there has been built up the enduring temple of chemical science. No science has a firmer basis of known facts than chemistry, the basic principles upon which it is built can be examined without fear that the foundation stones will turn to dust upon the touch of investigation. The results of the labors and discoveries of the alchemists have been of great value to the world, even though the direct objects they sought forever eluded their grasp and left disappointment and despair to their votaries. The objective points of the alchemists were the elixir of life, the alcahest or universal solvent, and the philosopher's stone.

The indestructibility of matter, and the possibility of recovering a given substance notwithstanding all its disguises by combination with other bodies—the persistence of matter and the immanence of its properties—were grand discoveries in material science. They marked the transition from alchemy to chemistry. The recognition of the indestructibility of force was the second great step, the crowning discovery of modern physics. In the words of Faraday, "It is the highest law in physical science which our faculties permit us to perceive."

Shall we take a third step, and proclaim the permanence of force but the destructibility of matter; that the atom may have a life, grow old, and die or pass back into primitive nothingness, or become the ether of which we talk so much and know so little? Shall we assume that radiant force may be changed into matter and fall under the law of gravitation? No single thought has contributed so much to give form and permanence to chemical science as the atom of Dalton. An atomic theory was indeed held by the Greeks in regard to the constitution of matter, but it related chiefly to the question of the continuity or discontinuity of matter in mass, and considered the question of the limited or unlimited divisibility of matter. But the chemical atom, with its application in explaining the law of definite and of multiple proportions by weight in chemical combinations, was the gift of the Quaker schoolmaster of Birmingham.

The question has been seriously raised by an American chemist whether gold can be manufactured. On the affirmative side of this question he points to the fact that didymium has been split into two metals, and by recombining these two new metals the old didymium was again formed. "These facts make it probable that the so-called chemical elements are not

really elements, but compounds, which in time we shall be able to separate into their constituents and to reproduce by combining other substances. Among the heavy elements—and hence those that would be expected to yield to the attacks of the chemist—is gold. It is not improbable that in time it will become possible to make gold in large quantities—an event which would throw it out of use as a standard of value, so far as it derives its own value from its rarity." The statement that didymium is a compound metal is of great interest to the chemist. But the fact that the reunion of these metals will form the old metal or alloy is not so surprising, but is what any chemist would expect. But how do such facts show the probability, or even possibility, of making any given metal out of heterogeneous materials? If the combination of cerium and samarium would form didymium, then a plausible case would be made out. But if praseodymium and neodymium are required to make didymium, how are we nearer the manufacture of this last metal by such discovery? We must still have the two new metals to make the old metal. Suppose that gold can be split into two or ten new metals the reunion of which will form gold, does this bring us one whit nearer the new age of gold? If it takes gold to make gold, what part or lot have baser metals in such transformations?

In conclusion, he said that "the hypothesis of the evolution of the chemical atoms by aggregation or polymerization of one-matter substance challenges scientific thought. Based upon broad assumptions and sustained entirely by analogy, it will hardly disturb the relative coinage value of the metals by holding out hopes of alchemical transmutation. The advice of William Crookes, to treat it simply as a provisional hypothesis, is conservative and wise."

The following-named papers were then read:

"Preliminary Notes on the Influence of Swamp Waters on the Formation of the Phosphate Nodules of South Carolina," by Charles L. Reese; "Land and River Phosphate Pebbles or Nodules of Florida," by Edward T. Cox; "A Latent Characteristic of Aluminium," by Alfred Springer; "The Influence of Negative Atoms and Groups of Atoms on Organic Compounds," by Paul C. Freer; "Gabbro Phonolyte," by Edward Goldsmith; "Raphides the Cause of the Acidity of Certain Plants," by Henry A. Weber; "The Calculation of the Boiling Point of a Paraffin under any Pressure," "The Calculation of the Boiling Points of Isomerics from their Moment of Inertia," and "Determination of the True Position of the Carbon Atoms in Organic Compounds by Means of Analytical Mechanics," by Gustavus Hinrichs; "Distribution of Titanic Oxide on the Earth's Surface," by Francis P. Dunnington; "The Precipitation of Fish Oil in Linseed Oil, when used as an Adulterant, by Silver Nitrate Solution," and "The Separation and Precipitation of Oleic Acid from Linseed Oil by Silver Nitrate," by Thomas Taylor; "Biological Function of the Lecithins," by Walter Maxwell; "Synthesis of Weighed Quantities of Water from Weighed Quantities of Oxygen and Hydrogen," by Edward W. Morley; "Purification of Worcester Sewage by Chemical-Precipitation," and "Fire-clay from Mount Savage," by Leonard P. Kinnicutt; "Di-Nitro-Sulfo-Phenol," by Edward Hart; "An Inquiry relative to the Causes leading to the Formation of Ore Deposits," by W. A. Chapman; "Delicacy of the Tests for Phenol," by John G. Spenser; "An Aceto Acetic Ether," by J. U. Nef; "On Plattnerite from Idaho,"

by William S. Yeates; "The Chemistry of Some Disease Germs," and "A Convenient Arrangement for a Pasteur Filter where Air Pressure is available," by Emil A. v. Schweinitz; "Notes on Pinite," "Note on the Chemical Composition of Muck Soil from Florida," and "Composition of Crystalline Artificial Calcium Phosphate," by Harvey W. Wiley; "Meat Preservatives," by J. Thomas Davis; "Determination of Phosphoric Acid in Presence of Iron and Alumina," by William H. King; "Continuous-feed Apparatus for distilling Water," by W. M. Stine; "The Atomic Theory," by Clarence L. Speyers; "Imitation Coffees," by Guilford L. Spencer and Ervin E. Ewell; "The Composition of Floridite," by Harvey W. Wiley and William H. King; "Tri-nitro Toluene, a Substitute for Musk," by William H. Seaman.

A report of the Committee on the Spelling and Pronunciation of Chemical Terms was presented before this section.

D. Mechanical Science and Engineering.—The presiding officer of this section was Prof. Thomas Gray, who fills the chair of Dynamic Engineering in the Rose Polytechnic Institute in Terre Haute, Ind. His address was a carefully prepared and valuable discourse on "Problems in Mathematical Science." It was quite technical in character, and dealt with the teachings of mathematics and physics in their application to engineering. He discussed the instruction in manual-training schools, trade schools, and technical schools, and the objects sought to be attained by training in such schools. Good results followed the adoption of manual training for boys and girls, but the idea of teaching a trade in a trade school was deprecated. It could be far better done in a workshop, where the actual practice could be had by the learner. The old idea of apprenticeship is better in every way. He spoke warmly of the good results that have followed higher education of every sort in technological colleges, and outlined the great benefits that will accrue to mechanical science from this source. The teachings of a more practical character, both in mathematics and theoretical dynamics, were advocated as desirable for technical colleges and similar institutions. Some of the directions in which technical research should be pushed, especially in the technical schools, referring chiefly to the properties of steam and its behavior in steam engines, were indicated. Great results from the direct combustion of fuel in the engine cylinder itself, after the manner in which it is accomplished in the gas engine, were predicted by him. In closing, the very great development of electrical engineering was referred to, especially in its application to street and other motors and to the distribution of power.

The following papers were read before the section:

"Economy produced by the Use of Water injected as a Fine Spray into Air Compressors," "On a Method of holding Samples of Wood and Brick for Determination of Tensile Strength," "Note on the Efficiency of the Screw Propeller," and "Relative Economy of Compound and Triple Expansion Engines," by James E. Denton; "On Experimental Results obtained with a New Form of Direct-Action Propeller," by David P. Todd; "The Government Timber Tests," by Bernhard E. Fernow; "The United States Tests of American Woods, made at the Washington University Testing Laboratory," by John B. Johnson; "On the Crushing of Short Prisms of Homogeneous Material," by Charles L. Bouton; "On Expan-

sion Steam Calorimeters," "Tests of Electric Railway Plant," and "On the Power absorbed in the Cutting of Metals," by Thomas Gray; "Maximum Error due to neglecting the Radiation Correction of a Barrus Universal Calorimeter," and "Relative Economy of Carbonic Acid as the Working Fluid of Refrigerating Machines," by D. S. Jacobus; "On the Efficiency of the Steam Jackets of the Pawtucket Pumping Engine," and "On the Opportunity for Mechanical Research at the World's Fair," by William Kent.

E. Geology and Geography.—This section was presided over by Prof. John J. Stevenson, of the University of the City of New York, who spoke on "The Relations of the Chemung and Catskill on the Eastern Side of the Appalachian Basin."

He prefaced his address with some historical notes respecting early studies of these groups, especially referring to the surveys of Virginia, Pennsylvania, and New York, which were conducted during the years 1837 to 1841. He traced the groups along the eastern outcrop from Tennessee into New York, across southern and western Pennsylvania and eastward through northern Pennsylvania again into New York. In this way the continuity of the section was shown, and the insignificance of the variations was insisted upon strongly. An area in southeastern New York and northeastern Pennsylvania in which the Chemung group is almost without trace of animal or vegetable life through the greater part of the thickness was described. The absence of life was thought to be due not to fresh water, but to turbidity of the water in a shallow basin near the land. The facts that the horizons of fish remains are much lower in the column than had been supposed, and that the plant remains come in like manner from the home group, were thought to be of especial interest and importance.

His conclusions were:

1. That the series, from the beginning of the Portage to the end of the Catskill, form but one period, the Chemung, which should be divided into three epochs: the Portage, the Chemung, and the Catskill.
2. That the disappearance of animal and vegetable life on so great a part of this area toward the close of the period was due simply to gradual extension of conditions existing, perhaps, as early as the Hamilton period in southeastern New York.
3. That the deposits were not made in a closed sea, but that the influx of great rivers, with their load of *débris*, made conditions in the shallow basin such that animal life could not exist.
4. That in the present state of our knowledge we are not justified in including the Chemung period in the carboniferous age.

The following-named papers were read before the section:

"Source of Supply to Lateral and Medial Moraines," by John T. Campbell; "New Meteoric Iron from Arizona containing Diamonds," by A. E. Foote; "Post-glacial Anticlinal Ridges near Ripley and Caledonia, New York," by Grove K. Gilbert; "Purposes of Mountain Building and their Relationship to the Earth's Construction," by Warren Upham; "Notes on an Extinct Volcano at Montreal, Canada," by Henry Lampard; "On a New Horizon of Fossil Fishes," and "On the Cranial Characters of *Equus excelsus* Leidy," by Edward D. Cope; "On Problematic Organisms and the Preservation of Algae as Fossils," and "On the Age of the Mount Pleasant, Ohio, Beds," by Joseph F. James; "Preliminary Report of Observations at the Deep Well near Wheeling, W. Va.," by William Hallock; "The Eureka Shale of Northern Arkansas," by Thomas C. Hopkins;

"The Attitude of the Eastern and Central Portions of the United States during the Glacial Period," by Thomas C. Chamberlin; "Neocene and Pleistocene Continent Movements," by W. J. McGee; "Fossil Tracks in the Triassic of York County, Pa.," by Atrous Wanner; "New Footprints of the Connecticut Valley," by M. N. Mitievier; "The Plant-Bearing Deposits of the American Trias," and "Principles and Methods of Geologic Correlation by means of Fossil Plants," by Lester F. Ward; "A Reply to Professor Marsh's Note on Mesozoic Mammalia," by Henry F. Osborn; "Exhibition of Certain Bones of *Megalonox* not before known," by James M. Safford; "On the Probable Existence of a Second Driftless Area in the Mississippi Basin," by Rollin D. Salisbury; "The Cincinnati Ice Dam," by Frank Leverett; "The Structure of the Ouachita Uplift of Arkansas," by Leon S. Griswold; "The Relations of the Archean and the Algonkian in the Northwest," by Charles R. Van Hise; "Results of a Well Boring at Rochester, N. Y.," by Herman L. Fairchild; "On a Deep Bore near Akron, Ohio," by Edward W. Claypole; "A Study of the Fossil Avifauna of the Silver Lake Region, Oregon," by R. W. Shufeldt; "The Peninsula and Volcano Cosignina," and "The Geological Survey of Nicaragua," by John Crawford; "The Highest Old Shore Line on Mackinac Island," by F. B. Taylor; and "Striae and Slickensides at Alton, Illinois," by James E. Todd.

F. Biology.—This section was presided over by Prof. John M. Coulter, President of Indiana University. He chose for the topic of his address "The Future of Systematic Botany." The ancient history of systematic botany is too well known to need even brief repetition, but the one desire which runs with increasing force through it all is to reach eventually a natural system of classification. At first, from necessity, plants were simply systematically pigeon-holed for future reference, and those who could thus dispose of plants were known as "systematic botanists," an appellation proper enough, but one unfortunately not having sufficiently outgrown its original application. The deplorable result of this early necessity of so rigidly systematizing facts, and thus rendering them accessible, was to make the pigeon-holes as permanent as the facts they were intended temporarily to contain.

Systematic botany has probably done all that it could, unaided, in the natural arrangement of plants. But it was not left without aid, and a group of new departments was made possible by the microscope and the unexampled progress of powers and manipulation. The study of the cell and of nascent and mature organs, and the recognition of plants as living things that are the resultant of the interplay of internal and external forces, have revived the ancient mummy called botany, and have made it a living thing, capable of endless development. The real systematic botany is to sum up and utilize the results of all other departments, and its work is well-nigh all in the future. The systematic botany which deals with generic characters and recognizes the fact that every plant is a living thing, with a history and all degrees of consanguinity, and that the final form of every natural classification must be to approximate to the order of descent, is in its early infancy.

For the systematists of to-day and of the future there must be three distinct lines of work, related to each other in natural sequence in the order presented, and each turning over its completed product to the next.

I. Collection and Description of Plants.—Many things besides the mere sporadic collection and recording of species should be included as legitimately belonging to this line of research. A plant is too often a text without any context, and is thus robbed of much of its significance. Nothing seems more unsystematic than field work in systematic botany. All information that can be obtained in the field concerning species is the province of the collector to procure and of the taxonomist to record.

In reference to the work of description, an unpublished note of Prof. Asa Gray, in which that distinguished botanist lamented the work of those who were incompetent, was read. The opinion that the exclusive use of gross organs in the description of higher plants would be given up, and that the more stable, minute characters would prove valuable aids in steadying diagnosis, was expressed. The character of a species is an extremely composite affair, and it must stand or fall by the sum total of its peculiarities, and not by a single one.

II. Study of Life Histories.—The work of searching for the affinities of great groups is the crying need of systematic botany to-day. The danger of magnifying the importance of certain periods or organs in indicating affinities, was summed up as follows: "I have thus spoken of the study of life histories to indicate that its chief function lies in the field of systematic botany: to suggest that it take into account development at every period and of every organ, and so obtain a mass of cumulative evidence for safe generalization; and to urge upon those not thoroughly equipped great caution in publication."

III. Construction of a Natural System.—The necessity of constructing a natural system with easy advance in the knowledge of affinities, as a convenient summary of information, to tell of progress and to direct future effort, was advocated. His concluding summary was: "The points presented in this consideration of the third phase of systematic botany are that the last and highest expression of systematic work is the construction of a natural system, based upon the accumulations of those who collect and describe and those who study life histories; that this work involves the completest command of literature and the highest powers of generalization; that it is essential to progress for a natural system to be attempted with every advance in knowledge; and that all the known facts of affinity thus brought within reach should be expressed in all systematic literature."

The following-named papers were read before this section:

"Notes on the Physiological and Structural Changes in Cayuga Lake Lampreys," and "Notes on the Heart of Certain Mammals," by Ida H. Hyde; "The Transformation of the Vermilion Spotted Newt," by Simon H. Gage; "On the Kinds of Motion of the Ultimate Units of Contractile Living Matter," by John A. Ryder; "On the Insertion of the Scapular and Pelvic Arches and Limbs of *Laecertilia*," and "On Coloration in Certain Reptilia," by Edward D. Cope; "On the Structure and Dimorphism of *Hypocrea Tuberiformis*," by George F. Atkinson; "Another Chapter in the History of the Venus Fly-Trap," by John M. Macfarlane; "On the Prothallium and Embryo of *Osmunda Claytoniana* and *O. Cinnamomea*," by Doug-

las H. Campbell; "A New Nectria," "Notes upon Bacteria of Cucurbits," and "Notes upon an Anthracnose," by Byron D. Halstead; "The Compositae collected by Dr. Edward Palmer in Colima," and "The Flora of Carmen Island," by Joseph N. Rose; "Uses of the Fermentation Tube in Bacteriology, with Demonstrations," by Theobald Smith; "The Foraminifera, with a New Device for the Exhibition of Specimens," by James M. Flint; "A Monograph of the Carolina Parakeet," by Edwin M. Hasbrouck; "Transpiration, or the Loss of Water in Plants," by Charles E. Bessey and Albert F. Woods; "Movement of Fluids in Plants," by William J. Beal; "Absorption of Fluids by Plants," by L. H. Pammel; "Gases in Plants," by J. C. Arthur; "Origin and Development of Parasitic Habit in Mallophaga and Pediculidae," by Herbert Osborn; "The Origin and Development of Parasitism among the Sarcophagidae," by Harrison Garman; "On the Habits of the Proctotrypidae," by William H. Ashmead; "The Biology of the Chalcididae," by Leland O. Howard; "Parasitism in Coleoptera, in Diptera, in Braconidae, and Ichneumonidae," and "Micro-organisms as Insecticides," by Charles V. Riley; "Enemies of the Honey-Bee," and "Abnormal Bees," by Albert J. Cook; "Notes on the Homology of the Hemipterous Moth," "Epipharynx and Hypopharynx of Odonata," and "The Mouth of Copris Carolina, and Notes on the Homology of the Mandible," by John B. Smith; "On the Phylogeny of the Archegoniata," by Douglas H. Campbell; "On the Ejection of Blood from the Eyes of Horned Toads" and "On the Turtles of the Genus *Malaclemys*," by O. P. Hay; "The Present Condition of the Study of the Deep-sea Fishes," by G. Brown Goode; "On the Importance of a Table at the Naples Station," by Charles W. Stiles; "Further Observations on a Bacterial Disease of Oats," by B. T. Gallo-way; "Botanical Field-work of the Botanical Division," by George Vasey; "Results from Recent Investigations of Pear Blight," by M. B. Waite; "The Spectroscope in Botanical Studies," by John A. Brashear; "The Persistence and Relation of Faunal Realms," and "The New Zealand Fish Fauna," by Theodore Gill; "A Case of the Loss of Sense of Smell," and "A Novel Color Illusion, and a New Method of Color Mixture," by Joseph Jastrow; "Modification of Habit in Paper-making Wasps," by Mary E. Murtfeldt; and "The Fate of the Fur Seal in American Waters," by William Palmer.

H. Anthropology.—This section was presided over by Prof. Joseph Jastrow, who fills the chair of Experimental and Comparative Psychology in the University of Wisconsin. His address was entitled "The Natural History of Analogy." Analogy was a very predominant method of argument among primitive people. He defined analogy by speaking of infants of a further degree of resemblance from a given degree of resemblance. The various types of agreement differing slightly from the standard were also treated. In almost all savage customs and beliefs, he said, abundant instances of reasoning by analogy were to be found. In magical practices, in interpretations of omens and dreams, in medicinal practices and social and tribal customs, striking instances of analogous argument abounded. The Zulu who chews a bit of wood to soften the heart of the man he wants to buy an ox from, the fetich determining by whether a stick stands or falls whether a war shall be kept up or allowed to stop; the medicine-man who performs incantations over some personal belonging of his victim or by the use of out-of-the-way drugs—all these were instanced as the results of analogy or a feeling of analogy. Similar traits in children were described and illus-

trated. He said that an abundant field of illustration was found in the popular superstitions, folk lore, and customs that have survived from a lower to a higher culture. The modern dream-book, household medicinal practices, charms, and, in the more elaborate system of details of astrology, the doctrine of sympathies and kindred pseudo-sciences, were the fields from which he took his illustrations. From this, progressive scientific thought had reached its present place instead of the shifting position once occupied by the argument of analogy. He concluded with: "That which was serious reasoning to our forefathers, now takes its place as a proper instrument for amusement and lies at the basis of a joke. This offspring of our race is also connected by history with this earlier form; and, furthermore, close relation is traced between the by-paths of modern civilization and the outgrown forms of culture among which it originated."

The following are the titles of the papers read before the section:

"The Essentials of a Good Education, with a New Classification of Knowledge," by William H. Seaman; "The Custom of Kava Drinking as practiced by the Papuans and Polynesians," by Walter Hough; "A Linguistic Map of North America," by John W. Powell; "Jade Implements from Mexico and Central America," and "Gold Ornaments in the United States National Museum from the United States of Colombia," by Thomas Wilson; "Siouan Onomatopoeic Interjections, and Phonetic Types," and "Games of Teton Dakota Children," by J. Owen Dorsey; "On a Collection of Stone Pipes from Vermont," and "On Bone, Copper, and Slate Implements found in Vermont," by George H. Perkins; "The Importance and Methods of the Science of Comparative Religion," by Merwin M. Snell; "An Experiment in Human Stirpiculture," by Anita N. McGee; "Relics of Ancient Mexican Civilization," by Zelia Nuttall; "Bow-Stretchers," and "Prehistoric Bows," by Edward S. Morse; "The Nez Perce Country," by Alice C. Fletcher; "Relation of a Loveland (Ohio) Implement-bearing Terrace to the Moraines of the Ice-Sheet," by Frank Leverett; "Utility of Psychological Study of Child Life," by Laura O. Talbot; "Origin of the Name Chautauqua," by Albert Gatschet; "Outlines of Zuñi Creation and Migration Myths considered in their Relation to the Ka-ka and other Dramas or So-called Dances," by Frank H. Cushing; "An Ancient Human Cranium from Southern Mexico," by Frederick W. Putnam; "The Length of a Generation," by Calvin M. Woodward; "Burial Customs of the Hurons," by Charles A. Hirschfelder; "The Messiah Religion and the Ghost Dance," by James Mooney; "Study of a Dwarf," by Frank Baker; "Stone Drills and Perforations in Stone from the Susquehanna River," by Atreus Wanner; "Geographical Arrangement of Prehistoric Objects in the United States National Museum," "Curious Forms of Chipped Stone Implements found in Italy, Honduras, and the United States," "Inventions of Antiquity," and "Evidences of the High Antiquity of Man in America," by Thomas Wilson; "Some Archaeological Contraventions," by Gerard Fowke; "On the Distribution of Stone Implements in the Tide-water Province," and "Aboriginal Novaculite Quarries in Arkansas," by William H. Holmes; "Study of Automatic Motion," by Joseph Jastrow; "Race Survivals and Race Mixture in Great Britain," by W. H. Babcock.

I. Economic Science and Statistics.—The presiding officer of this section was Prof. Edmund J. James, who holds the chair of Public Finance and Administration in the Wharton School of Finance and Economy of the Univer-

sity of Pennsylvania. His theme was "The American Farmer, his Present Economic Condition and Future Prospects." The condition of the farming class is at present exciting keen attention in nearly every civilized country. The politics and economics of the United States, England, France, Germany, Austria, and even Russia, are busied to-day with the farmer as they never were before. The farmer question, therefore, is no longer a local question, no longer confined to the United States, but is world-wide in its importance, and must be considered to some extent in its international aspects. The remarkable phenomena occurring in connection with the Farmers' Alliance movements show at once how deeply the iron has entered into the soul of the American farmer, and how thoroughly he has become aware that for some reason or other he is not keeping pace in his material, intellectual, and social progress with other classes in the community. It is not surprising that in this awakening he should not at first perceive the true source of his ills, and that he should attribute many of the disadvantages under which he labors to the machinations of other social classes. It is natural that he should see in the railroads, in the gold bugs of Wall Street, in the tariff on imports, in the banks and bankers, and in the monetary policy of the Government, the bitter enemies of his prosperity. Nothing will be gained for us, either from an economic or political point of view, by belittling or deriding the views of Western farmers on the money question, on the tariff, on the railroad policy, on taxation, and other similar topics. The American farmer has a grievance which must be carefully studied by students of economics and statistics, to ascertain, if possible, how far it is justified, and whether it can be remedied, and, if so, by what means.

The wealth of the United States is flowing away from its farms into its factories and railroads; from the country into the city; from the rural into the urban districts. The policy of our railroad companies has borne hard upon the individual farmer and upon the farmer as a class. It has altered all the conditions of agriculture in many sections of the country, and in nearly all of them in such a way as needlessly to burden and embarrass the farmer. The Granger legislation of the Western States was a perfectly justifiable attempt to check the wanton aggression of many railroad managers upon the fundamental rights of the rural classes, and, though it was at many points unsuccessful, it was the first distinct step in a policy of controlling railroad management in the interests of the public. Our system of taxation as a whole rests most heavily upon the farmer.

Nor is there any doubt that the financial policy of the country, using that term in the broadest sense, as including the whole system of monetary transactions built up by the combination of governmental action and private initiative, discriminates very directly and keenly against the farmer and the farming class. Nor can it be said that the tariff policy of the country has been managed, at least directly, with an eye as much to the farmer's interest as to that of other classes.

It is no wonder, then, that the American farmer is in a bad way, and likely to be in a

worse one. Along what line does improvement lie? In the first place, of course, in the direction of altering the influences above referred to. Railway policy must be altered at many points—at some of them fundamentally. The system of taxation must be readjusted and the farmer relieved of unjust burdens. The tariff must be improved; the banking and general monetary policy of the country changed in many respects.

The forces which are crowding the American farmer to the wall are world-wide, and not merely national forces. He is going to the wall because he is trying to compete with farmers of a low grade of intelligence and civilization in the production of crops where intelligence and civilization count for comparatively little.

The American farmer must seek new crops where intelligence and skill count for more than mere fertility of soil or juxtaposition to market, and where, having once established himself, he may bid defiance to the ignorance and inefficiency of the foreign peasant. This calls for a broad and liberal policy toward agriculture in all its relations.

If our farmers' alliances, grangers' associations, horny-handed sons of toil conventions, etc., would, with all their getting, get understanding, would, after securing—or better, while securing—needed reforms in the railway, tax, tariff, and monetary policy of the country, go to the very root of the matter, viz., remedy the indolence, ignorance, conservatism of the farming classes themselves in all that pertains to agriculture, no American could have cause to fear even the wildest propositions of the flat-money anti-corporation demagogue.

The following-named papers were read:

"The Necessity for State Supervision of Railway Extension," by Benjamin W. Snow; "The Economic Value of Cooking-Schools in the District of Columbia," by Laura O. Talbott; "The Code of Inheritance," by Richard T. Colburn; "Numerical Relations between Amount and Value of United States Potato Crop and Amount of Importations," and "United States Mercantile Marine and Duty Rates," by Henry Farquhar; "The Muck Soils of the Florida Peninsula," by Harvey W. Wiley; "The Artesian Wells and Underground Waters of Central Texas," by Robert T. Hill; "Energy as a Factor in Rural Economy," by Manly Miles; "World's Columbian Exposition," by Alexander D. Alexander; "Free Coinage: why not?" by Edward Atkinson; "The Coinage Ratio in our Silver Policy," by Edward T. Peters; "The Eleventh Census and Statistics of Manufacture," and "Permanent Census Bureau," by George A. Priest; "Tabulation Errors of Census," by Mrs. M. C. Baker; "The Locust or Grasshopper Outlook," by Charles V. Riley; "Immigration as an Economic Sociologic Problem," and "The Economy and Thrift of Machinery," by Charles S. Hill; "The Census-counting Machine," by John S. Billings; "On a Measure of the Reliability of Census Enumeration," by Alexander S. Christie; "A National University: its Character and Purposes," and "The Science and Art of Government," by Lester F. Ward; "The Southern Old Fields," by W. J. McGee; "Agriculture by Irrigation: Some Social Economic Possibilities," by Richard J. Hinton; "Water Management the Problem of the Future," by Bernhard E. Fernow; and "The Needs of the American Flax-fiber Industry," by Charles R. Dodge.

Popular Features of the Proceedings.—On the evening of Aug. 19 a reception was given to the association by the Board of Trade of

Washington, in the parlor of the Arlington, at which numerous addresses were made, including one by Secretary Foster. A musical entertainment in the private grounds of the Executive Mansion, at which the United States Marine Band played, was given to the association, by direction of the President, on Aug. 20. A lecture complimentary to the citizens of Washington was delivered, on the evening of Aug. 21, in the United States National Museum, by Dr. John M. Macfarlane, on "Illustrations of Heredity in Plant Hybrids," subsequent to which the museum was thrown open to the members for inspection of the collections. On Aug. 24 an excursion to Baltimore, by special train, was provided for. Upon arrival at Locust Point the steamer "Latrobe" met the party and proceeded across the bay to the Maryland Steel Company's works at Sparrow's Point, where the blast furnaces, Bessemer steel converter, and steel rolling mills were inspected. After luncheon on the steamer, a visit was paid to the Baltimore Sugar Refinery. The steamer then returned to the city, and the party visited the Johns Hopkins Hospital and the Johns Hopkins University. A complimentary excursion to Mount Vernon was tendered on Aug. 25 to the association by the scientific societies of Washington. Three general excursions were arranged for, as follow: (1) To Harper's Ferry and Luray, visiting the famous caverns; (2) to Atlantic City, visiting the lighthouse and life-saving station; and (3) to Old Point Comfort, Norfolk, and Virginia Beach, visiting Fort Monroe, Hampton, the Soldiers' Home, Normal School, and other features. Throughout the meeting, through the courtesy of the department chiefs, the various Government bureaus were opened to the members of the association, and on the afternoon and evening of Aug. 24 the Corcoran Gallery was opened to the visiting scientists.

Affiliated Organizations.—Prior to the meeting of the association the American Microscopical Society was convened on Aug. 11 and 12. The Association of American Agricultural Colleges and Experiment Stations held daily sessions on Aug. 13, 14, and 15. Under the terms of the trust which endows in perpetuity the agricultural work of Lawes and Gilbert at Rothamsted, England, a representative of this place is to visit America every three years as an exponent of its work. The first of these visits occurred during the Washington meeting, and Robert Warrington, F. C. S., the chemist at Rothamsted, was the representative. The Association of Official Agricultural Chemists met on Aug. 13, and held sessions for two days. The Society for the Promotion of Agricultural Science held its meetings on Aug. 17 and 18. A conference of American chemists, under the auspices of the American Chemical Society and the Washington Chemical Society, met on Aug. 17 and 18. The Association of Economic Entomologists convened on Aug. 18 and 19. J. A. Lintner, of Albany, N. Y., was chosen president of this body. The Botanical Club of the association held regular meetings on Aug. 20, 21, and 22. Prior to the regular meetings of the association William M. Canby was its president. Similarly the Entomological Club of the association met daily during the meeting.

After the meeting of the association the Geological Society of America held its summer meeting, on Aug. 24 and 25; and, finally, the International Congress of Geologists began its meetings on Aug. 26, and continued them with daily sessions until Sept. 1.

Final Sessions.—The final general meeting was held on the evening of Aug. 25, at which time the list of officers given below was elected, and the place of the next meeting decided on. A proposition to increase the research funds was advocated by John A. Brashear, who fixed the limit at \$100,000, and a committee was appointed, of which he was made chairman.

The Committee on Forestry reported that its efforts had, in part, at least, caused a change in the laws regulating public lands, which authorizes the President to use his discretion in the disposal of public timber lands. The report showed that the American Forestry Association had prepared a memorial, in which reservations, comprising several million acres will be asked in Minnesota, Montana, Idaho, Colorado, New Mexico, and California, and in the enlarged boundaries of the Yellowstone Park. The committee was continued to enable it to carry on the work of securing the enactment of such laws as will protect and provide for the administration of the lands thus reserved. Action was also taken upon a recommendation from the section on biology, favoring the petitioning of Congress for the establishing in the District of Columbia of an arboretum, under the direction of the Department of Agriculture. A resolution was also adopted calling the attention of the Secretary of Agriculture to the advisability of utilizing the Weather Bureau, the various agricultural experiment stations, and institutions of a similar character, for the purpose of forming a service of water statistics and making a careful survey of the condition of water supplies, which may serve as a basis for the application of proper principles of water management. Agreeably to a communication from the Australasian Association for the Advancement of Science, a committee was appointed to form part of an international committee to make a uniform system of biological nomenclature, that committee being Simon H. Gage, Charles T. Minot, John M. Coulter, Theodore Gill, and George L. Goodale. The meeting as a whole was a most successful one; 291 papers were read before the sections, against 259 for last year. There were 653 members in attendance, in comparison with 364 last year; and subsequent to Aug. 18, 91 new names were added to the list, making a total of 371 members elected since the meeting last year.

Next Meeting.—In 1892 the association will meet in Rochester, N. Y., and the time appointed is the third Wednesday in August. The following officers were chosen: President, Joseph Le Conte, Berkeley, Cal. Vice-Presidents: A. John R. Eastman, Washington, D. C.; B. Benjamin F. Thomas, Columbus, Ohio; C. Alfred Springer, Cincinnati, Ohio; D. John B. Johnson, St. Louis, Mo.; E. Henry S. Williams, Ithaca, N. Y.; F. Simon F. Gage, Ithaca, N. Y.; G. William H. Holmes, Washington, D. C.; I. S. Dana Horton, Pomeroy, Ohio. Permanent Secretary, Frederick W. Putnam, Cambridge, Mass. General Secretary, Amos W. Putnam, Brookville, Ind. Secre-

tary of the Council, Thomas H. Norton, Cincinnati, Ohio. Secretaries of Sections: A, Winslow Upton, Providence, R. I.; B, Brown Ayres, New Orleans, La.; C, James L. Howe, Louisville, Ky.; D, Olin H. Landreth, Nashville, Tenn.; E, Rollin D. Salisbury, Madison, Wis.; F, Byron D. Halstead, New Brunswick, N. J.; H, Anthropology, Stewart Culin, Philadelphia, Pa.; I, Lester F. Ward, Washington, D. C. Treasurer, William Lilly, Mauch Chunk, Pa.

British.—The sixty-first annual meeting of the British Association for the Advancement of Science was held in Cardiff during the week beginning Aug. 19. The officers of the association were: President, Dr. William Huggins. Section

WILLIAM HUGGINS.

Presidents: A, Mathematics and Physics, Oliver J. Lodge; B, Chemistry, W. C. Roberts-Austen; C, Geology, T. Rupert Jones; D, Biology, Francis Darwin; E, Geography, E. G. Rowenstein; F, Economic Science and Statistics, W. Cunningham; G, Mechanical Science, T. Forster Brown; H, Anthropology, Max Müller. General Treasurer, Arthur Rücker. General Secretaries: Sir Douglas Galton and Vernon Harcourt; and Thomas Forster Brown, Chairman of the Local Executive Committee.

General Meeting.—The first general meeting was held on Aug. 19, with Sir Frederick A. Abel in the chair. The address of welcome was made by the Marquis of Bute, who was chairman of the Local Committee and Mayor of Cardiff. The report of the General Committee was presented and accepted, subsequent to which the incoming president, Dr. William Huggins, was called to the chair. His address was delivered in the evening in Park Hall.

Address of the President.—Since 1851, when Sir George Airy, and 1860, when Lord Wrottesley, were presidents of the association, no representative of astronomy had been chosen to that office. It was therefore natural that Dr. Huggins should select as the subject of his discourse the history of the discoveries that have taken place in his chosen science during the past thirty years. He told how spectroscopic astronomy had become a distinct and acknowledged branch of that science. Within the last year or two improvements had been made in the spec-

troscope itself by Lord Rayleigh, and by Prof. Henry A. Rowland in the construction of concave gratings. Although up to the present time Ångström's map of the solar spectrum has been accepted as the standard of reference, still, in the near future, that of Rowland will be adopted, and its greater accuracy is due chiefly to the introduction by him of concave gratings and of a method for their use by which the problem of the determination of relative wave lengths is simplified to measures of coincidences of the lines in different spectra by a micrometer. The recent attempts to distinguish the lines which are due to our atmosphere from those which are truly solar were described. Concerning the nature of the heavenly bodies, all that can be positively asserted is, that the spectroscope reveals to us the waves which were set up in the ether, filling all interstellar space, years or hundreds of years ago, by the motions of the molecules of the celestial substances. Great caution must be observed when attempts are made to reason by the aid of laboratory experiments as to the temperature of the heavenly bodies. Of recent researches in this direction, the claim of Stas that electric spectra are to be regarded as distinct from flame spectra was mentioned, but it must not be forgotten that the light from the heavenly bodies may consist of the combined radiations of different layers of gas at different temperatures, and possibly be further complicated to an unknown extent by the absorption of cooler portions of gas outside.

As yet the spectroscope has failed to interpret for us the remarkable spectrum of the aurora borealis. Undoubtedly in this phenomenon portions of our atmosphere are lighted up by electric discharges; we should expect, therefore, to recognize the spectra of the gases known to be present in it. Especially we do not know the origin of the principal line in the green. Recently the suggestion has been made that the aurora is a phenomenon produced by the dust of meteors and falling stars, and that near positions of certain auroral lines or flutings of manganese, lead, barium, thallium, iron, etc., are sufficient to justify us in regarding meteoric dust in the atmosphere as the origin of the auroral spectrum.

Reference was made to the work on the "Spectra of the Comets," by Prof. Hubert A. Newton and Prof. Schiaparelli. Concerning the constitution of the sun, a very great advance has been made by the recent work at the Johns Hopkins University, by means of photography and concave gratings, in comparing the solar spectrum directly with the spectra of the terrestrial elements. Prof. Rowland has shown that the lines of thirty-six terrestrial elements at least are certainly present in the solar spectrum, while eight others are doubtful. Of those not found, many are so classed because they have few strong lines, or none at all, in the limit of the solar spectrum as compared by him with the arc. Rowland has not found any lines common to several elements, and, in the case of some accidental coincidences, more accurate investigation reveals some slight difference of wave length or a common impurity. Stas, in a recent paper, gives the final results of eleven years of research on the chemical elements in a state of purity, and on the possibility of decomposing them by the physical and chemical forces at our disposal. His experiments on cal-

cium, strontium, lithium, magnesium, silver, sodium, and thallium show that these substances retain their individuality under all conditions, and are unalterable by any forces that we can bring to bear upon them. Prof. Rowland looks to the solar lines which are unaccounted for as a means of enabling him to discover such new terrestrial elements as still lurk in rare minerals and earths, by confronting their spectra directly with that of the sun. He has already resolved yttrium spectroscopically into three components, and actually into two. It is worthy of remark that, as our knowledge of the spectrum of hydrogen in its complete form came to us from the stars, it is now from the sun that chemistry is probably about to be enriched by the discovery of new elements.

Passing to the sun's corona, recent investigations were cited, including those of Prof. Schaeberle, of Lick Observatory; but, still, of its chemical and physical nature we know very little. The behavior of gaseous matter during condensation and the probable resulting constitution of the heavenly bodies was then taken up. The view has been put forth that the diversified spectra of the stars do not represent the stages of an evolutionary progress, but are due for the most part to differences of original constitution. But the sun and stars are generally regarded as consisting of glowing vapors surrounded by a photosphere where condensation is taking place, the temperature of the photospheric layer from which the greater part of the radiation comes being constantly renewed from the hotter matter within.

As to the life of a star, he said:

Passing backward, we should find a gradual weakening of gravity at the surface, a reduction of the temperature gradient so far as it was determined by expansion, and convection currents of less violence producing less interference with the proportional quantities of gases due to their vapor densities, while the effects of eruptions would be more extensive. At last we might come to a state of things in which, if the star were hot enough, only hydrogen might be sufficiently cool relatively to the radiation behind to produce a strong absorption. The lower vapors would be protected, and might continue to be relatively too hot for their lines to appear very dark upon the continuous spectrum; besides, their lines might be possibly to some extent effaced by the coming-in under such conditions in the vapors themselves of a continuous spectrum.

In connection with the temperature of stars, he told how Samuel P. Langley, of Washington, D. C., showed that through the whole range of temperature on which we can experiment, and presumably at temperatures beyond, the maximum of radiation power in solid bodies gradually shifts upward in the spectrum from the infra-red through the red and orange, and that in the sun it has reached the blue. All the heavenly bodies are seen by us through the tinted medium of our atmosphere. According to Langley, the solar stage of stars is not really yellow, but, even as gauged by our imperfect eyes, would appear bluish white if we could free ourselves from the deceptive influences of our surroundings. Of the nebulae he told how the elder Herschel saw portions of the fiery mist or "shining fluid" out of which the heavens and the earth had been slowly fashioned. For a time this view of

the nebulae gave place to that which regarded them as external galaxies, cosmoical "sand heaps," too remote to be resolved into separate stars.

Then, discussing the various theories advanced concerning their constitution, he said: "On account of the large extent of the nebulae, a comparatively small number of luminous molecules or atoms would probably be sufficient to make the nebulae as bright as they appear to us. On such an assumption the average temperature may be low, but the individual particles, which by their encounters are luminous, must have motions corresponding to a very high temperature, and in this sense be extremely hot." Hence "it may well be that in the very early stages condensing masses are subject to very different conditions, and that condensation may not always begin at one or two centers, but sometimes sets in at a large number of points, and proceeds in the different cases along different lines of evolution." By the spectroscopic motions of approach or of recession of the stars can be detected and measured, so that under favorable circumstances the speed can be determined to within a mile a second. Of the application of photography to this branch of astronomical work mention was made, and the brilliant results obtained at Lick Observatory by Keeler cited. This spectroscopic method of determining celestial motions in the line of sight has recently become fruitful in a new but not altogether unforeseen direction, for it has, so to speak, given us a separating power far beyond that of any telescope the glassmaker, and the optician could construct, and so enabled us to penetrate into mysteries hidden in stars apparently single, and altogether unsuspected of being binary systems. From other directions information is accumulating—from photographs of clusters and parts of the Milky Way, by Roberts, in this country, Barnard, at the Lick Observatory, and Russell, at Sydney; from the counting of stars and the detection of their configurations by Holden and by Backhouse; from the mapping of the Milky Way by eye at Parsonstown; from photographs of the spectra of stars by Pickering at Harvard and in Peru; and from the exact portraiture of the heavens in the great international star chart which begins this year.

There are many other problems which might claim our attention. The researches of the Earl of Rosse on lunar radiation, and the work on the same subject and on the sun by Langley; observations of lunar heat with an instrument of his own invention by Boys, and observations of the variation of the moon's heat with its phase by Very; the discovery of the ultra-violet part of the hydrogen spectrum, not in the laboratory, but from the stars; the confirmation of this spectrum by terrestrial hydrogen in part by Vogel, and in its all but complete form by Cornu, who found similar series in the ultra-violet spectra of aluminium and thallium; the discovery of a simple formula for the hydrogen series by Balmer; the important question as to the numerical spectral relationship of different substances, especially in connection with their chemical properties; and the further question as to the origin of the harmonic and other relations between the lines and the groupings of lines

of spectra; the remarkable employment of interference phenomena by Albert A. Michelson for the determination of the size, and distribution of light within them, of the images of objects which when viewed in a telescope subtend an angle less than that subtended by the light-wave of a distance equal to the diameter of the objective. Along the older lines there has not been less activity; by newer methods, by the aid of larger or more accurately constructed instruments, by greater refinement of analysis, knowledge has been increased, especially in precision and minute exactness. Then he closed with: "Since the time of Newton our knowledge of the phenomena of Nature has wonderfully increased, but man asks, perhaps more earnestly now than in his days, What is the ultimate reality behind the reality of the perceptions? Are they only the pebbles of the beach with which we have been playing? Does not the ocean of ultimate reality and truth lie beyond?"

A. Mathematical and Physical Science.—The presiding officer of this section, Prof. Oliver J. Lodge, began his address with a reference to the Faraday centenary, the decease of Wilhelm Weber (one of the originators of that absolute system of measurement which has done so much for the unification of physical science), the discovery in America of a binary system of stars, and the practical discovery of a physical method for color photography. After commenting on these four events, he passed to the discussion of the desirability or necessity of a permanent government physical laboratory. Such a laboratory would be the natural custodian of our standards, in a state fit for use and for comparison with copies sent to be certified.

There are many experiments which can not possibly be conducted by an individual, because forty or fifty years is not long enough for them. Secular experiments on the properties of materials—the elasticity of metals, for instance; the effect of time on molecular arrangement; the influence of long exposure to light, or to heat, or to mechanical vibration, or to other physical agents.

Does the permeability of soft iron decay with age by reason of the gradual cessation of its Ampèrian currents? Do gases cool themselves when adiabatically preserved by reason of imperfect elasticity or too many degrees of freedom of their molecules? Do thermo-electric properties alter with time? And a multitude of other experiments which appear specially applicable to substances in the solid state—a state which is more complicated and has been less investigated than either the liquid or the gaseous—a state in which time and past history play an important part. Whichever of these long researches requires to be entered on, a national laboratory, with permanent traditions and a continuous life, is undoubtedly the only appropriate place.

The question whether it has not been established by direct experiment that a method of communication exists between mind and mind irrespective of the ordinary channels of consciousness and the known organs of sense, and, if so, what is the process?

It can hardly be through some unknown sense organ, but it may be by some direct physical influence on the ether, or it may be in some still more subtle manner. He said: Of the process I as yet know nothing. For brevity it may be styled "thought-transference," though the name may turn out to be an unsuitable one after further investigation. Further investigation is just what is wanted.

Then, discussing the means of attacking this problem, he said:

A vulnerable spot on our side seems to be the connection between life and energy. The relation of life to energy is not understood. Life is not energy, and the death of an animal affects the amount of energy no whit; yet a live animal exerts control over energy which a dead one can not. Life is a guiding or directing principle, disturbing to the physical world, but not yet given a place in the scheme of physics. The transfer of energy is accounted for by the performance of work; the guidance of energy needs no work, but demands force only. What is force? and how can living beings exert it in the way they do? In some way matter can be moved, guided, disturbed, by the agency of living beings; in some way there is a control, a directing agency, active, and events are caused at its choice and will that would not otherwise happen. Now I say that the doctrine of ultimate intelligibility should be pressed into other departments also. At present we hang back from whole regions of inquiry and say they are not for us. A few we are beginning to grapple with. The nature of disease is yielding to scrutiny with fruitful result; the mental aberrations and abnormalities of hypnotism, duplex personality, and allied phenomena are now at last being taken under the wing of science, after long ridicule and contempt. The phenomenon of crime, the scientific meaning and justification of altruism, and other matters relating to life and conduct, are beginning to show a vulnerable front over which the forces of science may pour. Facts so strange that they have been called miraculous are now no longer regarded as entirely incredible. All occurrences seem reasonable when contemplated from the right point of view, and some are believed in which in their essence are still quite marvelous. The possibilities of the universe are as infinite as is its physical extent. I seem to myself to catch glimpses of clues to many of these old questions, and I urge that we should trust consciousness, which has led us thus far; should shrink from no problem when the time seems ripe for an attack upon it; and should not hesitate to press investigation and ascertain the laws of even the most recondate problems of life and mind.

Among the papers read before this section were the following: "On the Action of a Planet upon Small Bodies passing near the Planet with Special Reference to the Action of Jupiter on such Small Bodies," by Hubert A. Newton, of Yale College; "The Absorption of Heat by the Solar Atmosphere," by W. E. Wilson; "The Ultra-violet Lines of Solar Prominences," by George E. Hale, of Chicago; "Researches Relative to the Second Law of Thermo-Dynamics," by G. H. Bryan and J. Larmar; "Researches on the Surface Tension of Ether at Different Temperatures," by Prof. Ramsay; "Probable Nature of the Bright Streaks on the Moon," by R. Copeland; "The Causes of Variation of Clark Standard Cells," by J. Swinburne; "A New Form of Polarizer," and "Some Points Connected with Measurement of Lenses," by S. P. Thompson; "On the Periodic Time of Tuning-Forks maintained in Vibration Electrically," by J. Viriamu Jones and T. Harrison; "Magnetic Experiments made in Connection with the Determination of the Rate of Propagation of Magnetization in Iron," by F. T. Trouton; and "The Connection between the Crystal Form and the Chemical Composition of Bodies," by W. Barlow. Besides the foregoing, reports of various committees were read and discussed, including one "On Electric Standards"; also, in joint session with the section on Mechanical Science, the

report of the committee on "Units and their Nomenclature" was discussed.

B. Chemical Science.—This section was presided over by Prof. W. C. Roberts-Austen, chemist and assayer to the Royal Mint, who discussed the relation between theory and practice in metallurgy, with special reference to the indebtedness of the practical man to the scientific investigator. This subject was treated from three standpoints, namely: 1. Certain facts connected with "oxidation" and "reduction," upon which depend operations of special importance to the metallurgist. 2. The influence in metallurgical practice of reactions which are either limited or reversible. 3. The means by which progress in the metallurgical art may be effected, and the special need for studying the molecular constitution of metals and alloys.

These were discussed quite elaborately, and, in closing, the great importance was indicated of extending the use of the less known metals. Attention is at present concentrated on the production of aluminium, and reference has already been made to the various processes now used. Incidental reference should be made to the growing importance of sodium not only in cheapening the production of aluminium, but as a powerful weapon of research. In 1849, when John Percy was president of this section, magnesium was a curiosity; now its production constitutes a considerable industry.

We may confidently expect [he said] to see barium and calcium produced on a large scale as soon as their utility has been demonstrated by research. Minerals containing molybdenum are not rare; and the metal could probably be produced as cheaply as tin if a use were to be found for it. The quantities of vanadium and thallium which are available are also far from inconsiderable; but we as yet know little of the action of any of these metals when alloyed with others which are in daily use. The field for investigation is vast indeed, for it must be remembered that valuable qualities may be conferred on a mass of metal by a very small quantity of another element. The useful qualities imparted to platinum by iridium are well known. A small quantity of tellurium obliterates the crystalline structure of bismuth; but we have lost an ancient art which enabled brittle antimony to be cast into useful vessels. Two-tenths per cent. of zirconium increases the strength of gold enormously, while the same amount of bismuth reduces the tenacity to a very low point. Chromium, cobalt, tungsten, titanium, cadmium, zirconium, and lithium are already well known in the arts, and the valuable properties which metallic chromium and tungsten confer upon steel are beginning to be generally recognized; but as isolated metals we know but little of them. Is the development of the rarer metals to be left to other countries? Means for the prosecution of research are forthcoming, and a rich reward awaits the labors of chemists who could bring themselves to divert their attention, for even a brief period, from the investigation of organic compounds, in order to raise alloys from the obscurity in which they are at present left.

The report of the Committee, consisting of W. C. Roberts-Austen, Sir Frederick Abel, John W. Langley, William A. Tilden, Edward Riley, John Spiller, G. J. Shelves, and Thomas Turner, on the Establishment of an International Standard of Analysis for Iron and Steel was considered. Last year it was hoped that the final report would be presented at this meeting, but the completion of the work has been deferred. The fifth standard has not been prepared, owing to the

difficulty experienced in obtaining so large a quantity of mild steel of perfectly uniform composition. Prof. Langley stated that it was impossible to make crucible steel sufficiently low in carbon in the plumbago crucibles of the United States. The matter was under consideration, and it was hoped the standard would be completed shortly. The report of the Committee on the Action of Light upon Dyed Colors was then considered. The primary object of this committee is to determine accurately the relative fastness to light of all the various colors at present employed by the dyer of textile fabrics. The work will necessarily proceed very slowly, and will extend over some years. During the past year the work of purifying and dyeing with red coloring matters has been begun and is now in progress.

The following-named papers were presented before the section: "Certain Pyrometric Measurements and Methods of recording them," by W. C. Roberts-Austen; "The Existence of a Compound in Alloys of Gold and Tin," by A. P. Laurie; "The Relation between the Composition of a Double Salt and the Composition and Temperature of the Liquid in which it is formed," by F. W. Humphrey; "Some Experiments on the Molecular Refraction of Dissolved Electrolytes," by J. H. Gladstone; "A Simple Apparatus for Storing Dry Gases," by W. Symons; "An Apparatus for Testing the Sensitiveness of Safety Lamps as Indicators of Fire-damp and Inflammable Vapors," by F. Clowes; "A New Method for the Disposal of Sewage," by C. G. Moor; "The Action of Nitrosyl Chloride on Unsaturated Carbon Compounds," by J. J. Sudborough; "Formation of Peaty Coloring Matters in Sewage by the Action of Micro-organisms," by W. E. Adeney; "The Reaction of Glycerides with Alcoholic Potash," by A. H. Allen; and "Note on Electrolysis of Alloys," by H. C. Jenkins. Several reports of various committees were read and discussed, among which those mentioned previously are important.

C. Geology.—The president of this section was Prof. T. Rupert Jones, who delivered an address consisting of an elaborate and compendious summary, methodically arranged, of facts, figures, estimates, and opinions relating to coal. He mentioned the books in which the history of coal is treated of, described the coal field of South Wales, the origin of coal, the area of the coal growth, the varieties of coal, the constituents of the coal measures and of coal, and the extent of the coal measures under the south of England. His closing remarks were:

Light, heat, motion, fragrance, and color are all now obtainable from coal. What more could the sun himself do for us? It is as if the sunshine that cherished the luxuriant jungles of the past had been preserved in the coaly mass of the buried trees. Indeed, the light and heat of former days, expended in thus converting carbonic acid and water into coal, are here stored up for man. By converting coal into carbonic acid and water he can again evolve that heat and light, and use them in a thousand ways beneficial to his race—nay, essential to his very existence as a civilized being. Nevertheless, a great deal has yet to be learned about the natural history of the coal measures, the order and extent of the special kinds of their animals and plants, the time occupied in formation, and the geographical and hydrographical conditions. At all events, we know that all their strata have been

arranged in order, have been buried under circumstances favorable to production of the various coaly fuels, and then turned up in orderly disorder, ready to the hand of man, and well adapted for his use in this passage stage of his civilization and development, helping him, when intelligent, active, careful, and persevering, to higher ends.

The following-named papers were read before the section: "The Discovery of the Olenellus Zone in the Northwest Highlands," and "Some Recent Work of the Geological Survey on the Archean Gneiss of the Northwest Highlands," by Archibald Geikie; "On the Cause of Monoclinical Flexure," by A. J. Jukes-Brown; "On the Continuity of the Kellaways Beds over Extended Areas near Bedford," by A. C. G. Cameron; "On *Colobodus*, a Mesozoic Fish," by Montague Brown; "On the Discovery of the Southeastern Coal Field," by Boyd Dawkins; "The Cause of an Ice Age," by Robert Ball; "Recent Discoveries on the Relation of the Glacial Period in North America to the Antiquity of Man," and "On Recent Discoveries (human images) in the Pleistocene Lava Beds of California and Idaho," by George F. Wright, of Oberlin College; "On Glacial Action in Pembrokeshire," by H. Hicks; and "The Occurrence of *Pachytheca Sphærica* and *Nematophycus* in the Wenlock Beds at Tymawr Quarry, Rumney," by John Storrer.

D. Biology.—Francis Darwin, of Christ's College, Cambridge, presided over this section. His address was as follows:

A seedling plant in a state of nature grows straight up, while its main root goes straight down. When it is artificially displaced, both root and stem execute certain curvatures by which they reach the vertical once more. Such curvatures, whether executed in relation to light, gravitation, or other influences, may be grouped together as growth curvatures. I shall principally deal with geotropic curvatures, or those executed in relation to gravitation, but the phenomena in question form a natural group, and it will be necessary to refer to heliotropism, and, indeed, to other growth curvatures. The history of the subject divides into two branches, which will be considered separately. When a displaced apogeotropic organ curves so as to become once more vertical, two questions arise, which may be expressed thus: 1. How does the plant recognize the vertical line? how does it know where the center of the earth is? 2. In what way are the curvatures which bring it into the vertical line executed? The first is a question of irritability; the second, of the mechanism of movement. Sachs has pointed out that these two questions have been confused. They should be kept as distinct as the questions, How, by what nervous apparatus, does an animal perceive changes in the external world? and How, by what muscular machinery, does it move in relation to such changes?

He dealt separately with "irritability" and "mechanism," and then treated of "circumnutation," expressing his continued belief in the views put forward in the "Power of Movement in Plants," that circumnutation is a widely spread phenomenon, even though it may not be so widely spread as he and his father had supposed. In conclusion he said:

The relation between rectipetality and circumnutation may be exemplified by an illustration. A skillful bicycle rider runs very straight; the deviations from the desired course are small; whereas a beginner deviates much. But the deviations are of the same nature; both are symptoms of the regulating power of the rider. We may carry the anal-

ogy further: just as growth curvature is the continuance or exaggeration of a nutation in a definite direction, so when the rider curves in his course he does so by willful exaggeration of a "wobble." It may be said that circumnutation is here reduced to the rank of an accidental deviation from a right line. But this does not seem necessarily the case. A bicycle can not be ridden at all, unless it can "wobble." In the same way it is possible that some degree of circumnutation is correlated with growth in the manner suggested above, owing to the need of regular pauses in growth. Rectipetality would thus be a power by which irregularities, inherent in growth, are reduced to order and made subservient to rectilinear growth. Circumnutation would be the outward and visible sign of the process.

Among the papers presented before this section the following may be mentioned: "Description of an Apparatus for the Cultivation of Small Organisms in Hanging Drops under the Microscope," by Marshall Ward; "Non-sexual Formation of Spores in the Desmidiæ," by A. W. Bennett; "Investigations on the Natural History of the Friendly Islands," by J. J. Lister; "Hybrid Ferns and Crossed Varieties," by E. J. Lowe; "Floating Leaves," by L. C. Miall; and "The Artificial Production of Rhythm in Plants," by Francis Darwin and Dorothea F. M. Pertz.

E. Geography.—The president of this section was E. G. Ravenstein, who spoke on the "Field of Geography." He first described the development of cartography, which he illustrated by an interesting collection of maps, and afterward passed to the influence of geographical features upon the destinies of the human race, and the changes effected by man's conquests over nature. These larger considerations, he contended, came legitimately within the "field of geography," as well as the mapping and description of the earth's surface. He said:

Perhaps one of the most instructive illustrations of the complex human agencies which tend to modify the relative importance of geographical conditions is presented to us by the Mediterranean. The time when this inland sea was the center of civilization and of the world's commerce, while the shores of western Europe were only occasionally visited by venturesome navigators or conquering Roman hosts, does not lie so very far behind us. England at that period turned her face toward Continental Europe, of which it was a mere dependency. The prosperity of the Mediterranean countries survived far into the middle ages, and Italy at one time enjoyed the enviable position of being the great distributor of the products of the East, which found their way across the Alps into Germany, and through the gates of Gibraltar to the exterior ocean. But a change was brought about, partly through the closing of the old Oriental trade routes consequent upon the conquests of the Turks, partly through the discovery of a New World and of a maritime highway to India. When Columbus returned from the West Indies in 1493, and Vasco da Gama brought the first cargo of spices from India, in 1499, the star of Italy began to fade. And while the spices of the Indies and the gold of Guinea poured wealth into the lap of Portugal, and Spain grew opulent on the silver mines of Mexico and Peru, Venice was vainly beseeching the Sultan to reopen the old trade route through the Red Sea. The dominion of the sea had passed from Italy to Spain and Portugal, and later to the Dutch and English. But mark how the great geographical discoveries of that age affected the relative geographical position of England. England no longer lay on the skirts of the habitable world; it had become its very center. And this natural advantage was enhanced by the colo-

nial policies of Spain and Portugal, who exhausted their strength in a task far beyond their powers, took possession of tropical countries only, and abandoned to England the less attractive, but in reality far more valuable, regions of North America. England was thus enabled to become the founder of real colonies, the mother of nations, and her language, customs, and political institutions found a home in a new world. And now, when the old highway through the Red Sea has been reopened, when the wealth flowing through the Canal of Suez is beginning to revivify the commerce of Italy, England may comfort herself with the thought that in her own colonies, and in the states which have sprung up across the Atlantic, she may find compensation for any possible loss that may accrue to her through geographical advantages being once more allowed to have full play.

Among the papers read before this section, the following are worthy of mention: "The Art of Observing," by John Coles; "Geographical Education," by J. S. Keltie; "The Treeless Character of Prairies," by Miller Christie; "The Homology of Continents," by H. R. Mill; "The Comparative Value of African Lands," by A. S. White; "Suggestions for the Revision and Improvement of Large Scale Maps of the Ordnance Survey," by Henry T. Crook; "Antarctic Exploration," by Delmar Morgan; "Photography applied to Exploration," by John Thompson; "A Journey in the Lake-Ngami Region," by H. D. Buckle; "A Visit to Kilima-Njaro and Lake Chala," by Mrs. French Sheldon; "The Geography of Southwest Africa," by Henry Schlichter; and "The Physical Aspects of the Himalayas and Notices of the Inhabitants," by J. Tanner.

F. Economic Science and Statistics.—This section was presided over by W. Cunningham, who delivered an address on "Nationalism and Cosmopolitanism in Economics," consisting essentially of considerations on present-day problems gathered from the experience of past times. He endeavored to show that nations and national distinctions are not such important elements in actual commercial life as they used to be, and that this gradual change, as it proceeds further and further, will necessitate modifications in current economic doctrine. He said:

Society is too frequently regarded as an aggregate of similar individuals whose actions can all be represented with sufficient accuracy by the Benthamite analysis of motives. Such a conception of society is surely out of date to-day. In the family there is a natural social and economic unit which was of much actual importance before English municipalities arose, and before English national life asserted itself in economic affairs. The family is a natural unit, which is destined to survive even if our national industry and commerce are more and more merged in cosmopolitan and international progress. Economists may complain that they are misunderstood; but a historian may be inclined to insist that, since human nature and institutions change so much, it is most important that our hypotheses regarding them should be stated fully and clearly. Carelessness had been shown by those economists among whom the doctrine of a wages fund grew up. They did not define it as fixed, but they thought and argued about it as though it was fixed, owing to the actual circumstances of their times, which they implicitly assumed. These conditions have passed away, but we need not denounce those who formulated a theory of wages which was, on the whole, applicable to the times in which they lived, because these times have changed, and it is no longer so applicable to ours. If we are to preserve and develop economics on all its sides, both as a formal

science which deals with the relations between economic units of all kinds and as an instrument for investigating actual facts and understanding them better, we must be careful to see that our hypotheses are appropriate to the actual conditions of life, and most anxious in our endeavor to state fully the conditions we assume.

The following were among the more important papers read before this section: "Labor and Capital," by C. H. Perkins; "On the Alleged Differences in the Wages paid to Men and Women for Similar Work," by Sidney Webb; "The Taxation of Inventors," by Louis Edmunds; "Recent Material Progress in Indian Agriculture," by C. L. Tupper; "Indian Railway Communication," by W. Furnivall; "The Data available for determining the Best Limit (Physically) for Hours of Labor," by Dr. Arlidge; "The Cure of Consumption in its Economic Aspects," by G. W. Hambleton; "The Increase of Food and Population," by W. E. Axon; "Le Play's Method of Systematic Observation," by F. Aubertin; and "Recent Changes in the Distribution of Population in England and Wales," by E. Cannon.

G. Mechanical Science.—The address before this section was delivered by T. Forster Brown, who referred to the progress which had been made in connection with locomotive and marine engines in such works as the Severn Tunnel, the Forth and Tay bridges, and the Manchester ship canal. In mining, the progress had been slow, and it was a remarkable fact that, with the exception of pumping, the machinery in use in connection with mining operations in Great Britain had not, in regard to economy, advanced so rapidly as had been the case in our manufactures and marine. This was probably due, in metalliferous mining, to the uncertain nature of the mineral deposits not affording any adequate security to adventurers that the increased cost of adapting improved appliances would be reimbursed; while in coal mining the cheapness of fuel, the large proportion which manual labor bore to the total cost of producing coal, and the necessity for producing large outputs with the simplest appliances, explained in some measure the reluctance with which high-pressure steam compound engines and other modes embracing the most modern and approved types of economizing power had been adopted. In the raising of coal and placing it on board ship there was a vast amount of machinery employed, much of which was now of an obsolete type. When, however, new winnings had been made, or where in old mines it had been found necessary to replace the old machinery by new, the question of efficiency, and at the same time economy, had of late years received serious attention. Electricity had made rapid strides as a motive power, and there was no doubt that, in conjunction with a better type of machinery for the compression of air, it would eventually become the principal agent in underground operations. Many large electrical installations had already been in use for a considerable period; but there must be still great improvement in electric plant before it would be adopted in preference to other machinery now in general use, especially in gaseous mines; and these improvements must embrace a certain means of rendering sparking absolutely harm-

less under all conditions, for this involved not only the increased efficiency of one class of machinery over another, but also the protection of human life. The following were among the papers read before the section: "The London and Paris Telephone," by W. H. Preece; "Recent Progress in the Use of Electric Motors," by G. Forbes; "Electric Lighting in Trains," by J. A. Timmis; "Electric Parcels Exchange System," by A. R. Bennett; and "On a New System of Screw Propulsion with Non-reversible Engines," and "Internal and External Work of Evaporation," by W. Worry Beaumont.

H. *Anthropology*.—The presiding officer of this section was Prof. F. Max Müller. His address began with a retrospect of his connection with the British Association, and he referred to the meeting of 1847, when he was present, and then he took up the history of the development of anthropology subsequent to the formation of the section in 1884. He then discussed the advantages which anthropology has derived from language, and also the disadvantages which have accrued to anthropology from allowing itself too implicitly to be guided by the science of language. Concerning this branch of his subject he said:

I suppose I need say no more to show how indispensable a study of language is to every student of anthropology. If anthropology is to maintain its high position as a real science, its alliance with linguistic studies can not be too close. Its weakest points have always been those where it trusted to the statements of authorities ignorant of language and of the science of language. Its greatest triumphs have been achieved by men who have combined the minute accuracy of the scholar with the comprehensive grasp of the anthropologist, and were thus enabled to use the key of language to unlock the perplexities of savage customs, savage laws and legends and particularly, of savage religions and mythologies. If this alliance between anthropology and philology becomes real, then, and then only, may we hope to see Bunsen's prophecy fulfilled, that anthropology will become the highest branch of that science for which this British Association is instituted.

Again referring to the address delivered in 1847 by Bunsen, he closed with:

Much has been achieved by anthropology to justify these hopes and fulfill the prophecies of my old friend Bunsen. Few men live to see the fulfillment of their own prophecies, but they leave disciples whose duty it is to keep their memory alive, and thus to preserve that vital continuity of human knowledge which alone enables us to see in the advancement of all science the historical evolution of eternal truth.

The following are among the more important papers read before this section: "The Social and Religious Ideas of the Chinese as illustrated by the Ideographic Characters of the Language," by R. K. Douglas; "On Recent Progress in the Analysis of Vowel Sounds," by R. T. Lloyd; "Family Life of the Haidas (Queen Charlotte Islands)," by C. Harrison; "The Barbaric Element in Ancient Greece and Italy," by G. Hartwell Jones; "The Worship of Meteorites," by Hubert A. Newton, of Yale University; "Comparison of Ancient Welsh Customs, Devices, and Commerce with those of Contemporary Nations," by J. S. Phené; "The First Salt-sea Wanderings of the English Race," by W. M. Adams; "East Central African Customs," by James Macdonald; "Points of Contact between Old

World Myths and the Customs of the Navajo Myth called the 'Mountain Chant,' by Miss A. W. Buckland; "The Formation of a Record of Prehistoric Remains in Glamorganshire," by Edwin Seward; "Anthropometry applied to the Purpose of Personal Identification," by J. G. Garson; "Instinctive Criminality: its True Character and Rational Treatment," by S. A. K. Stranahan; "Recent Hittite Discoveries," by J. S. Phené; "The Similkameen Indians of British Columbia," by Mrs. S. S. Allison; "On the Pottery made and used by the Nicobar Indians," by E. H. Man; and "Notes on the History and Ethnology of Welsh Fairies," by Leyson Rhys. It is interesting to add that the president, Prof. Müller, said he felt it his duty to express the gratitude of every anthropologist to Major John W. Powell for the work he had done during the last ten years. As director of the United States Ethnological Bureau he had contributed many useful works on anthropological subjects. The work of the bureau reflected the highest credit not only upon Major Powell, but upon the Government of the United States, who were doing their utmost to preserve records of an ancient world which were dying out before their eyes. He wished he could impress upon the Colonial Office of her Majesty's Government the necessity of taking similar action. He succeeded some years ago in persuading Earl Granville to encourage the publication of colonial records. There was no country which might be in possession of such useful information in regard to the early days of mankind as England, but it seemed to be impossible to impress upon the Government their responsibility in this matter. There was an old world disappearing before their very eyes, and the time would come when the present generation would be held responsible for not collecting information which was within their reach. If in the time of Cicero and Cæsar somebody had written down the Etruscan language, what an immense amount of time and labor might have been saved.

Final Sessions.—The last meeting of the General Committee was held on Aug. 25, when the report of the Committee of Recommendations was received. It was then announced that the total number of tickets issued was 1,488, realizing a sum of £1,664. Grants of money, amounting in all to £1,013, were appropriated to scientific purposes by the General Committee at the Cardiff meeting, August, 1891, and the announcement of the specific amounts was made. The concluding general session of the association followed, when resolutions of thanks to the Mayor of Cardiff, the executive committees, and to the local secretaries and treasurers were adopted and acknowledged. Subsequently the association adjourned to meet in Edinburgh on Aug. 3, 1892, under the presidency of Sir Archibald Geikie, the eminent geologist. The Lord Provost of Edinburgh, the Marquis of Lothian, the Earl of Rosebery, Lord Kingsburgh, Sir William Muir, Prof. Sir Douglas MacLagan, Sir William Turner, Prof. P. Guthrie Tait, and Prof. Alexander Crum Brown were elected vice-presidents for the Edinburgh meeting. Prof. G. F. Armstrong, F. Grant Ogilvie, and John Harrison were elected local secretaries for the meeting at Edinburgh, and A. Gillies Smith, local treasurer. The mayor and

town authorities extended an invitation to the association to meet in Nottingham in 1893.

Popular Features.—On the evening of Aug. 20 a *conversation* was given in Park Hall, at which the Marquis of Bute, as the chairman of the local committee, and the Marchioness of Bute received the members. As usual, there were several discourses delivered to the association. On Aug. 21 Louis C. Miall lectured on "Some Difficulties in the Life of Aquatic Insects"; on Aug. 24 Arthur Rücker spoke on "Electric Stress"; and on Aug. 25 Sylvanus P. Thompson delivered an address on "Electricity in Mining." Twenty excursions were arranged for, twelve of which were planned for Aug. 22 and eight for Aug. 27, at the close of the meeting. Several receptions were tendered to the members by residents of Cardiff, and in general interest the meeting was fully up to the average gathering of the association.

Australian.—The third meeting of this association was held in Christchurch, New Zealand, during the week beginning with Jan. 15, 1891. The officers of the meeting were: President, Sir James Hector. Vice-presidents: Sir R. G. C. Hamilton, A. Lebius, W. C. Kernot, W. Saville Kent, and Thomas Blackburn. General Treasurer, Henry C. Russell. Permanent Secretary, Archibald Liversidge. Presidents of the Sections: A, Mathematics, Physics, and Mechanics, T. R. Lyle; B, Chemistry and Mineralogy, Orme Masson; C, Geology and Palæontology, Reginald A. F. Murray; D, Biology, W. A. Haswell; E, Geography, G. S. Griffiths; F, Economic and Social Science and Statistics, G. W. Cotton; G, Anthropology, Alfred W. Howitt; H, Sanitary Science and Hygiene, Allan Campbell; I, Literature and Fine Arts, R. H. Roe; J, Architecture and Engineering, John Sulman.

Meetings.—The different sections met in rooms in Canterbury College that were placed at their disposal by the college authorities. The first general meeting was held in the old Provincial Council Chamber on the evening of Jan. 15, when Baron Ferdinand von Mueller resigned the chair to Sir James Hector, the director of the New Zealand Geological Survey, who delivered an inaugural address on assuming the presidency of the association. On the following morning the different sections met, and their presiding officers delivered addresses, as follow: C, "The Past and Future of Mining in Victoria," by Robert A. Murray; D, "Recent Biological Theories," by W. A. Haswell; E, "Antarctic Exploration," by G. S. Griffiths; F, "A State Bank of Issue," by G. W. Cotton; G, "Ceremonies of Initiation in Australian Tribes," by A. W. Howitt; H, "The Advancement of Sanitation among the People," by Allan Campbell; I, "Literature in Education," by R. H. Roe, and J, "The Architecture of Towns," by John Sulman. The sections continued to meet until Jan. 21, and during the mean while 74 papers were read and discussed.

Reports.—A revised code of laws was adopted for confirmation at the next meeting. Ten research committees were appointed to report on different subjects to the next meeting, and a grant of £25 was made toward measuring the rate of motion of the New Zealand glaciers. As great inconvenience is often felt from the want of a

special name for the sea between New Zealand and Australia, a recommendation was adopted that the Lords of the Admiralty be requested to name this sea the Tasman Sea. The committee also recommended the appointment, by the British and American associations, of a conjoint committee to define the terms of general importance in biology; and that Little Barrier Island, north of New Zealand, and Resolution Island, in Dusky Sound, be set apart as reserves, where the native fauna and flora of New Zealand may be preserved from destruction.

Entertainments.—Three evening lectures were given before the association, as follow: On Jan. 16, "The Glaciers of the Tasman Valley," by G. E. Mannering; on Jan. 19, "Oysters and Oyster Culture in Australasia," by W. Saville Kent, Queensland Commissioner of Fisheries; and on Jan. 20, "A Short History of Vocal Music," by G. F. Tendall. Garden parties were given by Sir James Hector, Leonard Harper, and the Bishop of Christchurch; while, on Jan. 22, Spohr's oratorio of the "Last Judgment" was given in the cathedral by its choir.

Excursions. during the meeting, were made, on Jan. 19, to the Christchurch drainage works; on Jan. 20, to the Addington workshops; on Jan. 21, to Kaiapoi woolen factory and Belfast freezing works; and on Jan. 22, to the Lincoln Agricultural College. After the meeting, excursions were made on Jan. 24, from Palmerston South to the mouth of the Shag river; on Jan. 26, from Napier to Kuapehu and Tongariro; and on Jan. 28, from Port Chalmers to the West Coast Sounds.

The meeting was considered a successful one, and the attendance was about 470. Among the visitors was Prof. George L. Goodale, past president of the American Association for the Advancement of Science, who went to the meeting as the official representative of the sister association in the United States.

Next Meeting.—The next meeting will be held at Hobart, Tasmania, with Sir Robert Hamilton, Governor of the colony, as president.

French.—The twentieth annual meeting of the French Association for the Advancement of Science was held in Marseilles during the week beginning Sept. 17. The president was P. P. Dehérain, a member of the scientific section of the French Institute, who delivered an address "On the Relations of Chemistry and Physiology to Agriculture." The opening session was held on the afternoon of Sept. 17, when M. Baret, the Mayor of Marseilles, welcomed the gathering in a short address, in which he spoke of the honor that his city felt in receiving the distinguished scientists; and, after referring to the history of Marseilles—a city of 400,000 inhabitants, and one that had been in existence for more than twenty-five centuries—he told of what it had done to advance the cause of science, citing the various industries and technical works which would be opened for inspection during the meeting of the association.

President's Address.—After referring to the different places at which the association had met in previous years, and especially to the meeting of 1890, when the unveiling of the statue of Gay Lussac, in Limoges, was deferred until the arrival of the association, he an-

nounced that, in accordance with the custom of his predecessors, who chose as the subject of their addresses a discussion of that branch of science with which they were most familiar, so he would attempt to discuss the progress of agriculture as affected by recent discoveries in chemistry and physiology. At the close of the last century the crudeness of the methods of chemical analysis were such that it was impossible to arrive at a positive knowledge of the composition of plants. It was De Saussure who, in 1804, wrote: "I have found phosphate of lime in the ashes of all the plants that I have examined, and hence assume it to be a constant constituent of all vegetable life." This naturally led to the artificial application of chemicals to the soil to replace those taken up by the plant. The first of these appears to have been bone ash, and it was not until 1843 that the Duke of Bedford demonstrated the real cause of its efficiency. Liebig's experiments, tending to show that by treating bones with sulphuric acid they became changed into superphosphates, was a distinct advance in the knowledge of the subject. The discoveries of phosphate rock and the great work in England at Rothamsted brings us down to modern times. Thus, by analyzing the ash of plants, chemistry has shown what ingredients are necessary to restore the soil to its normal composition. The condition of nitrogen in the soil and its influence upon vegetation was next taken up. The able researches of George Ville, in France, followed by those in England of Lawes and Gilbert, were referred to, and finally the more recent work by Berthelot was mentioned. In other ways chemistry had rendered great service to agriculture. The terrible disease that threatened to exterminate the vines of France was discussed, and how one means after another was suggested by chemists, until carbon disulphide, proposed by Thenard, and the sulpho-carbonates recommended by Dumas proved efficacious. He closed with a brilliant description of the agricultural resources of France, and especially those of the section of France of which Marseilles was the chief city.

Treasurer's Report.—The total receipts during the year, as reported by Emile Galante, were \$19,611, and the total expenditures were \$18,325, of which sum \$2,160 were grants made to various scientists engaged in original researches. By various amounts the capital of the association had been increased, until it had now reached the sum of \$170,430. He also announced that the council were studying means by which this twentieth meeting might be made memorable by reducing the annual dues required of members. In 1872 the capital of the association amounted to only \$20,000, but now, thanks to the skillful care of its officers, it had reached the sum of \$170,000, and in the mean while the sum of \$45,000 had been distributed.

Excursions and Entertainments.—Two evening lectures were given, one on Sept. 18 and the other on Sept. 21. A reception was held at the Hotel de Ville on the evening of Sept. 17. The afternoons were largely devoted to visiting scientific and industrial works. Excursions were made to Arles and to Aix during the meeting, and at its close two days were spent in an extensive trip along the Mediterranean coast.

ASTRONOMY, PROGRESS OF, IN 1891.

Although considerable advance has been made since the close of the preceding report, it can not be claimed that the present year has been characterized by important discoveries, such as rewarded the labors of astronomers during 1890.

The Sun.—This year ushers in the beginning of another sun-spot maximum period, which appears to be too early, reckoning from the date of its last occurrence, which was nearly three years too late, to accord with the received interim of about eleven years from maximum to maximum. Thus far during 1891 there has been hardly a day on which spots and extensive fields of faculae have not been observed.

On June 17, at 10^h 16^m, Paris mean time, M. Trouvelot, an assistant at the Meudon Observatory, near Paris, saw a luminous outburst on the sun of apparently the same character, he says, as that seen by Carrington and Hodgson on Sept. 1, 1859. The spot was of a yellowish color and near the western limb of the sun. Soon afterward another manifested itself a little to the north, from both of which what appeared to be volcanic bombs were projected. The same phenomena were observed the next day, though with less activity, and ceased to be noticeable soon after noon. These seem not to have been noticed elsewhere.

In No. 85 of the Johns Hopkins University Circular, Prof. Henry A. Rowland enumerates the following elements as certainly existing in the sun by comparison with the solar spectrum from the extreme violet down to D: Calcium, iron, hydrogen, sodium, nickel, magnesium, cobalt, silicon, aluminum, titanium, chromium, manganese, strontium, vanadium, barium, carbon, scandium, yttrium, zirconium, molybdenum, lanthanum, niobium, palladium, neodymium, copper, zinc, cadmium, cerium, glucinium, germanium, rhodium, silver, tin, lead, erbium, potassium.

The doubtful elements are: Iridium, osmium, platinum, ruthenium, tantalum, thorium, tungsten, and uranium.

Those not found in the solar spectrum are: Antimony, arsenic, bismuth, boron, nitrogen, caesium, gold, iridium, mercury, phosphorus, rubidium, selenium, sulphur, thallium, and prasodmium. Strangely enough, oxygen, which constitutes one half the earth, is not found in any one of the three lists.

Transit of Mercury.—The transit of Mercury, May 9, 1891, occurred, on this continent, save for the observatories on the Pacific coast, when the sun was too low to be well observed. Even in that locality the sun had set before the third and fourth contacts took place. At the Lick Observatory, Prof. E. E. Barnard observed the first two contacts as follow: Mt. Hamilton mean time, first contact, 3^h 46^m 32^s.7. Second contact, 3^h 51^m 19^s.9. Though carefully looked for, no trace of the planet could be detected before first contact, nor was that portion of the planet outside of the sun's disk between the two contacts visible. The luminous ring encircling the planet, which some observers claim to have seen both during this and the preceding transit, was not seen. This aureola, as it is called, was, at the last transit, clearly observed at at least two stations in India, while at another point in that country it was not visible even to eager search-

ers. At Madras the halo could not be seen, though the central white spot, observed at several previous transits, was plainly seen by the late Prof. Pogson and an assistant.

That mysterious phenomenon, the "Black Drop," usually seen at transits of Venus, also was generally visible. It appears as a black ligament connecting at ingress and egress the limbs of the planet and the sun, growing narrower and narrower as the planet progresses; when the rupture occurs, especially at ingress, the planet is found to have advanced considerably, which renders it impossible to determine accurately the precise instant of contact. As to the cause of these appearances astronomers are not agreed.

Transits of Mercury will, for ages, occur in the months of November and May, the next falling due Nov. 10, 1894.

Prof. Simon Newcomb, who has reviewed the transit of Venus observations of the years 1761 and 1769, from which Encke deduced a parallax of $8.571''$ and the earth's distance from the sun to be about $95\frac{1}{2}$ million miles, computes the parallax to be $8.79''$, which agrees almost exactly with that obtained from the transits of 1874 and 1882, and makes the sun's distance in round numbers 92,500,000 miles.

Spectrum Analysis.—Spectrum analysis, as applied to astronomical investigation and the interpretation of the solar, astral, and nebular lines, is still the absorbing theme among astronomers, and through the labors of such investigators as Huggins, Vogel, Rowland, Pickering, Young, De la Rue, Draper, Janssen, Langley, Keeler, and scores of others equally well known, it has become a distinct branch of science. Many observatories have separate appliances for the prosecution of this work, and the discovery of the gelatin dry plate has lent invaluable aid by making possible the photographing of their spectra, and thus securing an imperishable record for future comparison.

As we have seen, the spectroscope has shown that terrestrial matter is not confined to the earth, but exists also in the sun and in every visible star as well as in comets and the nebulae.

The task of analyzing the stars and nebulae, says Prof. Huggins, "is one of great difficulty when we have to deal with spectra differing from the solar type. We are thrown back upon the laboratory for the information necessary to enable us to interpret the indications of the spectroscope as to the chemical nature, the density and pressure, and the temperature of the celestial spaces."

The Nebular Line.—The vexed question, whether the principal nebular line is coincident with the magnesium fluting, which has so agitated the spectroscopists has been, it would seem, settled by both Dr. Huggins and Prof. Keeler. The latter fixes with great accuracy the position of the former, and makes it 0.43 tenth metre more refrangible than the lower edge of the magnesium fluting. The nebular line, he declares, has no resemblance to a fluting. Flutings and lines of magnesium, which could not fail to appear with the fluting at wave length 5006.36 , are entirely absent in nebular spectra. His conclusion that the principal nebular line is not coincident with the magnesium fluting must be regarded as conclusive. And this proof does

not rest on observations of one nebula only, but of several, and with a dispersion often equivalent to that of 24 prisms of 60° , as the fourth spectrum of a Rowland grating of 14438 lines to the inch was often employed. The whole matter turns on an almost inappreciable difference of the wave lengths of the two, that of the nebular line being 5005.68 tenth metres and that of the magnesium fluting 5006.13 . The amount of displacement of the lines being very small, it is barely possible that it is due to the relative motion of the earth toward the apex of the sun's way, or of the nebulae in the line of sight, or to both causes. The conclusion arrived at by Dr. and Mrs. Huggins and Profs. Lieving, Dewar, and Keeler effectually consigns to oblivion the celebrated meteoric theory of Lockyer.

Celestial Photography.—The following quotation from Prof. E. E. Barnard, of the Lick Observatory, California, whose fine photographs have attracted wide attention, will be instructive to those who wish to photograph celestial objects with a telescope: "The actinic image is totally invisible on the ground glass, and we have to grope for it, as it were. Its position can easily be found by experiment. A suitable attachment is made to carry the ground glass and plate holder; this takes the place of the eyepiece, and is supposed to be adjusted for changing the focus. If the telescope is adjusted to a star and allowed to remain stationary, the star will pass across the field of view by the rotation of the earth. Focus the image carefully on the ground glass. It should appear as a tiny point of light. Record this position of the tube. Substitute now the sensitive plate, and adjust the instrument so that the star shall cross the field; give an exposure of, say, half a minute, the telescope remaining stationary. Draw the tube out now about 0.05 of an inch, and repeat the exposure; continue this for a number of times, taking care after each exposure to shift the telescope in altitude, so that successive trials shall not fall on each other. When the plate is developed it will contain a series of lines or trails produced by the light of the star as it crossed the plate. Some of these will be blurred, but it will be seen that they successively become sharper until one is found that is perfectly sharp, i. e., if the experiment has been carried far enough. This will have been made at the chemical focus. The record for this trail, compared with the reading when the image was in focus on the ground glass, will be the correction to the visual to obtain the chemical focus. Hence, when a photograph is to be made, the image is sharply focused on the ground glass, the telescope is then adjusted to the chemical focus, and the resulting picture should be sharp. I have thus experimented with four different telescopes, and found that they all gave very satisfactory photographs at the chemical focus." Prof. Barnard found the chemical focus of each of the four telescopes to be *outside* of the visual, 0.17 , 0.10 , 0.12 , and 0.24 of an inch respectively. The last three were telescopes of the Lick Observatory.

The task of photographing the planets is one of great difficulty, inasmuch as the faintness of their light does not admit of instantaneous exposures, as is the case in photographing the sun, moon, and the brightest stars. Besides, the

rapid rotation of Jupiter and Saturn on their axes prevents prolonged exposures. So great is this latter hindrance that as yet no photographs of these two great planets have been secured that equal the delineations made by skilled draughtsmen. In photographing the nebulae, however, the exposures may last for hours if desired, and, in extent and depth of structural detail, the photographs far eclipse all visual revelations even when assisted by mammoth telescopes.

All attempts to photograph the solar corona without an eclipse have thus far been futile, as the sky luminosity so fogs the negative plates as to obliterate every coronal imprint. Commenting on this matter, Mr. Burnham, in his "Cayenne Eclipse Report," says: "Those who have given long exposures, or advocated doing so, with the object of getting the greatest possible extension of corona on the plate, must have overlooked the fact that the background of the sky is luminous, and would soon fog a sensitive plate if all other light were excluded. The problem, photographically considered, has nothing to do with the matter of photographing a nebula on the black ground of the sky at night. There the only light which reaches the plate comes from the object to be photographed, and the exposure can be indefinitely prolonged, with the result of constantly increasing the impression made by the fainter nebulous light. Undoubtedly the coronal light would act on the plate in the same manner if all other light could be excluded, and we should have a picture in extent and detail far beyond the most wonderful display ever seen with the naked eye."

It is the opinion of physicists that, above our atmosphere, the sky by day, even in the neighborhood of the sun, would be intensely black, under which conditions the corona could be photographed as well as the brightest nebula by night. Were it possible to attain to this, it is highly probable that during a total solar eclipse a single photographic expert would give more instruction than the combined results of a large and expensive expedition. But no such condition can ever be realized at ordinary heights, though an appreciable step toward it may be reached by working from elevations of 15,000 or 20,000 feet above the sea. In pursuance of this idea, M. Janssen has proposed the building of an observatory on Mont Blanc, providing rock could be reached at a reasonable depth; but as borings have been made through the ice cap to a depth of thirty feet, and, horizontally, to a distance of ninety feet without finding the desired rocky foundation, the project has been postponed until another season, at least, and, perhaps, permanently abandoned.

Photographic Chart of the Sky.—The last reunion of the International Committee on the photographic chart of the entire sky was recently held. Of the eighteen observatories assigned to the task, all are ready, and some have already secured a number of satisfactory trial plates. Many delicate and difficult questions arose, which can not be discussed here, most of which, it is hoped, have been solved, though doubtless others will present themselves as the work progresses. About three years have been occupied in constructing the photographic telescopes, in organizing, and in settling many pre-

liminaries made necessary by want of experience. The conference demands a great photographic chart of the heavens with exposures of forty minutes, with which it is expected to reach stars down to the fourteenth magnitude; and, as each plate is to be limited to four square degrees, and, as each star, to avoid errors, is to appear on two plates, over 22,055 photographs will be required. Besides the plates requisite for the great chart, a second set to form a catalogue is to be made, with shorter exposures, and to include stars only to the eleventh magnitude. The plates are to be prepared by photographing upon them very faint, delicate lines, called by the French *reseaux*, five millimetres apart, which will greatly facilitate the tedious process of measuring and cataloguing several million stars.

The following are the observatories taking part in this work, with the number of plates necessary to complete each zone:

Observatories.	No. of plates.	Observatories.	No. of plates.
Greenwich.....	1,149	Algiers.....	1,260
Rome.....	1,040	San Fernando.....	1,260
Catane.....	1,008	Tacubaya.....	1,260
Helsingfors.....	1,008	Santiago.....	1,260
Potsdam.....	1,232	La Plata.....	1,360
Oxford.....	1,180	Rio de Janeiro.....	1,373
Paris.....	1,260	Cape of Good Hope.....	1,512
Bordeaux.....	1,260	Sydney.....	1,400
Toulouse.....	1,080	Melbourne.....	1,149

In giving a sufficiently long exposure to secure very faint stars, the brighter are overexposed and their images enlarged, though to just what extent is difficult to determine. Again, stars of different colors require longer or shorter time to impress themselves on the gelatin film, and the ever-changing conditions of the atmosphere at different times and stations impose great difficulties, which it seems impossible to obviate.

Variable Stars.—Prof. Seth C. Chandler, an authority on variables, makes the statement that two thousand variable stars are visible with an opera-glass, while hundreds of thousands are revealed by the largest telescopes. Their periods range from 7^h 46^m 48^s, the shortest known, to several years in length. The shortest is known as S. Antliae, No. 3,407 of Chandler's Catalogue, right ascension A. D. 1900-0, 9^h 27^m 54^s, declination south 28° 12'. A photograph of its spectrum, made at Harvard College Observatory in April, 1890, indicated by the widening of some of the lines and the narrowing of others that it belongs to an intermediate class between variable stars of first and second type.

Spectroscopic Binaries.—The number of double stars now known, many of which are binaries, amounts to several thousand, and the list is constantly being augmented by further discoveries. These are visually double by the aid of the telescope, though some are so close as to suffer only a slight elongation under the highest powers our greatest telescopes will bear. It is not these we wish to consider, but a new class of binaries, which, while known to be such, are not thus seen even in the most powerful telescopes. They are called spectroscopic binaries, and number only about a dozen, including a few suspects; but in the near future, because of the increase in the number and efficiency of spectroscopes in the hands of zealous astronomers, this roll must be greatly extended.

Dr. Vogel has examined early photographs

taken at Potsdam of the spectra of Beta Auriga and of Zeta Ursæ Majoris, and, in the case of the former, finds the doubling of the lines well marked on many of those taken from Nov. 14, 1888, onward. No particular attention was paid to this fact at the time, and hence one of the greatest discoveries of modern times was then missed.

Change in the Motion of Sirius.—For several years the motion of this star (the Dog Star) has been one of recession, at one epoch it having been at the rate of 20 miles a second, but lately it has changed to one of approach, with a speed, according to Prof. Vogel, of nearly two miles a second, the spectra of iron and of hydrogen giving 1.96 and 1.73 mile respectively. The reversal of its motion is doubtless due, it being a binary double, to a change in its orbital motion. As it revolves around the center of gravity of the system, its direction of motion will always be changing. Besides its orbital motion, it has also one of translation through space.

The companion of this star, which for many years has been visible in telescopes of medium size, is now beyond the capacity of even the Lick telescope, with a power of 3,300. Heretofore Mr. Burnham has expressed the opinion that he would be able to follow it during its peri-astral passage, but he now thinks that it will not be again seen for several years. Its present distance is less than 40".

Jupiter's Satellites.—On Sept. 8, 1890, Prof. Barnard observed that the first satellite, while crossing the disk of Jupiter, appeared double. It was thus seen also by Mr. Burnham, the distinguished observer of double stars, and he does not hesitate to say that it appeared as perfectly duplex as any double star he had ever seen. The observation was made with the 12-inch telescope at the Lick Observatory. Its duplicity was viewed with different powers, so that no deception could be ascribed to the eye-pieces employed. The observation was strange and unheard-of, and can not fail soon to be confirmed or disproved. If not double, the only possible explanation of the phenomenon is that the satellite is surrounded by a luminous belt parallel to those of the planet.

Rotation of Mercury and Venus.—The supposed discovery of Schiaparelli, that these planets complete one rotation only while making a revolution round the sun, is not accepted by all astronomers. Apropos to this, MM. Niestenr and Stuyvaert, of the Royal Observatory of Belgium, who have studied Venus for ten years, have concluded that Cassini's period of the rotation of that planet (twenty-three hours) is correct.

Nebulae.—The quest for nebulae is now systematically prosecuted by only five astronomers, viz.: Bigourdan, of France; Denning, of England; Barnard, of the Lick Observatory; Stone, of the Observatory of the University of Virginia; and Swift, of the Warner Observatory. This field of work is not now popular, because large telescopes are required to achieve success, inasmuch as all of Sir William Herschel's Class I and II, and nearly all so faint as his Class III, have been discovered either by him or his successors, predecessors of the present searchers for these bodies. The places and magnitudes, with descriptive remarks of all known down to 1888,

may be found in Dr. Dreyer's New General Catalogue, published by the Royal Astronomical Society of England as Vol. XLIX, Part I, of its "Memoirs."

Prof. Barnard has recently discovered a new Merope nebula in the Pleiades. The old one, found several years ago by Tempel, has, from its supposed variability, been the cause of much discussion among astronomers, many of whom doubted even its existence. While easily seen with glasses as small as 3 inches, it is invisible in large telescopes, which anomaly is explained by the fact that small telescopes, having large fields of view, give the benefit of contrast with a dark sky, which the contracted fields of great instruments do not afford. For this reason the tail of Donati's comet could be followed farther by the naked eye than with the largest telescope. This is true also of the auroral streamers and of the zodiacal light.

Since the publication of his ninth catalogue, Dr. Swift has added 57 to his previous number of newly discovered nebulae.

M. Bigourdan, assistant to the Paris Observatory, calls attention to the supposed variability of the nebula (New General Catalogue, 1186) situated near the variable star Algol. It was discovered by Sir William Herschel in 1785, and in 1831 observed by Sir John Herschel, since which time there is no record of its having been seen until lately, though searched for.

Mr. Burnham has examined the vicinity of Hind's variable nebula in Taurus, and found, with the 36-inch telescope of the Lick Observatory, a very small, condensed nebula surrounding the double star T Tauri. But Mr. Roberts has photographed the region, and the plate showed no nebula, nor nebulous star, nor any nebulosity, though the exposure was three hours long. In this instance photography has increased rather than diminished the mystery attaching to the body. It may be that the nebula is deficient in violet rays, and therefore non-photographable. Are there not two nebulae here, one being Hind's variable, seen by Otto Struve, D'Arrest, Tempel, and others, and the other that seen by Mr. Burnham, as above?

For several years Isaac Roberts has made photographic study of the Andromeda nebula, but the majority of his plates, even as late as October, 1890, do not show any trace of a stellar nucleus, while others secured in November and December represent the nucleus as distinctly stellar. He is therefore of the opinion that the nucleus is variable, though further experiments may be necessary to corroborate this. The sudden appearance and disappearance in 1885 of a star near the center of the nebula lends additional confirmation to the theory of the variability of at least portions of the central part of this interesting nebula, which the spectro-scope declares to be a cluster on a scale of vastness equaling, perhaps surpassing, our Milky Way, the shape of which it greatly resembles.

Meteors.—The Perseid meteors which belong to the meteoric shower of Aug. 10 were this year more numerous than has been observed since 1871. As seen at the Warner Observatory, and at several widely separated places both in this country and in Europe, the number was so great as to attract general attention. Unlike the 14th

of November shower, it returns with unfailing regularity and is prolonged for several days, while all the others last but a few hours. The first meteors were seen at its last return on Aug. 2, and they were observed in greater or less numbers on every morning until Aug. 12. A satisfactory explanation of such a prolongation has never been given. Its radiant is in Perseus, and, instead of being a point, extends, according to observations of the writer, continued through several years, over an elliptical area whose axes are about 10° by 5° . No well-authenticated account of stone falls has been announced.

Meteorites.—A paper on this subject was read at the recent meeting in Washington of the American Association for the Advancement of Science by Prof. A. E. Foot, of Philadelphia. He says that in Crater Mountain, 185 miles north of Tucson, Arizona, he found small meteoric fragments scattered over an area a third of a mile in length by 120 feet in width, extending from northwest to southeast. Exactly in line with it but outside the crater, about 2 miles distant, were two meteoric stones, weighing 154 and 201 pounds respectively, and 131 smaller fragments ranging from one sixteenth of an ounce to 6 pounds 10 ounces. A section of a mass of 40 pounds, of extreme hardness, was exhibited at the meeting, "which revealed cavities containing small, black objects, one fiftieth of an inch in diameter, with which polished corundum was cut as easily as a knife might cut gypsum," and suggested the idea of diamonds. But the published statement that all the geologists present were agreed that they were diamonds is erroneous, and the writer has the assurance of one of our most celebrated meteorologists, who examined them, that they certainly are not those gems.

Comets.—Since Oct. 6, 1890, the date of the last discovery of a comet given in our last volume, the following comets have been discovered, numbered in the order of their finding rather than their perihelion passage: Comet *e*, by Prof. Zona, of Palermo, Italy. These are the computed parabolic elements: Perihelion passage = 1890, July 27-713, Berlin mean time; from node to perihelion = $328^\circ 53'$; longitude of node = $86^\circ 28'$; inclination = $155^\circ 2'$; log. q = 0.314.

Comet *f* 1890 was detected by M. Spitaler at Vienna on Nov. 16. At receipt of the news in Vienna of the discovery of Zona's comet, the day after its finding, Spitaler directed the 27-inch refractor to the indicated place, and saw at once a very faint object in the field, but, as it was much fainter than the telegram asserted, he sought farther, and found the Zona comet. Returning to his first object, he saw that it had moved, and that he had achieved a most extraordinary and entirely unprecedented event in astronomy—viz., the having in almost the same field of the telescope two comets moving in different directions. The following elliptic elements have been computed: Perihelion passage, 1890, Oct. 26-60123, Berlin mean time; longitude of perihelion = $58^\circ 25' 58.2''$; longitude of node = $45^\circ 5' 51.7''$; inclination = $12^\circ 50' 44.5''$; log. of a = 0.537532; period = 6.4 years.

The discoverer has reasons for supposing this to be its first appearance in its present orbit, which, he thinks, was changed into this form by a near approach to Jupiter in the latter part of

1887. Its aphelion distance is smaller than Encke's, or less than that of any known comet.

Comet *a* 1891 was discovered by Prof. E. E. Barnard, at the Lick Observatory, on March 29, and by W. F. Denning, of Bristol, England, on the succeeding night. The annexed parabolic elements have been calculated: Perihelion passage, 1891, April 27-55900, Berlin mean time; node to perihelion = $178^\circ 48' 24.8''$; longitude of node = $193^\circ 55' 36.5''$; inclination = $120^\circ 31' 27''$; log. perihelion distance = 9.599332.

Comet *b* 1891. This is a return of Wolf's periodic of 1884, and was detected on May 1 by Spitaler, and on May 4 by Barnard. On Sept. 4 it passed nearly over the center of the Pleiades, treating astronomers to a sight no human eye had ever seen.

Comet *c* 1891 is an apparition of Encke's comet which has the shortest period of any known = 3.3 years. It was first seen on Aug. 1 by Barnard. The principal interest attaching to it is the progressive diminution of its periodic time, evidencing, as many suppose, the retarding effect of the hypothetical, all-pervading ether. Astronomers are not agreed, however, as to the correctness of this conclusion.

Comet *d* 1891 was discovered, on Sept. 28, by Barnard, in right ascension $20^h 53^m 45^s$, declination south $1^\circ 23'$. This is a return of Swift's periodic comet, discovered in 1880, and adds another to the rapidly increasing list of short-period comets. Though it was previously found by Tempel in 1869, its periodicity was not then predicted or even suspected. Hence, conforming to a rule adopted by astronomers in the case of Wincke's, Tuttle's, and Biela's comets, all of which had been detected previously by others, this should be called Swift's comet, but it is usually denominated Tempel-Swift. The following elements, which differ but little from those of 1869-'80, have been computed for it, but the comet at discovery was nearly five degrees from its calculated place: Time of perihelion passage, Nov. 14-958, Paris mean time; longitude of perihelion = $43^\circ 14' 15.7''$; longitude of node = $296^\circ 31' 14.8''$; inclination = $5^\circ 23' 13.8''$; logarithm of perihelion distance = 0.036071. Motion direct.

Comet *e* 1891 by Barnard, on Oct. 2, in right ascension $7^h 31^m 24^s$, declination south $27^\circ 54'$. From observations made at the Lick Observatory on Oct. 3, 4, and 5, Prof. Campbell has computed the following elements: Perihelion passage, Nov. 8-75, Greenwich mean time; from node to perihelion = $262^\circ 6'$; longitude of node = $215^\circ 38'$; inclination = $75^\circ 50'$; perihelion distance = 1.0166. It had a rapid motion southeast, and was soon lost to northern observatories.

Catalogues.—The *Astronomische Nachrichten*, No. 3,047, has published a list of 70 new double stars discovered in 1890 by S. W. Burnham, of the Lick Observatory staff, with the 36-inch telescope. It is the seventeenth catalogue of double stars published by him. From their closeness they are very difficult objects, and require the largest telescopes for their examination. Thirty-nine have distances less than $1.0''$, while the average distance of all is $0.45''$. Twenty-five are at a distance of $0.33''$. They cover a wide range of magnitudes, the following being naked-eye stars: B. A. C., No. 230, 199 Ceti, 95 Piscium, Chi Persei, 48 Cephei (H), 34 Persei, B. A.

C. 1142, 248 Tauri, 5 Camelopardalis, Nu Geminorum, 36 Geminorum, Tau Herculis, 24 and Psi 1 Aquarii. Seven of the list previously known as doubles were found to be triples. The total number of double stars found by him is 1,224. Regarding the cumbering of our catalogues of double stars with uninteresting pairs, he says: "If my purpose had been to make an imposing catalogue of discoveries by finding as many new pairs as possible without reference to their character, the number in my lists, down to this time, could easily have been made many times larger without exceeding the Struve limits of magnitudes and distance; but at this time there would seem no good reason for incumbering a double-star catalogue with that kind of material. We now know that they can have no interest as double stars in the proper sense of the term. With large telescopes, pairs of 5" or 6" distance in the lower magnitudes of the *Durchmusterung* can be found by the score on any night when the seeing is too poor for ordinary micrometrical work, and with the 12-inch it would be easy to make a large list in a comparatively short time. I have not allowed myself to find new pairs of the kind recorded here any faster than they could be thoroughly measured. It may be many years before some of these are reobserved, and it is desirable to have a careful set of measures at this time with which to compare future measures."

Speaking of the double component of Gamma Andromeda, he says the elongation is doubtful with powers, on the 36-inch, of 1,900 and 3,300, and he thinks the distance much less than 0.1".

Mr. Burnham has, from measures of his own continued from the date of discovery, ascertained that the close companion to Kappa Pegasi makes a revolution round the principal star in the astonishingly short time of a little over eleven years, making it the shortest-period binary visually known. In the monthly notices of the Royal Astronomical Society for March, 1891, is given a diagram of its orbit. He has derived the following elements: Major axis, 0.636"; minor axis, 0.187"; maximum distance, 0.32"; minimum distance, 0.08"; position angle major axis, 125.4°; period, 11.13 years.

Telescopes.—The number of telescopes annually manufactured in the United States by Alvan Clark & Sons, of Cambridgeport, Mass., and by John A. Brashear, of Allegheny, Pa., besides other makers of lesser note, indicates a wonderful advance of astronomy in this country.

Because of the great difficulty of casting perfect disks, only one has been secured for the 40-inch telescope of the Observatory of Southern California, and not two, as was reported last year, unless one was returned, and consequently no progress has been made.

For the Bruce Photographic telescope neither disk has been received, but the Clarks have nearly completed the great prism—25 inches square—to be attached to the front of its 24-inch objective. Great results are looked for by astronomers from this instrument, which Prof. Pickering calls a "photographic doublet," being only 11 feet focus. It is, in fact, a photographic camera. "With it," he says, "a portion of the sky covering twenty-five square degrees can be photographed with good definition, while only three or four degrees can be covered equally well with

telescopes of the usual form." The time to photograph the entire sky, without after enlargement, will be reduced in the same proportion. With such a doublet, each hemisphere could be covered in one year with 800 plates.

The building for the great equatorial Coudé, at Paris, is completed. Instruments of this kind—"elbowed telescopes"—are finding much favor in other countries besides France. This at Paris has an objective 24 inches in diameter, and two plane mirrors of, respectively, 29 and 34 inches in diameter. A photographic objective, also of 24 inches aperture, is provided, and the change from one to the other can be easily and quickly made. Photographs of the moon 11 inches in diameter can be taken without subsequent enlargement.

The 16.2-inch telescope for Goodsell Observatory, Northfield, Minn., is finished, and Prof. W. W. Payne, its director, speaks highly of its performance on difficult test objects. The crown disk was obtained from Mantois, of Paris, and the flint from Jena, of Germany. The computations for the curves were made by Dr. C. S. Hastings, of Yale University, on a new plan, and this is the largest objective ever made on this formula. The per cent. of merit for color correction and blackness of field is 2:11, while if made of the usual curves it would be but 1:61. J. A. Brashear, of Pittsburg, ground and polished the lenses, and Warner and Swasey, of Cleveland, Ohio, constructed the mounting and dome. The total weight of the telescope and its accessories is 12,700 pounds.

Prizes and Benefactions.—Of the gift of \$6,000 from Miss Catharine Bruce, for the promotion of original astronomical research, the entire sum has been distributed by Prof. Pickering in accordance with the donor's wishes. Among the recipients were the following Americans: Prof. W. W. Payne, Editor of the "Sideral Messenger"; Prof. E. S. Holden, Director of the Lick Observatory; Prof. Simon Newcomb, Superintendent of the American Nautical Almanac Office; Prof. Henry A. Rowland, of Johns Hopkins University; and Prof. Lewis Swift, Director of the Warner Observatory.

The Lalande prize of the French Academy of Sciences, of the value of 540 francs, has been awarded to Prof. Schiaparelli, of Milan, Italy, for, chiefly, his observations tending to prove the synchronization of the rotational and revolutionary periods of Mercury and Venus.

The Valz prize has been adjudged to Prof. S. Glasenapp, Director of the Observatory of the University of St. Petersburg, Russia, for his investigations of the orbits of the double stars in the Pulkowa Catalogue.

Prof. C. A. Young, Director of the Halstead Observatory, Princeton, N. J., has received the Janssen prize for his spectroscopic discoveries.

The Danish Academy of Sciences has given a gold medal to Baron E. v. Haerdtl, of Innsbruck, Austria-Hungary, for his memoir on the problem of three bodies, proposed by the Academy in 1889.

The Copley medal of the Royal Society of London was awarded to Prof. Simon Newcomb for his contributions to gravitational astronomy. Dr. Franklin was its first recipient in 1753, and it has been conferred annually ever since.

The Donohoe comet medal, *via* the Astronomical Society of the Pacific, has been presented to

Prof. Zona, of Palermo, Italy; to Dr. J. Spitaler, of Vienna, Austria; to Prof. F. W. Denning, of Bristol, England; to M. Coggia, of Marseilles, France; and three times to Prof. E. E. Barnard, of Mount Hamilton, California.

No gold medal was awarded by the Royal Astronomical Society of England.

Asteroids.—Since the compilation of last year's report, twenty-two of these small planets have been discovered, eight of which have received names. As no complete list has appeared, and those of the text-books are erroneous in several respects, a catalogue recognized by astronomers as correct and complete to date is here given:

No.	Name.	Discoverer.	No.	Name.	Discoverer.	No.	Name.	Discoverer.
1.	Ceres	Piazza.	81.	Terpsichore	Tempel.	161.	Athor	Watson.
2.	Pallas	Olbers.	82.	Alcmene	Luther.	162.	Laurentia	Prosper Henry.

AUSTRALASIA, a division of the globe embracing the continent of Australia and the islands of the South Sea and Western Pacific, most of which are under British dominion. The statistics of population for the British Australasian colonies for 1889 are given in the following table:

COLONIES.	Population.	Births.	Deaths.	Immigration.	Emigration.
New South Wales.....	1,122,200	37,295	14,796	64,197	43,557
Victoria.....	1,118,028	36,359	19,892	84,582	68,418
Queensland.....	406,638	14,401	6,132	32,606	24,680
South Australia.....	324,484	10,818	3,501	9,239	8,736
Western Australia.....	43,698	1,594	611	2,850	2,883
Tasmania.....	151,480	4,757	2,098	23,440	20,771
New Zealand.....	620,451	18,457	5,772	15,392	15,173
Fiji.....	124,919	4,193	4,714

The census taken in 1891 shows a remarkable increase in the population of the cities. Melbourne, which now contains nearly one half of the total population of Victoria, has increased 72 per cent., while the other parts of the colony show an increase of only 11 per cent. in ten years. The present population of Sydney, the capital of New South Wales, is 386,000, showing an increase of 70 per cent. during the decade. The population of the whole colony is returned as 1,134,000, exclusive of Chinese. Adelaide, the capital of South Australia, has 133,000 inhabitants, or 29,000 more than a decade ago.

Finance.—The revenue, expenditure, and debt of each of the colonies are as follow:

COLONIES.	Revenue.	Expenditure.	Public debt.
New South Wales *.....	£9,063,397	£9,250,271	£46,646,449
Victoria †.....	8,511,105	9,750,204	41,377,693
Queensland †.....	3,211,795	3,695,775	28,105,684
South Australia †.....	2,478,981	2,404,179	20,435,500
Western Australia *.....	438,642	386,000	1,371,981
Tasmania *.....	709,486	681,674	5,019,050
New Zealand *.....	3,991,919	3,992,912	37,162,981
Fiji *.....	63,722	57,710	251,089

* 1889.

† 1890.

Commerce and Production.—The foreign trade of the several colonies in 1889 is shown in the following table:

COLONIES.	Imports.	Exports.
New South Wales.....	£22,864,057	£23,294,934
Victoria.....	24,402,760	12,734,734
Queensland.....	6,052,562	7,736,309
South Australia.....	6,304,451	7,259,365
Western Australia.....	518,127	761,391
Tasmania.....	1,333,865	1,459,857
New Zealand.....	6,297,097	9,889,265
Fiji.....	189,898	864,281

Most of the settled portions of Australia are within the temperate zone. The raising of sheep and mining are the principal industries. For agriculture the climate is too dry, and artificial irrigation is yet in the experimental stage. In New South Wales only 1,164,475 acres were under cultivation in 1890. There were 6,570,335 bushels of wheat produced, and 5,354,827 bushels of corn. Other grains are grown, as well as hay and fodder in large quantities, sugar cane, of which the product in 1890 was 168,862 tons, oranges, and the vine, of which the yield was 688,685 gallons of wine and 3,702 of brandy. The number of sheep in 1889 was 50,106,768; of horned cattle, 1,741,592; of horses, 430,777. The number of persons engaged in agriculture and pastoral pursuits was 106,226. A few of the forests are owned by the state and all are under state control, owners paying a royalty on all timber cut, which was 185,021,000 feet in 1889, valued at £617,000. Gold is found everywhere, but the rich deposits have been exhausted. In the four years 1886-'89 the gold coined and exported was £1,482,330, about one quarter as much as during a like period in the first twenty years of gold mining. Silver-lead ore, silver, and lead were produced in 1889 to the amount of £1,899,197; copper product, £122,444; tin, £207,670; coal, £1,632,849. Manufacturing industries in New South Wales employ 44,989 persons. The wool export in 1889 was 266,229,029 pounds.

Victoria, aided by a protective tariff and having a limited area of pasturage, has become the leading manufacturing colony. The number of hands employed in 1889 was 59,181. Gold mining has declined in the past twenty years to the

same extent as in New South Wales, though for several years the decline has been slow. In 1889 the amount of gold mined was valued at £2,459,356, the number of miners at work being 24,047. About one half the area suitable for agriculture or pastoral purposes has been alienated, viz., 22,492,300 acres. The product of wheat in 1889 was 11,496,000 bushels; of oats, 5,645,000 bushels; of barley, 1,831,000 bushels. Vineyards cover 15,662 acres, about double the area devoted to wine in New South Wales. The number of sheep in 1889 was 10,882,231; of cattle, 1,394,209; of horses, 329,335. The wool exported in 1889 was 135,607,370 pounds, more than half being the product of other colonies.

Queensland, lying in its northern parts under the tropics, is a sugar-growing colony. Only 9,919,692 acres, about 2 per cent. of the area of the colony, have been alienated by the Government. About half the country is covered with forests, and little has yet been done to utilize this wealth. The leased sheep and cattle runs, 6,547 in number, occupy 289,706,747 acres. The number of sheep in 1889 was 14,470,095; of cattle, 4,872,416; of horses, 352,364. There were 232,643 acres under grain crops, mostly Indian corn, and 49,741 acres under sugar cane in 1889. The gold product is increasing, amounting in 1889 to £2,586,000. The value of tin mined was £156,406; of silver and lead, £61,500. Wool was exported in 1889 to the amount of £2,680,134; sugar, £443,668; hides, £127,000; preserved meats, £83,168.

South Australia raises large quantities of wheat for export. The area under this crop in 1889-'90 was 1,842,961 acres, producing 14,577,358 bushels. It is also the chief wine-growing colony, producing from 7,352 acres of vineyards 1,052,086 gallons of wine in 1889. The live stock numbered 6,386,617 sheep, 824,412 cattle, and 170,515 horses. The output of copper, silver, and other minerals was valued at £349,430. Exports of wool in 1889 were valued at £2,194,701; wheat and flour, £928,675, of which £691,777 represent flour.

Western Australia is a new colony which has recently been admitted to the ranks of self-governing states, having a variety of soil and climate, vast areas suitable for pasturage and agriculture, and mineral resources of unknown extent. Of a total area of 678,400,000 acres, only 117,833 were cultivated in 1889. The total area of public lands sold up to the end of 1889 was 3,315,905 acres, of which 1,416,747 acres were alienated during that year. The area sown to wheat in 1889 was 35,517 acres. The average yield of wheat is 14 bushels to the acre; of barley, 17 bushels; of wine of good quality, 189 gallons. There were 1,088 acres planted to vines in 1889. Gold, silver, lead, tin, and coal have been found in the colony. The exports of wool in 1889 were £395,904 in value; of shells, £104,450; of timber, £63,080; of sandalwood, £57,465.

Tasmania exports considerable quantities of fruit in the fresh and preserved states. This export was valued in 1889 at £128,822; hops, £23,115; timber and bark, £150,409. The wool export was valued at £283,237. A more important product is tin, which was exported to the value of £345,407, and gold to the value of £123,-

486. There are rich deposits of galena ore, and large beds of coal.

In New Zealand about two thirds of the soil is capable of being made productive. The wheat acreage in 1890 was 335,861 acres, yielding 8,448,000 bushels, an average of 25 bushels to the acre. The oat crop was 13,673,000 bushels. Of live stock, the colony in 1886 had 187,882 horses, 853,358 cattle, and 16,580,388 sheep. In sheep there has been a large increase in recent years. Butter and cheese making are important industries, and frozen meat is one of the staples of the export trade. The export in 1889 was 656,822 hundred-weight of the value of £783,387. The export of wool was 102,227,354 pounds, having nearly doubled in ten years. Woolen mills on the islands worked up 3,556,000 pounds. Of grain, 6,027,201 bushels were exported. The export of Kauri gum was 7,519 tons, valued at £329,590. Timber has recently become an export article of some importance, the shipments in 1889 amounting to 42,568,000 feet. The exports of butter and cheese were valued at £213,945; hides and skins, £203,104; tallow, £159,460; grain and flour, £1,128,955. The gold mined in 1889 was £808,549 in value, not one third as much as in 1863, the year of greatest production.

Fiji in 1889 exported 13,178 tons of sugar, of the value of £263,533; copra of the value of £41,543; and bananas of the value of £42,605.

Navigation.—The following table gives the number of vessels and the tonnage entered and cleared at the ports of the colonies in 1889:

COLONIES.	ENTERED.		CLEARED.	
	Number.	Tonnage.	Number.	Tonnage.
New South Wales....	8,254	2,632,081	8,229	2,683,098
Victoria.....	2,855	2,270,827	2,886	2,823,851
Queensland.....	760	506,780	773	494,229

Western Australia*..	849	497,232	845	507,556
Tasmania.....	842	455,247	819	453,999
New Zealand.....	751	602,684	762	598,252
Fiji.....	89	51,228

* 1888.

Communications.—The Australian colonies have the greatest railroad mileage of any country in proportion to the number of inhabitants, unless Canada still holds that distinction; but in proportion to the extent of its territory Australia is the most scantily provided with rail communications of all countries. The capital to build the lines, which are state property managed by the colonial governments, was raised in England by means of public loans, and these form the bulk of the debts of the colonies. Following are the statistics of mileage, capital, cost, gross earnings, and expenditure of the Australasian railroads for 1889:

COLONIES.	Miles completed.	Capital expenditure.	Receipts.	Expenses.
New South Wales	2,132	£30,555,128	£2,638,086	£1,665,895
Victoria.....	2,341	29,125,280	8,110,140	1,945,887
Queensland.....	2,064	13,332,046	796,344	594,649
South Australia.....	1,756
Western Australia.....	500
Tasmania.....	374
New Zealand.....	1,809	15,085,000	1,095,569	652,787

The postal traffic of the colonies in 1880 was as follows:

COLONIES.	Letters.	Papers.	Packets.	Revenue.	Expenses.
New South Wales.....	58,971,300	86,580,500	7,869,400	£205,584	£293,606
Victoria.....	48,097,268	20,662,732	6,810,258	* 516,156	* 618,736
Queensland.....	13,070,088	10,937,889	1,914,495	183,469	209,404
South Australia.....	16,888,607	9,085,714	918,122
Western Australia †.....	2,253,814	1,183,096	158,693
Tasmania.....	4,703,384	5,424,657	651,706	59,586	44,288
New Zealand.....	42,901,238	16,721,016	5,881,493	222,978	154,101

* Including telegraph service.

† 1887.

All the Australian colonies in 1891 signified their accession to the Postal Union, securing thereby the uniform letter-postage rate of 2½ d. to all the principal commercial nations. By a telegraph convention they also obtained a reduction in the rates for cablegrams to Europe.

The length of telegraphs in the several colonies, and the extent of the traffic in 1880, can be seen in the following table:

COLONIES.	Miles of wire.	Messages.	Net revenue.
New South Wales.....	22,606	3,483,652	£186,862
Victoria.....	8,080	2,885,919	127,720
Queensland.....	16,981	1,438,398	* 24,273
South Australia.....	11,677
Western Australia.....	8,545	97,587	10,165
Tasmania.....	2,690	290,559	* 1,843
New Zealand.....	11,827	1,802,987	5,029

* Net loss.

Federation.—A federal council was empowered by an act of the British Parliament passed in 1885 to legislate on matters connected with the relations of Australasia and the islands of the Pacific, fisheries outside territorial limits, civil jurisdiction and the enforcement of judgments beyond the limits of the several colonies, and common measures pertaining to defense, quarantine, copyright, patent rights, commercial law, marriage and divorce, naturalization, and other matters in which uniformity or community of action might be desirable. The Federal Council met in 1886, 1888, and 1889. New South Wales and New Zealand declined to enter the union of which this body was the organ, and South Australia first joined in 1889. In 1890, instead of a meeting of the council, a conference of representatives of all the self-governing colonies met in Melbourne, in February, to consider a plan of confederation and a scheme of defense. This conference decided in favor of a national Australasian convention, composed of not more than seven delegates from each self-governing colony and four from each Crown colony, to meet early in 1891, at the invitation of the Premier of Victoria, for the purpose of framing a Federal constitution. The New Zealand delegates could not promise that their colony would enter the proposed federation, and at his instance the resolution moved by Sir Henry Parkes, the Premier of New South Wales, declaring it to be the opinion of the conference that "the best interests and the future prosperity of the colonies will be promoted by an early union under the Crown," was confined to the continent of Australia, with a proviso that the remoter colonies of Australasia should be entitled to admission at such times and under such conditions as might be agreed upon. The main resolution expressed recognition of the services of the convention of

1883, which founded the Federal Council, but set forth that subsequent years had developed the national life of Australia in population, in wealth, in the discovery of resources, and in self-governing capacity, to an extent which justified "the higher act, at all times contemplated, of the union of these colonies under one legislative and executive government." The New Zealanders held aloof, not only on account of their remoteness from the center of government of the future confederation and their unwillingness to share in the expense of a system of defense that could not give them the same degree of protection as the other colonies, but for the reason that they feared that a political union of the Australian colonies would pave the way for national independence; for the sentiment of loyalty to the British Crown, which is dying out in Australia, and is supplanted among the native Australians by a national spirit hostile to the British connection, is still strong in the more recently colonized New Zealand. In view of the prospect that New Zealand might join the federation in the future, its delegates in the conference voted for Sir Henry Parkes's resolution, and the colonial Legislature, after a spirited debate, voted to send representatives to the Federation Convention. In the Australian colonies the federation proposals met with the opposition of the high Protectionists in Victoria and of some of the leading Free Traders in New South Wales. The legislative assemblies finally agreed to them, and selected as delegates the leaders of the Government and of the Opposition and eminent jurists from each colony. Only James Service, the originator of the Federal Council, predicted the failure of Sir Henry Parkes's scheme of complete federation, and declined to serve as a delegate from Victoria. The Federal Council met at Hobart, Tasmania, on Jan. 20, 1891, only Victoria, Queensland, and Tasmania being represented. South Australia had formally withdrawn. The Council passed a bill declaring an order of lunacy issued by the Supreme Court of one colony valid in the others, and adopted an address to the Queen respecting the acquisition of land in the New Hebrides, and praying that restrictions on trade with the natives should apply equally to all nationalities.

The Federation Convention was convened at Sydney, New South Wales, on March 2. Sir Henry Parkes was elected president. There was a general agreement that the Federal Government should be carried on by a governor-general, a responsible ministry, and two legislative houses, a senate in which each colony should have equal representation, and a lower house elected on the basis of population; and in regard to intercolonial free trade, a Federal judiciary, and the necessity of federating for defense, there

was practical agreement. With respect to the powers to be accorded to the legislative houses, the smaller colonies were desirous of making the authority of the upper house as large as possible; in regard to the tariff to be maintained by the federation against the world, Victoria wished the rates fixed high, to protect its industries, while New South Wales was in favor of a low tariff; and on the question of the right of appeal from the Federal Supreme Court to the Judicial Committee of the Privy Council in London, Victoria and New Zealand would preserve this link binding them to the mother country, which the other strong colonies wished to sever. Whether the new nation should adopt the principles of the Canadian Constitution or the truer federal theories on which the United States are constituted was the main subject of difference, and this was practically decided when it was agreed that the name of the confederation should be, not the "Dominion," but the Commonwealth of Australia, by 26 votes to 13, this title indicating furthermore the prevalent aspirations for national independence. Sir George Grey, a delegate from New Zealand, who has formerly been governor under the Crown of various colonies, moved that the governor-general should be elected by the people; but this proposition, which the Imperial Government would be certain to reject, was negated by the majority of 35 to 3. The draft constitution was amended in minor particulars only during its discussion by the committee of the whole. It was adopted by a unanimous vote on April 9. After agreeing to a motion recommending the parliaments of the individual colonies to call special conventions for the ratification of the Constitution as framed, and to one requesting the Imperial Government, as soon as any three colonies should adopt the Constitution, to take the necessary steps to establish it in those colonies, the convention dissolved. When the act establishing the Commonwealth of Australia comes into force, which will be six months after its adoption by the Imperial Parliament, the governors of the individual colonies will no longer be nominated by the Imperial Government, but will be appointed in such manner as the Parliament of each state of the Commonwealth shall direct. The Federal Council will cease to exist. The main provisions of the bill adopted by the Federation Convention are as follows:

The colonies will be called States. The Legislature will consist of the Queen, a Senate, and a House of Representatives. The Governor-General will be appointed by the Queen at a salary of not less than £10,000 a year.

The Senate will consist of eight members from each State, chosen by the Parliaments of each State for six years, half retiring every three years, and the President of the Senate will be chosen by the Senate itself. He will have a vote on every measure, and when there is a tie vote the measure is lost.

The House of Representatives will be elected every three years by the people of the several States in proportion to their population on a basis of one member for every 30,000 inhabitants, the *minimum* number of members for each State to be four. The Speaker will be chosen by the House, and will have the casting vote when the votes are equal.

The members of both houses will receive £500 each per annum. No member can hold an office of profit or trust under the Crown, but ministers will not be

compelled to offer themselves for re-election on appointment.

The Parliament of the Commonwealth will have power to make laws on any of the following subjects:

(1) The regulation of trade and commerce with other countries and among the States; (2) customs, excise, and bounties; (3) the raising of money by any other mode or system of taxation, but taxation must be uniform throughout the Commonwealth; (4) the borrowing of money on public credit; (5) the postal and telegraphic services; (6) military and naval defenses; (7) navigation and shipping; (8) ocean beacons, buoys, light-houses, and light-ships; (9) quarantine; (10) fisheries; (11) census and statistics; (12) currency, coinage, and legal tender; (13) banking, the incorporation of banks, and the issue of paper money; (14) weights and measures; (15) bills of exchange; (16) bankruptcy and insolvency; (17) copyrights, patents, and trade marks; (18) naturalization and aliens; (19) the status of foreign corporations and those formed within Australia; (20) marriage and divorce; (21) the service and execution of civil process, and the judgments of the courts of one State in the other States; (22) the recognition of the laws, records, and judicial proceedings of the various States; (23) immigration and emigration; (24) the influx of criminals; (25) external affairs and treaties; (26) the relations of the Commonwealth to the islands of the Pacific; (27) river navigation with respect to the common purposes of two or more States; (28) the control of railways with respect to transport for the purposes of the Commonwealth; (29) matters referred to it by the Parliament of any State, but such law only to extend to the State or States by whom the matter is referred and such as afterward adopt such law; (30) the exercise of legislative powers with respect to the affairs of Australia which are at present exercised only by the Imperial Parliament or the Federal Council of Australia; (31) the manufacture of munitions of war; (32) matters necessary for carrying into execution the foregoing powers.

Parliament will also, subject to the provisions of the Constitution, have power to make laws necessary for peace, order, and good government with respect to the following matters: (1) The affairs of people of any race regarding whom it is deemed necessary to make special laws not applicable to the general community, but this power is not extended to the aborigines of Australia or the Maoris of New Zealand; (2) the government of any territory surrendered by any State for the seat of government or other purposes; (3) matters relating to departments of the public service transferred to the Executive of the Commonwealth. Laws appropriating revenue or imposing taxation must be sent down by message of the Governor-General to the House of Representatives. The powers of the Senate will be co-ordinate with those of the Lower House, except with regard to appropriation and taxation bills, which the Senate may affirm or reject, but not amend. Laws imposing taxation shall deal with taxation only, and, with the exception of customs and tariffs, with only one subject. Money bills of a general character must not be tacked on to appropriation bills; and in the case of bills which the Senate may not amend, it may return the same to the Lower House with a message requesting it to omit or amend any item; and the Lower House may, on receiving such message, if it thinks fit, make such omissions or amendments. The Governor-General's assent is required for all measures, and he will have the power of reserving any measures for the Queen's approval. Her Majesty in Council may disallow any bill within two years after its receipt. The executive power vested in the Queen will be exercised by the Governor-General, advised by a Council of seven ministers, who may sit in either house; £15,000 to be set apart for the payment of the ministers, who will constitute the Federal Executive Council and be the Queen's ministers of state for the Commonwealth.

The Governor-General will be the commander-in-chief of the military and naval forces. The Execu-

tive Government, as soon as formed, will take over the control of customs, excise, post and telegraphs, military and naval defense, ocean beacons, buoys, light-houses, light-ships, and quarantine.

The Supreme Court of Australia will consist of a chief justice and not fewer than four other judges, to be appointed by Parliament, and to hold office during good behavior, and will be the final court of appeal for Australia; but the Queen may, in all cases where public interests are involved, grant leave to appeal to herself in council. Indictable offenses must be tried in the State in which the offense is committed.

Parliament will have the sole power of imposing customs and excise; but the present duties will remain in force until a uniform tariff has been passed, when free trade will prevail between the States of the Commonwealth. The revenue collected will be applied, in the first instance, to defray the expenses of government, the surplus to be applied in such manner and for such purposes as Parliament may determine.

Parliament may make provision for the consolidation of the whole or part of the debts of the States. The States will retain all the powers they at present possess, except those expressly delegated to the Commonwealth. When a State law is inconsistent with the law of the Commonwealth, the latter will prevail.

The Governors of the States will be appointed by the local parliaments as they think fit. All references to the Queen must be made through the Governor-General.

The Constitutions of the States will remain as they are, unless altered by the States themselves. Any of the existing colonies, on adopting the Constitution, may be admitted into the Commonwealth. New States may be admitted under such conditions as Parliament may see fit to impose. The seat of government of the Commonwealth shall be determined by Parliament, and, until so determined, the place of meeting of Parliament shall be fixed by a majority of the governors of the States. Any amendment of the Constitution can only be effected in the following manner: Any law for the alteration of the Constitution must be passed by an absolute majority of the Senate and the House of Representatives, and thereupon be submitted to conventions elected by electors of the several States qualified to vote for the election of members of the House of Representatives. Such conventions shall be held as the Parliament of the Commonwealth prescribes. If the proposed amendment be approved by the conventions of a majority of the States, if the States composing this majority contain a majority of the people of the Commonwealth, it shall become law, subject, however, to the Queen's power of disallowance; but an amendment by which the proportionate representation of any State in either House of the Parliament of the Commonwealth is diminished, shall not become law without the consent of the convention of that State.

A proposition for the assumption by the Commonwealth of the public debts of all the colonies on the basis of £40 per head of population, those whose debts are heavier having to pay the difference, and those owing less to be compensated, was deferred, to be acted upon by the Federal Parliament.

New South Wales.—The Governor is the Earl of Jersey, appointed in October, 1890. The ministry at the beginning of 1891 consisted of the following members: Premier and Colonial Secretary, Sir Henry Parkes; Colonial Treasurer, William McMillan; Attorney-General, George Bowen Simpson; Secretary for Lands, James Nixon Brunker; Secretary for Public Works, Bruce Smith; Minister of Public Instruction, Joseph Hector Carruthers; Minister of Justice, Albert John Gould; Postmaster-General, Daniel O'Connor; Secretary for Mines, Sydney Smith;

Vice-President of the Council without portfolio, William Henry Suttor.

For the session which opened on May 19, 1891, the Government offered legislative proposals of moment aside from the question of federation. The programme embraced a local government bill, and the abolition of plural voting and division of the colony into single electoral districts, together with minor measures relating to the regulation of coal mining, water conservation, local option, and courts of conciliation to arrange trade disputes. The financial record of the Government was excellent, showing an increase of revenue for the first six months of the year amounting to £420,000 as compared with the corresponding period of 1890, being an excess of £320,000 over the estimate. Yet the position of the veteran leader of the majority was not strong. The Government had offended the working men by its course of action during the great strike of sheep-shearers and their sympathizers on the railroads and docks, it having been accused of unduly favoring the employers. Mr. Dibbs, the leader of the Opposition, attacked the federation scheme of Sir Henry Parkes, which would be only a precursor of imperial federation, not of national independence as desired by the younger Australians. The Protectionists, who have grown into a strong party in New South Wales, were anxious to oust the Premier, who is the chief exponent of the free-trade idea in Australia, and thought that they could count on the united support of the working men. The admirable programme of the Government was not allowed to come under discussion. Sir Henry Parkes announced that the questions of district government and one man one vote should take precedence of the federation bill; but Mr. Dibbs attacked the federation proposal, declaring that its author had lost sight of the true interests of New South Wales, at the same time discrediting the financial statement of Mr. McMillan and the conduct of the Administration. On a vote of want of confidence the Government was sustained only by the casting vote of the Speaker. The tie vote of 63 on both sides was accepted as a defeat, and Parliament was dissolved. The result of the elections, which took place in the middle of June, surprised the politicians and disconcerted all their plans. After the ending of the prolonged and disastrous labor struggle the leaders of the working men had promised that there should be no more strikes, saying that labor would defend its interests henceforth in Parliament and find legislative redress for its wrongs. A Labor party was organized and disciplined, with the result that, when the returns were all in, it was found that the Loyal and Free-Trade party of the "Grand Old Man" of New South Wales was able to obtain only 51 seats, whereas the Native Australian, Protectionist, and Separatist forces, led by Mr. Dibbs and Mr. Barton, had 57; while, instead of sending four spokesmen to serve in a humble advisory capacity, as in the last Parliament, the Labor party came with a strong phalanx of 26 representatives, and there were besides 3 Independents affiliated with the Labor party. The Labor representatives were Protectionists, and were known to be anti-British and even Republican and opposed to the federation scheme. Therefore they

were expected to ally themselves with the party of Mr. Dibbs. It was a surprise to many that the ministry cared to retain their portfolios till Parliament met on July 15, and a coalition between Sir Henry and Mr. Dibbs against the new and, to both, dangerous element was considered probable. The vote of want of confidence moved by Mr. Dibbs disappointed this expectation; and when the ministry was sustained by the solid vote of the 29 Labor representatives, Mr. Black, their leader, declaring that they would support the Government "as far as it suits their purposes," speculation was rife regarding the price to be paid, and the eyes of the world were drawn to a Legislature in which an organized Labor party can dictate measures. In the opening speech the electoral reform bill, extending the franchise, abolishing plural voting, establishing single districts, doing away with the condition of a money deposit by candidates, and making registration the only condition of suffrage, was explained. A resolution in favor of woman suffrage was promised. In other respects the Government proposals were the same as were offered in the last message. The Postmaster-General, Daniel O'Connor, though one of the most popular members of the Government, had lost his seat in the elections, but was not allowed to resign. The conflict between the Sheep-shearers' Union and the Pastoralists, who had formed a counter-organization, broke out afresh during the year, engaging the attention of the ministers and Parliament. There was no dispute about hours, nor about wages, which were 18s. a day, but only about the employment of unionists and non-unionists together. Sir Henry Parkes proposed a conference, which the shearers had originally rejected, but to which the employers now refused to accede unless the right of free contract was admitted. On this basis the contesting parties finally came together, the Secretary for Lands presiding over the meeting; and the shearers, who had recently driven non-unionists from their work by force and defied the public authorities, formally conceded freedom of contract, and the strike was declared at an end in the beginning of August. The motion of Sir Henry Parkes in favor of woman suffrage was lost by 57 votes against 34. At the end of July William McMillan retired from the ministry, which was reconstructed, Bruce Smith becoming Colonial Treasurer; E. Barton, Secretary for Public Works; W. H. Suttor, Postmaster-General; and D. O'Connor, Vice-President of the Executive Council.

Victoria.—The Governor is the Earl of Hopetoun, who was installed on Nov. 28, 1889. On Oct. 31 the coalition Cabinet of Duncan Gillies and Alfred Deakin, which had governed for four years, was overturned by a vote of 55 to 35. The refusal of the ministers to go to London for a large new loan for the satisfaction of constituencies wanting railroads, their financial mistakes, and their unpopular attitude in relation to the dock strike that was about to collapse, led to the falling away of their supporters and their sudden defeat in a parliament that followed them obsequiously and was without an organized Opposition a month or two before. The defection of about 25 representatives of labor constituencies in and around Melbourne was the

cause of so heavy and adverse a vote on the action of the Government in putting down picketing and intimidation. Mr. Monro, who led the attack, an Independent Liberal who had been Minister of Instruction under Sir Graham Berry in 1875, was asked to form a Cabinet, which was constituted on Nov. 4 as follows: Premier and Treasurer, James Monro; Attorney-General and Minister of Railways, William Shiels; Chief Secretary and Commissioner of Trade and Customs, G. D. Langridge; Commissioner of Crown Lands, Allan McLean; Commissioner of Public Works, James Wheeler; Minister of Water Supply, George Graham; Postmaster-General, John Gavan Duffy; Minister of Mines, A. R. Outtram; Minister of Defense and of Education, Lieutenant-Colonel Sir Frederick T. Sargood; Minister of Justice, J. M. Davies. It is, like all Victorian Cabinets of the past eight years, a coalition ministry composed of Liberals and Conservatives, the old party distinctions having been in a great measure obliterated, and in it the Conservative element predominates. The retiring Treasurer, who had expended \$13,000,000 of borrowed money while he was in office, left an empty exchequer and heavy liabilities to meet immediately. He had been accused of building useless railroads and granting bonuses to farmers and money for prospecting to gold-mining companies simply for the purpose of retaining his post. The strike, which involved various trades and was directed against imported labor, was practically ended before the end of 1890. The new Cabinet attempted to bridge over the financial difficulties by means of a new loan, but could not float it. A committee of public accounts was instituted. Parliament was opened on June 23. Both parties were in favor of the federation bill. Negotiations for offering it simultaneously and in the same manner in Victoria, New South Wales, and South Australia, in order that the three colonies might establish federation as soon as possible, had broken down, and each colony was left to follow its separate method of procedure. A bill to abolish plural voting was prominent in the Government programme, and, as in New South Wales, the ministry proposed to extend the principle of one man one vote, so as to include women among the electors. The ministry asked Parliament to do away with the Railway Commission, the creation of their predecessors. Among the other measures announced were the amendment of the local government acts, the setting apart of public lands for the endowment of State education, and mining, water conservancy, and irrigation bills. In the debate on the Federation bill the Assembly struck out the word "Commonwealth," and substituted "Federated States." The financial statement of Mr. Monro showed that the year ending June 30, 1891, closed with a deficiency of £797,000. Although the colony was suffering from commercial depression, increased taxation would be necessary to meet an excess of expenditures over revenue for the coming year that was estimated on the basis of existing sources at about £1,000,000.

Queensland.—The Governor is General Sir Henry Wylie Norman, who was transferred from Jamaica in December, 1888. The Cabinet in 1891 was composed of the following officers:

Premier, Chief Secretary, Attorney-General, and Vice-President of the Executive Council, Sir Samuel W. Griffith; Minister for Lands and Agriculture, S. Cowley; Minister for Railways and Postmaster-General, T. Unmack; Secretary for Mines and Minister for Public Instruction, W. O. Hodgkinson; Colonial Secretary and Secretary for Public Works, H. Tozer; Solicitor-General, T. J. Byrnes; Colonial Treasurer, Sir Thomas Mellwraith; without portfolio, H. Wilson. The question of the division of North and South Queensland, which has agitated the colony for a dozen years, has become more pressing since mining enterprise has developed the northern and central districts. The inhabitants of this northern section have urged the home Government to make an independent colony, on the ground that they are taxed for the benefit of the south. The chief objection advanced by the southerners was that the sugar planters and mine operators of the north, if they were allowed a free hand, would defy Australian opinion in respect to the importation of black and coolie labor. In 1887 Lord Knutsford replied to a deputation of North Queenslanders, that it would be difficult and undesirable to divide a colony having the privileges of responsible government unless the colonial Legislature requested it. That body had recently signified its sense of the proposition by a vote of 36 to 9 against separation, corresponding to the representation of the two sections in the Legislative Assembly. The movement in favor of separation had made such progress in October, 1890, that the vote had changed to 26 for separation to 32 against. A petition in favor of immediate separation had been forwarded to the Colonial Office in London, signed by 31 members of the Legislature. The home Government still held that it was a matter to be decided by the colony or reserved for the action of the future Parliament of the Australian States. A proposition to divide the colony into Northern, Central, and Southern Queensland received fewer votes than that for division into two colonies by a line running from Cape Palmerston. The evils complained of formerly by the North Queenslanders have not been remedied, for decentralization bills that have been proposed have not been carried, and local revenues and customs on goods consumed in the north are not applied for the benefit of that section. Sir Samuel Griffiths proposed an alternative scheme, that would reconcile the requirements of the different sections while preserving the integrity of the colony. This was subdivision, for administrative purposes and local self-government, into three provinces, each having its Parliament with control of certain specified funds, while the central Parliament would decide on matters of common and general Australasian interest. This proposal failed to obtain the approval of parliament in 1890, and was submitted again in the session that opened on June 30, 1891, when the draft of the Federal Constitution would also have to be discussed, the ratification of which would make division into autonomous provinces more advantageous. The Federal Union was approved in the Governor's speech, with a reservation as to amendments that might be necessary to give encouragement and enlightened sense to local patriotism

and advance material well-being. A naval defense bill for the establishment and maintenance of an additional squadron, in accordance with the agreement of 1887 that had been ratified by the parliaments of Great Britain and the other colonies, was passed without opposition. New land legislation was proposed to facilitate settlement. The budget statement showed an elastic revenue, the yield for 1891-'92 from taxation being estimated at £1,642,000, an increase of 7½ per cent. on the previous year. The gross revenue was estimated at £3,675,200, and the expenditure at £3,647,693. The ministry was chagrined at not being able to raise a fresh loan in London, in consequence of which all new public works, except such as will be immediately productive, have been discontinued. The labor disturbances that convulsed Australia in 1890 and 1891 began with a strike of the sheep-shearers of Queensland. The labor leaders assert that the employers began the struggle, and that their object was to crush unionism; and, further, that the governments, under the pretense of preserving order, aided the capitalists and enabled them to secure the victory. The Queensland Shearers' Union was at first successful in compelling the British India Shipping Company to accept only union wool. The Amalgamated Shearers' Union, covering New South Wales, Victoria, and South Australia, were unable to block the shipment of non-union wool from the southern Australian ports. The Trades and Labor Council, which took up the contest, was confronted by an association of employers. Attempts at mediation failed, and a temper was provoked on both sides that led in Queensland to violence. In and around Rockhampton bloody collisions occurred, and the Governor called out the troops to put an end to the disturbances. Leaders of the strike were prosecuted, and were sentenced to two or three years' imprisonment. The struggle between the unions of shearers and pastoralists in Queensland was ended in June, 1891, when unionists returned to work, signing the agreements exacted by the squatters, the whole point at issue being whether men should be free to contract for work on terms prescribed by the masters, or should conform to the rules laid down by the union. In drawing up the contracts that they required the men to sign, the employers intentionally made them very liberal, differing only in insignificant details from the union regulations.

South Australia.—The Governor is the Earl of Kintore, who assumed the government on April 11, 1889. The ministry consisted in 1891 of the following members: Premier and Treasurer, T. Playford; Chief Secretary, Sir J. C. Bray; Attorney-General, R. Homburg; Commissioner of Crown Lands, W. Copley; Commissioner of Public Works, W. B. Rounsevell; Minister of Education, D. Bews. At the meeting of Parliament on June 4, 1891, the Government was sustained on a motion of want of confidence by a majority of 7. The revenue for the year ending June 30 exceeded the expenditure by over £50,000. Important coal fields have been discovered recently. The settlers of northern Australia, like those in the tropical parts of Queensland, complain of the general Australian sentiment in regard to colored and Chinese

labor, the consequence of which is that cotton must be left to spoil in the field, sugar plantations have been abandoned, and rich tin, silver, and gold mines remain unworked.

Western Australia.—The Imperial Parliament conferred responsible government on Western Australia, the only one of the colonies on the continent that still remained under the partial control of the Crown, by the enabling act of 1890 embodying the new Constitution. The government is vested in the Governor, a Legislative Council of 15 members nominated in the first place by the Governor, but in the future to be elected, and a Legislative Assembly of 30 members, elected from as many districts. The qualification for voting is the ownership of real property worth £500 or the payment of £10 rent per annum. A member of either house must be the owner or occupant of property of five times such value. Power is reserved to the Crown to divide the country into two or more colonies, but the exclusive management and control of the waste lands of the Crown are vested in the colonial Legislature. The Governor is Sir William C. F. Robinson, who held the same office in 1874 and in 1880, and was re-appointed in 1889. The first Cabinet of Western Australia was constituted as follows: Premier and Treasurer, John Forrest; Chief Secretary, Mr. Strenton; Attorney-General, Mr. Burt; Commissioner of Lands, Mr. Marinton; Minister of Public Works, Mr. Venn.

Tasmania.—The Governor of the colony is Sir Robert G. C. Hamilton, who was appointed in January, 1887. The Cabinet in 1891 was composed of the following members: Premier and Chief Secretary, Philip Oakley Fysh; Treasurer, Bolton Stafford Bird; Attorney-General, Andrew Inglis Clark; Minister of Lands and Public Works, Alfred Pillinger. Parliament was dissolved on May 1, and the elections were fixed for May 22. The new Parliament was opened on July 8. The accounts for 1890 indicated that the period of depression was over. Instead of a deficit, there was a surplus at the close of the year of £35,000, showing an increase of £76,000 as compared with 1889. New railways had been opened, and others were in progress. The discovery and opening of silver mines added a new product to the resources of the island figuring for £17,000 in the exports.

New Zealand.—The Governor is the Earl of Onslow, formerly parliamentary Under Secretary for the Colonies, and afterward President of the Board of Trade, who was appointed to his present post in November, 1888. A new ministry came into office on Jan. 24, 1891, composed of the following members: Premier, Colonial Treasurer, and Minister of Native Affairs, J. Ballance; Attorney-General and Colonial Secretary, P. A. Buckley; Minister of Agriculture and Lands, Mr. Mackenzie; Minister of Mines and Defense, R. J. Seddon; Minister of Education and Justice, R. Reeves; Speaker of the House of Representatives, Major Stewart. The colony is rapidly recovering from the long period of depression that followed the failure of the City of Glasgow Bank, which was the result of inordinate land speculation, and threatened to bring about the forced sale of a large number of the private estates on the islands. The exports

of New Zealand produce increased from £6,707,805 in 1888 to £9,428,922 in 1891. The frozen-meat trade has nearly trebled in these years. The profits of the foreign trade in wool and mutton have caused a great quantity of land to be taken up for sheep farming. Still the people continue to emigrate to other colonies. Among the bills proposed to Parliament, which was opened on June 11, was one for the repurchase of private estates for the purpose of settlement. The Premier promised also to introduce a bill to deal with the labor question. The prospects of labor legislation and of restrictions to be imposed on capital cause even more concern to the conservative and wealthy classes in New Zealand than in other parts of Australasia. About one third of the members of Parliament owe their election to the labor vote, and their course in reference to labor measures is closely watched by delegates of the trade unions. Employers' associations in like manner exercise a control over representatives who are expected to serve their interests. The measures proposed by the Labor party, and adopted in part by the National Liberal Association, are strongly socialistic.

AUSTRIA-HUNGARY, a dual monarchy in central Europe, composed of the Empire of Austria and the Kingdom of Hungary, which have been politically independent, except in regard to common affairs, since the restitution of the ancient Hungarian Constitution after the war of 1866. The head of the house of Hapsburg is Emperor of Austria and King of Hungary. The standing army, the navy, the customs, foreign affairs, and other matters of common interest are administered by a common ministry, and supplies are voted by delegations from the parliaments of the two monarchies. The reigning Emperor-King is Franz Josef I, born Aug. 18, 1830, who succeeded to the throne Dec. 2, 1848, after the abdication of his uncle Ferdinand I. his father having renounced the crown in his favor. The heir-presumptive is the Emperor's brother, the Archduke Karl Ludwig, born July 30, 1833, whose son, the Archduke Franz, born Dec. 18, 1863, is next in succession. The Minister of Foreign Affairs and of the Imperial Household for the Whole Monarchy is Count G. Kalnoky, who succeeded Count Andrássy in 1881. The Minister of War for the Whole Monarchy is Field-Marshal Baron Ferdinand Bauer, appointed in 1888. The common Minister of Finance is Benjamin de Kallay, appointed in 1888.

Area and Population.—The area of the various provinces of the monarchy and their population, according to estimates made for Dec. 31, 1889, in Austria, and for a twelvemonth before in regard to the Hungarian dominions, are given in the table at the head of the next page.

The Ottoman provinces of Bosnia and Herzegovina, occupied and administered by the Austro-Hungarian Government in accordance with the Treaty of Berlin, had in the beginning of 1888 a total population of 1,404,000 souls.

The number of marriages registered in Austria in 1889 was 177,771; the number of births was 924,690; of deaths (excluding 26,340 still-born), 646,787; surplus of births over deaths, 251,563. In Hungary, Croatia-Slavonia, and Fiume the number of marriages in 1888 was 158,881; of births, 759,662, of which 14,026 were still-born; of

deaths (excluding still-born), 544,478; surplus of births over deaths, 215,184.

The emigrants from Austria-Hungary in 1888 were returned as 48,567, of which number 41,665 were destined for the United States and 2,333 for Argentina.

The population of the chief cities of Austria was estimated at the end of 1888 as follows: Vienna, 1,350,000; Prague, 304,000; Trieste, 160,000; Lemberg, 122,000; Gratz, 106,000. Budapest, the Hungarian capital, had 465,600 inhabitants in 1890.

Commerce.—The general commerce of Austria-Hungary for 1889 amounted to 578,000,000 florins of imports and 747,200,000 florins of exports, not including specie, as compared with 533,100,000 florins of imports and 728,800,000 florins of exports in 1888. The following were the largest imports in 1888: Cotton, 52,300,000 florins; wool, 37,900,000 florins; coffee, 32,800,000 florins; coal, 17,000,000 florins; woolen yarns, 16,500,000 florins; silk, 15,800,000 florins; leaf tobacco, 15,100,000 florins; hides, skins, and peltry, 14,500,000 florins; machinery, 14,200,000 florins; manufactured tobacco, 14,100,000 florins; cotton yarns, 14,100,000 florins; leather, 13,500,000 florins; silk goods, 10,400,000 florins; books, 10,200,000 florins; hardware and clocks, 10,100,000 florins; colors and tanning materials, 10,000,000 florins; woolen goods, 9,900,000 florins; cattle, 8,600,000 florins; grain, 5,200,000 florins. The chief exports in 1888 were of the following values: Grain, 95,500,000 florins; timber, 58,300,000 florins; sugar, 50,700,000 florins; hardware, 30,900,000 florins; flour, 29,500,000 florins; woolen goods, 24,900,000 florins; coal, 23,900,000 florins; wines, 21,600,000 florins; cattle, 19,300,000 florins; wool, 18,900,000 florins; glass and glassware, 17,000,000 florins; wood manufactures, 15,400,000 florins; paper manufacturers, 14,100,000 florins; feathers, 12,300,000 florins; poultry, 12,100,000 florins; gloves, 11,900,000 florins; iron manufactures, 11,500,000 florins; leather manufactures, 10,500,000 florins; silk manufactures, 9,100,000 florins; minerals, 8,900,000 florins; linen yarns, 8,000,000 florins.

The imports of precious metals in 1888 were

27,100,000 florins; and the exports, 12,200,000 florins.

The imports into Hungary from Austria and all other countries in 1888 were 446,631,000 florins, and the exports of Hungary were 444,383,000 florins, in total value. Cereals were exported in 1889 to the amount of 152,771,000 florins; cattle for 75,296,000 florins; and wines and liquors for 27,069,000 florins; the total value of exports for that year being 460,563,000, and that of imports 459,478,000 florins. The free cities of Trieste and Fiume, in which, under their ancient franchises, no duties were collected, except on the Government monopolies of tobacco, salt, and gunpowder, on July 1, 1891, were incorporated in the customs territory of the monarchy.

Navigation.—During 1888 there were 68,749 vessels, of 8,361,526 tons, entered and 68,634, of 8,357,598 tons, cleared at Austrian ports and 10,185, of 994,095 tons, entered and 10,150, of 997,167 tons, cleared at the ports of Hungary. Of the total tonnage about 82 per cent. was Austrian. The merchant marine of Austria-Hungary on Jan. 1, 1890, comprised 69 ocean steamers, of 81,870 tons; 102 coasting steamers, of 14,522 tons, and 9,851 sailing vessels of all sizes, of 160,799 tons. The Austro-Hungarian Lloyd Steamship Company, having become financially embarrassed, was in 1891 taken under the Austrian Government, which will appoint the president and be represented in the board of directors. By an agreement with the Hungarian Government, which has ceased all connection with the Lloyd Company, its steamers will monopolize the service to the Levant, India, and China, and the Hungarian Adriatic Company will have America for its field, except Brazil, which is open to both lines.

Railroads.—On Jan. 1, 1890, the Austrian Government owned 6,869 kilometres of railroads, but operated only 5,024 kilometres, while companies owned 7,814 kilometres and worked 9,659 kilometres. In Hungary the state owned 4,327 kilometres which it worked, and 4,117 kilometres which were leased to companies, while 2,256 kilometres were both owned and managed by private capital. The length of railroads in Austria was 14,683 kilometres, or 9,177 miles, and in Hungary 10,700 kilometres, or 6,700 miles. The total mileage increased from 11,206 in 1877 to 14,499 in 1885, and the capital expenditure from 2,761,152,000 to 3,475,203,000 florins. In 1890 the mileage was 15,877, not counting 342 miles in Bosnia and Herzegovina.

Posts and Telegraphs.—The number of letters carried in the Austrian mails during 1889 was 504,333,000; postal cards, 90,527,400; samples, circulars, etc., 60,195,500; newspapers, 93,000,000. The Hungarian post-office handled 135,739,000 letters, 37,207,000 postal cards, and 19,072,000 patterns, circulars, etc. The post-office in Bosnia and Herzegovina forwarded 6,793,000 letters and postal cards, 341,400 samples and circulars, and 876,400 newspapers.

The telegraphs in Austria had in 1889 a total length of 26,677 kilometres of line, with 73,003 kilometres of wire; in Hungary the length of line was 18,693 kilometres, with 47,919 kilometres of wire; in Bosnia and Herzegovina there were 2,806 kilometres of line, and 5,869 kilometres of wire. The messages for that year num-

bered: In Austria, 8,736,199; in Hungary, 4,211,141; in Bosnia and Herzegovina, 219,829.

The receipts from posts and telegraphs in Austria for 1889 were 29,530,836 and expenses 25,187,836 florins; in Hungary, in 1888 the receipts were 12,303,559 and the expenses 8,618,114 florins.

Common Finances.—The budget for common affairs in 1891 called for 117,290,284 florins for the army (including 14,450,439 florins of extraordinary expenditure), 11,344,533 florins for the navy (including 1,860,500 florins for extraordinary purposes), 4,861,100 florins for foreign affairs, 2,011,610 florins for the Ministry of Finance, and 126,710 florins for the Board of Control, making a total of 135,634,237 florins. The net proceeds of customs were reckoned at 40,669,500 florins, and receipts from the various ministries at 2,708,352 florins. In accordance with the last *Ausgleich*, Hungary pays 2 per cent. of the expenses after deducting the receipts, and what remains is apportioned—70 per cent. to Austria and 30 per cent. to Hungary. Hungary's 2 per cent. for 1891 is 1,845,127 florins, her quota of the remainder 27,123,377, and Austria's contribution 63,287,881 florins. The cost of administering the occupied Ottoman provinces for 1891 was estimated at 10,136,149 florins, which is covered by 10,187,450 florins of revenue, but does not include military expenses, for which the sum of 4,282,000 florins is allowed.

The general debt of the empire, owed in common by the two monarchies, amounted in 1890 to 3,122,010,000 florins, besides floating obligations represented by treasury notes to the amount of 411,994,644 florins, of which 323,140,194 florins are paper currency.

The Army.—The whole monarchy is divided into 106 military districts, 1 for each of the 102 infantry regiments, 1 for the Tyrolese Jäger, and 3 on the coast for the marine. Bosnia and Herzegovina are divided into 4 recruiting districts. The two Landwehrs, which have independent administrations under the direction of the Ministers of Defense of the two halves of the monarchy, recruit their 184 battalions of infantry and 16 regiments of cavalry from the same territorial districts as the regular army. Every regiment has four battalions, making 408 battalions of the line. Besides 12 battalions of Tyrolese rifles, forming the regiment furnished by Tyrol and Vorarlberg, there are 30 battalions of Jäger. There are 21 brigades of cavalry, of 2 regiments each; 14 regiments of field artillery, comprising 153 batteries of heavy and 28 of light artillery, 16 of mounted artillery, and 13 with mountain guns; 12 battalions of fortress artillery, of 6 companies each; 2 regiments of engineers, forming 52 companies in time of war; 1 regiment, forming 25 companies, of pioneers; and 1 regiment of 8 companies of railroad and telegraph troops.

The Landwehrs on the peace footing maintained 15,580 infantry and 11,892 cavalry, and for war can muster 407,684 infantry and 26,645 cavalry, and enrolled in the Landsturm were 441,122 men, making the total force of trained troops 1,449,483 infantry, 100,600 cavalry, 109,490 artillery, and 158,840 technical and other troops. The number of guns in peace time is 856, in war 2,008; the number of horses, 66,880

in peace and 274,060 in war. More than 4,000,000 men can be summoned into the Landsturm in case of war.

The strength of the regular army in 1891 was as follows:

TROOPS.	Peace footing.	War footing.
Infantry	196,233	600,677
Cavalry	58,714	73,955
Artillery	18,569	109,490
Engineers	10,143	47,609
Train	2,381	43,917
Sanitary troops	2,689	6,514
Staff, etc.	4,116	20,982
Establishments, etc.	15,945	39,818
Total	309,245	942,962

The Navy.—The armor-clad navy consists of 11 battle ships, of which the "Stephanie" and "Kronprinz Rudolf," launched in 1887, carried respectively two and three 48-ton guns, mounted *en barbette*, and the rest are central-battery ships, except one old broadside frigate. The steel ram cruiser "Kaiser Franz," steaming 18½ knots, will be excelled in speed by her sister ship, the "Kaiserin Elisabeth," and is already by some of the twelve new sea-going torpedo cruisers. The torpedo flotilla consists of 57 boats carrying machine guns, with which all the vessels of the navy are abundantly provided. There are 2 river monitors, 3 avisos, 4 training ships, 19 station and service ships, 6 harbor and coast-service ships, 9 school and barrack ships, and 4 hulks. The crews are recruited from the districts of Trieste, Fiume, and Zara.

Austria.—The Reichsrath, consisting of the Herrenhaus and Abgeordnetenhaus, legislates for the whole Cisleithan monarchy, conjointly with the Emperor, except in such matters connected with municipalities, taxation, agriculture, education, worship, charity, and public works as are reserved for the exclusive or concurrent legislation of the provincial diets or Landtage. The Austrian Cabinet is composed of the following ministers: Premier and Minister of the Interior, Count Edward Taaffe, appointed Aug. 19, 1879; Minister of Education and Ecclesiastical Affairs, Dr. Paul Gautsch von Frankenthurn; Minister of Finance, Dr. J. Dunajewski; Minister of Agriculture, Count Julius Falkenhayn; Minister of Commerce and National Economy, Marquis von Baequehem; Minister of Defense, Field-Marshal Count S. von Welsersheimb; Minister of Justice, Count Friedrich von Schoenborn; without portfolios, Baron von Prazak and Ritter von Zaleski.

Finance.—The receipts of the Austrian Government for 1890 were estimated as follows:

SOURCES OF REVENUE.	Florins.
Council of Ministers	713,800
Ministry of the Interior	1,159,201
Ministry of Defense	264,156
Ministry of Worship and Education	5,900,204
Finance administration	8,159,910
Land tax	35,310,000
House tax	81,472,000
Industrial tax	11,103,000
Income tax	25,334,000
Customs	37,291,000
Excise	102,369,600
Salt	20,679,800
Tobacco	32,391,800
Stamps	18,900,000
Judicial fees	38,770,000
Lottery	21,500,000

Total expenditure..... 546,808,085

Austria's special debt, contracted since 1868, which amounted to 332,244,000 florins in 1875, had grown to 681,099,000 florins in 1885, and in faster progression since to 1,128,483,000 florins in 1890.

Political Crisis.—Count Taaffe's attempt to reconcile the Germans and the Czechs on the basis of the formal compact, or *Ausgleich*, arrived at in January, 1890, was brought to naught by the agitation of the Young Czechs, who won over to their camp the entire Czech nation, leaving powerless the Old Czechs, who were to carry out the agreement. In the autumn session of the Bohemian Diet the question of the official language was brought into the debate with such effect that a fresh defection of Old Czech deputies left the Government without the sufficient majority to carry the clauses in the *Ausgleich* relating to the division of the Diet into national sections, or *curiæ*, which was the most important part of the compromise. Not even the law to divide the Agricultural Council into national groups could be carried. The impossibility of reconciling the German and Czechish extremists, the pretension of the Clericals to arrogate to the Church the entire control over education, and the desirability of granting a fair degree of recognition to the Ruthenian, Italian, and other smaller nationalities impelled Count Taaffe to end his relations with his former political allies and look for a new combination of the moderate men of all groups in another Reichstag. The old one had not long to run, the legislative period ending in June, 1891, and the majority showed signs of disorganization. On Jan. 25, 1891, all the parties were surprised by the publication of a decree dissolving the House of

Deputies and ordering new elections to take place in the beginning of March. On Jan. 22, when the new programme was settled at a Cabinet council, M. de Dunajewski, the most prominent Nationalist, or home ruler, in the ministry, tendered his resignation, and on Feb. 4, on his insisting on immediate retirement, it was accepted, and Dr. Emil Steinbach, previously Chief Secretary of the Ministry of Justice, was appointed Minister of Finance in his place. The selection of a man who had taken no part in party politics, and who, by a recent lecture directed against individualism and capitalism, had acquired the reputation of a Socialist, showed Count Taaffe's desire to make the Cabinet independent of parties, and to combat revolutionary Socialism with a programme of Socialistic legislation. The Social Democrats went into the electoral campaign for the first time with a platform of principles and a regular party organization. The Anti-Semites were joined by Prince Alois Liechtenstein, the Christian Socialist, who dropped his Clerical platform and appealed for the support of all the Anti-Semite groups.

The Elections.—The result of the elections disappointed the expectation that a new policy of compromise could be carried out by a coalition with the German Liberals, who had for twelve years formed the bulk of the Opposition. The defeat of the Old Czechs, who lost 36 seats to the Young Czechs, and were reduced to 10, broke up the former majority, and Count Taaffe continued his negotiations with the German Liberals, but their diminished strength did not warrant the Minister-President in giving them the influence they expected. They held 110 seats in a House of 353, having lost 16 to the German Nationalists and 15 to the Anti-Semites, and of the latter 7 were in Vienna, their old stronghold. The classification of the new Chamber, according to parties and national groups, was as follows: German Left, 110; German Nationalists, or Democrats, 16; Anti-Semites, 15; Poles, 57; Ruthenians, 8; Young Czechs, 36; Old Czechs, 10; Independent Czechs, 3; Left Center, 8; Clericals, 31; Slovenians and Croats, 23; Bohemian Feudal Conservatives, 18; Moravian Czechs, 5; Italians, 9; German Conservatives, 2. Except in Bohemia and German Austria, Conservative principles had been victorious, and the complexion of the new Reichsrath indicated the retention of Count Taaffe at the head of the Government and the continued exclusion of the German Liberals from the control of the Government's policy, for even the radical Young Czechs would give their support to any ministry rather than one that threatened to revive the centralistic features of the Liberal programme. The Poles, who contain Liberals as well as Conservatives in their ranks, but who vote in a solid group, were willing to coalesce with the German Liberals if Count Hohenwart's Federal Conservatives were taken into the league, but these, and the old feud between these and the German party, could not be composed.

Session of the Reichsrath.—Count Taaffe, who, as Prime Minister, is responsible to the Emperor, and not to Parliament, was compelled to meet a Chamber in which he had no pledged supporters besides the small group of Moderate

Conservatives. When Parliament opened there was no precedent of procedure for a situation so anomalous. A fierce and protracted debate over the addresses in reply to the speech from the Throne was in prospect, when Dr. Smolka, the President, left the chair to convey to the House Count Taaffe's plain admission that he had no majority, and to beg that controversial matters be waived and the address confined to a simple expression of thanks to the Throne. This proposal was unanimously agreed to, the Young Czechs alone reserving the right to bring forward their special grievances on some future occasion. Notwithstanding this, they were taunted by the Old Czechs, who are as strongly Nationalistic as themselves, but are Conservatives instead of Democrats. The speech with which the Emperor had formally opened the Reichsrath on April 11 contained a copious list of legislative proposals. Vienna was promised a metropolitan railroad. Notice was given of the purchase of several private railroads by the Government. Credits were required for the embankment of rivers to prevent floods. A project for the compulsory insurance of dwelling houses against fire was mentioned. The reduction of freight rates on state railroads was recommended. The codification of the criminal laws and reforms in civil procedure were declared to be urgent. The establishment of a medical faculty in the University of Lemberg was announced. The lapsing treaties of commerce the Government aimed to renew simultaneously and for a long term of years. An appeal was made to the parties to co-operate harmoniously. The international situation was said to justify belief in the wish of all European states to live in peace one with another. Before the general discussion of the budget, which took the place of the debate on the address, was concluded, Count Taaffe succeeded in welding together a working majority, consisting of the Poles, the German Left, and about 30 Moderate Conservatives. No change in the Cabinet was made during the summer session, which ended on July 16. One of the reforms in criminal procedure proposed was to give the courts power to try cases of extortion with closed doors, in order that victims of blackmailers may not be deterred by the dread of publicity from making complaints. The question of indemnifying persons unjustly condemned was made the subject of a debate. The system of civil procedure in Austria has long been admitted by every one to be faulty, but lawyers can not agree on the best system to be adopted. The Minister of Justice introduced bills to remove some glaring defects in the existing laws.

The prospect of the admission of German Liberals into the councils of the Government intensified the irritation of the Young Czechs, who embraced the occasion of the National Bohemian Exhibition, held during the summer at Prague, to organize Pan Slavist demonstrations. The Germans of Bohemia had already attached a political character to this exhibition of Bohemian products by ostentatiously abstaining from taking part.

The Labor Question.—The Socialistic working-men's party polled very few votes in the general election. The 1st of May passed without disorder, though many meetings were held in

Vienna and elsewhere, at which an eight-hour law, universal suffrage, and a free press were demanded. Strikes had broken out in the coal mines of Silesia, which were followed in a few days by riots that were suppressed by the troops. On June 9 the exceptional law of 1884, authorizing the Government to make domiciliary searches, confiscate letters, dissolve meetings, and order arrests without judicial warrant in Vienna and the suburbs of Wiener Neustadt and Kronenburg was abrogated by imperial decree, though the right of trying persons accused of revolutionary offenses by special tribunals without a jury was continued in force.

Hungary.—The Hungarian Parliament legislates for all the dominions of the crown of St. Stephen and for Croatia-Slavonia except in matters reserved for the Provincial Diet. It is composed of the House of Magnates, reformed in 1885, and the House of Representatives, consisting of 453 deputies elected for Hungarian districts and municipalities by direct suffrage, and 40 delegates for Croatia and Slavonia. The ministry, which is responsible to Parliament, is composed of the following members: President of the Council, Count Julius Szapary, who assumed office on March 7, 1890, as the successor of Koloman Tisza; Minister of Finance, Dr. Alexander Wekerle, appointed April 9, 1889; Minister of National Defense, or Honved Minister, Baron Geza Fejervary; Minister *ad latus*, or near the King's person, Ladislaus de Szögyenimarich, appointed in December, 1890; Minister of the Interior, Count Julius Szapary, appointed in April, 1890; Minister of Education and Public Worship, Count Albin Szaky; Minister of Justice, Desiderius de Szilagyi, appointed April 9, 1889; Minister of Industry and Commerce, Gabriel de Baross, appointed Dec. 21, 1886; Minister of Agriculture, Count Andreas Bethlen, appointed in April, 1889; Minister for Croatia and Slavonia, Emerich de Josipovich, appointed Aug. 23, 1889.

Finance.—The budget estimates for 1891 give the revenue from the different branches of the Administration as follows:

SOURCES OF REVENUE.	Florins.
State debts	4,491,579
Accountant-General's office	1,895
Ministry <i>ad latus</i>	600
Ministry of the Interior	1,136,870
Ministry of Finance	272,791,448
Ministry of Commerce	69,896,086
Ministry of Agriculture	13,062,918
Ministry of Worship and Instruction	1,000,684
Ministry of Justice	792,958
Ministry of Defense	815,300

Ordinary revenue	363,490,898
Transitory revenue	5,518,245

Total revenue..... 369,009,583

The expenditure under various heads for 1891 was estimated as follows:

HEADS OF EXPENDITURE.	Florins.
Civil list	4,650,000
Cabinet Chancery	75,252
Parliament	1,265,810
Quota of common expenditure	28,573,985
Pensions	6,738,208
National debt	119,524,751
Guaranteed railroad debts	10,773,818
Guaranteed interest	1,354,566
Administration of Croatia	6,254,325
Accountant-General's office	110,100
Minister-Presidency	836,180

HEADS OF EXPENDITURE.		Florins.
Ministry <i>ad latus</i>		54,120
Ministry for Croatia.....		86,040
Ministry of the Interior.....		11,596,215
Ministry of Finance.....		60,676,554
Ministry of Commerce.....		50,893,714
Ministry of Agriculture.....		13,066,505
Ministry of Worship and Instruction.....		7,294,055
Ministry of Justice.....		12,694,852
Ministry of Defense.....		11,008,915
Ordinary expenditure.....		342,571,190
Transitory expenditure.....		8,130,672
Investments.....		11,781,737
Extraordinary common expenditure.....		6,520,944
Total expenditure.....		369,004,543

Hungary's special debt has grown from 719,-544,000 florins in 1875 to 1,582,259,000 florins in 1890.

Parliamentary Session.—The time of Parliament was largely taken up in the session of 1891 with a determined struggle over a Government bill to reform the administration of counties. The bill was approved by the great land owners, although it curtailed their privileges, and by many of the champions of popular rights, because it was designed to reform gross abuses in the local administrations and in the electoral system. Under the feudal arrangements that have obtained hitherto, the landed gentry, large and small, have had full control of the local government in their districts, the selection of the county officials, nominally elective, and a decisive influence in national elections. The Government proposed to make the chief county officers and the magistrates nominees of the Crown. The responsible leader of the Opposition supported the principle of the bill, but the extreme Opposition, composed largely of the petty nobility, whose prerogatives were at stake, denounced the measure as an attempt to destroy the electoral franchise by giving the Government power to put electioneering agents in the chief local offices, and also as the abrogation of ancient rights of local self-government. Count Szapary gave a public promise that as soon as the bill was passed he would introduce another to secure full freedom of voting. Count Apponyi expressed himself as satisfied with this pledge. The extreme Opposition declared that they would not let the bill pass without the insertion of electoral safeguards. One of their demands was that disputed elections should be decided by the law courts, and not by the Parliament; and the Prime Minister promised to bring in a bill to accomplish this, and to establish a tribunal for the settlement of disputes between the authorities and private persons. The Administrative Reform bill was introduced before the close of May. A week was consumed in discussing its title, several weeks were spent in debating its principle, and three more were given up to the first clause. Ten substitute bills were offered by members of the Opposition for the mere purpose of obstruction, which was continued after the Government had redeemed its promises by offering bills to remove the trial of electoral petitions to the Supreme Court, and to forbid official activity in elections and insure the freedom of the popular vote. The latter measure disqualifies candidates and disfranchises electoral districts for bribery, but allows a certain liberty in treating, on the plea that to rural voters who are

brought a long distance from their homes some accommodation should be given. The bill, which runs for eight years, contains a clause, intended to check the growth of the Socialist and Anti-Semitic movement, which disqualifies a member who within three months previous to his election shall in speech or print have excited to hatred against nationalities or creeds or denounced the institutions of marriage or property, or promised a general distribution of public property or private wealth. To influence the debate, Deputy Ugron, of the Extreme Left, quoted what he said was the secret oath taken by Hungarian Cabinet ministers, an antique formula pledging absolute obedience and devotion to the monarch. There was no hope of passing the 278 clauses of the Administrative Reform bill, and when the principle of the bill had been approved by a vote of 188 to 88, the ministry resorted to an unusual expedient. On Aug. 4 Count Szapary announced the withdrawal of the original bill and the substitution of another, consisting of two clauses—the first empowering the Government to appoint certain classes of county officials, and the second authorizing the Government to adopt such regulations in regard to the details of the new county government as in its discretion seem best. Count Albert Apponyi and the Moderate Opposition pronounced this device unconstitutional; but Count Szapary persisted, and succeeded in carrying the substitute bill by the vote of the Liberal majority on Aug. 9. The other business of the session was got through with, and on Aug. 17 the Parliament was prorogued, to meet again on Oct. 3, preparatory to the assembling of the delegations in Vienna.

Postal Congress.—The fourth congress of the Universal Postal Union met at Vienna on May 20, 1891, and dissolved on July 4. The treaty arrangements between the members of the Union respecting rates of postage and charges for forwarding mails by ship or land conveyance, were revised and consolidated in a new convention that will go into operation on July 1, 1892. To secure the entrance into the Union of the Australasian colonies, the Congress offered to accord to them the position of separate states, which was already enjoyed by the Indian Empire and the Dominion of Canada. On their account also the question of reducing both letter rates and transit charges was put aside to be considered by the next congress. In regard to this question some of the plenipotentiaries expressed themselves in favor of abolishing all charges for forwarding mails between countries belonging to the Union by the sea or land service of a third country and of establishing a single uniform rate of international postage. An innovation in international rates and arrangements was the rule adopted that every country of the Union shall henceforward supply the public with post cards with prepaid replies. It was further decreed that recipients of underpaid letters must not be charged more than the full rate of postage. Another rule was laid down that when countries charge a higher rate than 5 cents a half-ounce for letters sent over the sea, they must make the rate uniform for all destinations that are reached under equal conditions. This will affect Great Britain, from which the postage to British colonies has been 2½ d., but to

foreign countries similarly situated *4d.* A regulation that benefits Great Britain more than other nations legalizes the practice, that has existed only by international courtesy, of forwarding closed mail bags to ships of war on foreign stations. Postal cards of one country posted in another will not, as heretofore, be suppressed, but will be forwarded and delivered to the addressee as unpaid letters, on which letter postage is to be collected. Hereafter letters can be posted on board mail packets by affixing stamps of the country to which the ship belongs, unless she is in port, in which case it must be the stamp of the country to which the post belongs. The post-office in East India and some other countries not only forwards consignments of merchandise in suitable packages, but the price payable on delivery may be collected by the letter carrier and remitted through the post-office to the consignor. The international mail service has now been made available for this purpose to countries that have adopted or shall adopt this custom. The practice of stamping the name and address of the sender on the address side of a postal card gains space for a longer communication on the blank side. By a new regulation the signature and address may be written. Till now correspondence in transit to countries outside the Union has been charged so much per letter; but by the new treaty the Union countries agree to transmit mails to non-Union countries at an average rate for sea transit, to be fixed at triennial periods on the basis of the statistics of traffic, as in the case with Union correspondence. This change will enable the countries of the Union to establish moderate uniform rates of postage to all places outside the Union. The maximum dimensions of packets of merchandise, samples, patterns, specimens, etc., admissible to the mails have by a former rule of the Union been 20 centimetres in length, 10 in width, and 5 in thickness, or approximately 8 by 4 by 2 inches. By a special arrangement between the United States, France, Great Britain, Italy, Belgium, Switzerland, Portugal, Greece, Luxembourg, Argentina, and Japan samples could pass between those countries in packages not exceeding 30 by 20 by 10 centimetres, or 12 inches in length, 8 in width, and 4 in thickness, and of the maximum weight of 12 ounces. These larger limits of size have been adopted for the whole of the Union, though the conventional limit of weight remains 8 ounces. The representatives of countries in which wine, oils, indigo, madder, and other dye stuffs and substances that might escape and damage letters were unsuccessful, as they had been at the previous congress at Lisbon in 1885, in securing the admission to the letter mails of samples of such articles, which must continue to be sent by parcel post to countries that exclude them from their letter mail bags. In some countries the law makes the postage on unpaid or insufficiently prepaid mail matter, when it has not been collected from the addressee, recoverable from the sender. The

convention binds the governments of countries of the Union to introduce such a law if they have not one already in force. Reciprocity was also arranged for, after a long discussion, in regard to the detection and punishment of frauds on the postal revenue by means of counterfeit or cleaned stamps. The plenipotentiaries undertook in behalf of their Governments to have a measure for the punishment of forgery of foreign stamps presented to their respective legislatures. The Congress discussed details of internal postal administration, and revised and elaborated the former agreements relative to the international parcel post, money orders, registered letters, the collection of bills and drafts, subscription to newspapers and periodicals, and certificates of identity for travelers. The rate of payment for international money orders was fixed at 1 per cent., and for small sums the minimum charge was reduced from 40 to 20 pfennigs—that is, 10 cents. The limit was raised from 500 to 1,000 francs. A clearing-house scheme for the adjustment of balances of postal accounts through the medium of the International Bureau at Bern was adopted at the suggestion of the German Postmaster-General. Mr. Wanamaker's idea of an international postage stamp, offered without preliminary notice and without the elaboration of a working scheme, was regarded as impracticable, in view of the difficulties arising from differences in currency and variations in the rates of exchange. One of the advantages would be that it would enable a writer to inclose a stamp in his letter, and thus insure a reply without putting a foreign correspondent to expense for postage. The British and the Indian delegates suggested plans for furthering this feature of the scheme by means of prepaid reply stamps on the principle of return post cards, and the British delegate moved to refer these proposals and the American scheme, in so far as it related to prepaying the answer to a letter, to the International Bureau for examination. The chief of the German postal administration, Dr. von Stephan, being opposed to the least step toward removing the sentimental barriers between nations, argued strongly against this motion, which was rejected. It is not unlikely that a reply-paid postage stamp may be instituted in the postal intercourse between the United States, the United Kingdom, the British colonies, and India. Throughout the session of the congress the delegations from the United States and Great Britain generally approved and worked for the same objects, and were supported by the representatives from India and Canada, and, in most cases, by the Egyptian delegate, although it had been suspected in the beginning that the refusal of England to organize sorting offices on mail steamships, such as have been instituted for the convenience of the American postal authorities on the German packets, might lead the American delegates, William Potter and Capt. Brooks, to favor Germany's side in contentious questions.

B

BALLOONING, MODERN. Practical ballooning comprises both the manufacture and the use of balloons. There are two kinds of balloon—the hydrogen or gas balloon, and the Montgolfier or hot-air balloon. The former is the most important, and claims the greater part of our attention here.

A complete hydrogen balloon consists of the gas envelope and valve, netting and ropes, wicker car, concentrating ring, and anchor, to which may be added a drag rope and a collapsing cord. For inflation pure hydrogen gas is used, also carbureted hydrogen or coal gas, and sometimes water gas. Sand bags are required to retain the balloon in position during inflation, and more or less sand is usually carried in the car as ballast. Every aeronaut should be capable of making his own balloon, but, in the almost total absence of practical information, most of them become old before learning all that is necessary on the subject. Silk, linen, or cotton, or combinations of these, are the fabrics we have to deal with for the manufacture of the envelope or gas holder. The best of these is silk, of which there are many kinds that answer equally well. Linen, at first sight, would seem to be the next best material for balloon construction, but experience has proved otherwise; the fabric is heavy, and becomes hard and brittle when varnished, and a balloon made of it is continually breaking into holes. Cotton, of various weights and makes, is most in use, because it is cheap, will last as long as the oil varnish, and answers every purpose in ordinary ballooning. Strength is obtained by using the heavier qualities, and almost any degree of lightness may be had by using the finer grades. The best heavy cotton for this purpose is the bleached Wamsutta sheeting. It is a common error to suppose that unbleached cotton is more suitable for the purpose than bleached. It is possible that a half-bleached cloth might be stronger, but the sponginess of unbleached goods is detrimental to their use. Wamsutta, however, on account of its weight, is suitable only for very large balloons. Lonsdale sheeting is lighter and better adapted to medium sizes. Lonsdale cambric is still lighter, and may be used for balloons of twenty-five or thirty thousand cubic feet capacity. The proper shape of balloons for economy in material, weight, and gas, as well as for facility in management, is globular, and consequently we shall consider no other.

The first thing in order is to ascertain the quantity of cloth required, which may be done in the following manner: To determine the number of breadths, divide the circumference in inches by the number of inches in width of material, deducting one inch for each seam. The length of the gores will be equal to half the circumference. Multiply the number of breadths by the number of yards in the length of a gore; deduct one fourth of the product, and the result will be the total quantity in yards required to make the balloon. The following rules will be

found useful in determining the size of the balloon required. To obtain the number of cubic feet in a sphere, multiply the surface by one sixth of the diameter. To determine the number of square feet in the surface of a sphere, multiply the diameter in feet by the number of feet in the circumference.

The Pattern.—For a pattern use manilla roll paper of sufficient length and width. At one end of the paper write "tip," and at the other "neck": then draw the following lines: First one running from end to end, an inch from one of the edges. Measure from tip to neck the exact length of the gore as previously calculated, and add three inches for loss by seams. Divide, with a pair of compasses or other convenient instrument, the whole length into thirty-six equal parts, and draw lines across the paper at the points of division. Then take a strip of paper or wood one inch wide and one inch less in length than the width of the paper or the cloth, and with a pencil make a measure by dividing the strip into ten equal parts; subdivide these each into ten parts; and, lastly, divide these subdivisions each into ten parts. Thus we shall obtain a scale of one thousand parts. For convenience we shall call the divisions on the scale "marks," counting from 1 to 1,000. With this measure we can determine the points through which the curve line of the pattern must pass. Place the end of the scale or measure at the line first drawn, one inch from the edge of the paper, near the tip end and beside line No. 1. The length of this line to the point through which the curve passes will be 87 marks; with a pencil make a cross at the point, and proceed to line No. 2, which will be 173 marks in length, and so on, connecting afterward the points thus marked by a curve line. If the balloon is to be made perfectly round, with a cylindrical neck attached, the pattern must be pointed at both ends; but if it is to be slightly elongated at the bottom, with a gradual development of the neck, the pattern is extended in length and the curve gradually turned outward, as in the diagram. The pattern must be cut along the curve line. Lay out the cloth on a long table, and cut out lengths of a little over two thirds that of the pattern, or exactly eight inches below line 24, and call the end the "butts." Lay the pieces successively one upon another until all are down, taking care that the edges on one side are kept even. On the cloth thus arranged lay the pattern even with the butts, and after putting weights upon it proceed to cut, with a knife and straight-edge, through all the layers at once, continuing from point to point along the curve. After cutting it will be necessary, for the guidance of the sewers, to mark with a pencil each layer of the cloth, on both edges, at the ends of the cross lines from 1 to 24. The pieces cut from the tip to the equator are to be readjusted with the broad ends evenly matched and their edges arranged as before. Reverse the pattern and place line 12 at the butts, and with the

knife trim off the surplus, leaving the curve already formed in the cloth to serve for the neck, or altering it to suit the taste. Mark this portion for the sewers the same as the upper part. Before the pieces are lifted from their places they must all be marked with cross lines at double the distance of those on the pattern, beginning at the center (line 18) and working each way, using the marks on the edges as guides. Along these cross lines are to be sewed the stays, which give additional strength to the balloon. After marking half of the layers from tip to neck, the remainder must be turned over and marked on the reverse side.

The breadths are now ready for sewing into gores, each gore being two breadths in width. The cross lines represent the interior of the balloon, and a breadth taken from the first and another from the second set of markings are matched, when their straight edges are to be sewed together with the cross lines inside facing each other. The seam is made by first sewing through the two thicknesses about half an inch from the edge, then the breadths are opened, the seam laid over to the right, tucked in, and hemmed down. The sewing must always be done from the tip downward.

Having joined all the pairs of the upper set by sewing their selvages together, do the same by the lower set; but in this case begin the sewing always at the broad end, working toward the neck. The gores may then be sewed together by adding one gore after another, until half of them have been joined, then put the others together in the same way, always beginning at the tip end for the upper part, and at the broad end of the lower part. This will result in two upper and two lower

parts. The sewing on of stays and collapsing cord are next in order. The stays are made from strips of the balloon material folded to three thicknesses, forming a tape about half an inch in width. These tapes are sewed along the marks prepared for them; but care must be taken not to vary the relative position of the balloon while sewing, otherwise the ends of the stays will not match on the opposite sides. Keep the tip of the top parts to the right hand, and the broad or butt end of the lower parts to the right. The "collapsing cord," or "rip line," is made by sewing a strong cotton cord about one eighth of an inch thick to a strip of the balloon material about 4 inches wide and several yards in length, according to the size of the balloon. About 7 yards will answer for a balloon of 25,000 cubic feet capacity. The cord is sewed along the middle of the strip to within an inch or two of either end, the surplus cord remaining attached. The sewing of the cord to the strip should be made with No. 8 cotton, well waxed, doubled, and back-stitched on, for this stitching is depended upon for tearing the strip when occasion requires. The strip is to cover the cord and to be sewed on the outside of the balloon, beginning at the butts and running upward along the side of one of the straight seams. Both edges and the two ends of the strip are to be sewed down; but before the upper end is closed the surplus cord must be passed through a hole to be made for the purpose, to the inner side of the balloon. A portion of the surplus cord is sewed zigzag in a bag or pocket 6 inches wide and 3 feet long, which is to be stitched on the inside of the balloon just above the hole made to admit the cord. The cord, suspended from this bag, can hang loosely or be slightly tacked along one of the seams down through the neck of the balloon. The zigzag cord in the bag diminishes the danger of any accidental jerk tearing the balloon, as the cord must tear entirely from the bag before a rupture takes place.

Both the stays and the collapsing cord may be dispensed with by those who choose to take the risk, for they are not in general use; but the stays prevent any accidental tear extending the whole length of the balloon, while the collapsing cord, though seldom needed, is a remarkably good thing when the necessity for its use occurs.

If ornamentation is intended, this is next in order. Letters, stripes, scrolls, festoons, pictures—anything—may be painted on without the least injury to the fabric, and any kind of ornamentation is far more agreeable to the eye than the naked cloth. The colors should be well selected, and may consist of stains or finely ground pigments. Carmine makes the finest crimson, and should be dissolved in water with the addition of a little ammonia. Soluble blue gives light or dark shades. Ultramarine blue is a very bright color, and mixed with other pigments is useful, particularly in forming a stable purple with Indian red. Chrome yellow, chrome green, raw and burnt sienna, lamp-black, and well-powdered bone-black, may all be used to produce the tints required; but care must be taken never to use vermilion, on account of its decomposing action upon the oil varnish. Umber should be used very sparingly, if at all, as it becomes hard

and liable to crack. These colors should be mixed with starch of about the consistency of that used in the laundry, and the combination is best made while the starch is hot. The colors may be applied with broad, flat brushes, though almost any kind of painter's brush will answer, and where the same figure is to be repeated many times stencils cut from oiled or varnished paper may be used.

The ornamentation completed, all the parts are to be joined together. First the lower ones are to be sewed to the upper portions by a cross seam at the buttings, taking care to match all the seams to one another perfectly. This done, the two halves only remain for closing. Heretofore all the seams have passed over the sewing machine in a continuous way from front to back, while the closing seams are done by bringing forward small portions at a time from behind the machine. Begin by sewing at the tip on the first row, but only 2 yards before turning over and sewing down the reverse side, join together such stays as have been included, continue the sewing, reversing and joining the stays 2 yards at a time all the way down, and then treat the last seam in like manner, beginning at the tip and sewing downward. The top of the balloon should be lined with an extra thickness, 6 to 8 feet across. At the junction of the seams a round hole is to be cut to admit the valve. A disk of leather having an upright collar attached, and resembling a broad-brim hat without a crown, is stitched on around the opening, ready for the introduction of the valve.

The Varnish.—The balloon must be coated with some suitable material for closing the interstices of the fabric, to give it gas-retaining qualities. A nearly perfect skin, or film, is aimed at, and this may be obtained in various ways, but the only materials that seem practically suited to this purpose are linseed oil and India rubber. The former is by far the easiest of application, while the latter makes much the lightest weight balloon. Linseed oil is brought to the right consistency for forming a flexible varnish of quick-drying properties by prolonged heat or long exposure and frequent stirring in the open air. Fine, limpid oil, made from Calcutta seed, gives the best results. A copper kettle must be used for the process, as iron is liable to oxidation, which ruins the varnish. The kettle must not be filled by at least one fifth of its capacity, as the oil swells with the heat and is liable at certain stages to foam. The kettle may be permanently fixed and the fire made movable, or the kettle may be movable and the fire a fixture, but one or the other is necessary. The heating should be governed by the aid of a thermometer, and must never be allowed to rise to 500° F., as it is liable to burst out into flame; but it may be allowed to rise to 400° with safety, and if run at this heat for twenty-four hours will be sufficiently done to answer the purpose. When cool it will be as stiff as the thickest molasses in cold weather, and quite stringy when tried between the thumb and finger. Constant stirring while over the fire is beneficial, and the oil should never be covered except to raise the heat to the required degree. At 212° the water contained in the oil boils off, and later, as the heat rises, a liver-like substance is formed in the oil, unless it

is kept stirred, but this substance redissolves, and need cause no uneasiness. No addition to the oil seems to be of the slightest advantage, and the purer it is kept from all contamination the better it is. A slight addition of sulphur prevents foaming and allows the raising of the heat to a greater degree, but the addition of sulphur would be likely to cause a corrosive action on the fiber of the balloon.

The thick oil varnish is to be thinned down when wanted for use by the addition of benzine until it will sprinkle freely through a watering pot with a tolerably fine rose.

The balloon is now stretched out at full length, and folded one breadth upon another. When this has been accomplished, take the watering pot and sprinkle the top layer, using judgment as to the quantity required to give the first coating. When this is done, turn over the first layer, treating the subsequent ones in like manner, until all have been sprinkled. Then, while it is still wet with the mixture of benzine and oil, begin at the tip end and roll the balloon up tightly. Give it an occasional turn over, so that the diluted oil may permeate every part. These operations must not take place in the sun, or it will not be safe to roll up the balloon, for fear of spontaneous combustion. After the lapse of several hours the balloon may be unrolled and opened, when the oil will be found well soaked through the entire fabric. If any bare places show themselves, they are readily covered. Drying in the shade is to be preferred when time is no object; but when it is, the sun accelerates the process. The first coating should have time, if possible, to season in the shade after it has been dried in the sun, as spontaneous combustion is less likely to occur when the first coat has had time to harden. The subsequent coats may be put on in the same manner as the first, or the work may be hastened by two men following the sprinkler with soft brooms, for the purpose of distributing the oil equally to every part. As many as four coats will be required to make the balloon sufficiently gas tight.

Spontaneous Combustion.—It should be understood that oil varnishes, when applied to fabrics of any kind, are liable to spontaneous combustion, the tendency being increased when the drying has been done by artificial heat, or in the sun. This liability passes away in a few weeks, but until the seasoning has taken place, it is extremely unsafe to remove the balloon any considerable distance, even when it is packed loosely, unless steps have been taken to counteract the difficulty. There is no danger of heating when the balloon is extended at full length in the shade. But when it is rolled up tightly, even if left in the open air, charring will surely take place in a few hours. Where shipment is necessary, it has been found that sprinkling the balloon over with some of the lighter products of petroleum, as, for instance, kerosene, or a mixture of this with benzine, is a sure preventive of spontaneous combustion. After seasoning has taken place, which may be determined by rolling up tightly and carefully observing the result, the balloon may be packed away with safety.

Rubber-coated Balloons.—Balloons made impermeable by India-rubber may consist of one or more thicknesses of silk or cotton, and the

strength of material and imperviousness may thus be increased to any desired extent—for this reason, rubber is the only suitable substance for coating balloons of extraordinary dimensions. The great Giffard balloon of the Paris Exposition was made of several layers of cambric and rubber cemented together. To prepare the rubber solution, sheets of the elastic material are suspended in barrels or cans containing benzine, and a few hours will suffice to soften the gum so that it may be stirred into a pasty mixture. To this is added, from time to time, minute doses of bichloride of sulphur in benzine, taking several days for the operation, at the end of which time the proper coagulation may have taken place. This rubber solution is applied, by means of a spreading-machine, to the cloth before cutting. Each coat is slightly dusted with steatite, to give more body, and when enough coats have been laid on, it may be taken from the machine and rolled up. If it is to be used singly, it is ready to be made into a balloon; but if it is required to be doubled, the surface is left in a sticky state and the faces of two pieces are pressed together. The cost of rubber coating exceeds that of oil varnishing; but some advantage is gained in lightness and lasting qualities.

The Valve.—The imperfection of the balloon valve seems to have been a considerable source of annoyance, even to the French aeronauts, who frequently mention the “catapasm,” or poul-

tice, with which they are in the habit of stuffing their wooden valves to make them gas tight. This seems a barbarous mode of procedure, which is indeed unnecessary, for a valve can be made of metal which will be perfectly free from leakage without any such outward application, and it may be as large as three feet in diameter, if

required. The best metal for the purpose is copper, and one of the worst is brass. The latter will be corroded by contact with the gas, while the former will not. The size of the valve must bear some proportion to that of the balloon, from twelve to twenty-four inches diameter being sufficient for ordinary ones. A valve twelve inches in diameter is large enough for a balloon of 25,000 cubic feet capacity. The smallest of these need not weigh more than three pounds. They are made of rolled sheet copper, and consist of a U-shaped rim, a cross bar, two clappers, a bridge, and a set of rubber springs. The clappers of the valve are covered with soft leather, and a projecting edge on the rim and cross piece presses the leather into a groove near the edges of the clappers. The largest valves would gather so much water in case of rain that it is recommended to have the clappers as nearly flush as possible with the upper part of the rim instead of the lower, an arrangement that adds somewhat to the cost of its construction, but obviates the danger of having the

valve opened by an accumulation of rain. It is well to have the clappers of this style of valve worked up into a bulging form, from the groove to the center, in order that they may be somewhat stiffened. The sharp edge, which is fitted into the groove of the clapper, will be placed, in this valve, at the upper edge of the rim, but bent downward to meet the groove. Staples are on the under side of the clappers, to which cords are attached, forming a loop or loops for connecting the valve cord, which passes down through the neck of the balloon into the car.

To insert the valve, we have simply to draw the leather collar in the top of the balloon over the lower flange and around the rim, securely lashing it in its place. The upper edge of the collar is then turned down, and another lashing is made over it, to which are tied eight cords, arranged at equal distances apart, forming the net attachments.

The Net.—This is not so difficult to make as is generally thought. It is begun at the top or center, continued downward, and at the lower edge merges into tabs, to which are attached the ropes proceeding to the concentrating ring. A net must not only be strong enough to bear the load that the gas will lift, but must be equal to the strain brought upon it by the wind during inflation. It is of especial importance that the net should be strong enough at the top, near the valve, where the meshes must be small, so that if a break occurs in one it would not extend easily to the rest. The top is really the weak part of the net, particularly for captive balloons. Several instances are known of balloons passing through their nets from meshes breaking at the center, but fortunately no captive balloon has ever met with this accident while in the air, although it is liable to occur at any time if due care is not taken. Cotton twine makes the best net; silk would of course be light, strong, and soft, but its costliness puts it out of the question, except for special cases. Flax or hempen cord, though strong at first, soon weakens, and when wet with rain will shrink several feet, making a close-fitting net too small for the balloon, while under similar circumstances, cotton shows little or no change. The strength of twine required must be determined by the size of the balloon. For the smaller ones, a mesh should not break with a weight of seventy-five pounds, and for the largest it should bear two hundred pounds.

At a convenient height suspend a hoop, and tie on it, say, one hundred loops, each about three inches long. Begin by knitting the first row to these loops, and on the succeeding rows enlarge the number, by adding for the first few rounds four meshes, then three, two, and finally one mesh, until the number is sufficient to encircle the largest part of the balloon, after which the knitting will continue to the end without further increase of the number. The meshes may be frequently enlarged also, according to judgment. At the distance of eight or ten feet from the lower edge the net divides into twenty or more parts, which are knitted separately, and form the tabs to which the net ropes are to be attached. If two hundred meshes are on the last round, and twenty attachments are wanted, we begin the tab by knitting on to ten meshes, then return, first making a loop or half-

mesh, on the side of the tab. When the other point from which we started has been reached again, we make the last mesh on the side by includ-

THE LARGE CAR.

ing a cord that was left hanging at the beginning of the tab. Thus knitting right and left, adding the half-mesh on one side and the loose cord on the other, we at last complete the tab by gathering and tying the lower meshes together. Ropes of manilla hemp serve for the attachments to the concentrating ring. The top of the net is finished by cutting away the loops on which the first round was made, and then knitting with a double cord to the one hundred meshes, taking up two meshes at a time. A circle formed by passing a small rope through the last meshes completes the work. The net and cords, when stretched at full length, should be two or three feet longer than the balloon.

The Concentrating Ring.—This may be of wood or metal. A large mast-hoop, smoothly dressed down, answers the purpose very well. It should be strong enough to resist any strain that may be brought to bear upon it. Two loops of manilla rope have their ends spliced to the hoop at equal distances apart, and hang down a foot or more. To these loops the anchor rope and drag rope are attached. Neither of the ropes should ever be fastened directly to the hoop, as the latter may be broken by so doing.

The Wicker Car.—The car should be made of willow, as this is the lightest material that can be used for the purpose, and gives an unequaled degree of elasticity. Rattan is often used, although it is much heavier. It wears well, and may sometimes be added with advantage to the willow car. The shape of the car is a matter of taste. A closely woven basket of an

oval pattern is generally preferred. Six or eight strong ropes are woven into the willow, passing through the bottom and sides of the car and making from twelve to sixteen attachments to the concentrating ring. A convenient car to seat twelve or more persons is made with the addition of extended sides, which may be permanent or detachable, by having the parts made separately and attaching by rope laces. The extension forms the seats, and has another set of ropes to be fastened to an extra hoop, larger than the concentrating ring.

Floats.—Around the sides of the car, either within or without, may be lashed one or more floats. A contrivance that is light and always attainable consists, according to the size of the car, of from fifty to one hundred hermetically sealed fruit cans in a long, stout canvas hose just large enough for the cans to slip in. This forms a life-preserver in the water, and no one need fear drowning, though cut loose from the balloon, so long as he stays by the car. Those who are cognizant of the many disasters that have happened to aerial voyagers for want of some means of keeping afloat when falling into the water will fully appreciate the value of this simple device.

The Drag Rope.—This useful appendage is usually about 350 feet long, is simply a stout manilla rope, of a weight proportioned to the balloon. The lower end is pointed, and the strands are well sewed together to prevent raveling. It has come into use within the past thirty years, though it was suggested by Green, the English aeronaut, long before as a good appliance for preventing an erratic descent into the water. Some practice is required to reconcile the aeronaut to its use; for while it has many good points, it has some bad ones also, the worst of which is its liability to entanglement in tree-tops. The balloon is checked in its downward course when the rope begins to rest on land, water, or forest, and with the means of temporarily escaping woods or water the aeronaut is pretty sure of finding a good landing-place. Finally, the drag rope will help him to a safe descent by its frictional, hold-back qualities.

The Anchor.—An ordinary boat anchor will answer the purpose. Some use five-pronged grapnel hooks, which are most effective when the prongs are straight and three-sided like bayonets. A thin, diamond-shaped steel plate on the end of each gives a better hold in soft ground. Large balloons should have two anchors attached to the same rope, one a little in advance of the other. A boat anchor and a straight-pronged grapnel are very effective.

Size of Balloons.—A balloon of 7,000 cubic feet capacity may be made light enough, when filled with hydrogen gas, to carry a man of 160 pounds and some ballast. A capacity of about 12,000 cubic feet of coal gas will be required for one man. But neither of these balloons can carry much extra weight, and experienced aeronauts will not consent to such a limit. The sizes in general use range between 12,000 and 100,000 cubic feet. A party of 9 persons ascended with a balloon of 92,000 cubic feet capacity from the Centennial grounds in Philadelphia, carrying with them a large quantity of ballast. They were nineteen hours in the air, and landed near Perth

Amboy, N. J., considerably less than 100 miles from the starting point.

The balloon is capable of much greater development than is dreamed of at present. It is possible to make one that could sail around the globe; but until there comes a demand for such a wonder it is not likely to make its appearance.

The Care of Balloons.—Oil-varnished balloons are constantly changing in appearance, weight, strength, and condition of the oil film. At first the varnish scarcely discolors the cloth, but it soon begins to yellow, and in time darkens to a brownish hue. If too much exposed to air it will dry hard, and if kept an undue time from the air it will become soft and sticky. Fresh coatings have to be given from time to time until the accumulation of weight impairs its carrying powers. The "life" of a balloon may be doubled by simply sprinkling it over with kerosene oil after each ascension.

Montgolfier or Hot-air Balloons.—Unbleached domestic cotton is mostly in use for hot-air balloons, and the rule already given for cutting may be applied in this case, except that the neck has an opening of from 8 to 12 feet. Stays are stitched at intervals across the cloth, and a wooden hoop is usually attached to the neck. The fabric is improved with a little filling. Flour paste, paste and whiting, glue size and ochre, are all in use, but the best, perhaps, is a thick solution of soap and whiting, which is first laid on and afterward sprinkled with strong alum water. No net is required; all weight to be carried is suspended from the wooden hoop or neck of the balloon. No valve is needed, but the balloon is suspended by an iron ring during the early part of the inflation.

The Parachute.—Linen or cotton cloth is the material for parachutes. They are umbrella-shaped when in the air, but have no frame work. They are cut in a similar manner to the upper third of a balloon, and should be well stayed. Strong cords are pendant from the edge or are sewed along the seams, and are of sufficient length to prevent violent swaying in the descent. The cords are concentrated to a point or small hoop, from which a basket or other contrivance may be suspended. At the top of the parachute is a knife so arranged that on pulling a cord it cuts the rope attaching the parachute to the balloon. Sometimes a hoop is suspended inside to facilitate the opening of the folds when the rope has been cut. No parachute should be less than 30 feet in diameter, to insure easy lighting.

Inflation.—The Montgolfier depends entirely on heated air for its buoyancy. A long, wide, and deep trench is dug, in which the fire is made, and the heat conveyed to the balloon. The trench is covered with iron plates, or logs of wood with earth upon them, and a short, cylindrical chimney is built upon one end; this, with a broad, wooden cover for the chimney, completes the arrangement. Two tall poles, with pulleys at the top, stand at a convenient distance, one on each side of the trench. Through the pulleys and through the ring at the top of the balloon runs

a strong rope, by which the head of the balloon is hoisted after its neck and folds have been carefully arranged around the chimney. Several men seize the cloth and steady it, to prevent contact with the fire. The outer end of the trench is filled with light, dry wood; a cupful of alcohol, benzine, or kerosene is thrown over the wood, and the fire is started. A man stationed within the balloon stands by the chimney, with the wooden cover, ready to damp the fire, and has a pail of water at hand from which he can

A SNOW DROP.

sprinkle the balloon if sparks find a lodgment anywhere. The helpers stand upon the folds of cloth to prevent cold air from entering. From ten to twenty minutes, with a brisk fire, serves for the complete distention of the globe. The parachute, previously attached to cross ropes on the hoop, lies at one side. The gymnast takes his place beneath on the trapeze or other contrivance, the cover is put on the chimney, all let go, and, with a rush, the ascension takes place. As the heated air soon cools, not many minutes are lost in selecting a place for alighting. The parachutist then pulls the knife cord, which cuts the rope connection, and instantly he is seen to drop, at first like an arrow, but in a moment the parachute catches the air, and then sails steadily down, alighting generally much easier than if he had continued on with the balloon.

Carbureted Hydrogen Gas.—Gas from coal is a practical substitute for hydrogen, although its buoyancy is much less, being only 35 to 40 pounds per thousand feet. But its use is more general, because of its comparative cheapness. The necessity for erecting temporary apparatus, the cost of materials and labor, all tend to make hydrogen ten times more expensive than coal gas. Much of the gas now made for illuminating is coal gas adulterated with water gas and petroleum oil, or consists entirely of the latter. Oil gas is too heavy for balloons, and hence any of these mixtures may be considered useless. Water gas of itself will answer very well, as it is nearly as buoyant as coal gas; but it must be taken for inflation at the gas works, and be made expressly for the purpose. The inflation

with coal gas is made from an opening in any street main that is large enough to give a sufficient flow in the desired length of time. Small mains, or those at considerable distance from the works, will, as a rule, deliver the gas too slowly. To settle any question regarding time required for obtaining a given quantity at any point, make a test with a small balloon, of 500 cubic feet capacity, noting the time required to fill it, and calculate accordingly.

Hydrogen Inflation.—Hydrogen gas for balloon inflation is made by the decomposition of water with the aid of sulphuric acid and fine iron. Large wooden tanks, hogsheds, or barrels are used for the process, into which the iron and water are first introduced, and when the acid is added the generation immediately begins. Two hundred and fifty pounds of acid, the same quantity of fine iron, and 1,000 pounds of water are required for each thousand cubic feet. The gas passes through pipes to a washer, and is made to bubble up through lime water, after which it passes through a flexible conductor to the balloon. Hydrogen gas will lift, according to its purity, from 60 to 70 pounds for each thousand cubic feet.

The balloon is prepared for inflation by extension at full length, folding the breadths one upon another, and then equally dividing the leaves so that they shall lie in fan-like fashion two breadths wide. With the neck of the balloon toward the gas apparatus, it is to be covered with canvas two thirds of the way from the neck to the valve, and on this canvas, close to the balloon, sand bags are arranged to prevent the folds expanding with the gas, except at the upper end. As the inflation progresses, the bags nearest to the filled portion are removed one by one. The net is spread over the top, and fastened round the valve, and then the gas is allowed to flow through to the valve end. A large bulb soon forms, the head of the balloon rises, the net is adjusted, and sand bags are hooked on to keep all in place, changing them to lower positions as the work progresses, until finally the globe is completely distended. In the mean time the car may be attached by tying the net cords to the concentrating ring; some sand bags may be put into the car, those on the netting allowed to slide along the net ropes, and on reaching the concentrating ring ropes may be removed altogether. The anchor and drag rope must be neatly coiled

and hung on the side of the car, while their ends are to be fastened to the cross loops overhead. The anchor should be hung by its flukes to the side of the car, and may be lashed to its place until needed. Extra clothing, water, and provisions are next in order, and then the aeronaut is

ready to be off. Sand bags are removed one at a time until the car floats and is held by a single rope. This is then cast off, and the voyage begins.

The Voyage.—A sufficient buoyancy must be given to clear all projections. The gas expands as it rises in an atmosphere of increasing rarity, and soon begins to be ejected from the open neck of the balloon. The loss, under a cloudy sky, may stop the ascent, but in bright sunshine the balloon, floating in a relative calm, will become heated to the extent of gaining many additional pounds of ascensive power, and, in spite of the continued loss, will keep rising until there is no further gain in heat; then a descent occurs, which can only be overcome by the discharge of ballast. A voyage in the day-time usually consists of a series of ascents and descents, because of the alternate overflow of gas and discharge of ballast; but at night this is all changed; for a good gas-tight balloon may be suspended at one constant height all night long. The reason of this is that there is a decrease of temperature at the rate of one degree for every four hundred feet, and as cold condenses gas, making it heavier, it finally reaches a height at which its impulsive force meets with a counterpoise, and between the two the balloon finds its level.

The wind's speed may be nothing, or it may exceed seventy miles an hour. A dead calm often leaves the balloon in queer places, from which extrication is not difficult, for a boy may walk away with it, or a skiff can carry it to the shore. It is different in high winds; then we have a monster to handle, which at times can only be conquered by ripping open its gas-expanded sides. Thunder-storms are to be avoided, and the aeronaut must be wary, or he may be drawn into them very unexpectedly. Do not run high, but rather keep as low as possible. Ordinary rain-storms are unpleasant, for the water courses down the sides of the silken globe, falling in streams from its neck into the car; yet the moist-

ON THE OCEAN WAVE.

ure does not affect the voyage in any great degree. But beware of snow clouds, for the little crystals may gather in such quantity on the broad roof above your head that a sudden descent will bring you to the ground in spite of all your efforts.

Long voyages are beset with many difficulties, particularly from forests and large bodies of water, over which a greater sense of security is gained by the possession of a drag rope. Lake Erie is crossed or run its whole length with the drag rope more easily than a dozen miles of Long Island Sound without.

The open sea is the most threatening in its aspect, for no ordinary balloon could reach its farther shore, and if caught within its domain, the *aéronant* will be glad that he has a drag rope to keep him out of the wet. There is one instance

is at hand, and these episodes are apt to be very entertaining, as the *aéronant* is usually made welcome.

But if you are traveling through the South it is best to be on the lookout for "Johnny and his gun." He may mistake your intentions, for he seldom sees a balloon, and when he does, if you take him by surprise, he will shoot before he inquires into your motives. While visiting, or at the end of your journey, you can amuse yourself and the inhabitants by making a few captive ascensions. This can be done, when the air is calm,

by paying out the drag rope carefully, hand over hand; but if the men let the rope slip, it may get so much momentum as to lift them off their feet, and cause them to let go.

In case of wind, a landing may be effected with difficulty unless care be taken to choose a sheltered place. Cross a mountain at the rate of forty miles an hour, drop into the valley on its farther side, and the air will be found as still as when the flags hug their masts. Any depression is an advantage, and a safe harbor will usually be found behind a piece of woods.

In landing, look out for dead trees; every one is a balloon trap. If you should strike one, lose no time in getting out of it, for the limbs may break

and drop their load, to your serious injury. If you find yourself upon a strip of sandy beach, with the open sea before you and your passengers beginning to tumble out, that is one of the best places to use the collapsing cord, and finish by treading upon the sand rather than in the water.

Ordinary ascensions, such as are made for the entertainment of the public, do not usually exceed the height of one to two miles. As generally expressed, low sailing—say, within the range of 1,000 feet—is the pleasantest. We see all objects more plainly, can talk with the inhabitants as we pass along, and realize something of that sense of superiority which wings give to the feathered tribe.

Preference is given to the afternoon for ascensions for several reasons, but principally because of the preparations requiring considerable time, and also that with a declining sun the wind generally falls, making a descent about sunset much safer, as a rule, than at any other time of day. Pleasant weather is, of course, the best, although cloudy days are the most favorable for variety, the cloud scenery being intensely attractive to most persons. *Aéronauts* seem to have little *penchant* for carrying instruments; it is the passenger or the investigator of scientific questions that requires their use. The *aéronaut* is satisfied with his barometer or without it; he has learned the appearance of objects from cer-

A SAFE HARBOR.

on record where two voyagers were brought back to the land by a yacht, which gave steerage way to the balloon while the latter towed the boat with a wind blowing parallel to the shore. All *aéronants* agree that after hours spent over a watery waste no more welcome sight could be imagined than to see the land once more beneath their feet. Forest wilds produce an intensely lonesome feeling, and one wonders what would become of him if the wind should fail or the gas give out. Under such circumstances he clings tenaciously to the ballast as his only salvation, and the drag rope is made to do duty in climbing the mountains before him. This is easy enough, though he runs the risk of the rope's becoming entangled in the tree-tops, yet he always has the satisfaction of knowing that the rope can be cut loose, if necessity should arise. Such a release would send him above the highest peaks and perhaps into the still more solitary clouds. But forced landings sometimes occur, and the voyagers have to make the best of it. It happens, however, that some of the most unpromising descents turn out to be the best, furnishing another chapter of adventure in descending mountain streams, camping under primitive forest trees, sighting the startled game, and finally sharing the lumberman's rude cabin just once before looking upon civilized life again. Occasional calls may be made by means of anchor or drag rope, particularly where assistance

tain heights, and he feels almost intuitively the rising or falling of the balloon. But a scrap of paper thrown from the car solves any doubt. Extra clothing should always be carried for extended voyages, and provisions also, for nothing can be more uncertain than the landing-place after a prolonged flight in the air.

America is, perhaps, the best country in the world for long and interesting voyages; the great variety of scenery, particularly east of the Mississippi, the one general language, and the intelligence of the people, all favor this above other countries; but for short aerial voyages the best place is, no doubt, to be found in France or England.

The most remarkable ascensions in this country, since that of La Mountain, are the following: Lowe sailed from Cincinnati to Columbia, S. C., about 300 miles, in six hours.

Two experienced voyagers rose from Plymouth, N. H., in 1872, and, having crossed the White mountains, found themselves at nightfall in the wilds of Maine. After alighting among the tree-tops on the lee side of a mountain, where they consulted for half an hour on the possibility of escape from their dilemma, they determined on a continuation of the voyage. Throughout the night they floated on over the Maine and Canada wilderness, and toward morning were carried out over the Gulf of St. Lawrence. Their ears caught the sound of the surf beating on the shore while they were passing out over the water. They made a careful descent, availing themselves of the advantages of the drag rope, when by good fortune a counter-current wafted them back to the shore. Daylight coming on, they discovered a road—the only one in hundreds of miles—and effected a safe landing near the little French settlement called Sayabec, 250 miles below Quebec.

A company of five persons rose from the city of Buffalo, and, taking a southerly course, passed into the State of Pennsylvania. Crossing the Allegheny mountains, they reached Havre de Grace, Md., where, ascending to a great height on account of the heat of the rising sun, they encountered a current from the west, which carried them over the State of Delaware and landed them in southern New Jersey. They were about thirteen hours in making the journey.

Seven persons rose from Cleveland at 11 o'clock A. M., on a September day, and were immediately swept out from the shore. Their course lay down the lake for a hundred and thirty or forty miles, when they came down for a sail on the water by the aid of the drag rope. In doing so they doubled back on their former course, but with a tendency toward the Canada shore. They repassed Erie and Cleveland, and at 7 P. M., after eight hours over the lake, they left it at Point au Pele, on the Canada side. Approaching Lake St. Clair, they were seeking for a landing-place, when, in passing over a piece of woods, the drag rope fouled among the trees. Sand was thrown out to force it loose, and after three heavy bags had been disposed of the balloon was freed and rose rapidly to the clouds. Lake St. Clair was crossed in the darkness. The tinkle of an occasional cow-bell was then heard, but later they heard the deep-toned voice of a steam gong, descended, and saw the

lights of a steamer on Lake Huron. Port Huron was at their feet, but they were hurried away from it by a lake breeze met in the descent, and a landing was effected at midnight, eleven miles from the town.

Two voyagers ascended from Chicago, who, by a circuitous route of six hundred miles, after a nineteen-hours' voyage, found themselves in a dense wilderness. They spent five days without food before a habitation was found, and three days more in reaching Chippewa Falls, where they could telegraph to their friends.

The "Daily Graphic" Company, of New York, announced that they would send a balloon across the Atlantic. Donaldson and Wise were to be the aeronauts, and a balloon of 450,000 cubic

AN INHOSPITABLE RECEPTION.

feet capacity was constructed of domestic cotton and coated with oil varnish. The materials employed were too cheap and primitive for such a great undertaking, and coal gas was deemed sufficient for a voyage of thousands of miles. The parties quarreled when the day for the in-

flation arrived, and poor Donaldson, with the experience of scarcely a dozen ascensions in a little one-man balloon, found himself in sole control of the immense *aërostat*. In his efforts to fill it, all control was lost, and the bag itself was saved only by a judicious use of the knife.

about one hundred miles a descent, which they could not govern, brought them in contact with objects on the ground. Becoming demoralized, they abandoned the ship. The landing was effected at East Canaan, Conn.

Long Voyages.—The longest voyage ever made in this country was that of John La Mountain, from St. Louis to the vicinity of Watertown, N. Y., July 1 and 2, 1859. The distance, as measured on various maps, is from 825 to 835 miles in a direct line. The *aéronaut* had with him as passengers Mr. O. A. Gager, of New York, Mr. Hyde, a journalist of St. Louis, and the well-known *aéronaut*, John Wise, of Lancaster, Pa. The balloon was of oiled silk and had a capacity of about 90,000 cubic feet. The voyage was made in about sixteen hours.

Paul Rolier, one of the impromptu *aéronauts* of the siege of Paris, and a sharp-shooter named Deschamps, ascended together in a balloon of 70,400 cubic feet capacity, and landed in Norway, it is said, 600 miles north of Christiania, the capital of that country. If this is correct, it would appear to be the longest voyage on record. The voyagers during the night descended over the sea, and, their drag rope being insufficient, they were dashed into the waves; but by throwing out some Government dispatches they rose again, finally effecting a landing in a forest where the snow was knee-deep. They were fourteen hours and forty minutes on their journey, suffering much from cold. They slept alternately till the following morning, menaced by the vicinity of wolves. They found a cabin and some Norwegians next day, and soon reached a neighboring village, whence they were carried on sledges, and finally by rail reached Christiania. They were not incumbered with their balloon, for, in their haste to land, the balloon, with a portion of their dispatches, escaped, coming down again many miles away and frightening the inhabitants.

The New York "World" recently undertook to break the record of long voyages with a balloon of 160,000 cubic feet capacity, and employed an amateur to do the work. The undertaking was too great for a person of limited experience. An older *aéronaut* sent the balloon and party aloft, but, with everything favoring a long and eventful voyage, the inex-

THE ONLY WAY OUT.

Another *aéronaut*, of more experience, was sent for, with no better results; but at last one was found who succeeded in starting Donaldson and his two companions on their journey. Fortunately, they did not go directly out to sea, though Brooklyn was their point of departure; but they kept inshore, and at the distance of

perienced one failed to keep afloat, reaching the ground fifty-three miles from the starting point, St. Louis.

Other voyages have attracted general attention, particularly the final ones of Donaldson and Wise. The former rose from the lake front of Chicago, taking with him young Grimwood, a reporter. They floated off at a ten-mile gait directly up the lake, and were at last lost to view. A terrific storm arose that night, and no reliable news was had of them for weeks, when the body of Grimwood was found in the sand on the distant shore of the lake. The finding of the body, with a torn life-preserver around it, told all that will ever be known of their fate. It is probable that Donaldson remained in the car and sank with the balloon.

Wise arose from St. Louis, having a reporter with him named Burr. The wind was high and favorable for a very long voyage; and, besides, a landing in such a wind would have been dangerous. They continued into the night, but the gale did not abate. The balloon was not very large, and was incapable of remaining up a great while. Three hundred miles in a straight line they went for Lake Michigan, and after reaching it were swamped in its cold embrace, as Donaldson and Grimwood had been. Burr was washed ashore and his body was found, but Wise probably sank in his car.

Highest Ascents.—The highest ascent is claimed by Cogswell, the English aeronaut, and Glaisher, the meteorologist, who ascended together from Wolverhampton, England, Sept. 5, 1862. Glaisher, in his account of the ascension, published in his "Travels in the Air," claims to have made an instrumental record of 6 miles, and would like to have it believed that they rose another mile after their exertions had ceased. He said his eyes failed him, and he called on Mr. Cogswell to help him read the instruments; but "in consequence of the rotatory motion of the balloon, which had continued without ceasing since leaving the earth, the valve line had become entangled, and Cogswell had to mount into the ring to readjust it." The statement is rather unscientific, and it will always be a conundrum how the cord could become entangled in that way. Had the scientist dealt with plain facts, more credence would be given to his story, but he attempted the sensational by telling how Cogswell lost control of his hands after climbing into the hoop, and, without saying how he managed to sustain himself in such a position, tells us that he took the valve cord between his teeth and let off gas enough to send the balloon down. Here is another riddle for the practical aeronaut. Why did he want to open the valve at all, when a simple cessation of his labors from pushing the balloon to a greater height would have accomplished the same object? Though he opened the valve at 6 miles, Mr. Glaisher was so anxious for the greatest-height record that he would fain stretch it to 7 miles. He has given us his remarkable story of the ascent with a heavy cotton balloon of 90,000 cubic feet capacity, filled with coal gas, and has made it well-nigh impossible for the lightest balloon filled with the purest hydrogen to compete with him. It is certain that coal gas will never do it again.

A few years since three Frenchmen ascended

together with the intention of rising to the greatest possible height. They carried bags of oxygen to supply them with its life-sustaining properties, and after they had risen to the height of five miles, being reinvigorated by its inhalation, one of their number suddenly seized three bags of sand, one after another, and discharged their contents over the side of the car. Almost instantly the three men became asphyxiated, and only one of them recovered after reaching the earth. The death of the two aeronauts was supposed to have been caused by the increased rarity of the air; but it seems more probable that the gas descending upon their heads as it was forced out of the mouth of the balloon from the rapid expansion caused by the injudicious discharge of ballast, produced the effect.

Professional aeronauts are very few in America, though there are numbers who follow some other occupation and make occasional ascents. It is safe to say that not more than half a dozen names could be mentioned of persons who devote themselves exclusively to this pursuit. In England there are as many as here, while in France they are more numerous, because of the more frequent opportunities for ascension, no *fête* day lacking its balloon attraction. The whole number of professional aeronauts in the world is not more than fifty; but parachute jumpers and hot-air balloonists are not included, for they can be counted by hundreds in every civilized country.

The dangers of ballooning are often magnified, but it can not be denied that for him who follows it for a life-time there is more or less of peril. Many narrow escapes occur and sometimes a life is lost, as in the case of Thurston, Donaldson, and Wise. Stiner died from the effects of exposure in a descent near San Francisco, where he was compelled to wade for hours through water, sometimes up to his neck, in seeking to extricate himself from an isolated position. The accidents to balloons are frequent. It is rare, indeed, that twenty ascensions can be made without three or four wrecking experiences. Trees are ordinarily the cause of these mishaps. The oiled fabric tears easily, and through failure to obtain anchorage, and high winds, an aeronaut frequently loses more in a single descent than his earnings for half a dozen ascensions; but, with all these drawbacks, there is no more fascinating enjoyment.

BAPTISTS. I. Regular Baptists in the United States.—The following is a summary of the statistics of the Baptist churches in the United States as they are presented in the American Baptist Year-Book for 1891: Number of associations, 1,382; of ordained ministers, 22,703; of churches, 34,780; of members, 3,164,227; of Sunday schools, 18,555, with 131,889 officers and teachers and 1,280,663 pupils; increase by baptism during the year, 140,058; value of church property, \$61,646,377. Amount of contributions: For salaries and expenses, \$7,186,532; for missions, \$1,045,371; for education, \$374,039; miscellaneous contributions, \$2,609,637. The numbers for the rest of North America are: British Provinces, 795 churches, 517 ministers, and 77,832 members; Mexico, 1,161 members; Cuba, Hayti, Jamaica, and other islands, 42,910 members. Total for North America, 35,817 churches, 23,344

ministers, 3,286,030 members. In Brazil, 8 churches, 8 ministers, and 312 members. In Europe, 3,871 churches, 3,081 ministers, and 408,742 members, of which 2,802 churches, 2,974 ministers, 320,163 members are in Great Britain and Ireland, 20,990 members in Germany, and 33,521 members in Sweden. In Asia, 696 churches, 470 ministers, and 79,468 members. In Africa, 47 churches, 74 ministers, and 2,958 members. In Australasia, 192 churches, 124 ministers, and 15,568 members. Total for all countries, 40,631 churches, 27,101 ministers, and 3,793,078 members, showing an increase from the previous year's reports of 941 churches, 1,755 ministers, and 91,696 members. The whole number of baptisms returned in 1890 was 155,494.

The educational institutions in the United States comprise 7 theological institutions, with 57 instructors and 657 pupils; 34 universities and colleges, with 422 instructors and 6,537 pupils; 38 seminaries for female instruction exclusively, with 405 instructors and 4,886 pupils; 45 seminaries and academies for young men and for persons of both sexes, with 281 instructors and 5,578 pupils; and 26 institutions for the colored race and Indians, with 198 instructors and 4,780 pupils. Of the 16,895 pupils in the universities and colleges, seminaries and academies, and freedmen's and Indians' schools, 1,575 were preparing for the ministry, making with the students in the theological seminaries, 2,232 persons studying with that end in view.

The Baptist African Missionary Convention of the Western States and Territories reported in 1890 a year's receipt of \$418, and was supporting two missionaries on the Congo river in Africa, while two more were on the way there; and the Women's Convention in Kansas co-operates with it in the support of another missionary. The Baptist Foreign Missionary Convention of the United States (colored) has, since its organization in 1880, collected about \$25,000; sent out 11 missionaries, who have labored at 3 stations and 5 out-stations, and received 300 converts. Its receipts for 1890 were \$4,135.

The American National Baptist Convention (colored) reports 17 State conventions, 12 schools owned and managed by the Home Mission Society, and 44 owned and managed by colored Baptists themselves.

Home Mission Society.—The fifty-ninth annual meeting of the American Baptist Home Mission Society was held in Cincinnati, Ohio, beginning May 20. The Hon. C. W. Kingsley presided. The receipts for the year, including conditional and trust funds, but not including church-edifice loans repaid, had been \$405,153. Of this sum, \$15,341 had been contributed through the woman's societies of Boston, Connecticut, Michigan, and Chicago. The expenditures, not including loans to churches, had been \$408,497. The society's labors had been conducted in 49 States and Territories, and in Ontario, Manitoba, British Columbia, Alaska, and six States of Mexico, and had engaged the services of 948 missionaries. Of these, 209 had labored among foreign populations, 286 among the colored people, Indians, and Mexicans, and 443 among Americans. One hundred and five new mission stations had been taken up, 38 of them among foreign populations. The society aided

in the maintenance of 26 established schools for the colored people, Indians, and Mexicans; 8 day schools for the Chinese in California, 2 in Oregon, and 1 in Montana; and 2 schools in Utah, 2 in the Indian Territory, and 3 in Mexico. The missionaries represented 13 nationalities or peoples, viz., Americans, Germans, French, Swedes, Danes, Norwegians, Indians, negroes, Chinese, Mexicans, Bohemians, Poles, and Finns. Other items of the work are: Churches and out-stations supplied, 1,328; members received by baptism, 4,523; churches organized, 199; total church membership, 41,735; Sunday schools under the care of missionaries, 948; attendance on Sunday schools, 64,191; benevolent contributions reported, \$43,627. During the fifty-nine years of the society's existence 117,103 persons had been baptized and 4,226 churches organized by its agents. In twelve years the increase of missionaries to the colored people had been twofold and of teachers more than fourfold; of missionaries to the Chinese, twofold; to the Indians, twofold; to the Mexicans, from none to 15; to the French, threefold; to the Germans, about twofold; to the Scandinavians, nearly fivefold; and to the American population, nearly twofold. In the church-service department, 88 churches had been aided by gifts or loans, or both, to the amount of \$42,499. The Loan fund amounted to \$118,874. The receipts for the year on its account had been \$6,200. The receipts for the Benevolent fund had been \$22,639.

Publication Society.—The annual meeting of the American Baptist Publication Society was held in Cincinnati, May 22. The Rev. Thomas Armitage, D.D., presided. The society had received in its three departments, \$647,884. The sales in the book department had amounted to \$529,596, or \$25,943 more than in the previous year; the receipts of the missionary department had been \$95,493, or \$30,000 less than in the previous year; and the Bible department, \$22,729. There had been contributed from the book department to the missionary department, \$128,437, of which \$46,880 were in cash, and the remainder in books and tracts. The missionary work of the society was represented by 122 missionaries, who returned 44 churches constituted, 500 Sunday schools organized, and 317 pastors, ministers, and students aided with grants for their libraries. An unfavorable report was made of the condition of the mission which had been begun in Armenia eight years before, the results of which had not been successful and the prospects of which were not encouraging; and the meeting resolved that, after reasonable notice to the present agents on the field, the society should discontinue appropriations to it. There had been much difference of opinion among Baptists as to the expediency of sustaining this mission, which was working in fields already occupied by the American Board, with embarrassment to some of that society's churches.

Missionary Union.—The seventy-seventh annual meeting of the American Baptist Missionary Union was held in Cincinnati, May 25. The Rev. G. W. Northrop, D. D., presided. The total receipts of the treasurer from all sources for all purposes had been \$492,275, of which \$121,690 had been contributed by the two Woman's Foreign Missionary Societies; the expend-

itures or liabilities had been \$553,869, showing a balance against the treasury of \$61,594. From the missions to the heathen there were returned 68 stations and 1,322 out-stations. Including 98 missionaries who were now absent from their fields, there were 378 missionaries, of whom 14 were physicians, 13 laymen, 107 single women, and 119 wives of missionaries. The European missions returned 965 preachers, 734 churches, 76,039 members, and 6,354 persons baptized in 1890. In all the missions there were 378 missionaries, 1,823 preachers, 1,415 churches, 152,642 members, 15,063 baptized in 1890, and 71,950 pupils in Sunday schools. The contributions from the mission churches had been: From the heathen missions, \$51,038; from the European missions, \$186,158. The heathen missions were the Burman, Karen, Shan, Chin, Kachin, Telugu and Tamil, Assamese, Garo, Naga, Kohl, Chinese, Japanese, and Congo missions. The European missions were in Sweden, Germany, Russia, Denmark, France, and Spain. The most conspicuous events of the missionary work of the year had been the visit of the Rev. Henry C. Mabie, one of the corresponding secretaries to the missions in Asia, and the great revival in the Telugu mission. The growth of that mission since its beginning has been remarkable. In 1866 there were 1 station and 38 members. A second station was then founded, and a rapid growth begun. At the end of 1877 there were 4,517 members. In 1878 there were 10,601 baptisms, of which 2,222 were on July 2. In the report for 1890 the number of members was given as 33,838. The complete statistics for the past year gave the number of baptisms as more than 6,000, and the whole number of church members as more than 40,000. A good account was given of the character and steadfastness of the converts. The plan for the celebration of the centennial, in 1892, of Protestant foreign missions, or the one hundredth anniversary of the beginning of that work by William Carey, reported by the committee and adopted by the meeting, contemplates services to be continued through the year, and includes a commemorative discourse and other special services at the annual meeting of the Union, in Philadelphia, in May; efforts to send out one hundred new missionaries and raise a memorial fund of one million dollars for the universal work of the Union; general meetings to observe the four memorial days of the Carey movement, to be held in different parts of the country under the supervision of the Centennial Committee; and at least one memorial service to be held in each church or group of churches in commemoration of the instrumentality of Baptists in promoting world-wide evangelization.

Woman's Home Mission Societies.—The Woman's Baptist Home Mission Societies held a joint meeting in connection with the anniversaries of the three preceding societies. The receipts of the Western society (Chicago) had been \$57,085; expenditures, \$48,209, leaving a balance of \$8,876. The Eastern society (Boston) had received \$43,000, and supported 47 teachers, chiefly among the negroes.

An autumnal missionary conference was held in Buffalo, N. Y., Nov. 17, 18, and 19, the first of a series of conferences projected by the Missionary Union to be held apart from the anniversaries, when more time can be given to the consid-

eration of the aims, spirit, and methods of future missionary operations. The features of the meeting included the reading of papers on those subjects and discussions of them.

Baptist Young People's Union.—A Young People's Baptist Union of America was organized at a convention held in Chicago, Ill., July 7. Its objects were declared in the constitution adopted to be: "The unification of Baptist young people; their increased spirituality; their stimulation in Christian service; edification in Scripture knowledge; their instruction in Baptist history and doctrine; and their enlistment in all missionary activity through existing denominational organizations." Mr. John H. Chapman, of Chicago, was chosen president. Forms were adopted for constitutions of State, associational, and local organizations.

Southern Baptist Convention.—The Southern Baptist Convention met in Birmingham, Ala., May 8. The Hon. Jonathan Haralson presided. The report of the Foreign Mission Board showed that it had received from the churches \$113,322, and was indebted \$4,206. The missions were in China, Japan, Africa, Italy, Brazil, and Mexico, and returned 38 main stations, 147 out-stations, 86 American missionaries, 23 ordained and 53 unordained native assistants, 67 organized churches, 2,377 members, 361 baptisms during the year, and 22 schools, with 823 pupils. The mission in Japan had been established during the year. The Home Mission Board had received \$67,188; in addition to which the State Conventions and District Associations raised not less than \$100,000 for State and district missions. The board had employed 406 missionaries, against 371 in the previous year: of whom 31 had labored among foreign populations, including Indians, 22 in Cuba, and 51 among the negroes. The work of the board among the Indians was confined to the Indian Territory. The Baptists of the South had been at work among these people for half a century, and this convention for nearly forty years; and the success attending efforts to evangelize them had been remarkable. There were now in the five civilized tribes as many baptized believers and as many churches and native preachers, in proportion to the population, as in any community on the globe. The Levering school would after the present session be no longer under the control of the board, the Creek nation, possessing a very large school fund, having resolved to terminate all existing educational contracts with mission boards, and assume the entire responsibility of educating its people. The work among the colored people had not reached the importance it demanded, and the report of the board dwelt upon the need of enlarging it. The work in Cuba continued with unabated interest. A large church had been dedicated in Havana on Feb. 15. Mr. Diaz, the missionary, reported that there were 7 churches, with 1,917 members and 210 baptisms during the year; 7 Sunday schools, with an average attendance of 679 pupils; and 8 church buildings.

The Woman's Missionary Union, which is auxiliary to the convention, had received \$38,980. Besides assisting in the maintenance of the home missions and sending supplies to them, it had contributed to the support of twenty-five girls

in a Cuban college for young women and in the support of missionaries in the foreign field, and had this year collected a Christmas offering of \$4,320 for the North China Mission. The present was the third annual meeting of the Union.

American Baptist Education Society.—The third annual meeting of the American Baptist Education Society was held at Birmingham, Ala., in connection with the meeting of the Southern Baptist Convention. Its report showed that there were 140 Baptist institutions of learning in the United States, into whose necessities the executive board had carefully looked. During the past three years the society had aided institutions in securing endowments to the extent of £209,850. This sum, conditionally given, had brought to the institutions aided an aggregate of \$1,165,000. If the present assets of the Chicago university (\$2,250,000) were added, the work of three years would be represented by the total sum of \$3,415,000.

II. Free-Will Baptist Church.—The Free-Will Baptist Annual Register and Year-Book for 1891 gives as the totals of the statistics of the Free-Will Baptist churches: Number of yearly meetings and single associations, 54, with 8 quarterly meetings and 14 churches not connected with any yearly meeting; of quarterly meetings, 201; of churches, 1,630; of ordained ministers, 1,398; of licensed preachers, 218; of members, 86,405.

The Education Society received \$3,078 during 1890, and returned \$10,198 as the total amount of invested funds in its hands on Aug. 31 of that year. Thirteen institutions of academic and collegiate grade are sustained by the denomination.

The receipts of the Home Mission Society for 1890 were \$110,759; and the amount of its invested funds was returned at \$14,075.

The Foreign Mission Society returned receipts of \$21,642, with invested funds of \$35,449. From the mission in India (Bengal and Orissa Yearly Meeting) were reported 1,410 members of the native Christian community, with 2,721 pupils in Sunday schools and 3,520 in the day and general schools. There are also connected with the denomination a Woman's Mission Society, a Temperance Union, a Sunday-school Union, a Young People's Social and Literary Guild, and a United Society of Advocates of Christian Fidelity.

III. Seventh-Day-Baptist Church.—The whole number of members returned in this Church for 1891 is 8,748. Of this number 1,796 are non-residents. The statistical secretary called especial attention in his report to this class of members—persons scattered over the land and trying to observe the principles of their creed in a state of isolation from their fellow-members. There are, he said, probably many more little groups of Seventh-Day-Baptist families than there are organized churches. The Sabbath-school Board had reports from 75 schools, in which were 5,395 members, of whom 822 were officers and teachers. The trustees of the Memorial fund returned an income for the year of \$6,495, and the total amount of endowment funds realized as \$116,748. The treasurers of different institutions had received \$14,422 for notes paid direct to them and accounted part of the Memorial fund. There were besides four

parcels of real estate bequeathed to this fund, the value of which was not yet estimated.

The Education Society had received \$1,795 on interest account, and \$2,600 on account of principal; the endowment funds and securities to its credit amounted to \$45,088. It presented reports from Salem College, Virginia, Albion Academy, Wisconsin, Milton College, Wisconsin, and Alfred University, New York. The last institution had an endowment fund of \$51,514.

The Tract Society had received \$7,267. It had a Hebrew Paper fund of \$779, and a permanent fund of \$8,047. A minute adopted at a meeting of the society declared that the arguments set forth to sustain the observance of Sunday "tend to destroy confidence in the divine authority of the Word of God and to do away with the sense of the obligation to observe any Sabbath at all," and that the Seventh-Day people can hope to present effectually their distinctive principles only among those "who recognize the necessity of a Sabbath based upon the Scriptures."

The receipts of the Missionary Society, not including receipts in the China field, had been \$11,939. The mission at Shanghai, China, returned 4 foreign workers and 3 native preachers, with 32 church members, 42 pupils in day schools, and 4 additions to the Church during the year, and 3,283 patients had been treated in the dispensary. The mission church in Harlem Holland, returned 31 members. Although no Jewish mission had been established, a contribution to that work had been sent to a missionary in Austria. Reports were made from many home mission stations. The Woman's Board, co-operating with this society, had received \$3,051.

The General Conference met at Westerly, R. I., Aug. 19, under the presidency of Mr. George B. Carpenter. The delegates to the council held in Chicago, in October, 1890 (see "Annual Cyclopædia" for 1890), reported concerning the satisfactory character of the sessions and presented a copy of the proceedings. As a representative body the council surpassed any former gathering of the people of the Church. Delegates attended from the General Conference, from the benevolent societies and boards, and from 79 churches. The Committee on Denominational History reported that historical and biographical articles and papers on missionary history had been published in the denominational journals, and urged that the series should be completed and published in collected form. Resolutions were adopted urging the demand for increased aggressiveness and activity in promoting the movement for "Sabbath reform," with which the denomination is identified; expressing joy and approval over the increasing interest in missions and in the higher education; reiterating the opposition of the conference to the use and sale of intoxicating liquors; condemning distinctions in regard to immigrants based upon prejudice, race, or color instead of other characteristics; commending the study of the issues presented by the "Higher Criticism" in Bible study; and approving the Christian Endeavor work of the young people.

IV. Baptists in Great Britain.—The Baptist Union of Great Britain and Ireland met in London, April 27. Col. James Theodore Griffin

presided. The report of the council showed that there were connected with the Union 2,802 churches, 3,781 chapels, 1,223,526 chapel seats, 330,163 members, 48,132 teachers and 482,892 pupils in Sunday schools, 4,000 local preachers, and 1,874 pastors in charge; and that £54,605 had been expended on new chapels, £38,591 on improvements, and £67,388 toward reduction of debt. An incorporation had been secured in order to enable the Union to hold securities and other property of the Annuity fund. The establishment of a publication department and a denominational book room had been considered. The securities of the Annuity fund were valued at £143,590; the additions during the year had been £8,452, besides which the stock had largely increased in value. The receipts for the Augmentation fund had been £10,034; and for the Union itself, £1,729. The Home Mission Society made report of 81 mission churches with 34 dependent stations and 8,538 Sunday-school children. Its income was only £2,500, £700 of which were raised by the churches in co-operation with the society. The aided churches had raised more than £7,000 during the year for various purposes, including £319 for foreign missions. Resolutions were adopted by the Union condemning the opium traffic in India as indefensible on moral grounds, an offense against God, and a terrible wrong to the people of that land; and approving a measure for free education that should provide for the abolition of fees in the higher as well as in the lower standards, place every school receiving grants in lieu of fees under the control of a board of representative managers, and provide for at least one board school within reach of every family in the kingdom.

The Baptist Missionary Society had received during the year £68,123, and had expended £78,684. The present annual expenditure was some £10,000 in excess of the current normal receipts. This was chiefly attributable to the rapid extension of the work on the Congo and in China. Ten years previously there were only 6 missionaries connected with the Congo Mission, and the annual expenditure was only £1,500. In the last year there were 28 missionaries, and the expenditure was £14,592. The staff of 3 missionaries in China ten years ago, costing less than £2,000, had been increased to 21 missionaries, with an expenditure of £10,034. On these two fields alone, therefore, the expenditure had increased by £21,000, while the general contributions of the churches had increased by only £13,000. The plan of associating missionaries into a sort of brotherhood, or forming communities of unmarried men living together and engaging in active evangelistic work, had been successful, and was favorably reported upon. On the report of the executive committee, the society decided to concentrate its work in certain fields by reducing the number of stations and the extent of territory to be covered. In pursuance of this plan, the missionaries will withdraw from a number of stations in India already well occupied by other societies, and confederate the remaining stations, working them together in groups. Five such groups have been arranged for in India. It was also decided to withdraw the missionaries of the society from the service of Anglo-Indian churches, and leave those

churches to their own resources, the principle being stated that the funds of the society "were not contributed for the purpose of relieving Christian people of their individual responsibility as followers of Christ." The plan of union of the society with the General Baptist Missionary Society was agreed to, and now only awaited the ratification of that body at its coming meeting.

The receipts for the Zenana Mission had been £7,592, and the expenditures £105 more than that sum. A boat was employed carrying the ladies of the mission up and down the rivers of Bengal. The receipts of the Bible Translation Society had been £1,230, or £130 less than in the year preceding. The capital of the Baptist Building fund was returned at £43,098, and the whole amount of loans was £196,595. More loans had been granted in the past year than in any preceding one.

General Baptist Conference.—The General Baptist Conference met at Burnley, June 23. The Rev. Dr. Clifford presided. Resolutions were adopted confirming the plan of union with the Baptists. After expressing gratification at observing numerous signs of union among the churches, and at the spread of the principles taught by the founders of the denomination till they "are now the operative faith of the churches of Christendom," the resolutions recite

That in reviewing the last few years of our history we gratefully remember the message which came from the chair of the Baptist Union in 1886, inviting us to consider the desirability of terminating the division of Baptists into "General" and "Particular," as at once inaccurate, misleading, and injurious; the hearty and unanimous vote of the Baptist county associations and of the Baptist Union in favor of the perfect fusion of the Baptists of England; and the courteous and grace-filled endeavors of the Baptist Missionary Society and the Baptist Union to facilitate such a fusion.

That while many of us have felt reluctant to break our associations with a religious past that in its newer development goes back to 1770, and in another form to 1612, yet when we remember the practical union of Baptists which has been recognized in our churches in elections to the pastorate for the last thirty years, the unanimity of the votes of our churches in favor of amalgamation, the steps already taken by our churches to share the work of the county associations, the action of this association in favor of union in 1861-'62, the promise of even greater efficiency in our foreign and home mission work, the other advantages of real Christian unity, we rejoice to accept the invitation offered us.

A resolution offered as an amendment, to the effect that while agreeing to the union of the denominational institutions the association should be perpetuated by retaining the name of General Baptist and continuing the General Conference, was lost by a vote of 4 to 1. A protest which was offered against the action for union was afterward withdrawn.

Autumnal Meeting of the Union.—The autumnal meeting of the Union was held in Manchester, beginning Oct. 5. The proceedings consisted of meetings and discussions in the interest of the Home and Foreign Missionary Societies, the Zenana Mission, and the colleges, without the transaction of business. A resolution was passed recognizing with gratitude the consummation of the Union with the General Baptist Association. Expressions in favor of

closer relations with the Congregationalists and with the free churches generally were received with much interest. A resolution was passed calling on the Liberal party to place the disestablishment and disendowment of the ecclesiastical establishment in Wales among the first acts of justice which the new Parliament is to perform. Another resolution was passed, renewing a previous resolve to protest and agitate the question of free education till all parish schools are placed under the control of the rate payers, and are made thoroughly unsectarian, alike in government and instruction.

BELGIUM, a constitutional monarchy in western Europe which seceded from the Kingdom of the Netherlands in 1830. Prince Leopold, of Saxe-Coburg, was elected King of the Netherlands by the National Congress, and ascended the throne on July 21, 1831. The independence of Belgium was recognized by Austria, Great Britain, Prussia, and Russia in the treaty signed at London on April 19, 1839, which pledges those powers to defend the neutrality and inviolability of Belgian territory. Leopold II, born April 9, 1835, son of the first king, came to the throne on the death of his father, Dec. 10, 1865. The King has three daughters by Queen Marie Henriette, daughter of Archduke Joseph, of Austria; but under the Belgian Constitution they are precluded from succeeding to the throne. By the death in 1891 of the heir-presumptive, Prince Baldwin, the eldest son of the King's brother Philippe, Count of Flanders (see OBITUARIES, FOREIGN), the succession passes to the latter's younger son, Albert, born April 8, 1875.

The Chamber of Representatives consists of 138 members, 1 to every 40,000 of population, elected for four years by the direct suffrage of tax payers paying 42 francs a year in direct taxes, a qualification which limits the franchise to about 1 in 50 persons. The Senate is elected, in the same way, for eight years, and has half the number of members. Half the Senate is renewed at the quadrennial elections.

The Cabinet, constituted Oct. 26, 1884, is composed of the following ministers: President of the Council and Minister of Finance, A. Beernaert; Minister of Justice, L. Lejeune; Minister of the Interior and of Public Instruction, J. Devolder; Minister of War, General C. Pontus; Minister of Agriculture, Industry, and Public Works, L. Debruyne; Minister of Railroads, Posts, and Telegraphs, J. H. P. Vandenpeereboom; Minister of Foreign Affairs, Prince Chimay.

Area and Population.—The kingdom has an area of 29,455 square kilometres, or 11,373 square miles. The population was estimated on Dec. 31, 1890, at 6,147,041. The number of marriages registered in 1889 was 43,759; the number of births, excluding still-births, 177,542; the number of deaths, 119,726; excess of births over deaths, 57,816. The number of immigrants in 1889 was 23,190, and the number or emigrants was 22,150. The population of the chief cities on Dec. 31, 1889, was as follows: Brussels, with suburbs, 477,398; Antwerp, 221,360; Ghent, 152,391; Liège, 146,162.

Commerce.—The value of the general commerce, which includes re-exports, was 3,106,843,078 francs for imports and 3,011,026,216 francs for exports in 1889. The imports by sea were 1,327,-

867,876 francs, and the exports by sea 1,320,292,463 francs in value. The total value of the imports for home consumption was 1,556,400,000 francs, and of the exports of Belgian products 1,458,500,000 francs. The values of the principal classes of special imports in 1889 were as follow: Cereals, 250,863,000 francs; textile materials, 195,291,000 francs; vegetables; 93,205,000 francs; timber, 65,001,000 francs; live animals, 53,648,000 francs; mineral substances, 70,652,000 francs; gums and resins, 61,698,000 francs; hides and skins, 65,500,000 francs; textile manufactures, 51,070,000 francs; metals, 54,424,000 francs; coffee, 47,565,000 francs; butter and eggs, 37,481,000 francs; meat, 20,105,000 francs; other animal products, 34,304,000 francs; textile yarns, 26,270,000 francs; wine, 22,898,000 francs; oils, 17,749,000 francs; fish, 12,914,000 francs; rice, 14,551,000 francs; waste and manure, 25,235,000 francs. The leading exports of domestic produce and manufacture in 1889 were of the following values: Yarns, 147,507,000 francs; machinery, etc., 98,069,000 francs; raw textiles, 92,844,000 francs; coal, 90,998,000 francs; iron, 74,981,000 francs; sugar, 73,349,000 francs; grain, 72,874,000 francs; textile manufactures, 63,344,000 francs; hides and skins, 60,408,000 francs; stone, 58,073,000 francs; vegetables, 56,975,000 francs; glass, 46,340,000 francs; various animal substances, 34,175,000 francs; zinc, 31,720,000 francs; steel, 31,442,000 francs; chemicals, 31,198,000 francs; meat, 27,501,000 francs; various mineral substances, 23,683,000 francs; live animals, 20,761,000 francs; fire-arms, 18,098,000 francs; paper, 14,390,000 francs. The share of each of the principal commercial countries in the Belgian special commerce in 1889 is shown in the following table, giving the imports and exports from and to each country in francs:

COUNTRIES.	Imports.	Exports.
France.....	822,747,000	852,794,000
Great Britain.....	198,499,000	299,898,000
Netherlands.....	205,487,000	216,984,000
Germany.....	172,751,000	255,872,000
United States.....	118,246,000	43,299,000
Russia.....	113,466,000	10,757,000
Roumania.....	96,798,000	7,247,000
Argentine Republic.....	56,887,000	41,796,000
Sweden and Norway.....	42,619,000	10,044,000
Italy.....	19,757,000	45,158,000
India.....	64,366,000	8,968,000
Brazil.....	20,092,000	14,252,000
Spain.....	15,607,000	22,363,000
Peru.....	35,107,000	
Switzerland.....		29,786,000
Uruguay.....	15,893,000	
Portugal.....		15,484,000
Turkey.....		15,409,000

The total trade compared with that of the previous year shows an increase of 4 per cent. The imports from France increased 12 per cent., and the exports to France 3 per cent. The exports to Germany increased 47 per cent. Those to the United States showed a decline of 17 per cent., while to the other parts of America they increased 16 per cent. The imports from England increased 9 per cent., and the exports to England 17 per cent. The total imports for domestic consumption showed an increase of 1 per cent. over the value in 1888, and the exports of Belgian goods increased 17 per cent. There was a marked increase in the imports of wood,

grain, potatoes, fish, minerals, iron, lead, chemicals, oil cake, oil seeds, beet root, resin and petroleum, and in the exports of arms, vegetables, linen thread, cast steel, glass, wrought iron, refined sugar, and stones.

Navigation.—During 1889 there were 7,010 vessels, of 5,158,436 tons, entered, and 6,994, of 5,145,595 tons, cleared, at Belgian ports. The largest share, 1,307,804 tons entered and 1,489,264 cleared, belonged to Great Britain, the United States coming next, with 474,104 tons entered and 481,779 cleared. The commercial navy on Jan. 1, 1890, numbered 42 steamers, of 65,951 tons, and 9 sailing vessels, of 4,271 tons.

Railroads, Posts, and Telegraphs.—On Jan. 1, 1890, there were 3,209 kilometres of railroads in Belgium under the management of the Government, and 1,261 kilometres worked by private companies, making a total length of 4,470 kilometres, or 2,793 miles. The number of passengers on the state lines in 1889 was 59,957,199. The gross receipts for that year were 136,919,693 francs on the state lines and 40,223,562 francs on the companies' lines, and the expenses for the state were 75,235,052 francs, and for the companies 19,858,345. The capital expended on the state system was 1,301,452,773 francs.

The number of letters carried in the mails during 1889 was 95,467,361, besides 17,021,382 official letters; the number of post cards, 34,331,674; of printed inclosures, 68,457,974; of newspapers, 91,546,377; receipts, 16,135,714 francs; expenses, 9,320,296 francs.

The total number of dispatches transmitted by the telegraphs during 1889 was 7,737,353. The length of telegraph lines in operation at the end of that year was 4,054 miles, with 10,332 miles of wire. The receipts for the same year were 3,336,203, and the expenses 3,992,340 francs.

Finances.—The budget for 1891 states the total amount of the ordinary revenue of the Government as 346,612,721 francs, of which 24,333,000 francs are derived from property taxes, 19,340,000 francs from personal taxes, 6,680,000 francs from trade licenses, 600,000 francs from mining royalties, 27,923,331 francs from customs, 40,934,504 francs from excise duties, 19,010,000 francs from probate duties, 24,970,000 francs from registry fees, etc., 5,900,000 francs from stamps, 1,458,000 francs from various indirect taxes, 139,000,000 francs from railroads, 3,900,000 francs from telegraphs, 10,380,000 francs from the post-office, 2,505,000 francs from navigation and pilot dues, 1,280,000 francs from domains and forests, 15,098,000 francs from funds and securities, and 3,300,786 francs from repayments. The total ordinary expenditure was estimated at 338,381,503 francs, of which 102,096,726 francs are allocated to interest and sinking fund of the debt, 4,686,155 francs to the civil list and dotations, 17,111,075 francs to the Ministry of Justice, 2,482,655 francs to the Ministry of Foreign Affairs, 22,965,915 francs to the Ministry of the Interior and of Public Instruction, 17,016,597 francs to the Ministry of Public Works, 104,094,123 francs to the Ministry of Railroads, Posts, and Telegraphs, 46,588,462 francs to the Ministry of War, 15,523,895 francs to the Ministry of Finance, 4,267,400 francs to the Gendarmerie service, and 1,548,500 francs to repayments, etc.

The total amount of the consolidated debt in 1891 was 1,785,185,007 francs, in addition to which there were annuities amounting to about 30,000,000 francs, and a floating debt of 20,000,000 francs. The debt was incurred mainly for the construction of railroads and other productive works. During 1890 the debt was increased by 33,500,000 francs to provide for the new fortifications on the Meuse. The expense of these fortifications was originally estimated by General Brialmont at 24,000,000 francs, but by the middle of 1891 there had already been expended 72,000,000 francs, and additional credits were voted for completing the line of forts.

The Army.—The strength of the Belgian army on the peace footing, according to the military budget for 1890, is as follows:

TROOPS.	Officers.	Men.	Total.
Infantry.....	1,883	23,590	80,778
Cavalry.....	368	5,650	6,048
Artillery.....	509	7,562	8,371
Engineers.....	59	1,890	1,479
Administration.....	74	820	894
Total.....	2,923	44,612	47,570

This enumeration does not include the general staff, numbering 474. The Gendarmerie, of whom there are 2,449, form a part of the regular army in time of war. The number of horses maintained in time of peace is 7,200, besides 1,636 for the Gendarmerie. The artillery has 200 guns in peace and 240 in war time. The available strength of the army for war is 154,780 men, not including the Civic Guard, or volunteers, who numbered 42,827 in 1889.

The Suffrage Question.—The Moderate Liberals, who were in power before 1884, with their chief, Frère-Orban, as Prime Minister, and who carried through the scheme of state education that has been partly annulled by their successors, were unwilling to enlarge the franchise, because the new voters would add sufficiently to the strength of their opponents to drive themselves from power. Since the accession of the Conservative or Clerical party the conflict over secular education has been cast into the shade by the labor question and the agitation for electoral reform. A strong Radical party has grown up among the intelligent middle classes, whose watchword is universal suffrage, and in this demand it is supported by the Socialist Labor party, which, though deprived of the ballot to a great extent, has made its power felt in Belgium by sharp and protracted labor struggles and clamorous political agitation. Frightened by these new political elements, the Clericals have been averse to offering a moderate scheme of revision that, if it should pass, would only open the door for a wider extension of the suffrage. The Moderate Liberals were equally reluctant to share the voting privilege with the masses. The apathy of the ruling classes incensed the people, and gave such impetus to the agitation that it could no longer be ignored. The question of national defense, which has become urgent since the virtual repudiation by England of her pledge to defend Belgium from invasion, complicated the matter; for not only the Radicals but eminent military men declared that compulsory military service, without which Belgium can not have

an efficient army, will never be carried as long as the franchise is restricted to the class that is interested in preserving its immunity from personal service. In November, 1890, when the Chamber met, it had placed before it a proposition to amend Article XLVII of the Constitution by extending the franchise to all householders, which was referred to a committee. The passage of a proposal to revise any part of the Constitution by a majority vote necessitates a dissolution of Parliament and the convocation of a new one, in which a two-third vote is required in each Chamber before the amendment can become a law. The dilatory proceedings of the ministers and Chamber in the matter caused the champions of popular suffrage to suspect that the intention was to postpone the question indefinitely. Before the reassembling of the Chamber the Liberal Association, representing the middle class in Brussels, arranged for monster meetings, to be followed by a street demonstration on the day that the Chamber reopened, Jan. 20. The burgomaster having declined to prohibit the demonstration, the ministry called out two classes of the reserve to prevent disorder. The men were all in camp within forty-eight hours, showing that mobilization is well prepared; but it seemed doubtful whether the army, recruited from the class demanding the right to suffrage, could be depended on to repress the popular excitement. In the Chamber, where the Moderate Liberals and Radicals, forming the united Opposition, held only one third of the seats, M. Janson, the Radical leader, offered a bill to secure universal suffrage. The Moderate Liberals, under M. Frère-Orban and M. Bara, expressed themselves in favor of a considerable extension, based upon educational and other qualifications. M. Janson's plan was referred to the committee, but only for the purpose of being shelved. The Workmen's party made the right to vote their sole demand, and, while holding themselves independent of all other political bodies, appealed to the sympathies and fears in turn of the Liberals and Conservatives. They sent a petition asking the King to intervene, and another to the bishops, wherein they declared it to be "a monstrous iniquity, carried out in utter disregard of the Catholic faith, which permits 130,000 Belgians, who are no better than their fellow-citizens, to be absolute masters." They announced beforehand a general strike of all the working people in the country as a demonstration in favor of universal suffrage, and many of their employers called on the Government to grant their demand and avert such a calamity. To prepare for the strike, they not only saved up their wages, but obtained assistance from outside by means of a subscription fund. Every sympathizer who contributed a penny to this fund received a little green ticket as a receipt and a badge of his opinions. This strike fund was swelled by contributions from abroad. In March, M. Beernaert presented a scheme of revision, to which the Government would agree if the Liberals would accept it, that would enlarge the electorate so as to embrace about 600,000 persons by granting the right of voting to all persons who rent an unfurnished lodging. Coupled with this was a proposal for proportional representation of parties in elections to the Chamber and to the pro-

vincial and communal councils. It was also proposed to transfer the right of electing Senators from the people to the provincial councils, and to give the King an absolute veto on all legislation. This scheme was denounced as a proposal, not to increase, but to curtail the political power of the people. The committee of the Chamber discussed a proposition to make the age of twenty-five and the payment of ten francs a year in direct taxes qualifications for the parliamentary franchise, but continued to delay its report. The members of the Labor party grew incensed at the slowness of the Cabinet and its supporters in the Chamber. The 1st of May passed without the general strike being declared, and it was announced that the General Council of the Labor party were opposed to it; but on the following day men began to leave their work. In the Charleroi coal district 30,000 went out. They were followed by the miners and foundrymen of Liège, the operatives of Monceau and Marchienne, and the carpenters and other trades of the capital. On May 5 the Labor Council and the Miners' Federation consented to support a general strike in all four coal basins. Dynamite cartridges were exploded by strikers in vengeance on men who continued at work. In the provinces, collisions took place between strikers and the authorities. The Labor Council, compelled to take the lead in a movement that it was unable to resist, ordered a strike of dock laborers at Ghent, Antwerp, and Ostend, to prevent the landing of imported coal, and called out the metal workers of Brussels and the mechanics in all the large cities. At Seraing, Herloz, and other places rioters were wounded in fights with the gendarmes. Although industrial demands were put forward by the miners, the declared object of the great strike was to enforce the demand for unrestricted suffrage. It abated when the parliamentary committee hastened to make their report and the ministers pledged themselves to electoral reform. In a few weeks the strike was over, having accomplished none of its objects. The final recommendations of the committee were announced at the last sitting of the Chamber, on Aug. 16. The report condemned universal suffrage and commended a franchise based on occupancy, as in England, and proposed the postponement of revision till the parties could agree on a communal and provincial electoral system.

Diplomatic Relations.—An international office for the publication of the customs tariffs of all countries in the five principal European languages began its work on April 1, 1891, at Brussels. The French Government having denounced the commercial treaty with Belgium, which lapses on Jan. 31, 1892, the Belgian Government retaliated by a notification that the convention of navigation between the two countries and the convention for the guarantee of property in literary and artistic works, models, designs, and trade marks would expire on the same date. A convention was concluded with Bulgaria containing the same provisions as the new Anglo-Bulgarian commercial treaty. All the powers, excepting the United States, France, and Portugal, ratified the general act and declaration of the Brussels Anti-Slavery Conference of 1890. The American Government, which was

sustained by France in its objections to the right of search, obtained an extension of the period allowed for ratification. Separate conventions made by France and Portugal and the Congo State regulate the rates of duties in the Congo basin (see CONGO FREE STATE).

Socialist Labor Congress.—The first regularly convened International Trade Union Congress, open to all nations, was held at the Paris Labor Exchange in 1886. It had been preceded by a conference of labor representatives from France, Italy, Spain, and England, where the project of holding a congress was discussed and approved. In 1888 the second congress took place in London, and it was there decided to meet again in the following year at Paris during the World's Fair. This third congress was organized by the French Possibilists, and was attended by the English Trade Unionists and the English Socialists. A heated discussion arose on the question of fusing with the Marxist Socialists, who had organized a separate international labor congress, in which 83 German Socialists, including several members of the Reichstag, took part. The main feature of the Possibilist congresses had been the harmony and co-operation of Socialists with Trade Unionists and other non-Socialistic bodies. Anxious to preserve this alliance, the Possibilists had enacted rules that were designed to prevent the congresses from being swamped by delegates from a multitude of Socialist bodies and committed to principles unacceptable to the numerous working-men's associations in Great Britain that are opposed to Socialism. The rules were these: (1) No society can be represented at any of the congresses unless it has been in existence for a full year previous; (2) the delegates of each nationality shall judge of the *bona fide* character of the societies of their own country seeking to be represented and pass upon the credentials of their countrymen; (3) vote in the congress shall be taken by nations, the majority of delegates from each country deciding what its vote shall be on each motion; (4) all questions to be discussed shall be communicated to the organizing committee in time to be printed and sent around to all the societies participating in the congress at least six weeks before it assembles. It was the refusal of the Marxists to assent to these rules that prevented the two congresses from uniting in 1889. The Belgian delegates gave an invitation to the Possibilists to hold their next congress at Brussels in 1891 under the auspices of the Belgian Labor party. This invitation was accepted, and the Belgian organization undertook to act as a correspondence bureau to unite all parties during the intervening two years. The Marxists arranged to hold a congress in 1891 in Switzerland.

Without the consent or knowledge of the English trade bodies, the Belgian committee resumed negotiations for a fusion with the Marxists, and persuaded the Swiss committee to give up the plan of organizing a separate congress; but to obtain this result it was necessary to abandon the four rules. The English Labor Electoral Association, representing a large number of the strong and active trade unions of England, at its annual convention unanimously adopted a motion that the societies present should go to

the Brussels congress, but insist when they got there that the rules laid down by the Possibilist congress should be carried out. Previous to that, and before the negotiations for a union with the Marxists were made known, the annual Congress of British Trade Unions at Liverpool had voted to take part in the Brussels congress, and instructed the Parliamentary Committee to take every means in its power to make the congress a success. When fully informed of the change in the purpose and organization of the congress, the Parliamentary Committee met and agreed that under the altered circumstances they were not bound by the Liverpool vote to send representatives to Brussels, and that they would abstain. The very name of the congress was calculated to keep away English trade unionists, except the New Unionists, who have imbibed Socialistic principles; for it was no longer the International Working-men's Congress, but the International Socialist Working-men's Congress. Moreover, the date was changed from Aug. 18 to Sunday, Aug. 16, which was inconvenient to Englishmen, because they would have to lose a part of the previous week's work, and objectionable to many of them for religious reasons. The following list of subjects was announced as the *agenda* of the Congress:

(1) The present condition of the laws protecting workers from the national and international point of view, and the means to be employed to render such laws more effective.

(2) The right of coalition, how is it secured? The international aspect of strikes, boycotting, and the trade-union movement.

(3) What is the position and duty of the working classes with respect to militarism?

(4) The attitude which the organized workers of all countries should assume with regard to the Jewish question. (Proposed by the American Union of Workers speaking the Hebrew language.)

(5) How parliamentarism and universal suffrage can be utilized to the advantage of the Socialist workers' cause. The tactics which should be employed so as to bring about the emancipation of the workers, and the means by which this can be realized. (Dutch proposal.)

(6) On the alliance of workmen's Socialist parties with the middle-class political parties.

(7) On the suppression of piece work.

(8) The 1st of May international celebration to be consecrated to the principle of the eight-hour working day and the international regulation of labor, together with the universal affirmation to be made by the proletariat in favor of the maintenance of peace among all nations.

(9) Adoption of a general and uniform designation to indicate all the Labor parties in the world. (The Central Revolutionary Committee of Paris proposes "The International Socialist Party." The Belgian workmen's party proposes "The International Socialist Workmen's Party.")

(10) Serious and practical organization: (a) International correspondence between workmen; (b) universal working-class statistics; (c) international understanding between workers of all trades, to be secured by the creation in each nation of a syndical committee and of an international syndical (or trade-union) committee; (d) by the regular communication of different information, and by means of an international Socialist almanac, translated into several languages and appearing annually; (e) by Socialist propaganda and agitation in all countries.

(11) Proposal to hold the next International Congress in Chicago in 1893, and an international demonstration in that town. Designation of the next International Socialist Workmen's Congress.

The congress met on the date set at the Maison du Peuple, the hall of the Belgian Labor party in Brussels. Every country in Europe was represented, excepting Russia and Portugal. In addition to the 188 Belgian delegates, 77 presented themselves from France, 42 from Germany, 29 from Great Britain, 11 from Austria, 9 from Holland, 6 from the United States, 6 from Switzerland, 5 from Poland, 5 from Roumania, 3 from Sweden and Norway, 3 from Denmark, 2 from Italy, 2 from Hungary, and 1 from Spain. The Marxists, Blanquists, and Possibilists of France were all strongly represented. Among the German delegates were the Social-Democratic leaders Bebel, Liebknecht, and Singer. From England came prominent Socialistic agitators and also representatives of trades councils and unions. The American delegates were pronounced Socialists. Anarchists and Revolutionary parties were excluded. The speeches, limited to ten minutes, were translated immediately after delivery for the benefit of all sections, and the voting was by nationalities. The sessions extended over a week. The Marxists were in the majority, but they showed a desire to frame the resolutions in such a way as to be acceptable to the British trade unionists, at whose suggestion these international congresses were inaugurated. Mr. Sanial, delegate of the Central Labor Union of New York and of American Socialists generally, who described America as a country in which misery is increasing so fast that it is becoming a hell for working men, urged the claims of Chicago as the meeting-place for the next congress; but Switzerland was selected by the committee for the next regular congress, which will be held in the first week of August, 1893. In deference to the non-Socialistic English unions, it was decided to leave the title of the congress to be determined by that body. A proposition that no person should be permitted to attend as a delegate whose expenses were not borne by the organization that he represented was taken into favorable consideration. The intention was announced of sending some delegates from the Continent to the separate Socialist congress that is to be held in Chicago in 1893. It was resolved to organize a general international demonstration in favor of an eight-hour day, to take place on May 1, 1892. A resolution inviting the Socialist and Labor parties of all countries "to affirm in their programmes the complete equality of the two sexes and to demand the concession to women of the same political and civil rights as are enjoyed by men, and the repeal of all laws placing women outside public rights," was passed, with only three dissenting votes. The resolution in regard to labor-protecting legislation brought out the differences of opinion between the Continental workmen and the British delegates. Mr. Kazan, who represented the Hebrew trade unions of the United States, said: "We are not going to cringe and fawn for legislation, but will extort it from the capitalist class, and abolish the wage system." The British members objected to amendments embodying particular Socialistic demands, and the congress finally adopted unanimously the following resolution:

This congress, recognizing the existence of a class struggle, and convinced that as long as class rule pre-

vails the emancipation of the working classes will be impossible, declares that the laws enacted and the decrees issued in various countries since the Paris International Congress, held in 1889, do not in any respect meet the aspirations of the workers. That although the Berlin conference, as admitted by those who themselves initiated it, met under the pressure exerted by the international labor congresses, and may therefore be regarded as an important concession to public opinion, the results have demonstrated that existing governments do not wish to effect necessary reforms; and that, on the other hand, the resolutions of the Berlin conference have been used as a pretext by certain manufacturing countries to arrest the development of labor-protective legislation by invoking the decisions of the Berlin conference and pointing to the defects in the legislation of competing countries. Moreover, this congress affirms that in cases in which legislation is not defective, its application is allowed to remain inoperative.

For these reasons, this congress urges upon the workers of all countries to agitate for the realization of the programme laid down by the Paris congresses, if only to make it clear to the workers that the governing and exploiting classes are hostile to legislation effectively protecting the interests of labor.

Whereas it is necessary to give to the international labor movement a common impulse, especially in the direction of protective labor legislation, therefore be it resolved by this congress:

(1) To organize in every country a permanent commission of inquiry concerning the conditions of labor in its relation to working-class legislation.

(2) To collect, collate, and exchange all necessary information, with a view to the development and unification of all the said legislation.

(3) This congress recommends the wage workers of the whole world to unite their efforts against the domination of capital, and, wherever they enjoy political rights, to exercise them with the object of gaining their emancipation from wagedom.

Declarations in condemnation of piece work and of the subcontract system were approved. Mr. Kazan was unable to obtain a clear declaration from the congress on the Jewish question. The committee recommended a resolution "condemning the anti-Semitic agitation as a device of the capitalist class and of reactionary governments to divert the Socialist movement from its course, and to sow division among the workers, and affirming that the only way to achieve the emancipation of the Jewish working classes was to effect the amalgamation of the Socialist parties in the respective countries." This was altered on the motion of British delegates to read "the amalgamation of the Socialist and Labor parties," and at the suggestion of M. Argyriades, a French delegate, who denounced Jewish banks and Jewish financiers as oppressors of labor, an amendment was accepted to the effect that the congress "condemns both anti-Semitic and philo-Semitic agitation." The resolution regarding militarism was a sweeping one in favor of universal disarmament and peace, condemning wars and the maintenance of standing armies as a device to bolster up the power of capitalism.

BOLIVIA, a republic in South America. The legislative power is vested in a Congress, consisting in a Senate and a House of Representatives, and the executive power in a President, elected for four years. Don Aniceto Arce was made President in 1888. The country is divided into 8 departments, each under the administrative and military authority of a prefect appointed by the President.

Area and Population.—The area, which before 1880 was 842,000 square miles, has been reduced, by the cession of the sea-coast province of Antofagasta to Chili, to 772,548 square miles. The population is about 2,300,000, one fourth of whom are whites, one fourth mestizos, and one half Indians. La Paz, which is the seat of Government, has about 60,000 inhabitants.

Commerce and Production.—The foreign commerce of Bolivia is large, and has greatly increased in recent years. The amount is not known, the estimates being based on statistics furnished by Chili, Peru, and the Argentine Republic. The exports in 1885 amounted to \$9,800,000, and the imports to \$7,000,000. In 1890 the exports had increased to about \$20,000,000, while the imports were \$15,000,000 in value. The foreign trade is mostly with England, Germany, and France. The share of the United States is very small. The direct shipments from the United States to Bolivia in 1890 were \$11,002; but this does not represent the extent of the trade, for considerable quantities of dry-goods, drillings, kerosene, hardware, and machinery reported as sent to Peru, or the other republics bordering on Bolivia, are consumed in that country, and many of the imports that are credited in the trade reports of the Treasury Department to those neighboring countries are the produce of Bolivia. The silver mines of Bolivia are supposed to be the richest in the world. Those at Potosi from the time of the Spanish conquest have yielded over \$3,000,000,000. Other rich deposits are found at Oruro, Aullaga, and in other places. In 1881 the export of Bolivian silver through Buenos Ayres was valued at \$17,000,000, and in 1882 at \$21,000,000. In 1888 they were \$17,064,218; in 1889, \$12,145,545. There are valuable deposits also of tin, lead, bismuth, mercury, copper, platinum, zinc, magnetic and other iron ores, alum, salt, magnesia, and other minerals, and a large variety of precious and semi-precious stones. The export of copper ore and regulus amounts to about \$240,000 a year. Vegetable products of both the temperate and tropical zones thrive in Bolivia. Enough wheat is grown for domestic consumption, and a considerable surplus is exported. The coffee produced in Bolivia is of superior quality. Next to silver, the largest export is cocoa, the product of which in 1885 was valued at \$1,718,320. After this comes India-rubber, which is of a very high grade, and exists in inexhaustible quantities. Another valuable product is cinchona bark; the number of trees has been estimated at 5,000,000, and the annual output at 200,000 pounds.

Communications.—Bolivian commerce has been retarded by lack of transport to the coast. There is now railroad communication with the Chilean port of Antofagasta by means of a line that crosses the frontier at Ascotan, and has been extended for 400 miles on Bolivian territory, nearly to Oruro in the center of the plateau. It will be continued to the agricultural district of Cochabamba, and a branch will connect it with Potosi. The Peruvian railroad that has been built from Mollendo, on the coast, to Puno, on Lake Titicaca, is to be joined by a line from La Paz. Communication with the Atlantic Ocean is facilitated by the extension of one of the Argentine railroads to the frontier of Bolivia. A

project for the improvement of the tributaries of the Amazon and La Plata to afford water communication with the Atlantic is regarded as feasible, and likely to be carried out.

Finance.—Bolivia is financially better off than any other South American state. The foreign debt is being rapidly paid off; it had been reduced to \$622,121 in 1890, while the internal debt was only \$4,450,000. About one third of the revenue is derived from customs and one third from a tribute collected from the aboriginal tribes. The receipts of the treasury for the financial year 1890 were estimated at \$3,624,200, and the expenditures at \$3,734,814. About one third of the expenditure goes to support a military force of 124 officers and 900 soldiers.

Relations with Chili.—Bolivia was the first country in either hemisphere to recognize the belligerent rights of the Junta de Gobierno (see CHILI), which was done by proclamation on June 30, 1891. While this act was advantageous to Bolivia's commerce, as the Congressional party held the northern provinces of Chili bordering on Bolivia and could deny her access to the sea-ports, yet it involved the risk of a war with Balmaceda in the event of his success in the civil war. It strengthened the position of the Junta, both in Chili and in its relations with foreign countries; and in return the Bolivian Government is said to have obtained a treaty of commercial reciprocity, whereby no transit duties are levied on goods imported into Bolivia through Antofagasta or other Chilean ports; and Bolivia, on her part, acknowledges the perpetual sovereignty of Chili over the annexed provinces, and agrees to admit Chilean products free of duty.

BRAZIL, a republic in South America, proclaimed on Nov. 15, 1889, when Dom Pedro II, the Emperor, was dethroned by a popular rising and exiled with his family. A Provisional Government was instituted, which framed and published a new Constitution, that was ratified by the first National Congress, convened on Nov. 15, 1890. By this instrument the Brazilian nation constituted itself into a federal republic, under the name of the United States of Brazil. Each of the old provinces was declared a self-governing State, to be administered under a republican form of government, with power to impose taxes, and subject to no interference from the Central Government, except for purposes of national defense or the preservation of internal order or for the execution of Federal laws. Legislation relating to customs, paper currency, and postal communications is reserved to the Federal Government. The right of suffrage is secured to all male citizens over twenty-one years old, with the exception of beggars, persons ignorant of the alphabet, soldiers in actual service, and persons under monastic vows, registration being the only prerequisite. The executive authority is vested in the President, who must be a native of Brazil over thirty-five years of age. He is elected by the people directly for the term of six years, and is not eligible for the succeeding term. In all the States the election takes place on March 1 of the last year of the presidential period. The votes are counted at the State capitals, and the candidate receiving the absolute majority of the popular votes is declared elected by Congress at the opening ses-

sion, and is inaugurated on the 15th of November following. With the Vice-President it is the same. The President may be removed by the Senate, sitting as a tribunal under the presidency of the chief justice, on articles of impeachment presented by the Chamber of Deputies. The President has power to appoint and remove the members of his Cabinet and make all Federal civil appointments, and can appoint diplomatic representatives and Federal judges with the consent of the Senate. He is commander-in-chief of the army and navy. He has power to make war or peace only on the authorization of Congress. Ministers address their reports to the President, and can only communicate with the Chambers by letter or in conference with commissions. The Vice-President of the Republic is President of the Senate. Senators are elected by the Legislatures of the States for nine years, three from each State, one retiring and his successor being chosen every three years. Senators and Deputies receive equal salaries. The Chamber of Deputies has the initiative in all laws relating to taxation. Deputies are elected for three years by direct popular vote in the proportion of one to every 70,000 inhabitants. Congress assembles on May 3 of each year, and remains in session four months. The President can call an extraordinary session. The present Chamber has 202 members, the State of Minas-Geraes sending 37; Bahia and São Paulo, each 22; Rio de Janeiro and Pernambuco, 17 each; Rio Grande do Sul, 16; Ceará and the Federal District, 10 each; Pará and Maranhão, 7 each; Alagoas, 6; Parahyba, 5; Rio Grande do Norte, Piahy, Sergipe, Paraná, and Santa Catharina, each 4; Goyaz, 3; and Matto Grasso and Esperito Santo, 2 each. According to the Federal Constitution, the executive, legislative, and judicial authorities of each State must be separate and independent; the Governor and members of the Legislature must be elective; and judges must not be elective nor removable from office except on impeachment and judicial sentence. The Federal District, or *Município Neutro*, consisting of the city of Rio and its environs, an area of 538 square miles, is administered by the Federal Government. At some future time the Capitol is to be removed to a district of 14,400 square kilometres, about 75 miles square, reserved as the property of the Union in the center of the republic. The present Federal District will then be constituted as a State. By vote of the Legislatures in two consecutive sessions and with the consent of Congress, States can divide themselves or amalgamate with other States. The States alone can levy taxes on exports of their own products, land, inheritances, and industries. Amendments to the Federal Constitution may be presented by one fourth of the members of either House of Congress, and if they are passed to a third reading by a two-thirds vote in both Chambers, they will be considered again in the following year, when they must be passed a second time in three readings by a two-thirds majority of both Houses before they become law. Or if an amendment is asked for by two thirds of the States after having been proposed and sanctioned by a majority vote given by their respective Legislatures within the same year, then it must be proposed in Congress, and is adopted when it

receives a two-thirds vote after three discussions in each Chamber. No proposition shall ever be admitted to consideration which tends to abolish the federative republican form of government or the equal representation of the States in the Senate. The original draft declared clergymen, magistrates, police and army officers, and Federal office holders incapable of sitting in either House of Congress, but all restrictions were removed by the Constituent Assembly, except that candidates must be registered as voters, and must have been citizens four years to become members of the Chamber and six years to be eligible for the Senate. It is declared that no sect or church shall receive aid from the National or State governments, and that no Brazilian shall be debarred from exercising civil and political rights or exempt from civic duty on account of religious belief or duty. The clauses forbidding the establishment of new convents or monastic orders and proscribing the Jesuits were expunged. The protests of Cardinal da Costa, the primate of Brazil, against the civil marriage clause, the secularization of cemeteries, and the exclusion of religious teaching from public schools, failed to impress the Congress, and, while all religious disabilities were removed, these clauses were left standing.

Marshal Deodoro da Fonseca, the head of the Provisional Government, was confirmed in the presidency by the Constitutional Congress, and General Floriano Peixoto was elected Vice-president. Their term of office expires in 1894. The Cabinet first appointed by President Fonseca consisted of the following officers: Aristides da Silveira Lobo, Minister of the Interior; Dr. Ruy Barbosa, Minister of Finance; Benjamin Constant Botelho dei Magalhães, Minister of War; Admiral Eduardo Wandelkolk, Minister of Marine; Quintano Bocayuva, Minister of Foreign Affairs; Dr. Demetrio Nunez Ribeiro, Minister of Commerce and Agriculture; F. de Campos-Salles, Minister of Justice. They still held office at the beginning of 1891, with the exception of the Ministers of Agriculture and the Interior, who were succeeded by Dr. Francisco Glycerio and Dr. Cesare de Faria Alvin. Meanwhile B.C. Botelho dei Magalhães was appointed Minister of Public Instruction, Posts, and Telegraphs, resigning the charge of the War Department to Gen. F. Peixoto. Early in the year this statesman—familiarily known as Benjamin Constant, revered by the Republicans as their intellectual leader and the chief organizer of the revolution—died in office, and by one of the temporary provisions of the new Constitution, following the article granting a pension to the ex-Emperor “sufficient to guarantee him a decent subsistence,” it was decreed that Dr. Benjamin Constant’s house should be preserved as a national monument.

Area and Population.—The area of Brazil is 3,209,878 square miles, and the population was officially estimated in 1888 at 14,002,335, indicating an increase of 41 per cent., or 2.56 per cent. per annum, since the census of 1872; but as that census was incomplete, the rate of growth has probably been less. According to its returns, there were at that time 3,787,289 whites, 3,801,787 mestizos, 1,954,452 negroes, and 386,955 Indians. In the northern provinces there is a large

Indian element, and in the States of Rio de Janeiro, Bahia, Minas-Germes, and Pernambuco negroes predominate in numbers. In 1850 the number of slaves held in Brazil was estimated at 2,500,000. An official enumeration in 1887 gave the number of negroes still held in slavery as 723,419. By a measure passed in the following year all were declared free, and compensation to the owners was refused. The present number of wild Indians is estimated to be about 600,000. The city of Rio had 357,332 inhabitants in 1885. The immigration, which was 131,268 in 1888, fell away to 65,161 in 1889, and 21,088 in the first six months of 1890, owing to yellow fever and to complaints of hardships endured by immigrants, which were investigated by the Italian Government. Of the immigrants in 1889, 34,930 were Italians, 15,240 Portuguese, 8,662 Spaniards, 1,903 Germans, 584 French, 470 Austrians, 387 Belgians, 126 Swedes, 76 British, and 2,793 from other countries. During 1890 the Provisional Government granted concessions of public lands equal to the British Islands in area, with the view of promoting immigration, and Senhor Glycerio, the Minister of Agriculture, contracted for the introduction of over a million families, agreeing to pay the shipping company \$25 for every adult immigrant, and a subsidy of \$20,000 to companies bringing at least 10,000 settlers in a year. For six months after their arrival, immigrants are under the special protection of the state, which will support them when necessary. They are promised farms at from \$12 to \$25 an acre, with houses ready for occupancy and seed and implements thrown in, and ten years are given them to pay off the debt. These extraordinary inducements stimulated immigration greatly. Portuguese, Spaniards, Italians, Russians, and British and Irish came in such numbers that many suffered hardships from overcrowding in the barracks provided by the Government. A great number sickened from change of climate and food, and a large proportion failed from inability to till the land.

Commerce and Production.—Coffee and sugar are the chief commercial products of the country. Cotton is cultivated also, and numerous cotton mills have been established. The state has offered a guarantee of interest to sugar factories, and in 1890 many new ones were started, concessions being granted for 58,650,000 milreis of capital in the first nine months. The number of cattle in Brazil is about 17,000,000, and hides are exported largely from the southern province. In the swamps of the Amazon valley great quantities of rubber are gathered. High duties are paid on imports, and on several of the chief products of the country export duties are collected. Of the imports, which consist mainly of cotton and woolen fabrics, preserved meat and fish, wines and spirits, breadstuffs, coal, iron and steel, and linen cloth, Great Britain supplies about 45 per cent. of the total value, France 17 per cent., and Germany 14 per cent. Of the exports, about one third go to the United States, one third to Great Britain, one tenth to France, and an equal proportion to Germany. The value of the exports from Rio in 1889 was 104,611,321 milreis (the value of the milreis varies from 35 to 55 cents, according to the rate of exchange). Almost the sole export from that

point is coffee, of which 4,526,906 bags of 60 kilos were shipped from Rio, Santos, and Victoria in 1889-90. During the same fiscal year 104,536 tons of sugar were exported from Pernambuco. The export of rubber from Pará and Manaos in 1889 was 18,682 tons, and the number of hides exported from Rio Grande do Sul was 749,301. Cotton of the value of 15,000,000 milreis, tobacco for 5,000,000 milreis, and Paraguay tea for 3,500,000 milreis, were exported in 1887.

During 1889 the number of vessels entered at the port of Rio de Janeiro was 1,375; the tonnage, 1,759,911; the number cleared, 1,181; tonnage, 1,587,011. The merchant marine in 1890 numbered 506 vessels, with an aggregate capacity of 149,066 tons, of which 121 were steamers of 67,707 tons.

Communications.—The length of completed railroads in May, 1889, was 5,331 miles. Nearly all are single-track lines of one-metre gauge. The state owns 2,091 miles. Most of the lines belonging to companies have a guarantee, usually of 6 or 7 per cent. interest, either from the General Government or from the States through which the lines run. A complete national system of railroads, giving an outlet to all the productive sections of the country, is one of the projects of the new Government. A scheme embracing the construction of 20,000 kilometres, or 12,500 miles, has been approved, and the outlay for one fifth of the whole appears in the budget for 1892.

The telegraph lines, which belong to the Government, had a total length in 1889 of 10,720 kilometres, with 18,489 kilometres of wire.

The number of letters passing through the post-office in 1888 was 14,875,522; of newspapers, 16,149,092; receipts for eighteen months, 2,210,000 milreis; expenses, 2,760,000 milreis.

The Army and Navy.—The peace effective of the army in 1890 was 1,600 officers and 28,400 men, forming 36 battalions of infantry, 1 transport company, 1 depot company for instruction, 12 regiments of cavalry, 5 regiments of field and 5 battalions of foot artillery, and 2 battalions of pioneers. The Gendarmerie number 10,000 men, of whom 2,000 are quartered in the capital. The National Guard is to be reorganized.

The navy in 1890 consisted of 58 vessels, of which 10 are ironclad, mounting 232 guns all told. There were 5 cruisers, 17 gunboats, 2 steamers, 5 schoolships, 13 auxiliary vessels, 2 propellers, and 14 torpedo boats. The crews numbered 5,934 men, including officers. A fast protected cruiser of 4,500 tons is not yet finished.

Finances.—The budget for 1890 made the total revenue 142,989,500 milreis, of which 87,000,000 milreis were the estimated receipts from import duties, 2,590,000 milreis from port dues, 15,030,000 milreis from export duties, 13,440,000 milreis from railroads, 3,000,000 milreis from posts and telegraphs, 19,120,000 milreis from stamps, succession duties, and registration, and 2,800,000 milreis from other sources. The revised estimate made the total receipts 147,200,000 milreis. The expenditure for 1890 was estimated at 151,219,720 milreis, 9,226,528 milreis being assigned to the Interior Department, 805,707 milreis to foreign affairs, 7,816,575 milreis to justice, 11,495,000 milreis to the navy, 14,994,492 milreis to the army, 44,779,248 milreis to public

works, and 62,102,166 to the Department of Finance. In 1889 the revenue was estimated at 139,340,000, and the expenditure at 153,147,844 milreis. This does not include 20,266,965 milreis of extraordinary expenditure, toward which there was an extraordinary revenue of 7,780,000 milreis. For 1890 the extraordinary expenditure was reckoned at 25,456,830 milreis.

The expenses on account of the debt were estimated for 1890 at 47,201,503 milreis. The internal funded debt, amounting in December, 1889, to 543,555,300 milreis, consists mainly of 5-per-cent. bonds. The foreign loans amount to 270,395,556 milreis, or £30,419,500 sterling, about two thirds paying 4 per cent. and the rest 4½ per cent. interest. A sinking fund of 1 per cent. is provided, with which the bonds are to be paid off by lot if they stand above par; but if they are below par, it is to be applied to purchases in the open market.

Change of Ministry.—A difference arose between the Minister of Agriculture and the President in regard to the construction of a harbor for the State of Rio Grande do Sul. Improvements in the Rio Grande harbor and an attempt to build a railroad to Santa Catharina in the northern part of the State had proved unsuccessful; and the President, who was accused by his enemies of favoritism and connivance in jobbery, insisted in granting a concession and guarantee to projected harbor works in the roadstead at Torres, and a railroad leading thither, with the view of making that the port of the province. Dr. Glycerio disapproved, and on Jan. 5 tendered his resignation. The refusal of the Congress to vote indemnity for the acts of the Provisional Government was resented by the President, and, taking the occasion when the Constitution passed its first reading, the remaining ministers resigned their portfolios together on Jan. 20, 1891. On Jan. 22 a new Cabinet was organized as follows: Baron de Lucena, Minister of Agriculture, Commerce, and Public Works; Dr. João Barbalhao Uchoa Cavalcante, Minister of the Interior and Public Instruction; Tristeo de Alancar Araripe, Minister of Finance; Dr. Justo Leite Pereira Chermont, Minister of Foreign Affairs; Rear-Admiral Fortunato Foster Vidal, Minister of Marine; Major-General Antonio Nicolao Falcão da Frota, Minister of War; Assis Brazil, Minister of Justice. On Feb. 23 the Constitution was adopted in its amended form, and on Feb. 25 Marshal Deodoro da Fonseca was elected President by a majority of 23, Prudente de Moraes being the opposing candidate. General Peixoto was chosen Vice-president by a majority of 47 votes. The Congress then separated to begin its regular session on June 15. The Cabinet was remodeled on May 23, Americo Braziliense becoming Minister of Finance in the place of Senhor Araripe, who was transferred to the Ministry of the Interior, and Senhor Cavalcante made Minister of Posts and Telegraphs, while Alfonso Carvalho entered the Cabinet as Minister of Justice. The new Minister of Finance was unable to cope with the growing difficulties of the situation, and on July 5 he retired and was succeeded by Baron Lucena, whose former duties were assumed by Senhor Cavalcante.

Reciprocity with the United States.—A treaty to secure reciprocal trade between Brazil

and the United States was concluded at Washington on Feb. 7, 1891, by virtue of which sugar, molasses, coffee, and hides, the produce of Brazil, are exempt from duty on importation into the United States. In reciprocity for and in consideration of the exemption from duty of these articles by an act of Congress approved in October, 1890, the Government of Brazil by legal enactment authorized the admission into Brazil, free of all duty, whether national, State, or municipal, of certain articles produced or manufactured in the United States and of another list of articles with a reduction of 25 per cent. from the tariff now in force, or any future tariff. The Brazilian act went into force on April 1, 1891. The following is the schedule of articles admitted free into Brazil: Wheat, flour, corn, maize, and the manufactures thereof, including cornmeal and starch, rye, rye flour, buckwheat flour, barley, potatoes, beans, peas, hay, oats, pork (salted), including pickled pork and bacon, except hams, fish (salted, dried, and pickled), cotton-seed oil, coal (anthracite and bituminous), resin, tar, pitch, turpentine, agricultural tools and implements, machinery, including stationary and portable engines, all machinery for manufacturing and industrial purposes (except sewing machines), instruments and books for use in the arts and sciences, and railway construction material and equipment. Of these, the average imports for the last three years have been \$20,003,937 in annual value, and of this the United States have contributed only \$3,394,633, while other countries have furnished \$16,609,304. The schedule of articles that Brazil admits with a reduction of duty of 25 per cent. is as follows: Lard and the substitutes therefor, bacon, hams, cheese, canned and preserved meats, fish, fruits and vegetables, manufactures of cotton (including cotton clothing), manufactures of iron and steel not included in the foregoing free schedule, leather and the manufactures thereof (except boots and shoes), lumber and timber and the manufactures of wood (including cooperage, furniture, and all kinds of wagons, carts, and carriages), and the manufactures of rubber. Of these, the average value of the importations for three years has been \$38,631,242, of which the United States furnished only \$2,035,899, while other countries furnished \$36,595,343.

An American steamship company has been organized, with A. J. Dittenhoefer and Henry L. James, of New York, as president and vice-president, to build or buy six steamers and eight fast-sailing vessels for the purpose of establishing a mail packet and commercial line between New York and the ports of Brazil. The United States and Brazilian governments may give subsidies for regular semi-monthly mails, and the Brazilian Government has guaranteed interest on the capital raised by \$3,000,000 of bonds. The voyage between New York and Rio will be made in fourteen days.

A Dictatorship proclaimed.—Differences arose between the President and Congress, at first over financial measures passed by the Chambers and vetoed by the President and schemes recommended by the President that were voted down by Congress. A *coup d'état* leading to a dictatorship or the restoration of royalty was feared by the opponents of Fonseca, who introduced a

bill fixing the procedure for the impeachment of the President. When President da Fonseca vetoed it, the Chamber passed a motion to override the veto, whereupon the President dissolved Congress by a decree published on Nov. 8. Armed force was used to close the Chambers. Martial law was proclaimed in the Federal District. The rupture was preceded by riotous disturbances in Rio on Oct. 8, and was attended by street fighting on Nov. 4. President Deodoro da Fonseca proclaimed himself Dictator on the invitation of officers of the army, announcing that he would fix a date later for the election of representatives of the nation. The army and a part of the navy supported him in his course of action, which he declared, in a manifesto, to be due to irregular proceedings of Congress and the efforts of the promoters of a restoration of the monarchy. He convoked a new Congress charged with the revision of the Constitution, which is to meet in January, 1892. The ministers, with the exception of Baron de Lucena, who, like Gen. Deodoro, was formerly an Imperialist, all resigned their portfolios. The suspension of the Constitution caused much popular dissatisfaction in many of the States, most of all in Rio Grande do Sul, where the local Government ordered the National Guard under arms, and the authority of the Dictator was repudiated. President da Fonseca ordered troops to Rio Grande to prevent the State authorities from carrying their declaration of independence into effect. On Nov. 10, the State of Grão Pará likewise declared its independence. A decree was published making expulsion from Brazil the penalty for resisting the Dictatorship. The revolt against the Central Government in Rio Grande do Sul, which began on the night of Nov. 9, spread rapidly. The Government troops at Yugaraoon and in two other garrisons went over to the rebels, who were led by Gen. Fernandez.

The Government had about 6,000 troops, half the army, in Rio Grande do Sul. Of these, five infantry regiments and one of cavalry deserted to the insurgents as soon as the revolt was proclaimed. Large bodies of volunteers were raised, with the intention of gaining possession of the whole province before the naval and military reinforcements arrived. Of the towns, only Porto Alegre, the capital, Yugaraoon, and Santa Victoria supported the dictatorship. Gen. Fernandez advanced on the capital, capturing Santa Anna to the north of it, which offered little resistance. The revolution, though caused by the differences between the President and Congress, started on Oct. 7 in a row at an opera in Rio Janeiro between students and the police, which was followed by street fighting for two days, at the end of which the police were replaced by soldiers. Fonseca and his Cabinet assumed, for politic reasons, that the chief trouble in Rio Grande was due to the strife between the two contending parties, and would end with the triumph of the party hostile to the administration. When the Government transports were unable to land troops to engage the insurgents by reason of obstructions placed in the channel, when Porto Alegre was in their hands, when they had raised an army by the middle of November of 50,000 men, and when Gen. Ossorio, who was made commander-in-chief, issued a

manifesto in which he threatened to march on to Rio Janeiro to depose the Dictator, then Baron Lucena telegraphed to the revolutionary Junta that he would recognize any local government that the people of the province preferred, on the sole condition that peace and tranquillity should be restored. The Junta, at the head of which stood Dr. Assis Brazil, one of the chief originators of the republican movement, replied that his forces would not disarm until Fonseca should resign the presidency and the Congress be reassembled in Rio Janeiro. On Nov. 21 the President issued a proclamation appointing Feb. 29 as the date for the general election and May 3 for the assembling of the next Congress. He recommended that the Constitution should be amended to secure the independence of the judiciary and the Executive by introducing safeguards to uphold the President's veto, by enlarging the powers of the Executive and limiting those of Congress, and by reducing the number of representatives. He advised also the legal recognition of existing decorations and titles of distinction. Fonseca became alarmed when he discovered that a large part of the army could not be depended on to fight for him. The forces were rapidly augmented by recruits attracted by liberal pay. When signs of indifference and even of hostility began to be manifested among the naval commanders, the Dictator perceived that success was very doubtful. The State of Pará refused to furnish aid to the Dictator, and the municipal authorities of the capital city compelled the Government troops to deliver up their arms. In the city and the State of Rio Janeiro there was strong sympathy with the revolt. A military force was sent to Santa Catharina after the return of the unsuccessful expedition to the Rio Grande, for the purpose of entering the insurgent State by land and meeting the revolutionary army, which had set out on its northward march. Admiral Wandelkolk, ex-Minister of Marine, and other chiefs of the navy and eminent military officers, consulted on the situation, and decided to end the crisis and prevent a collision with the insurgent army, which was rapidly approaching the border of Santa Catharina, by a military *pronunciamiento* against Fonseca. On Nov. 23 the demonstration, backed by the army and the fleet, took place in Rio, and Marshal Fonseca was given 24 hours in which to abdicate. The squadron fired several shots into the city, injuring some of the churches, in sign of the earnestness of its demand. Fonseca hesitated only long enough to convince himself that the navy and three quarters of the army had declared against him. He presented his resignation to his Prime Minister and friend, Baron Lucena, and issued a manifesto announcing his retirement and stating that his motive was to avoid bloodshed. Floriano Peixoto was immediately installed by the revolutionary committee as President in his stead. The new President appointed a Cabinet in which Rodriguez Alves was made Minister of Finance; Faria, Minister of Agriculture; Pereira, Minister of Justice; and temporarily of the Interior and of Education; Mello, Minister of Marine; Oliveira, Minister of War; and Pullita, Minister of Foreign Affairs. As soon as Fonseca's abdication was known, the insurgent army

in Rio Grande do Sul began to disband. The state of siege proclaimed by Fonseca was raised. On Nov. 25 Gen. Peixoto issued a call for the reassembling on Dec. 18 of the Congress dissolved by Fonseca. The same Congress reassembled, and all the States were represented. Though the secession movement in Rio Grande do Sul did not entirely subside at once, Gen. Floriano Peixoto appeared this thriving and populous state, with 650,000 inhabitants, of whom 200,000 are Germans, by choosing the majority of the ministers from among its Deputies. The Ministry of Finance was given to Senhor de Paula Rodriguez Alves, who had a high reputation for ability. The crisis had been caused principally by the financial proceedings of Fonseca and his Cabinet, who found, on assuming power, a foreign debt of \$154,000,000, an internal debt still larger, and \$114,000,000 of railroad bonds in which interest was guaranteed, while only one line, the São Paulo, capitalized at \$9,000,000, earned the amount of the guarantee. The Government launched out in new undertakings to please politicians and their localities, and the financial stress became great. The state of the treasury grew alarming when it was discovered that the expected deficit of \$14,000,000 would be surpassed by \$5,000,000. Foreign trade and productive activity went on during the crisis. The President's dispositions reduced the deficit for 1890 to \$8,000,000 in gold, and the country soon settled down under the new Government.

BULGARIA, a principality in southeastern Europe, tributary to Turkey. The Constitution of 1879 vests the legislative authority in a single Chamber, called the *Sobranje*, the members of which are elected by universal suffrage for three years, in the proportion of 1 to every 10,000 of population. Eastern Roumelia, which was created an autonomous province of Turkey by the Treaty of Berlin, was united to Bulgaria by the revolution of September, 1885, and the Prince of Bulgaria was commissioned as Governor-General by the Sultan in April, 1886. The reigning Prince is Ferdinand, born Feb. 26, 1861, the youngest son of the late Prince August, Duke of Saxe-Coburg-Gotha, and of Princess Clementine, daughter of Louis Philippe, King of the French. He was elected by the great *Sobranje* on July 7, 1887, to succeed Prince Alexander of Battenberg, who abdicated on Sept. 7, 1886; but his election has never received the formal assent of the Porte and the signatory powers, as required by the Treaty of Berlin.

Area and Population.—The area of Bulgaria proper is 24,360, and of Eastern Roumelia, or South Bulgaria, 13,500 square miles; total area, 37,860 square miles. The total population was found by a census taken Jan. 1, 1888, to be 3,154,375 persons, of whom 960,441 inhabited South Bulgaria. The population was divided as to sex into 1,605,389 males and 1,548,986 females. The race statistics give 2,326,250 Bulgars, 607,319 Turks, 58,338 Greeks, 50,291 gypsies, 23,546 Jews, 2,245 Germans, 2,142 Serbs, 2,557 other Slavs, 1,069 Russians, 544 French, and 80,074 of other nationalities.

Finance.—The budget for 1891 estimates the revenue at 80,470,000 lei or francs, and the expenditure at 79,299,233 francs. For the army, 20,617,435 francs are required; for the public

debt, 13,078,618 francs; for financial administration, 13,820,732 francs; for the Ministry of the Interior, 8,335,430 francs; for public works, 7,722,243 francs; for public instruction, 5,140,985 francs. Of the revenue, 39,952,000 francs are raised by direct taxation, and 15,893,500 francs by custom-house and internal duties.

The debt to the Russian Government on account of the occupation, of which 15,893,500 francs remain to be paid, is to be extinguished in 1896. A loan of 50,000,000 francs was contracted in 1887, and another of 30,000,000 francs. The Government has assumed the annual tribute of £118,000 Turkish owed to the Sultan by Eastern Roumelia, and arrears of £21,000 Turkish. The powers have not yet acted on the clause of the Berlin Treaty requiring them to assess the tribute Bulgaria shall pay.

The Army.—The army, service in which is obligatory both in Bulgaria and Eastern Roumelia, has a peace strength of 1,604 officers and 34,203 soldiers, and a war strength of 2,304 officers and 122,703 men. It is organized in 3 divisions, of 2 brigades each, composed of 24 regiments of infantry, of 2 battalions and 1 depot battalion; 4 cavalry regiments of 4 squadrons, besides the troop of the guards; 6 regiments of field artillery, each having 4 batteries, of 4 pieces in peace and 8 in war, and a mountain battery with 2 guns; 2 depot batteries and 1 battery of siege artillery; 1 regiment of engineers, of 2 battalions; and 1 disciplinary company.

The fleet, consisting of 1 yacht, 3 steamers, 7 steam sloops, and 2 torpedo boats, is manned by 12 officers and 334 men.

Commerce and Production.—The people are employed mostly in agriculture, and the main article of export is wheat. In 1889 the value of the grain exports was 45,841,000 lei or francs. Live animals were exported of the value of 6,000,000 francs. Other exports are wool, tallow, butter, cheese, hides, flax, and timber. The value of the imports in 1889 was 72,860,245 francs, of which 22,492,177 francs came from Austria-Hungary, 21,193,374 francs from Great Britain, 9,778,456 francs from Turkey, 4,532,297 francs from Russia, and the rest from Germany, France, Roumania, and other countries; the direct imports from the United States being 59,554 francs, while there were no exports to this country. The chief imports are cotton and other textile manufactures, iron and other metals, and coal. The total value of the exports in 1889 was 80,581,076 francs, of which 30,555,910 francs were invoiced to Turkey, 18,290,317 francs to France, 12,595,444 francs to England, 3,558,284 francs to Austria, between 1,000,000 and 2,000,000 francs each to Italy, Roumania, Germany, Belgium, and Greece, and only 84,669 francs to Russia. With Serbia the commercial intercourse amounted to 962,547 francs of imports and 358,184 of exports.

Political Complications.—The election in August, 1890, of a large majority to sustain in the *Sobranje* the national or anti-Russian policy of the dictatorial Prime Minister, Stambuloff, was an index of the feeling of the country. Among the uneducated farming class the sentiments of gratitude toward Russia and of veneration for the orthodox Czar have little force, and whatever pro-Russian feeling exists is born of fear of Russian vengeance. The masses of

the people take little interest in politics, and only ask their Government to avoid war, to make the burden of taxation light, and to exercise its police powers as little as possible. The political restlessness in Bulgaria is confined to the numerous class of professional politicians who depend on public office for their livelihood, and who are willing to become the tools of Panslavist intrigues, and to foment agitation against the men in power in the hope of succeeding them. All the leaders have been Nationalists when in office. Zankoff, the originator of the policy of Bulgaria for the Bulgarians, allied himself with Russian conspirators and planned the abduction of Prince Alexander in order to oust Karaveloff. The latter, to avoid an open rupture with Russia, schemed to get rid of Alexander while keeping the reins of power in his own hand. Stambuloff then took the lead in the Nationalist cause, and successfully carried through a counter-revolution. The Zankovists, the revolutionary Russophil party, were proscribed, and the active agents in the kidnapping and other military conspiracies became pensioners on the Russian Slav Committee, ready to engage in fresh insurrectionary plots. Karaveloff and his followers were tolerated, but suspected, by Stambuloff and the party in power. From Stambuloff's party branched off a new opposition party, called the Radoslavists, from their leader, Radoslavof, who are in accord with the Stambulovists in wishing to maintain Bulgarian independence, but condemn the tyrannical and unconstitutional methods employed by the Prime Minister to crush his adversaries. After the general election, in which the Zankovists and other opposition parties were prevented by official interference from manifesting their actual strength, the country enjoyed many months of tranquillity. Shortly before the beginning of 1891, a young but eminent financier, Belcheff, was appointed to the vacant Ministry of Finance. The Russian Government having complained, through the German consul-general, of the hospitality given in Bulgaria to Russian refugees and Nihilists, the Bulgarian Government expelled a number of persons, among whom were some that were known to be Russian spies, who, to conceal their purposes, had pretended to be Nihilists. In the case of two suspicious individuals who were expelled, the St. Petersburg Cabinet raised a protest. Threats of vengeance against Stambuloff for the execution of Major Panitza, and incipient plots against the life of Prince Ferdinand were concealed from the public. About a month before the expiration of the Prince's commission as Governor of Eastern Roumelia, the appointment of his predecessor, to whose rights he was tacitly allowed to succeed, having been for the constitutional period of five years, dating from April 6, 1886, rumors were heard of an intended insurrection on the borders of Servia and Roumania. Major Bendereff and Capt. Grueff, the kidnappers of Prince Alexander, were seen in Bucharest and Servian towns in the company of political fugitives and adventurers. On March 27 three political assassins fired at the Prime Minister and his friend, Minister Belcheff, as they were walking together on the street, and the latter was killed, while his chief, who was

the intended victim, escaped. Among the hundreds of persons who were arrested in the next few days were Karaveloff and other political opponents of Stambuloff. Many were released, but several of the leaders of the Russophil party were detained in custody. Bulgarian refugees and hired Montenegrins and Macedonians had been armed with revolvers and Berdan rifles, and were ready, on the assassination of the Prime Minister, to cross the Servian frontier and begin a guerilla war. Two secret deposits of arms and many documents, pointing to a widely ramified conspiracy, were discovered by the police in Sofia. The murdered minister was succeeded by Natchevich, a distinguished financier. When the time came for the Porte to appoint a governor of Eastern Roumelia, it let the date pass without making a sign, thereby tacitly accepting the union of the two Bulgarias and the permanent rule of the Prince over the autonomous province. The request of the Turkish agent in Sofia for an audience with Prince Ferdinand, and the reception of Dr. Vulkovich and M. Natchevich by the Sultan, were clear manifestations of the friendly disposition of the Turkish Government and a recognition of the loyal attitude of the Bulgarian authorities in regard to Macedonian disturbances. In August, the Turkish authorities in Macedonia were instructed to allow the Bulgarians in Macedonia to exercise freely their religious ceremonies and manage the tuition in their schools without reference to the Greek patriarchate. The refusal of the Servian Government to deliver up Rizof, a Bulgarian journalist suspected of having instigated the Belcheff murder, who was afterward allowed free passage through Roumania into Russia, and the continued presence of dangerous characters on the frontier, caused the Bulgarian Government to push on the fortifications at Slivnitza and the Dragoman Pass, to call out reserve regiments, and to concentrate troops on the frontier. The Servians responded by massing troops on their side, and prepared to manoeuvre 65,000 men along the frontier in the autumn. This caused the Turkish Government to urge Servia to withdraw her troops, and in consequence of this invitation both the Servian and the Bulgarian governments desisted from the threatening demonstrations. When the new Turkish Cabinet, by objecting to the emission of silver coins bearing Prince Ferdinand's effigy, and to the construction of the Uskub-Kustendil strategic railroad, showed Russophil tendencies, the British, Austrian, and Italian governments instructed their diplomatic agents at Sofia to be less reserved in their intercourse with Prince Ferdinand. Dissensions arose between the Prime Minister and the Minister of Justice, owing to illegal methods pursued by officials in investigating the Belcheff murder and the interference of M. Stambuloff with judicial proceedings against one of his partisans. On Oct. 2, M. Tontcheff resigned, and M. Grekoff, the Minister of Foreign Affairs, added the portfolio of Justice to his own. The latter minister, on going to Constantinople to present anew a request for the formal recognition of Prince Ferdinand, instead of receiving from the Sultan the usual temporizing reply, met with a decided rebuff.

C

CALIFORNIA, a Pacific coast State, admitted to the Union Sept. 9, 1850; area, 158,360 square miles. The population, according to each decennial census since admission, was 92,597 in 1850; 379,994 in 1860; 560,247 in 1870; 864,694 in 1880; and 1,208,130 in 1890. Capital, Sacramento.

Government.—The following were the State officers during the year: Governor, H. H. Markham, Republican; Lieutenant-Governor, J. B. Reddick; Secretary of State, Edward G. Waite; Treasurer, J. R. McDonald; Comptroller, Edwin P. Colgan; Attorney-General, W. H. Hart; Surveyor-General, Theodore Reichert; Superintendent of Public Instruction, James W. Anderson; Railroad Commissioners, William Beckman, J. M. Litchfield, and James W. Rea; Chief Justice of the Supreme Court, W. H. Beatty; Asso-

ciate Justices, J. R. Sharpstein, T. B. McFarland, A. Van R. Paterson, C. H. Garoutte, Ralph C. Harrison, J. J. De Haven.

Population by Races.—The table below presents the population of the State by races in 1880 and 1890.

Finances.—The State Treasurer reported a balance in the treasury on July 1, 1888, of \$1,546,434.25; the total receipts for the year ensuing were \$7,554,526.68, and the total expenditures \$7,035,189.50, leaving a balance on July 1, 1889, of \$2,065,771.43. For the year next following the total receipts were \$9,999,663.62, and the total expenditures \$8,500,175.69, leaving a balance of \$3,565,259.36 on July 1, 1890. These figures include all the various funds held by the State Treasurer. The separate receipts and expenditures of the more important of these funds were

as follow: General fund, balance on July 1, 1888, \$499,812.80; receipts for year ensuing, \$3,065,185.13; expenditures, \$3,060,515.62; balance on July 1, 1889, \$504,482.31; receipts for year ending July 1, 1890, \$5,081,484.61; expenditures, \$3,755,330.07; balance on July 1, 1890, \$1,830,636.85. School fund, balance on July 1, 1888, \$277,941.95; receipts for year ensuing, \$2,582,013.51; expenditures, \$2,501,108.39; balance on July 1, 1889, \$358,847.07; receipts for year ending July 1, 1890, \$2,719,743.71; expenditures, \$2,658,430.14; balance on July 1, 1890, \$420,160.64. Interest and sinking fund, balance on July 1, 1888, \$243,505.49; receipts for year ensuing, \$204,738.15; expenditures, \$212,680; balance on July 1, 1889, \$235,563.64; receipts for year ending July 1, 1890, \$205,464.03; expenditures, \$246,900.83; balance on July 1, 1890, \$194,126.84. State School Land fund, balance on July 1, 1888, \$115,970.52; receipts for year ensuing, \$275,976.07; expenditures, \$139,609.99; balance on July 1, 1889, \$252,156.60; receipts for year ending July 1, 1890, \$255,602.68; expenditures, \$459,619.11; balance on July 1, 1890, \$48,140.17.

The bonded State debt amounts to \$2,642,000, all except \$5,000 of which is represented by the funded-debt bonds of 1873. These bonds are held as follow: By individuals, \$278,000; by the State School fund, \$1,541,500; by the University fund, \$817,500.

The high rate of State taxation during the past few years has provoked frequent complaints, and the subject of taxation became one of the most important local topics discussed in the canvass of 1890. Both of the leading parties promised to keep the rate below 50 cents on each \$100 of valuation. As a result, the rate fixed by the State Board of Equalization this year was 23.4 cents for the general fund and 17.6 cents for the School fund, a total of 41 cents, as against a total of 58 cents in 1890 and 72.2 cents in 1889.

Legislative Session.—The twenty-ninth session of the Legislature began on Jan. 5, and ended on March 25. On Jan. 13, United States Senator Leland Stanford, who was the unanimous choice of the Republican caucus, was re-elected for the full senatorial term by the following vote: Senate, Stanford 27, Stephen M. White, the Democratic nominee, 12; Assembly, Stanford 59, White 18, Benjamin Morgan 1, On Feb. 28, Senator Stanford's colleague, United States Senator George Hearst, died in Washington, and numerous Republican candidates for the office appeared. Without an attempt at settlement in the Republican caucus, the contest between them was carried directly into the Legislature. On the first ballot in each House, on March 10, the following vote was cast: Senate—M. M. Estee 12, M. H. De Young 4, Charles N. Felton 7, George G. Blanchard 3, William Johnston 2, D. A. Ostrom (Democrat) 10, scattering 2, Assembly—Estee 13, De Young 18, Felton 8, Blanchard 9, Johnston 4, Ostrom 15, scattering 11. Eight ballots were taken, Estee leading in all except the last. The eighth ballot, on March 19, resulted in the election of Charles N. Felton, by the following vote: Felton 73, Estee 15, Stephen M. White (Democrat) 28, scattering 2.

An Australian or secret-ballot law was enacted

at this session. It provides that all ballots cast in elections for public officers shall be printed and distributed at county expense, except that ballots for municipal officers shall be printed and distributed at the expense of the city or town. Candidates whose names are entitled to appear on the official ballots must be nominated either by the convention of a political party that polled at the last preceding election 3 per cent. at least of the entire vote cast in the State or other political division for which the nomination is made, or by nomination papers signed by electors equal in number to at least 5 per cent. of the entire vote cast in the last preceding election in the State or other political division for which the nomination is made. The duty of preparing the ballots for city and town elections is imposed on the town or city clerk, and for all other elections on the county clerk. Tinted blank paper for the ballots shall be furnished to these officers by the Secretary of the State on payment of the cost. Such paper shall be water marked with a design to be furnished by the Secretary of State, so that it shall be plainly discernible on the outside of the ballot when folded. Such design shall be kept secret until the election, and shall be changed for each general election. The paper for ballots for municipal officers shall be of a different tint from the paper used for other ballots. The names of all candidates for city or town officers shall be placed on the municipal ballots and the names of all other candidates on the general ballots. They shall be arranged under the designation of the office in alphabetical order according to surname, except that the names of candidates for presidential and vice-presidential electors shall be arranged in groups as presented in the several certificates of nomination, and the elector may vote for the whole of such group by making a mark after such group. There shall be added to the names of all candidates their party or political designation. Blank spaces shall be left in which the elector may write the names of other candidates. At the head of each ballot shall be printed the names of all political parties that have filed certificates of nomination, and the elector, by placing a mark opposite the party name shall be considered to have voted for all the party candidates, but a ballot so marked shall not be counted if marked in any other place, except to indicate a vote on any question submitted on the ballot.

At each polling place a sufficient number of booths or compartments shall be provided in which voters may conveniently mark their ballots screened from observation. Each elector shall receive but one general ticket and but one municipal ticket from the ballot clerk, who shall note the number on the ticket and write it in his register opposite the name of the elector. The marking shall be done only with a stamp furnished for that purpose. On election days employes shall be allowed two hours without loss of pay for the purpose of voting. The act took effect on July 1, 1891.

An act to prevent Chinese immigration prohibits any Chinese person, except certain officials of the Chinese Government and their retinue, from coming to or within, or landing at or remaining in, any port or place within the State, whether for the purpose of transit only or other

erwise. The master or agent of any vessel bringing such prohibited persons into the State is subjected to a heavy fine. Every Chinese person resident in the State at the time of the passage of this act is required, within one year thereafter, to apply to the State Bureau of Labor Statistics for a certificate of residence, which shall state the name of the person and various facts regarding his personal appearance, place of residence, etc., and upon it shall be printed or pasted a well-taken photograph of the applicant, including all facial marks or features that will facilitate identification. Such certificate shall be recorded with the county clerk within the year, and any Chinese person within the State at the time of the passage of the act who shall not comply with these provisions shall be adjudged by the court to be unlawfully within the State and shall be subject to the penalties hereinafter provided. Every agent of any transportation company or line or vessel, before selling a ticket or passage to any Chinese person, shall require him to produce his certificate of residence, and shall insert the number of said certificate in the ticket. If such certificate is not produced the agent is required to cause the arrest of such person, and to file a complaint against him for being unlawfully in the State. No Chinese person shall be permitted to enter the State by land or water without first producing the certificate in this act required of Chinese persons resident in the State. The burden of establishing citizenship shall rest upon the defendant. Any Chinese person adjudged guilty of being unlawfully within the State shall be punished by being deported from the State to his or her own country, or by a fine of not less than \$500 nor more than \$1,000 and deportation from the State to his or her own country, or by imprisonment in the State Prison for a term not less than one year nor more than five years, and on termination of said imprisonment by deportation to his or her own country. Any person who shall knowingly bring into or cause to be brought into the State, by land or otherwise, or who shall aid or abet the same, or aid or abet the landing in the State from any vessel or otherwise of any Chinese person not lawfully entitled to enter the State, shall be deemed guilty of a felony, and shall, on conviction thereof, be fined a sum not exceeding \$1,000 and imprisoned in the State Prison for a term not exceeding one year, and, if a Chinese person, shall be sentenced to deportation as in other cases.

An act in the interest of working men requires corporations to pay their mechanics and laborers weekly or monthly on regular days, and in default of such payment the latter shall have a lien for their wages on all the property of the corporation prior to all other liens, except duly recorded mortgages and deeds of trust.

Provision was made for submitting to the people at the next general election a proposed amendment to the State Constitution limiting the pay of members of the Legislature to one hundred days, and providing that no bill shall be introduced after sixty days of the session have expired, except by consent of two thirds of the members. It was also enacted that at the same election the sense of the people should be taken upon the question whether an educational

qualification for suffrage ought to be required, and upon the question whether United States Senators ought to be elected by a direct vote of the people.

To provide for representation of the State at the World's Fair in 1893 a board of seven commissioners were created, with authority to provide buildings and superintend the exhibit at the fair. The sum of \$300,000 was placed at their disposal for this purpose.

An act was passed, to be submitted to the people at the next general election, authorizing the State Treasurer to issue and sell not over \$600,000 in bonds of the State, bearing 4 per cent. interest and payable in nineteen years, the proceeds of such sale to be used in building a general railroad, passenger, and ferry depot at or near the foot of Market Street in San Francisco. To meet the interest on these bonds and to provide a sinking fund for their payment at maturity, the State Harbor Commissioners are required to raise a sufficient sum by increasing the fees for dockage, wharfage, tolls, rents, and cramage payable to them, and to pay over such sum to the State.

Another act, to be submitted to the people, authorizes a board of loan commissioners to refund the State debt into 4-per-cent. bonds, payable in twenty years, the amount of such refunding issue to be not over \$2,528,500.

The State was redistricted for members of the Legislature and for members of Congress. Seven congressional districts were formed, of which the city of San Francisco comprises nearly two.

Congress was memorialized to enact a law whereby farmers may borrow money of the Government up to 60 per cent. of the value of their farms, paying 2 per cent. interest and giving the Government a mortgage thereon as security.

Other acts of the session were as follow:

Providing for the acquisition of the Sutter's Fort property by a board of trustees to be appointed by the Governor, and appropriating \$20,000 for preserving, protecting, and improving the same.

Authorizing the appointment of women as notaries public.

To establish a State Board of Arbitration for the settlement of differences between employers and employees.

Providing that the Superintendent of State Printing shall hereafter be elected by the people.

To punish persons selling or furnishing tobacco in any form to minors under sixteen years without the written consent of parent or guardian.

Creating a State board of pharmacy.

To punish persons selling or giving intoxicating drink to minors under eighteen years, and to punish proprietors or managers of places where liquor is sold who permit such minors to visit such places for purposes of gaming.

Creating the county of Glenn out of the northern portion of Colusa County, provided the people of the proposed new county shall vote for such separation at an election to be held in May, 1891.

Providing a new law for the formation of agricultural districts and of agricultural associations therein.

Providing for the incorporation of mutual building and loan associations.

Appropriating \$5,000 for the purpose of sending an expert to Australia, New Zealand, and adjacent countries to collect and import into the State parasites and predacious insects.

Making it a misdemeanor to advertise to obtain a divorce.

To punish the crime of train wrecking with death or imprisonment for life.

Appropriating \$5,000 for each of the years 1891 and 1892, to be expended in the encouragement of ramie culture, both by the purchase of ramie roots for free distribution to farmers and in the payment of a bounty for merchantable ramie fiber grown in the State.

Giving to honorably discharged Union soldiers and sailors a preference in employment in the public service and upon public works.

To provide for the establishment of a law library in each county.

Assenting to the act of Congress, approved Aug. 30, 1890, in aid of agricultural colleges in the various States.

Appropriating \$121,400 for improvements at the Reform School at Whittier.

Appropriating \$125,000 for additional buildings at the Home for Feeble-minded Children at Glenn Ellen, Sonoma County.

Appropriating \$25,000 for completing the building for the State Normal School at Chico.

Appropriating \$65,000 for additions and repairs at the Folsom State Prison.

Appropriating \$55,000 for improvements at the Southern California Insane Hospital.

Appropriating \$37,000 for additional buildings at the normal school at San José.

Education.—The following public-school statistics for the years ending June 30, 1889, and June 30, 1890, are contained in the last report of the Superintendent of Public Instruction:

ITEMS.	1889.	1890.
Children between 5 and 17 years..	275,302	280,582
Number attending public school..	195,229	198,960
Number attending private school.	21,044	21,460
Number not attending any school.	59,029	60,462
Children of all ages enrolled in public schools	215,905	221,756
Average daily attendance	143,783	146,589
Male teachers	1,151	1,162
Female teachers	4,104	4,272
Total value of school property....	\$12,081,278	\$12,746,308

The securities held in trust by the State Treasurer for the School fund amounted on June 30, 1890, to \$3,268,350, of which the sum of \$1,541,500 was in State bonds and \$1,726,850 in county bonds. The Superintendent reports that the present compulsory school law can not be enforced effectually without further legislation.

Charities.—At the Napa Insane Asylum there were 1,378 patients on Nov. 15, 1890, or over 300 beyond the proper capacity of the institution. At the Stockton Insane Asylum the number of patients at the close of the fiscal year 1890 was 1,588. To relieve the crowded condition of these institutions the Legislature of 1889 provided for the establishment of two new asylums at San Bernardino and at Ukiah, Mendocino County. The corner-stone of the asylum at Ukiah was laid on Dec. 9, 1890, of that at San Bernardino one week later, and the work of construction has continued through this year. In addition, the Insane Asylum at Agnews, originally intended exclusively for incurable patients, has been opened to all classes of the insane, and considerable numbers have been transferred to it from the Napa and Stockton asylums.

•**Prisons.**—The number of prisoners at the San Quentin prison on June 30, 1889, was 1,373, and at the Folsom prison 549. On June 30, 1890, the number at both prisons had consider-

ably increased. At the San Quentin prison, since 1889 the labor of convicts has been devoted solely to the manufacture of jute goods. The jute bags manufactured are sold at a low figure, and the farmers, who use them in sacking their crops, have been relieved from the high prices heretofore exacted by the combination of individual dealers in imported bagging.

Coal.—Although coal deposits have been discovered in many of the counties of the State west of the Sierras, no mining operations on a commercial scale have been prosecuted, except in Amador and Contra Costa counties. Coal was discovered in the Mount Diablo district in 1852, but productive mining was not prosecuted until after the year 1860. This district now furnishes the major portion of the product of the State. The coals of California so far as at present known are all lignitic, generally inferior to the coals of Washington and Oregon, and can not compete with the better coals supplied by sea from British Columbia and Australia. The total product of coal in California during the calendar year 1889 was 121,820 short tons, valued at \$288,232, showing an average price of \$2.31 per ton at the mines. The average number of persons employed during the year was 283, and the total wages paid \$169,649.

Lumber.—The output of mills in California during 1890 was as follows: Humboldt and Del Norte counties, 180,744,142 feet; Mendocino and Sonoma, 165,775,261; Santa Cruz, Santa Clara, San Mateo, 96,850,000; Sierra, Yuba, El Dorado, Placer, 91,500,000; Nevada, 86,500,000; Colusa, Tehama, Butte, Lake, 73,500,000; Trinity, Shasta, Siskiyou, 68,500,000; Inyo, Tulare, Fresno, Mariposa, 31,575,000; Amador, Tuolumne, Calaveras, Mono, 27,222,027; San Diego, San Bernardino, Kern, 27,000,000; Plumas, Modoc, Lassen, 15,750,000. Total, 864,916,430 feet.

Industrial.—For 1890 the area of the State devoted to wheat raising was only about 3,000,000 acres, or 900,000 acres less than in 1889. The crop produced was about 1,000,000 tons, or 400,000 tons less than in 1889. The heavy rains of the winter of 1889-'90 so flooded the low lands that the crop was almost entirely grown on the high lands. Fully 70 per cent. of it was raised in the southern counties. The wool product for 1890 is estimated at 36,000,000 pounds, against 34,008,370 pounds for 1889. The vintage of 1890 is estimated at 17,500,000 gallons, distributed among the counties as follows: Napa, 4,500,000; Sonoma, 3,000,000; Alameda, 1,750,000; Santa Clara and Santa Cruz, 3,000,000; Fresno, 1,500,000; Los Angeles and other southern counties, 1,500,000; Sacramento and northern counties, 1,250,000; all other districts, 1,000,000. In addition, about 1,000,000 gallons of brandy were made, consuming about 5,000,000 gallons of wine. The estimate for the raisin product of 1890 is 1,400,000 twenty-pound boxes.

CANADA, DOMINION OF. See DOMINION OF CANADA.

CAPE COLONY AND SOUTH AFRICA. The Cape of Good Hope is a British colony in South Africa possessing self-government. The Governor is Sir Henry Brougham Loch, who was transferred from Victoria in 1889. The Prime Minister in the beginning of 1891 was Cecil Rhodes.

Area and Population.—The area of Cape Colony, with the Transkei and Walfisch Bay, is 233,430 square miles. By the incorporation in the territory of native territories, the disproportion between the colored and the white population has been increasing, and it is predicted that in ten years the natives will outnumber the whites ten to one. In 1865 the native population was one and a half times larger than the white, and in 1891 the proportion was three to one. In the old colony the whites have increased 42·32 per cent. since the census of 1875, and the aboriginal natives only 18·35 per cent. The two classes there are nearly equal in number, the preliminary returns of the census of 1891 giving: White population, 337,000; aboriginal natives, 340,405; other colored people, 277,879; total, 955,284. The population of Griqualand West in 1891 was 83,115, of whom 29,469 were whites and 53,646 colored. In that district also the proportion of whites has increased, being 35·46 per cent., as compared with 27·33 per cent. in the census of 1877. In the native territories annexed since 1875 there were 262,705 inhabitants, of whom only 2,561 were whites. In 1891 there were 10,343 whites in a total population of 487,340. The grand total for the whole colony is 1,525,739, as compared with 1,082,966 at the last preceding enumerations. The average density has increased from 2·52 to 6·89 persons to the square mile. There are 99·03 females to 100 males, a larger proportion than formerly, owing to the annexation of native territories.

Finance.—The colonial revenue in 1889 amounted to £4,338,114, of which £1,595,458 were derived from taxation, £1,885,492 from railroads and other services, £299,833 from public lands, £55,330 from fines and other sources, and £502,000 were raised by loans. The total expenditure was £3,524,858, of which £1,049,295 represented the service of the public debt, £839,794 were for the railroad service, £142,633 for defense, £194,893 for police, £117,931 for the civil establishment, and £110,506 for extraordinary expenditure. The revenue for 1890 was £4,430,050, and for 1891 it was £4,147,736, a decrease of £282,314.

The debt of the colony in the beginning of 1890 was £21,120,784.

Production and Commerce.—In 1890 Cape Colony and its dependencies produced 1,983,108 bushels of wheat, 3,107,571 of Indian corn, 4,484,665 gallons of wine, 1,115,306 of brandy, and 4,090,376 pounds of tobacco. There were 13,202,779 sheep, 4,767,921 goats, 313,747 horses, and 1,524,213 horned cattle in the colony in 1890. The total value of imports in 1889 was £10,841,454. The imports of merchandise were £7,942,506, and the exports of colonial produce £9,405,955 in value. The principal exports and their values were as follow: Diamonds, £4,325,137; wool, £2,251,375; copper ore, £696,918; hides and skins, £430,025; ostrich plumes, £365,884; Angora goat hair, £351,544; wine, £23,120; grain, £10,043. The wine and brandy exports fell off from £529,000 gallons in 1889-'90 to 351,000 in 1890-'91. Exports of wool and agricultural produce have also declined since 1889.

The number of vessels entered in 1889 was 835, of 1,401,909 tons. Of these, 588, of 1,196,420 tons, were British. The number cleared was

818, of 1,381,268 tons. The coasting tonnage entered was 2,394,946; cleared, 2,390,077.

Communications.—The Government railroads in the beginning of 1890 had a total length of 1,608 miles. All except 63 miles have been built since 1873. The capital expenditure has been £14,318,502, or £8,905 per mile. There were 3,259,590 passengers and 541,671 tons of goods conveyed in 1889, and during that year the receipts were £1,759,832 and the expenses £937,703.

The number of letters posted in 1889 was 13,597,243; of newspapers, 6,879,457.

The telegraph lines, all of which were erected by the Government, had a total length in 1889 of 4,510 miles. The messages sent in that year numbered 1,375,929. The receipts were £94,929; expenses, £67,232.

Politics.—The most important act of legislation in 1891 was the creation of banks of issue on the model of the national banks of the United States. Their notes are protected by a deposit of Government securities, and will be redeemed in gold by the treasury in case the banks fail to pay them. Provision is made for an official investigation of any bank on application. Mr. Hofmeyr, leader of the Dutch party, who dictates the policy followed by the Premier, has proposed a measure that is intended to curtail the voting power of the natives, not by taking away the franchise from any who now possess it, but by giving a double vote to persons owning a certain amount of real property. This suggestion is approved by Mr. Rhodes, although the political predominance of the Dutch race would be increased, since a large proportion of English mechanics, miners, and traders would not be qualified to exercise the additional vote. Mr. Rhodes looks forward to a united and harmonious South African nation stretching up to the Zambesi, in which there will be no jealousy or divergence of interests between citizens of British and those of Afrikaner descent, in which Cape Colony will maintain the primacy and lead, and which will not desire to sever the connection with Great Britain. As a means of strengthening the national sentiment, he has purchased a tract near Cape Town, on which will be built a South African university. In the Transvaal, President Kruger was not inclined to sanction the immediate entrance of the Republic into the proposed South African customs union, and Gen. Joubert favored a commercial league with Natal against Cape Colony on condition that Zululand should be thrown open to Boer settlement. The customs union proposed by the Cape Government was joined only by the Orange Free State, but in the Swaziland convention of 1890 the Transvaal Government had bound itself to enter the union within three years. The Boers complained because the British Government withheld the reasonable concessions that they desired in Swaziland.

Pondoland.—The native district of Pondoland, which forms a part of the territory of Cape Colony, has a population of 200,000, ruled by their own chiefs under the supervision of a commissioner of the Cape Government. The country was ravaged in the early part of 1891 by a war between the rival chiefs Sigcau and Umhlangaso, who destroyed the crops and burned

down the huts in all directions. The Colonial Government abstained from interfering, except with admonitions. Sigcau was victorious.

Natal.—The colony of Natal, which was separated from Cape Colony in 1856, is negotiating the basis of a parliamentary constitution with the home Government. The Governor, Sir Charles B. H. Mitchell, succeeded Sir A. E. Havelock in 1889. The area of the colony is estimated at 21,150 square miles, and the population in 1889 at 530,158, comprising 37,390 Europeans, who are mainly English, 33,480 natives of India, and 459,288 Caffres. The increase, over 50 per cent. on the total for 1879, has been little greater in the European than in the native population. In 1878-'84 there were 4,526 assisted immigrants brought into the colony, and in 1889, when assisted immigration was resumed, 759 European colonists were introduced. The revenue of the colony in 1889 was £1,327,105, against £990,614 in 1888 and £600,177 in 1886. The expenditure in 1889 was £1,146,079. The customs duties collected in 1890 were £329,000.

The revenue from railroads in 1889 was £458,698; customs, £369,460; excise, £23,471; land sales, £34,613; posts, £44,965; telegraphs, £28,412; and £76,004 from the native hut tax. The chief expenditures were £512,698 for railroads, £76,195 for public works, £54,018 for defense, and £24,678 for education. There was a loan expenditure of £790,370, and the debt at the end of the year amounted to £5,035,126. The value of the imports in 1889 was £4,527,015, and of the exports £1,656,318. The exports of wool, amounting to £752,182, of gold, amounting to £584,933, of hides, of the value of £55,829, and of skins, Angora hair, and other products, come largely from the neighboring Boer republics. The exports of Natal products amounted to £957,132, the chief articles being raw sugar and rum. The number of vessels entered in 1889 was 555, of 513,360 tons.

The Legislative Council, under the present Constitution, consists of 24 elected and 7 nominated members. A bill to provide for the establishment of responsible government was submitted to the Colonial Office in April, 1891. It proposed that the Legislative Council should consist of 37 elective members, but had no provision for an upper chamber. As in former negotiations the colonists have insisted on the control over native affairs, so in this draft it was provided that the authority of the Governor, as paramount native chief, should be exercised by the Governor in Council. The London authorities refused to assent to this, and to a clause setting apart an annual sum of £20,000 for native purposes, but giving the control of the items of expenditure to the Legislative Council. Lord Knutsford was firm in reserving to the Governor, as the representative of the Crown, free from the influence of the colonial ministers, the political administration over the native communities and the command and disposition of British troops, and in keeping under the direction of the home Government all action affecting imperial interests or governing the fulfillment of international obligations. Whatever sum was stipulated in the compact as a minimum appropriation for the welfare and education of the natives, he proposed to have placed, as in Western Aus-

tralia, under the control of a native protection board. The colonial representatives changed the language of the clauses, but not the meaning, in such a way as to meet the objections of the Colonial Office, and the remodeled bill, approved by the Legislative Council in July, was pronounced unsatisfactory by the Imperial Government. A code of native law enacted by the Legislative Council in 1890 was vetoed by the Governor on the ground that it would interfere with the prerogative of the Imperial Government to make laws for the natives.

Bechuanaland.—The Crown colony of British Bechuanaland has an area of 43,000 square miles, and a population estimated in 1885 at 44,135. Sir Sidney G. A. Shippard, the Administrator, is also Resident Commissioner for the British Protectorate of Bechuanaland, which extends northward to the Zambezi, having Matabeleland on the east, and westward over the Kalaharie Desert to the border of the German Protectorate in Southwest Africa. In May, 1891, the tract called Bastards' country, lying between the twenty-first meridian, the former boundary of Bechuanaland, and the twentieth meridian, the conventional limit of the German Protectorate of Namaqualand, was annexed by proclamation. The reason given for the annexation was that peace was endangered by a *trek* of Boers and Damaras. When Mr. Rhodes was in England, during the Anglo-Portuguese negotiations in the spring of 1891, he obtained for the Cape the right to annex Bechuanaland.

German Southwest Africa.—In 1885, in the early days of German colonial enterprise, Herr Lüderitz, a German merchant, secured from native chiefs coast lands at Angra Pequena, in Damaraland, and on the opposite side of the continent at St. Lucia Bay, in Zululand, with the expectation of planting German colonies, opening up communications with the Transvaal, extending German trade into the Zambesi region, and establishing a zone of German influence reaching from shore to shore north of the regions to which British activity was at that time confined. The Gladstone Government was spurred to action by the protests of Cape Colonists. A gunboat was sent from Cape Town, which planted the British flag at St. Lucia Bay only a few days before the German gunboat arrived. An official expedition was conveyed to Damaraland by a German man-of-war, and though Dr. Nachtigal, its head, was unable to make a treaty of protection with Kamahehero, the paramount chief, Dr. Göring, some months later, induced him to sign one which he has since desired to repudiate. Though the British Government refused to interfere with the German designs on the southwest coast, the Cape Colonists made efforts to defeat them. They prevailed on the Imperial Government to reoccupy Walvisch Bay, the chief harbor and source of water supply. Robert Lewis, who had long resided among the Damaras, procured from Kamahehero a concession of mining rights, of the right to build railroads, and of other commercial privileges, about a month before the German treaty was signed. The German Colonial Company for Southwest Africa, to which Herr Lüderitz assigned his rights, found itself hampered by the intrigues of

the Cape Colonists, who got the natives to hinder the Germans in their enterprises. Lewis was prevented from making use of his mining privileges by a code of regulations drawn up by the German officials. After he and two Englishmen named Ford and Bam were banished from Damaraland for political plotting in 1890, the English Government intervened diplomatically to urge his claim before the Berlin authorities. The Anglo-German African agreement destroyed the hopes of profitable trading or pastoral operations, and left nothing but the mineral resources of the country for the Germans to fall back upon. The capital of the Colonial Company was exhausted, and it was decided to organize a new company, with offices in Hamburg, and appeal to the London market for a part of the capital. The German Reichstag in February, 1891, voted 100,000 marks to continue for one year longer a staff of officials and a force of 40 or 50 police in Damaraland. On April 6 the Colonial Department of the German Foreign Office declared Lewis's general mining concession of Sept. 9, 1885, null and void, on the ground that it was obtained with the political object of withdrawing Damaraland from German influence and bringing it under the rule of a foreign power, and could not, therefore, be regarded as a private contract or serve as a basis for private rights. Dr. Golding, the Imperial Commissary, retired in April, and was succeeded by Capt. Von François, who had previously commanded the police force. The new German company expects to build a railroad across the country. Lewis transferred rights to 50,000,000 acres near Wal-fisch Bay and gold fields on the Orange river to an English company that was organized in London in February, 1891.

Ngamiland.—The country around Lake Ngami, to which Germany and Great Britain both laid claim, was abandoned to Great Britain by the Anglo-German settlement of 1890. The African and General Exploring Company was organized to investigate the mineral and commercial resources of this region. South of the lake a large number of quartz reefs have been discovered. The death of Moremi, head chief of the Towana nation, on Nov. 4, 1890, left the country in a disorganized and unsettled condition. The next heir is a youth named Sec-home, half-brother of Moremi and nephew of Khama, the Bechuana king, and during his minority an unpopular chief named Dithapo acts as regent. The Towanas are only one of several tribes settled in the country, but under Moremi they held the others in subjection, except the invading Namaquas, who disputed with them the sovereignty over the country. From the latter the Germans obtained their title.

British Zambesia.—The country reserved to Great Britain in the Anglo-German and Anglo-Portuguese agreements of 1890, lying north of Bechuanaland and the South African Republic, is under the administration of the British South Africa Company, which was created by a royal charter signed Oct. 29, 1889. The sphere of the company's activity at present comprises Mashonaland, Matabeleland, and Manica. It is empowered to take over other districts, subject to the approval of the Government, including Northern Bechuanaland or Khama's country,

the region between that and the German boundary, and, in fact, all parts of South Africa within the sphere of British influence and not hitherto administered by British officers up to or beyond the Zambesi. Lobengula, King of the Matabeles, a tribe numbering 200,000 souls, has an army of about 15,000 men, armed with modern rifles obtained from the English, and has been accustomed to raid and pillage the country of the Mashonas, the Makalakas, and other surrounding tribes. During the first year of its existence the chartered company built an extension of the railroad from the Cape to the diamond fields of Griqualand West, continuing it northward from Kimberley to Vryburg, 126 miles. This section, which was opened Dec. 3, 1890, was sold to the Cape Government for £700,000, and the company went to work on a further extension of 98 miles to Mafeking.

The climate of the plateau of Mashonaland, which is 4,500 or 5,000 feet above the sea, and of Matabeleland, a hilly country of forests, streams, and pastures, is said to be healthful for Europeans. The nights are cool in summer, and the long winter is invigorating. There is plenty of good soil easy of cultivation. English enterprise was attracted to this country by the gold-bearing reefs that were known to exist there more than twenty years ago. The claims raised by Portugal to the valley of the Zambesi impelled Cecil Rhodes and his associates to organize the British South Africa Company for the purpose of securing for England all the high and healthful regions and the auriferous lands. Mining concessions had already been granted by the Portuguese authorities to British subjects, but the holders were bought out or given shares in the chartered company. Alluvial gold is found in all the stream beds, but seldom in paying quantities. The quartz in the reefs discovered by Thomas Baines in 1870 at the junction of the Umfuli and Simbo rivers assays 3 or 4 ounces to the ton. Attempts to work the Tati mines without proper machinery have failed. The Jumbo reef, near Fort Salisbury, has many old shafts. Four gold fields were opened, besides the Manica district, and mining commissioners and claim inspectors were appointed in the early part of 1891. These were the Umfuli and Hartley Hill, Lo Magondi, Mazoe, and the Kaiser Wilhelm or Matoko districts. No prospecting has been done in Matabeleland for fear of rousing the hostility of Lobengula. As soon as the Chartered Company was formed, a police force of 500 men was raised to take possession of Zambesia. A telegraph was completed to Palapwe, in Khama's country, 315 miles from Mafeking, in British Bechuanaland, by Oct. 14, 1890. The pioneer expedition of 180 picked men, escorted by a part of the police force, advanced from the Macloutse river, where the rest of the police remained to keep open communications and protect the base. Crossing the river on June 25, 1890, they built a road as they marched, and in ten weeks arrived at Mount Hampden, Mashonaland, 300 miles from the Macloutse, with their ox wagons, machine guns, a steam engine, and other material. A fort was erected at the Tuli drift, one at Fort Victoria, on the edge of the Mashona plateau, and later Fort Charter was built, and Fort Salisbury, near Mount Hampden,

which was made the headquarters of the administration. The company, which has a paid-up capital of £1,000,000, derives its revenue from trading licenses, registration fees, and mining concessions, which it has the power to tax to the extent of 50 per cent. of the output of gold. It agreed to give a subsidy of £9,000 a year to the African Lakes Company, with a view to the eventual amalgamation of the two. The local administration was placed in charge of A. R. Colquhoun and Dr. Jameson. The former went secretly into Manica, to conclude treaties and obtain concessions that could be set up as counterclaims to defeat the Portuguese title. On Sept. 14 he made a treaty with Umtasa, the local chief of Manica, who is said to be independent of Gungunhama and free from all obligations to the Portuguese. The Portuguese claimed sovereignty over the independent Mashonas, and through their vassal Gungunhama, King of Gazaland, over Manica. The British asserted that all Mashonaland and the Barotse country north of the Zambesi were tributary to Lobengula, whom they claimed as a vassal. The draft agreement of Aug. 20, 1890, which fixed the eastern boundary of the English sphere at the Sabi river was rejected by the Portuguese Cortes. Seven weeks after the treaty of protection was made with Umtasa, Col. Paiva d'Andrade and the half-cast Gouveia, otherwise known as Gen. Manuel de Souza, who was the official administrator or Capitão Mor of the district, arrived at Umtasa's kraal engaged on a survey for a railroad. They were met there by English officers who announced the British annexation of the country. Major Forbes, who had a force of police within call, at a public meeting, at which Umtasa formally acknowledged that he had ceded his country to the Portuguese twenty years before, put a sudden end to the parley by seizing Col. d'Andrade, Baron Rezende, and Gouveia in the presence of the chief and his *indunas* and English and American prospectors who were working under licenses issued by the Mozambique Company. The English flag was again hoisted, Massikessi was occupied and garrisoned, and the Portuguese officers were carried prisoners to Fort Salisbury. At various places in Mashonaland where the Portuguese flag was flying the chiefs submitted to the British occupation after the seizure of Gouveia. Moloko, the paramount chief of the country north of Manica, changed his allegiance by making a treaty with F. C. Selous, an agent of the Chartered Company. Negotiations were begun with Gungunhama to make him transfer his allegiance to England.

Before these events were known in Europe a *modus vivendi* was signed in London, on Nov. 14, 1890, by which the British and Portuguese governments agreed to preserve the *status quo*, and each to respect the possessions actually held by the other pending the adjustment of disputes by a treaty of delimitation. The temporary arrangement was valid for six months.

The wagon route of 900 miles from Vryburg was not adapted for the transport of crushing machinery and miners' supplies, and therefore the English desired to obtain possession of the road from the east coast by way of the Pungwe river. From Beira, the port of the Pungwe

river, to Mount Hampden the distance is only 380 miles, of which 120 miles can be made in small steamers on the river. When the English learned of this route, over which the Portuguese expected to build a railroad to their mines in Manica, the railroad that had been begun between Vryburg and Mafeking was abandoned. On Dec. 6 Major Forbes took formal possession of the whole country between Manica and the sea, lying between the Pungwe and the Busi rivers. On Jan. 3, 1891, Lieut. Freire went to Massikessi as the bearer of an official message to the British officer in charge informing him of the *modus vivendi*. The English officer refused to receive the notice, and placed the messenger under arrest. An expeditionary force of volunteers who had arrived from Portugal set out for Massikessi and Manica, but were kept back by orders sent from Lisbon, and employed in working in the harbors.

The violation of the agreed boundary and the abduction of Portuguese officials in Manica after the *modus vivendi* was concluded, seemed likely to result in a collision between the forces of the Chartered Company and the bands of young Portuguese who volunteered to defend their country's rights in Africa, and possibly in a native war between the English and the forces of Gungunhama or Lobengula. Sir Henry Loch and Mr. Rhodes hastened to England to ward off a catastrophe by bringing about a settlement of the dispute with Portugal. The Mozambique Company reorganized with the aid of French capital, obtained a regular charter conferring the power to administer and exploit these regions of Africa, to levy taxes and impose import duties, to make treaties with native chiefs, and to carry on or grant concessions for mining and other undertakings. The company engaged within a specified time to build a railroad from Beira, at the mouth of the Pungwe, to Massikessi, on the borders of the Manica territory. The country handed over to the jurisdiction of the company was that bounded on the north by the Zambesi down to its mouth, on the north-west by the district of Tete, on the west by the boundary of the province of Mozambique, on the south by the Sabi or Save river, and on the east by the ocean. These limits included about 9,500 square miles that were in dispute, including Manica and the gold fields there, to which miners were flocking from all countries. An Anglo-American company had been formed for the purpose of establishing a service of river steamers and wagons by the Pungwe route.

Several Englishmen who attempted to import arms or who refused to acknowledge Portuguese authority on this river were stopped. The "Countess of Carnarvon," which had gone up the Limpopo with a cargo of arms, was seized by a Portuguese gunboat on Feb. 22, 1891. Dr. Jameson and other officials of the British South Africa Company were on board the English steamer, which had made a previous voyage on the Limpopo, and found it navigable as far as the junction of the Nuanetsi, at the boundary line of the territory claimed by the South Africa Company. The arms (1,000 rifles with 20,000 rounds of ammunition) had been landed on the banks of the Limpopo to enable, it was supposed, native chiefs in the district of Inhambane to rebel against Portugal. The Governor-Gen-

eral of Mozambique declared a state of siege in Sofala and Manica, because agents of the South Africa Company went about inciting the natives to revolt. The Portuguese authorities at Beira, while leaving the route open on condition of the payment of 3 per cent. transit dues, insisted on the recognition of Portuguese sovereignty. The mails had to pass through the Portuguese post-office, and when Gen. Willoughby, at the head of an armed expedition, sailed up the Pungwe in the "Alice," flying the British flag, the vessel was stopped and the Portuguese flag hoisted. While negotiations were going on between the two governments, Gungunhama, whose *indunas* had signed a treaty accepting a Portuguese protectorate at Lisbon in 1885, was persuaded to send an embassy to London to pray for a British protectorate. The Portuguese collected an army of 10,000 natives at Sena in preparation for the hostilities threatened by the South Africa Company. Natives who were subject to Gouveia's rule revolted, and were with difficulty reduced to submission.

Sir John Willoughby's party, which was stopped at the mouth of the Pungwe, was only the advance guard of a large body of immigrants that the agents of the South Africa Company had recruited in order to force the route open and flood Manica with adherents of the company. Major Johnston, who had been the leader of the pioneers into Mashonaland, followed with several hundred well-armed miners, whom he conducted across Portuguese territory from the coast. When they had almost reached Massikessi they were met on May 11 by the soldiers of the Portuguese outpost, part blacks and part the student volunteers from Lisbon, and, after fighting several hours, killing seven Portuguese and losing some of their own men, the English won the battle. The Portuguese force, commanded by Major Caldas Xavier, was returning from an unsuccessful attack on the fortified post of Chovaa, held by the British South Africa Company's police, four miles west of Massikessi.

Anglo-Portuguese Agreement.—To prepare the way for a settlement of the South African controversies, it was necessary for the officers of the South Africa Company to satisfy the claims of the promoters of the Mozambique Company. Arrangements were made by which individual interests were secured, and English capital was raised to enable the Portuguese company to work in the profitable field that was assigned to it. Lord Salisbury offered terms that were more favorable than those contained in the abortive treaty of Aug. 20, 1890, and the Portuguese Cabinet, knowing that a refusal of these would result in the loss of all their South African possessions, hesitated only through fear of popular dissatisfaction that would again defeat the treaty and drive them from office, and possibly result in the overthrow of the monarchy. The principle followed was to reserve to England all the healthful highland country adapted for European settlement and to concede to Portugal all the low-lying territory that can be inhabited and cultivated only by colored races. To carry out this idea and to gain Manica, the only immediately attractive gold district since Matabeleland was closed, the English Government made an important concession—that of 50,000 square

miles north of the Zambesi, thus abandoning the cherished idea of continuous communication under British jurisdiction through northern Zambesia and Nyassaland, Lake Tanganyika, and Uganda, up to the Soudan. The draft of a new treaty was completed in London on May 14, the day on which the *modus vivendi* expired. Instead of the narrow triangle of land north of the Zambesi, bounded by that river and the Shire on one side and by a line drawn from opposite the Ruo to near Tete on the other, the new treaty gives to Portugal the whole north bank between the Shire and the Loangwe. The boundary starts from the Shire just below its junction with the Shiwanga, proceeds by an irregular line in a northwesterly direction to the intersection of the fourteenth parallel of latitude with longitude 33° 30', and thence in a southwesterly direction to where the fifteenth parallel intersects the Loangwe river, and follows the channel of the river down to the Zambesi at Zumbo. In Central Africa the English sphere is made coextensive with the Barotse kingdom, which is supposed to reach far beyond the sources of the Zambesi, the limit laid down in the former treaty, and approach the Portuguese settlements on the Angola coast. South of the Zambesi the territory allotted to the British South Africa Company is enlarged, but yet the Portuguese retain a slice of Manicaland. Along the south bank of the Zambesi, Portugal has the ten-mile strip at Zumbo allowed in the former treaty. After a few miles the line in latitude 18° 30' turns sharply to the southeast and strikes the Mazoe at about 33° of east longitude, and thence the limit of the British South Africa Company's territory is drawn directly southward to within a few miles of the Limpopo, where it turns to the southwest, leaving the mouth of that river in the possession and control of Portugal. The frontier proposed before ran south from the Makoe along the thirty-third meridian for about a degree, and then turned westward and followed the course of the Sabi river, giving the whole of Manica to Portugal. In the new frontier a *détour* is made near Massikessi, where substantial Portuguese houses and large stores of trade goods existed at the time when it was seized by the English, in possession of the Portuguese, with a patch in the neighboring highlands to which Portuguese officers can repair in hot weather. Umtasa is left to the English, and the line in Manica is drawn along the eastern slope of the plateau, it being understood that all territory east of longitude 33° will be Portuguese and all west of 32° 30' will belong to Great Britain. The exact line of demarcation is to be settled by a joint survey.

In Central Africa the dividing line between the British and the Portuguese spheres of influence is formed by the middle of the channel of the Zambesi from the Katima cataracts northward to the Barotse country, and then follows the western boundary of that territory. The delimitation will be made by an Anglo-Portuguese boundary commission, and any disputes that may arise will be referred to arbitration. In case either country desires to alienate any part of the territory south of the Zambesi, the other shall have a pre-emptive option. Portugal guarantees religious freedom in all her possessions of

East and Central Africa. For twenty-five years the transit dues across Portuguese territories shall be 3 per cent., unless in the course of five years the British Government commutes the dues and secures perpetual freedom of transit by paying to Portugal the capitalized value of £80,000 per annum at 3 per cent. interest—that is, a lump sum of about £1,000,000. Precious metals and specie are exempt from duty. In the districts north of the Zambesi above the confluence of the Shire and south of the Zambezi above the Luenha, British merchandise is not subject to duty, and the same exemption is secured for Portuguese merchandise in its transit across British territory in Nyassaland. Each power has the right to construct railroads, roads, or telegraphs across the territory of the other in the same regions, subject to local laws and regulations. Each power shall respect all rights of private property and mining concessions granted by the other in the territories hitherto in dispute and now divided. Disputed titles to claims within thirty miles of the frontier shall be referred to arbitration. Navigation on the Zambesi and the Shire shall be free to the ships and flags of all nations on the terms laid down for international African rivers in the General Act of the Congo. The Limpopo is not made an international river; but, except on the Pungwe, the Portuguese Government engages to allow and to facilitate transport. It also promises to construct a railroad from the coast to the borders of the South Africa Company's territory, either along the Pungwe or in the valley of the Busi. The surveys for the railroad must be completed in six months from the conclusion of the treaty, and the date by which the line must be finished was then to be agreed upon by the two governments. If the Portuguese Government does not carry out the agreement, it must allow a company to be chartered by some neutral power to build the railroad. It promises to construct a line of telegraph and to keep open a highroad from the Pungwe to the British frontier. Outside the treaty an agreement was entered into whereby a British company can establish wharves and warehouses on the Chinde, and a Portuguese company shall have the same privilege on the southwest shore of Lake Nyassa.

The bases of the new treaty were signed in London on May 28. Lord Salisbury stipulated that the treaty should be ratified by the Cortes before being signed by the British Government. The *modus vivendi* was continued by agreement for another month. The treaty was approved, with only six dissentient voices in the Chamber, on June 6, and by an equally large majority of the Senate, and on June 11 was signed at Lisbon. Senhor Ennes and Major Leveson, the Portuguese and English boundary commissioners, went to Manica to begin the delimitation in July.

After the removal of the differences with England, the Portuguese Government relieved itself of the expenses connected with the administration of Mozambique, estimated at £155,000 a year, by separating it from the province of Lourenço Marques and delegating all its sovereign rights south of the Zambesi to the Mozambique Company, which has come partly into the control of Englishmen. The head of the local administration on the coast will be a royal com-

missioner, who will reside alternately at Lourenço Marques and Mozambique. A railroad is to be built from Quillimane to the Shire river. The territory in the Zambesi valley will be handed over to chartered companies.

Gungunhama's Embassy.—The intrigues of the British South Africa Company to acquire the Portuguese sea-coast were not countenanced by the Marquis of Salisbury, who was prepared to abate the British pretensions and make sacrifices after the high-handed acts of the English in Manica and on the Pungwe and their treacherous incitement to rebellion of the black subjects of Portugal, lest a Portuguese revolution and war in Europe should result. The coming of Gungunhama's envoys did not shake his decision. By a treaty made in 1817, and in fuller terms in the treaty of 1847, the Gaza country—that is, the whole Mozambique littoral from the Zambesi to Delagoa Bay—was recognized by Great Britain as belonging to Portugal. Lord Salisbury declared, to the chagrin of the managers of the South Africa Company, that he would have nothing to do with Gungunhama. The monarch of the Gaza Zulus is a grandson of a rebellious vassal of King Chaka who fled with his followers from Zululand and conquered the country north of the Limpopo in the early part of the century. Another rebel chief migrated westward and founded the Matabele Kingdom. Gungunhama, when visited by the emissaries of the British Company, denied that he owed allegiance to the Portuguese. Though he had raised their flag over his kraal ever since his succession, he said it was merely a token of friendship; that Gouveia paid him tribute for the country that he occupied; and that the Portuguese governor, in sending him presents at regular intervals, acknowledged him as over-lord. Eight years before he had petitioned the Natal authorities for British protection. Now he sent Huluhulu, his ambassador on that occasion, and Umfeti to the "Great White Queen" with the message, "I want her to hold me up and be my shield." While these messengers were on the way to England, the faithless King sent another embassy to Lourenço Marques with a message declaring his vassalage and fidelity to Portugal, and offering to fight for the Portuguese with all his forces if any one should attack their dominions.

The Boer Trek.—While the British pioneers were pushing their conquests into Portuguese territory, they had to protect their allotted domain from the long-threatened Boer invasion. By virtue of a treaty made by the Banyai chief Chibe with Commandant Potyaeter and another concession secured by one Adendorf, the Transvaal Boers claimed Banyailand, the most fertile part of Mashonaland, and many were willing to join an expedition, under the lead of Vorster, Adendorf, and Col. Ferreira, for the purpose of taking forcible possession of that region and establishing a republic. Sir Henry Loch sent troops from the Cape to relieve the Bechuana-land police, and the latter took the place of the British South Africa Company's police, enabling the company's officers to place a strong guard at every crossing of the Limpopo. President Kruger issued a vigorous proclamation, in conformity with the obligations imposed by the convention of August, 1890, and he was sustained by

the Volksraad, which, on April 25, decreed the penalty of £500 fine or a year's imprisonment with hard labor. The leader of the Afrikaner Bond, Mr. Hofmeyr, obtained from the British Government a promise that it would allow a Boer republic to be set up in Swaziland. This and the offer of free farms of 3,000 acres in Mashonaland to any Boer who would accept the jurisdiction and conform to the statutes of the British South Africa Company, removed the reason for a hostile invasion, which was imminent in spite of the military preparations of the British and the co-operation of the authorities of the South African Republic. Several thousand *trekkers* came from the Orange Free State and encamped near Pretoria in May. Having gained without fighting the right that the English Government has hitherto denied of free settlement in the country north of the Limpopo, the *trekkers* disbanded. Col. Ferreira still wished to make a demonstration. With a party of about 200 he crossed the Limpopo on June 24, at the Main Drift. The main body on the opposite bank of the river prepared to make a forcible entry. Dr. Jameson crossed over and explained that they could all have farms, whereupon many expressed a willingness to take land from the company, and no further hostile manifestation occurred. Many Boers afterward entered Banyailand and selected farms, although the leaders of the *trek* had insisted that the titles that they held from the local chiefs were a valid conveyance, whereas the company had not the shadow of a title, for Lobengula possessed no rights of any kind in this country, and even if he did he had made no grant of lands in any part of his dominions, but only mining rights, to the individuals who had assigned their concessions to the British South Africa Company.

Development of Mashonaland.—After the settlement of the Anglo-Portuguese dispute, a part of the military police force was disbanded, and the members took up mining claims. Up to July 15 there had been issued 1,557 prospecting and 67 trading licenses, representing as many individual settlers. Of mining claims there were at that date 5,967 in force, besides 2,372 protection certificates. The bulk of these claims were situated near Fort Tuli and in the Umfuli district. In addition, 200 claims for silver and tin found in the Manica district had been registered. A gold claim includes 150 feet in the direction of the reef and 200 feet on either side, and to make it valid the miner must sink a shaft 60 feet. The mining operations were placed under the direction of Mr. Rolker, an American engineer. The settlers suffered much from fever and dearth of food during the rainy season. From lack of tools they were delayed in their work. The tall grass and the tsetse fly are serious hindrances to transport. A road was built from Fort Salisbury to the Kaiser Wilhelm field, 130 miles. This is the only district, except in Manica, where placer mining promises well. For a long period Portuguese traders have visited it to buy gold from the natives.

The Mozambique Company has arranged with French engineers for the building of a railroad from Beira to Massikessi, a telegraph line, and docks. The capital of the company is £1,000,000. The Portuguese Government gets the railroad for nothing at the end of thirty years.

CHEMISTRY. Chemical Theory.—In his address on assuming the chair of President of the American Chemical Society for 1891, Prof. George F. Barker spoke of the discovery of the periodic law as marking an important epoch in the progress of the physics of chemistry as well as of pure chemistry. For not only does that law assert that the purely chemical properties of the elements are periodic functions of the masses of their atoms, but it asserts also that their physical properties are like functions. New researches were undertaken by the chemist to fix more precisely these atomic masses, new calculations were made upon data already accumulated, and new relations were experimentally established going to show the position of the doubtful elements in the periodic series; and the most elaborate experiments were begun also by the physicist upon the phenomena of solution, of density, of specific heat, of refraction, of electric conductivity, and the like, in order to connect these physical properties with the mass of the atom, and thus to establish the predominant influence of the atom, even in molecular physics. The address was devoted to outlining some of the important relations existing between chemistry and physics and to indicating the directions of investigation in this borderland between the two sciences. Attention was called to the importance of making the terminology of the two more in harmony and more accurate, particularly of observing the distinctions in the use of the terms atom and molecule and mass and weight; of the line of study suggested by the analogy pointed out by Van't Hoff between gases and dilute solutions, or the application of the kinetic theory to solutions; of the study of electrolysis and of spectrum analysis and the later theories of the origin and relations of the elements. The facts thus far brought out in the investigations of these subjects indicate "a tendency toward a true statics and dynamics of atoms; toward a condition of exact science which will confer upon chemistry the power of prediction."

Of the two methods which the technologist may pursue in acquiring his art, that which begins with learning the scientific principles that lie at its base and proceeds to the application of them is called by Prof. Meldola the *synthetical* method, while that in which he first seeks proficiency in practice, to become familiar with the science afterward, is called the *analytical* method. Of the relative merits of these two courses in application to arts dependent on chemistry, Prof. Meldola says that the analytical method is too cumbersome and too circuitous to be of any real practical use. It is possible to lead an intelligent mechanic from his every-day occupation to a knowledge of the higher principles of mechanical science by making use of his experience of phenomena which are constantly coming under his notice. But "no person engaged in chemical industry in any capacity, whether workman, foreman, manager, or proprietor, can be taught the principles of chemical science out of his own industry unless he has some considerable knowledge of general principles to start with. No person who is not grounded in such broad principles can properly appreciate the explanation of the phenomena with which his daily experience brings him into contact, and if his previous

training is insufficient to enable him to understand the nature of the changes which occur in the course of his operations, he can not derive any advantage from technical instruction. These remarks will, I hope, serve to emphasize a distinction which exists between technical chemistry and other technical subjects. . . . The reason for this difference in the mode of treatment of chemical subjects is not difficult to find. The chemical technologist—the man who is engaged in the manufacture of useful products out of certain raw materials—is, so far as the purely scientific principles are concerned, already at a very advanced stage, although he may not realize this to be the case. The chemistry of manufacturing operations, even when these are of an apparently simple kind, is of a very high order of complexity. There are many branches of chemical industry in which the nature of the chemical changes undergone by the materials is very imperfectly understood; there is no branch of chemical industry of which the pure science can be said to be thoroughly known. For these reasons I believe that I am justified in saying that the chemical technologist is working at a high level, so far as the science of his subject is concerned, and this explains why he can not be dealt with by the analytical method."

MM. Lecoq de Boisbaudran and A. de Lap-
parent claim priority in the discovery of the periodic law of the chemical elements for M. Béguyer de Chancourtois, Chief Engineer and Assistant Professor of Geology in the School of Mines, who, on April 7, 1862, presented to the Academy a paper "On a Natural Classification of the Simple or Radical Bodies entitled 'The Telluric Screw,'" and followed it with other communications. The telluric screw was a device for graphically representing the relations of the atomic weights, from the examination of which it appeared that those relations corresponded for the most part to real analogies in the properties of the corresponding elements. Mr. John Newland's first publication on the subject was made July 30, 1864, the publications of Profs. Mendeleef and Lothar Meyer of their independent and simultaneous discovery of the same truth were made later.

Those compounds are called tautomeric by Laar which apparently react in a manner indicated by two constitutional formulæ differing from one another. It is assumed that in such bodies the atoms oscillate between two different portions of equilibrium. This interpretation does not permit the use of the term constitutional formula in its proper sense which would permit only one of those positions recognized from allied reactions) to be considered correct. The other position would not belong to the substance *per se*, because the reactions according to which it has been derived have caused a change of position of the atoms within the molecule. Incorrect formulation of the chemical equations for these reactions may be the reason for the apparent contradiction of the principles of structural chemistry which these phenomena of change within the molecule offer.

In his presidential address before the Institution of Electrical Engineers, Dr. William Crookes spoke of electricity as a tool by the judicious use of which we may gain some addition to our scanty knowledge of the atoms and molecules of

matter, and of the forms of energy which by their mutual reactions constitute the universe as it is manifest to our five senses. Working as a chemist in the laboratory, the author had found the induction spark often of great service in discriminating one element from another, as well as in indicating the presence of hitherto unknown elements in other bodies in quantities far too minute to be recognized by any other means. In this way chemists have discovered thallium, gallium, germanium, and numerous other elements. On the other hand, in the examination of electrical reactions in high vacua various rare chemical elements become in turn tests for recognizing the intensity and character of electric energy. Electricity, positive and negative, effect respectively different movements and luminosities. Hence the behavior of the substances upon which electricity acts may indicate with which of these two kinds we have to deal. In other physical researches both electricity and chemistry come into play simply as means of exploration.

Chemical Physics.—A laboratory of low temperatures has been established by Prof. Pictet at Berlin by the aid of which new conditions for investigating the properties of matter are realized, and new facts have been brought to light in various branches of science. The refrigerating machinery is designed to withdraw heat from the objects under observation, and to keep them as long as may be required at any desired temperature between -20° and -200° C. Of the refrigerating processes at the command of the experimenter, that by the evaporation of liquids is preferred. The apparatus is adapted to the production of three stages of low temperature, for each of which special machinery is provided. For the first stage the Pictet liquid—a mixture of sulphurous and carbonic acids—is used; for the second, laughing gas; for the third stage, liquefied atmospheric air, the evaporation of which causes the thermometer to fall below -200° C. Under the experiments with these apparatus a remarkable difference was noticed in the radiation of heat. Material considered as non-conducting does not appear to affect much the passage of heat into a body cooled down to below -100° ; or, as Prof. Pictet expresses it, "the slow oscillations of matter which constitute the lowest degrees of heat pass more readily through the obstruction of a so-called non-conductor than those corresponding to a higher temperature, just as the less intense undulations of the red light are better able to penetrate clouds of dust or vapor than those of the blue." It is mentioned, as an example of the methods which the refrigerating machine permits the investigator to employ, that, in order to measure the elasticity of mercury, Prof. Paalzow had the metal cast into the shape of a tuning-fork and frozen hard enough for the purpose in view. On this occasion it appeared that quicksilver can be shown in a crystallized state in fern-like crystals. The most important application of the refrigerating machinery is in the purification of chloroform, by which that exceedingly unstable substance becomes a practically unchangeable liquid. Sulphurous ether is also produced in a hitherto unknown degree of purity.

Liquid oxygen has been hitherto described as colorless, and so it appears to be in thin layers;

but M. Olszewski, in the course of his investigation of the absorption spectrum, has obtained a sufficient quantity of the liquid 30 millimetres thick, and has discovered that it possesses a blue color like that of the sky. The direct experiments on its absorption spectrum show that this color is exactly what one would expect from its nature. The author suggests that the blue color of the sky may be simply due to the atmospheric oxygen, which in gaseous layers of such extent may exhibit the same color as when compressed into a few centimetres of liquid. Apart from the discussion of this debatable subject, the fact is of interest to chemists that ordinary oxygen and its condensation allotrope, ozone, when compressed into the liquid state, are thus related as to color, the former possessing a light-blue and the latter a deep-blue tint.

The results of an examination of the properties of liquid chlorine have been published by Dr. Knietseh, of Ludwigshafen, in Liebig's "Annalen." The work included the determination of the vapor density of liquid chlorine at temperatures from -88°C . to $+146^{\circ}\text{C}$. (its critical point), a complete examination of its behavior near the critical point, and the determination of its specific gravity and coefficient of expansion for a range of temperature between -80° and $+80^{\circ}$. Liquid chlorine generally appears to possess a yellow color. When, however, the color of a long column is examined it is found to have a distinctly orange tint. The absorption spectrum does not exhibit any characteristic bands, but the blue and violet portions of the spectrum are completely absorbed, and the transmitted spectrum thus consists of the red, orange, yellow, and green. The pressure is given for every five degrees up to 40°C ., and thence for every ten degrees up to the critical point, 3.66 atmospheres at 0° , 5.75 atmospheres at 15° , 11.5 atmospheres at 40° , and 93.5 atmospheres at the critical point, 146° . Some very interesting results were obtained in determining the critical point, the yellowish-green color of chlorine perhaps assisting in rendering the appearance of what has sometimes been termed the fourth state of matter between the liquid and the gaseous more distinct than usual. At 140°C . extremely small bubbles began to be developed through the mass of the liquid, at 144° the hitherto sharp meniscus began to disappear, and at 145° the presence of a liquid was evident only by the more intense yellow color and the higher refractive power of the lower portion of the tube. At 146° the contents of the tube were homogeneous throughout, the critical point being attained and the liquid converted into a gas. On cooling, the condensation always began below 146° , with the formation of a cloud and a fine rain of minute yellow spheres of liquid chlorine. Liquid chlorine is proved to be a very expansible substance. The coefficient of expansion at 80°C . is already 0.00346, nearly equal to that of gaseous chlorine, and is rapidly increasing, so that before the critical temperature of 146° is attained the coefficient of expansion will be considerably higher than that of the gas.

The experiments of Prof. Vivian B. Lewes on the spontaneous ignition of coal led him to reject the explanation of Berzelius, which attributes spontaneous ignition to the oxidation

of pyrites contained in the coal. The heat given off by the combustion of pyrites would not be sufficient to raise the temperature of the adjacent coal to the ignition point. The cause of spontaneous ignition is to be found, on the other hand, rather in its power—especially when finely divided—of absorbing oxygen, which causes the slow combustion of some of the hydrocarbon constituents even at ordinary temperature. The action may increase under favorable conditions until ignition of the coal results. The risk is greatest with large masses of coal and with the ordinary air supply on board ships. The oxidation increases rapidly with the ignition temperature of the coal, so that coal fires are found to occur most often on ships frequenting tropical climates. It may be roughly estimated that the absorbing power of a coal for oxygen is proportional to its power of taking up moisture. Prof. Beden said, in the discussion of Prof. Lewes's paper, that in heating coal dust at various temperatures up to 140°C . he had noticed that in some cases combustible gases were given off by the coal.

Cumulative evidence has been gathered by Sir Henry Roscoe and Mr. Scudder of the deposition of iron by burning water gas (which consists of carbon monoxide and hydrogen) upon the appurtenances of the burners and upon whatever objects or substances it comes in contact with. The amount of the deposit appears to increase with the time the gas has been stored in an iron cylinder, till at length the gas becomes smoky on burning. Upon passing some of this gas through a tube cooled with ice a few drops of a turbid liquid were obtained, which consisted chiefly of iron carbonyl. The turbidity disappeared on the addition of hydrochloric acid. It is thus evident that iron carbonyl is produced in the cold by the action of the carbon monoxide contained in the water gas upon the iron of the containing cylinder. A similar deposit of metallic iron has been found on the steatite burners from which ordinary coal gas is burned, and this points to the existence of iron carbonyl in our common illuminating gas. This conclusion is strengthened by the fact mentioned by Dr. Thorne that coal gas which has been compressed in iron cylinders and allowed to stand for some time is unfit for lantern projection on account of the deep stain of iron that is found upon the lime cylinders.

Dr. William Crookes described at the meeting of the British Association his experiments on the electrical evaporation of metals and alloys. Films of gold, silver, and platinum were thus obtained which could be peeled off from the glass on which they were deposited and were homogeneous. Different metals treated thus evaporate at different rates. A few, including aluminum and magnesium, seem to be non-volatile. It is thus possible, in the case of the gold aluminum alloy discovered by Prof. Roberts-Austen, to separate a large portion of the gold from the aluminum by electrical evaporation.

C. T. Heycock and E. H. Neville record the results of experiments in the application of Raoult's theorem—that the solution of any substance in any solvent lowers the freezing point of the solvent in a fixed degree—to the dissolution of metals in metals. Making tin the

solvent, they found the law the same as in Raoult's experiments with other substances, viz., that the fall in temperature of the solidifying point is directly proportional to the weight added, and that the fall in temperature is inversely as the atomic (or molecular) weight of the metal added. The experiments were tried with zinc, copper, silver, cadmium, lead, mercury, aluminum, and antimony dissolved in tin. The temperature rose with antimony, while aluminum produced a fall only half as great as the other elements.

The results of experiments on the crystallization of liquid films are published by Prof. Tito Martini, of Venice. He finds that a strong solution of sodium sulphate, when cooled to near its saturation point, possesses a viscous character that enables it to form a thin film on a metallic ring. On rapid evaporation, such a film crystallizes to an open lattice-work of minute crystals, which preserve their transparency for some time and then effloresce and crumble to powder. Even more satisfactory results were obtained with a transparent film of liquid sulphur; while experiments with ammonium chloride and sodium hyposulphite were unsuccessful.

The glow of phosphorus is ascribed by T. E. Thorpe to the "degraded combustion" of phosphorous oxide, which is formed whenever phosphorus is exposed to the air. When phosphorus is placed in oxygen, or in an atmosphere containing oxygen, under such conditions that it volatilizes, the phosphorus oxidizes, partly into phosphoric oxide and partly into phosphorous oxide. Ozone is formed, and this reacts upon the residual phosphorous vapor and the phosphorous oxide, with the production of the luminous effect to which the element owes its name. The glow itself is nothing but a slowly burning flame, having an extremely low temperature, caused by the chemical union of oxygen with the vapors of phosphorus and phosphorous oxide. By suitable means this glow can be gradually augmented till it passes by regular gradations into the active vigorous combustion which we ordinarily associate with flame. Many substances, in fact, may be caused to phosphoresce in the same way. Prof. Thorpe and A. E. Sutton, in a later paper, give a more minute description of phosphorous oxide, and show that it has a well-marked physiological effect. It is possible that the action attributed to phosphorus, especially as regards its influence on the glycogenic functions of the liver and on tissue change, is really due to this substance.

A research carried on by Dr. G. Gore with the aid of the voltaic balance shows that the decomposition of chlorine water by light may be divided into two essentially different parts, or periods, of chemical change. During the first period, a very great and gradual loss of voltaic energy occurs, attended by formation of hydrochloric, hydrochlorous, and chloric acids. During the second period a moderate and slow increase of voltaic energy takes place, accompanied by decomposition of the hydrochlorous and chloric acids, a further formation of hydrochloric acid, and the production of peroxide of hydrogen. Under the influence of prolonged sunlight the whole of the oxygen of the hydrochlorous and chloric acids united with water to form peroxide

of hydrogen, and the peroxide then combined with the whole of the hydrochloric acid to form a definite "solution compound," represented by the formula $2\text{HClH}_2\text{O}_2$. It is interesting to observe that suitably decomposed chlorine water or, in its stead, a mixture of $\text{CHCl}_3 + \text{HClO} + \text{HClO}_2$, in a proper proportion of water has the property of absorbing energy by exposure to light, very much like that possessed by the green leaves of plants.

New Substances.—A new antiseptic, said to possess certain decided advantages over those hitherto in use, has been brought to the attention of the French Academy of Medicine by Prof. Berlioz, of Grenoble. It is called microcidine, and is a compound of naphthol and soda. It is neither poisonous nor irritant, is twenty times as active as boric acid, and is much more soluble than thymol or carbolic acid. It is a grayish-white powder. A solution of three grammes to the litre of water is slightly colored, but it does not soil the hands or bandages. On account of its safety and strength it is claimed to be especially adapted to family use.

A new compound of iron and carbon monoxide, analogous to a nickel compound previously described by Messrs. Mond, Langer, and Quincke, has been obtained by Mr. Berthelot. To prepare it, carbon monoxide is led over iron in a very finely divided state, free from admixed oxide, at a temperature of 45°C . when it issues in the form of a gas. It is anticipated that by the aid of this volatile compound some furnace reactions, as yet little understood, may be elucidated. M. Berthelot is of the opinion that it may help to explain the formation of bubble flaws in manufactured iron, which have frequently led to unfortunate results. M. Berthelot also describes several new reactions of nickel-carbonyl—a liquid boiling at 46°C ., which is so volatile that its vapor tension at 16°C . is given as a quarter of an atmosphere. A drop placed upon a glass plate rapidly volatilizes, the portion last to disappear being for a few moments cooled down by the evaporation of the first portion to such an extent as to form beautiful little crystals. When suddenly heated to 70°C ., it detonates, the detonating reaction being expressed by the equation $\text{Ni(CO)}_4 = 2\text{CO}_2 + 2\text{C} + \text{Ni}$. When mixed with oxygen, simple agitation over mercury of the tube containing it brings about detonation. When oxygen is given slow access to the liquid oxide a solid substance is formed, which is green if the oxygen is moist and brownish yellow if it is dry. In contact with oil of vitriol the liquid compound, after appearing unaffected for a few moments, suddenly explodes with production of flame. With nitrous oxide, bright-blue fumes are produced which fill the vessel and eventually subside, forming a blue solid.

The tannin of chestnut wood has been studied from specimens prepared by himself from the beginning by Prof. Henry Trimble and found closely to resemble gallotannic acid in physical and chemical properties. It decomposes at 200°C . into pyrogallallic and metagallic acids, giving an abundant crop of crystals of the former substance. Each of the three fractions in which it was obtained was estimated for sugar. The first was found to contain 10.48, the second 7.98, and the third 6.18 per cent. of glucose. An acetyl

derivative was prepared which in many respects resembled pentacetyl tannin.

Some very interesting properties and reactions of the chlorides of selenium are described by M. Chabré. Treating the tetrachloride as prepared by Berzelius for determination of vapor density, two molecules of the substance were dissociated at 360°C . into one molecule of Se_2Cl_2 and three molecules of chlorine. The subchloride, Se_2Cl_2 , is a much more stable body, and may be distilled unchanged at 360°C . Determinations of the density of its vapor yield values closely approximating to 7.95, the theoretical density of a molecule of the formula Se_2Cl_2 . Other interesting reactions were observed between selenium tetrachloride and benzene. When the two substances are brought together for reaction, the selenium tetrachloride is decomposed as when it is heated to 360°C ., the liberated chlorine reacting with the benzene to form several chlorobenzenes, and all the selenium remaining in the form of Se_2Cl_2 . When the benzene and SeCl_4 are brought together in the presence of aluminum chloride, on treating the mixture with water, separating and distilling the oil obtained, three distinct fractions may be collected. The first is monochlorobenzene: the second, at 227° – 228°C . under a reduced pressure, consists of phenyl selenide, a yellow oil of specific gravity 1.45 at 19.6°C . The third fraction, boiling between 245° and 250°C ., consists of another new compound, $\text{Se}_2(\text{C}_6\text{H}_5)_2\text{Cl}$. It is a red oil, of specific gravity 1.55 at 19.6°C . On allowing it to stand, it deposits yellow crystals of a compound of powerful odor, which may be obtained recrystallized from alcohol in long rhombic prisms. This substance is seleno-phenol, $\text{C}_6\text{H}_5\text{SeH}$, analogous to thiophenol and mercaptan, and in alcoholic solution readily reacts with salts of mercury and silver.

A new gaseous compound of nitrogen and hydrogen has been discovered by Dr. Theodore Curtius, having the composition HN_2 , and has been called by him, after its derivation, azoimide. The gas dissolves in water with great avidity, forming a solution which possesses strong acid properties, and dissolves many metals, such as zinc, copper, and iron, with evolution of hydrogen gas and formation of nitrides, the metal taking the place of the liberated hydrogen. In view of this property, the name azoimide is regarded as not sufficiently descriptive, hence Prof. Curtius proposes instead *Stickstoffwasserstoffäure*, for which the nearest English equivalent would be hyrazoic acid. HN_2 possesses a fearfully penetrating odor, produces violent catarrh, and resembles hydrochloric acid in its affinity for water. Having isolated the new substance, Prof. Curtius and Herr Radenhausen have found it to be a clear, colorless, and very mobile liquid of phenomenally explosive nature. The liquid possesses the intolerable odor of the gas and the aqueous solution. It mixes readily with water and alcohol. It boils—when the operator is so fortunate as to carry out a distillation in safety—without decomposition at 37°C . But it explodes with extraordinary violence when suddenly heated or when touched with a hot body, and also sometimes without apparent provocation at the ordinary temperature, with production of a vivid blue flame.

The new peroxide of sulphur, SO_4 , discovered

by Traube, of Berlin, is obtained when solutions of sulphuric acid containing at least 40 per cent. of acid are subjected to electrolysis as a crystalline deposit upon the anode. It is not the anhydride of an acid, but a neutral oxide of a similar character to hydrogen peroxide. In water it parts with its oxygen readily and is reduced to ordinary sulphuric acid. It is stable in a moderately concentrated solution of sulphuric acid. It is but a weak oxidizing agent, but under certain circumstances acts as a powerful reducing agent.

Two gaseous fluorides of carbon, the tetrafluoride, CF_4 , and the difluoride, C_2F_4 , have been isolated by M. Moisson and M. Chabré. Fluorine directly attacks carbon with varying degrees of energy, according to the form in which the carbon is presented. Pure lampblack instantly becomes incandescent throughout. The action on the other forms of carbon is slower in proportion to their density, and in the harder varieties has to be assisted at first by the application of heat. The products of combination are generally gaseous mixtures of the two fluorides. The tetrafluoride is a colorless gas that liquefies under a pressure of five atmospheres at 10°C ., is absorbed and decomposed by an alcoholic solution of potash into potassium fluoride and carbonate, and is slightly soluble in water and more readily so in carbon tetrachloride, alcohol, and benzene. The most convenient way of preparing it depends on the reaction of silver fluoride and the vapor of carbon tetrachloride. A gas obtained by allowing fluorine to stream through red-hot carbon appears to be the C_2F_4 described by M. Chabré.

Fluoride of methyl, CH_3F , obtained by MM. Moisson and Merlaux by the action of methyl iodide on fluoride of silver, is a gas that liquefies at ordinary temperatures under a pressure of 32 atmospheres, is slightly soluble in water, and more readily so in methyl iodide or methyl alcohol, is very stable, and saponifies with great difficulty. It is also obtained, but of inferior purity, by the action of pentafluoride of phosphorus on methyl alcohol.

Another fluoride of methyl, isobutyl fluoride, $\text{C}_4\text{H}_9\text{F}$, prepared by the action of isobutyl iodide upon silver fluoride, is colorless, and in the liquid condition mobile, and boils at 16°C . The gas burns on ignition with deposition of carbon and the formation of clouds of hydrofluoric acid. It does not attack glass. M. Moisson has prepared by means of the reaction of silver fluoride with the iodides of the corresponding organic radicles the fluorides of methyl, ethyl, propyl, and butyl, and finds them in each case more stable than the analogous chlorine compounds.

Methylene fluoride, CH_2F_2 , prepared by M. Chabré, is a gas obtained by heating methylene chloride with silver fluoride, has a density as compared with air of 1.82, and is absorbed by alcoholic potash. It completes a series of which the chlorine, bromine, and iodine members have long been known. M. Chabré has found that hard Bohemian glass tubes may be used in these reactions with silver fluorides, for with them the corrosion is so insignificant that for practical purposes it need not be regarded.

Boron iodide, BI_3 , is prepared by M. Moisson by three methods, the most convenient of which

is by the action of hydriodic acid on amorphous boron. It appears in crystals, colored reddish purple by a small taint of free iodine, but, when purified, colorless, transparent, and somewhat nacreous. Exposed to light, they emit iodine. They melt at 43°C . into a liquid which boils undecomposed at 210°C . They are exceedingly hygroscopic, and are decomposed by the moisture they attract, and are instantaneously decomposed in contact with water. Boron iodide burns readily when heated in air or oxygen.

When boron iodide is acted upon by phosphorus, boron phospho-di-iodide BPI_2 , is produced. It is a deep red amorphous powder; melts between 190° and 200°C .; when heated in a vacuum begins to volatilize about 170° , the vapor condensing in the cooler part of the tube in red crystals; is very hygroscopic and rapidly decomposed by water; burns spontaneously in chlorine; and inflames when slightly warmed in oxygen.

A second phospho-iodide of boron is represented by the formula BPI , and is formed by the action of sodium or magnesium on a solution of the di-iodide just described, or by heating that substance to 160°C . in a current of hydrogen. It is obtained as a bright-red powder, somewhat hygroscopic. It volatilizes in a vacuum without fusion at about 210°C ., and the vapor condenses when cooled into orange-colored crystals. Heated to redness, it decomposes into free iodine and phosphide of boron, BP . By the continued action of dry hydrogen upon the heated compound, the iodide and a portion of the phosphorus are removed and a new phosphide of boron, B_2P_3 , is obtained.

A specimen of iron-carbon-oxide was exhibited at the British Association, obtained by Messrs. Mond and Langer as an amber-colored liquid, which, on standing, deposits tabular crystals of a darker color and solidifies below -21°C . to a mass of needle-shaped crystals. It boils at 102°C ., but leaves a small quantity of green-colored oil behind. Several analyses and vapor-density determinations have been made, but it is not yet certain whether a pure substance has been obtained or a mixture of several iron carbonyls.

Specimens of nickel-carbon-oxide and metallic nickel obtained from it were exhibited by Ludwig Mond at the meeting of the British Association, and an account was given of the discovery and properties of the compound. Chemically, nickel carbonyl is very inactive, and experiments made to introduce the carbonyl group by its means into organic substances had been uniformly unsuccessful. Experiments were described that had for their object the direct extraction of nickel from its ores by means of carbon monoxide. As long as the nickel was combined with arsenic or sulphur the process was successful on a laboratory scale. The ore, matte, or speiss was calcined, reduced by water gas at 450° , cooled down to a suitable temperature, and treated with carbon monoxide in a suitable apparatus. On exposing a heated surface to the gas containing nickel-carbon-oxide, it is possible to produce direct from such gas articles of solid nickel or goods plated with nickel, resembling in every way those obtained by galvanic deposition of metals, and reproducing with the same exactitude and fineness any design upon such articles. This result can

also be obtained by immersing heated articles in a solution of nickel-carbon-oxide in such solvents as benzol, petroleum, tar oils, etc., or by applying such solution to the heated articles with the brush or otherwise.

Repeating the work of Messrs. Mond, Langer, and Quincke on the remarkable compound of nickel and carbon monoxide, $\text{Ni}(\text{CO})_4$, M. Hanriot has found it a highly poisonous substance, far more deadly than carbon monoxide itself. Blood poisoned by means of it exhibits the characteristic absorption spectrum of blood containing carbon monoxide. The oxygen of the air diminishes somewhat the poisonous action of the compound, inasmuch as it promotes dissociation into metallic nickel and carbon monoxide.

Mr. Waldron Shapleigh exhibited at a recent meeting of the Franklin Institute, Philadelphia, some forty specimens of salts of what are called the rare earths, with minerals from which they are obtained, viz., samarskite, zircon crystals, and monazite sand from North Carolina, monazite sand from Brazil, gadolinite from Texas, and allanite from Virginia. This was the first time the salts of praseodymium and neodymium have been shown and probably separated in this country; the separation of these elements is long and tedious. The specimens shown had undergone nearly 400 fractional distillations, and had been in a state of constant preparation since early in 1888. Tons of cerite and monazite sand had been used, and tons of the salts of cerium and lanthanum obtained, but the yield of praseodymium was only a few kilogrammes. The percentage of neodymium was much higher. Zirconium, lanthanum, and cerium should no longer be classed among rare earths, as hundreds of tons of ores from which they are obtained have been located in North Carolina, and there seems no end to the deposits of monazite sand, one of the richest ores, and containing most of the rare earths. In Brazil it does not have to be mined, as it is in the form of river sand. In North Carolina it is found in washing for gold.

A new crystalline carbohydrate, of the composition $\text{C}_{18}\text{H}_{32}\text{O}_{18}$, called stachyose, has been extracted by Drs. Von Planta and Schulze from the bulbs of *Stachys tuberosa*. The crystals and their aqueous solution possess a faint, sweet, sugar-like taste, and the solution in water, which is of neutral reaction, rotates the plane of polarization strongly to the right. From its properties it is assigned to the group of carbohydrates called by Prof. Tollens crystallizable polysaccharides, in which are included raffinose or mellitose, gentianose, and lactosine. Stachyose resembles lactosine very closely, especially in the formation of galactose on inversion, but is distinguished from it by its lower dextro-rotatory power.

An important series of new compounds—the ketazines—has been obtained by Prof. Curtius, resulting from the action of hydrazine hydrate upon ketones. The simplest of these, which is obtained by the action of hydrazine hydrate upon acetone, is a clear liquid possessing a sharp odor somewhat resembling that of alkaloid coniine. By employing other ketones, a large number of the ketazines have been prepared. Those containing fatty radicles are liquids, and those containing aromatic groups are solids. The lowest members only dissolve in

water, with a solubility rapidly decreasing with increase of carbon atoms. Acids decompose them in the cold, with assimilation of water, into their constituents, but they are comparatively stable toward alkalies. Light exerts a decomposing action upon them; specimens placed in bright sunshine rapidly become yellow. Reducing agents are without action upon them, and they appear further to be incapable of reducing either Fehling's solution or (except after long boiling) ammoniacal solutions of silver salts.

New Processes.—India-rubber is usually vulcanized by heating it with sulphur until chemical combination takes place. A different method is pursued in making cloth for waterproof garments. The cloth is washed with a solution of chloride of sulphur in bisulphide of carbon, when the fabric is heated to evaporate away the excess of those substances. The chemical action in the process is supposed to be represented by a combination of the sulphur with the India-rubber, producing vulcanization, and of the chlorine with the hydrogen to produce hydrochloric acid. This reaction, Mr. William Thomson believes, is not the correct one, while the reverse is probably more in accordance with the facts, viz., that the chlorine of the sulphur chloride combines with the India-rubber to produce vulcanization, while the sulphur is left free or only partially in combination with the rubber. Mr. Thomson supports this view by citing certain results of his own experiments. A substitute for India-rubber which is much used is produced by acting on vegetable oils with the solution of chloride of sulphur in bisulphide of carbon. The oil becomes converted into a solid substance somewhat resembling India-rubber, but more brittle. Mr. Thomson's analyses of this substance have invariably shown it to contain a much greater proportion of chlorine than of sulphur. The process is therefore probably a vulcanization by chlorine rather than by sulphur. The substitutes contain considerable quantities of oily matters soluble in water, which have also been found to be chlorine and sulphur compounds of the oils. These oily matters are supposed by some manufacturers to be injurious to the rubber, but the author has found that it rather acts as a preservative of it. Copper salts exert an injurious effect on India-rubber, and cloth that has been dyed with them is destructive to a coating which may be placed upon it.

The authors William Thomson and Frederick Lewis continued their experiments on the action of copper and other metals and their salts on India-rubber. A sheet of India-rubber was spread on paper and vulcanized. The substances—filings of metals or solutions of salts—were placed upon small squares of the rubber and exposed to a heat of 140° F. for ten days, when the rubber on each square was tested. Copper was found to have a destructive effect far beyond that of the other metals. The following metals were destructive in the order in which they are mentioned: Platinum, palladium, aluminum, and lead. Magnesium, zinc, cadmium, cobalt, nickel, iron, chromium, tin, arsenic, antimony, bismuth, silver, and gold had no effect upon the rubber. Of salts, besides those of copper, arsenic iodide, silver nitrate,

strontium, chlorate, vanadium chloride, red and black oxides of manganese, and bismuth chloride destroyed the rubber; ferrous nitrate, sodium nitrite, uranium nitrate, and ammonium vanadate considerably damaged its elasticity; lead chromate, ferrous sulphate, zinc acetate and chloride, tin peroxides and perchloride, chromic acid, and lead borate only slightly damaged it. Copper salts were found to damage it even in minute quantities and in proportion to the quantity of copper present. Experiments on the action of different cloths and cloths of different colors likewise demonstrated the injurious effect of copper. Of acids of a strength to neutralize equal parts of a 10-per-cent. solution of anhydrous sodium carbonate, nitric acid was destructive, while hydrochloric, sulphuric, chromic, citric, and tartaric acids were not; but rubber soaked in the strongest sulphuric-acid solution containing 10 per cent. of acid was destroyed on being heated to 212° F. Peroxide of hydrogen appeared to be neutral in effect, while ozone had been previously found to be destructive. The opinion of manufacturers that over-mastication of India-rubber is injurious was not borne out by the experiments.

Having found that gold can be completely precipitated by the electric current from its double cyanides, Edgar F. Smith and F. Muir attempted to decide what metals can be separated from gold in this manner. Their experiments were satisfactorily successful in the separation of gold from copper, from cobalt, from nickel, from zinc, and from platinum, and of silver and mercury from platinum. With cadmium the precipitate was never free from platinum. The electrolytic separation of zinc from mercury, cadmium, and silver in a solution of potassium cyanide was effected without difficulty.

To detect contamination of water with sewage, Peter Griess dilutes paradiazobenzol sulphuric acid with 100 parts of water and adds a little soda lye in excess. The solution must be used when fresh, as it soon becomes colored spontaneously. If when it is introduced into the water no change of color takes place within five minutes, the total absence of organic secretions or products of decomposition may be inferred. A yellow color shows the presence of such matter in proportions corresponding with its tone. With this test the author has made very delicate determinations.

A method of making phosphorous oxide by burning phosphorus in the air is described by Prof. T. E. Thorpe and A. E. Tutton. Pure phosphorous oxide crystallizes in thin monoclinic prisms, melts at 22.5°, solidifies at 21°, and boils unchanged in an atmosphere of nitrogen or carbon dioxide at 173°. When heated at 300° it decomposes, and is converted into phosphorus and phosphorous tetroxide. It is readily acted on by light and in bright sunshine turns yellow and eventually dark red. Cold water, contrary to the usual statement of the text-books, has very little action upon it. Hot water acts on it with explosive violence, and the red sub-oxide, phosphoric acid, and phosphoretted hydrogen result. On exposure to the air or oxygen it spontaneously oxidizes to phosphorous pentoxide, with a faint luminous glow if the pressure is diminished. It has well-

marked physiological effects, and some of the action heretofore attributed to phosphorus is probably due to it. So also is the smell that usually accompanies phosphorus, whose vapor as such is believed by Schönbein to be odorless.

A process for extracting oil patented by W. T. Forbes consists in treating oleaginous material with a solvent, then expelling the dissolved oil and solvent from the mass by centrifugal force; introducing steam to vaporize any of the solvent remaining in the residuum; and drying the same by applying centrifugal force. All the different steps of the process are applied while the material operated upon is contained in the revolving chamber of a centrifugal machine.

In his colorimetric method for determining tannin in barks, S. J. Hinsdale prepares a ferric liquor by adding solution of ferric chloride to solution of potassium ferrocyanide. A tannic solution is then made. The substance in which the tannin is to be determined is brought in contact with a little boiling water, and the solution is diluted with cold water. Six flat-bottomed glasses are set upon white paper, and in the first are put 5 drops of the solution to be titrated; into the others are put, respectively, 4, 5, 6, 7, and 8 drops of the solution of tannin. To each are then added 5 c. c. of the ferric liquor. After the lapse of 3 minutes the experimenter observes the tint of the tannin solution which corresponds most closely with the solution under examination.

For the rapid estimation of arsenic in ores, F. W. Boam uses a modification of the "Uranium acetate method," which is applicable to all ores containing arsenic, and which are attacked by HNO_3 . The author has tested it against other methods, and finds it superior to all for rapidity and accuracy.

Atomic Weights.—The Committee of Revision and Publication of the Pharmacopœia of the United States has published a table of atomic weights, prepared, at its request, by Prof. F. W. Clarke, upon the basis of the most recent data and his latest computations. The committee regards it as highly desirable for this table to be adopted and uniformly followed by chemists in general, at least for practical purposes, till it is superseded by a revised edition; and it requests that all calculations and analytical data which are to be given for its use or cognizance be based upon the values in the table. The basis to which all the atomic weights in the table are referred is $\text{O} = 16$.

In their estimation of the atomic weight of magnesium, W. M. Burton and L. D. Vorce employed, in order to obtain magnesium of exceptional purity, a method similar to that described by Dr. H. N. Morse for the preparation of pure zinc by distillation. Weighed portions of this pure metal were converted into the nitrate, and this was ignited to the oxide. Thus the errors arising from the presence of impurities and those involved in determining the impurities and correcting them are believed by the authors to have been avoided. The atomic weight given by this process was 24.211. Perfect crystals of magnesium were obtained during the experiments and made objects of study. From them magnesium appears to be more closely related to beryllium in its crystal form than to zinc.

Prof. Seubert's determinations of the atomic

weight of osmium have been completed, and give a final mean value of 190.3. The settlement of this question is regarded as very important, inasmuch as it removes the last outstanding exception to the periodic generalization. On the supposition that the chemical and physical properties of the elements are functions of the atomic weight, the atomic weights of the four metals of the gold-platinum group should increase from that of osmium up to that of gold. The accepted atomic weights of these metals previous to 1878 stood, however, in the reverse order. At that time Seubert took up the problem. The atomic weights of the several substances were gradually corrected, and they now stand: Osmium, 190.3; iridium, 192.5; platinum, 194.3; and gold, 196.7—an order fully in accord with the gradation of chemical and physical properties of the substances.

The atomic weight of rhodium has been re-determined by Prof. Seubert and Dr. Kobbé, of the University of Tübingen, with an accuracy which is regarded as leaving no doubt that the value of this constant has been arrived at within the ordinary limits of inevitable experimental error. The experiment was made by reducing the heated ammoniacal salt $\text{Rh}_2(\text{NH}_3)_4\text{Cl}_2$ in a current of pure hydrogen to metallic rhodium. The mean of ten experiments gave $\text{O} = 15.96$, $\text{Rh} 102.7$; or $\text{O} = 16.103$. Rhodium therefore retains the place in the periodical system marked out for it by its chemical behavior, between ruthenium, 101.4, and palladium, 106.3, and in the same vertical group as its analogue iridium.

Prof. F. P. Venable advocates making $\text{O} = 16$ the standard of reference for the atomic weights. Hydrogen, although its small atomic weight makes it the most convenient unit, does not furnish a convenient standard, because the ratio of the atomic weight of only a few of the elements can be compared directly with it. While the exact ratio of oxygen to hydrogen (usually written $\text{O} = 15.96$) would furnish the most suitable standard were it fixedly determined, its selection would not be wise, because it is still liable to correction. Since extreme exactness is unattainable and a compromise is necessary, the selection suggested offers the solution freest from objection. "The atomic weights are but relative numbers. To be in any respect constants, they must be relative to but one single element. With but few exceptions, the ratio to oxygen can be determined. In revision of atomic weights, then, this should receive the chief attention."

The determination of the atomic weight of lanthanum by Dr. Brauner, of Prague, is contradictory to Winkler's hypothesis that the element should be regarded as tetravalent, with an atomic weight of 180, instead of being, as has hitherto been accepted, trivalent, with an atomic weight of 138.5. Dr. Brauner reasoned, from the determinations of the specific heat of lanthanum, that the old figure was correct, and then proceeded to redetermine the atomic weight. His experimental method consisted in converting known weights of the oxide into sulphate. His value obtained for the atomic weight of the element is 138.2, which keeps it in its old place in the trivalent group of the periodic system marked off for it by its basic properties.

The atomic weight of beryllium has been de-

terminated by Drs. Krüss and Moraht by means of what is probably the purest oxide ever prepared. The value obtained, 9.05, is very nearly a whole number, being nearer to 9 than any value ever previously obtained. It therefore appears that the whole number 9 is more nearly approached the purer the materials are with which the experiment is performed—a result that has an important bearing in favor of Prout's hypothesis.

The atomic weight of copper has been determined by T. W. Richards from the analysis of cupric bromide, and found—that of silver being 108—to be 63.644.

Relations have been detected by M. Prud'homme between the shades obtained by the use of mordants in dyeing and the atomic weights of the substances. The shades appear to undergo continuous variations, which appear very distinct by the side of Mendeleef's classification of the elements in natural groups and periodic series. From numerous experiments made with some thirty-six elements, the author concludes that in each of Mendeleef's groups, if we consider the terms of the periods of the even or odd rank, there is a continuous variation in a determined direction from blue to red or from red to blue. The author continues his paper with more specific accounts of the variations.

Chemical Analysis.—Prof. Roberts-Austen expressed an apprehension in his address at the chemical section of the British Association that the wide range of study upon which a metallurgical student is rightly expected to enter may lead to diminution in the time devoted to analytical chemistry, and this most serious question, he said, should be pressed upon the attention of all who are responsible for the training of our future chemists. There can be no question that sufficient importance is not attached to the estimation of "traces," an analysis being considered satisfactory if the constituents found add up to 99.9, although a knowledge as to what elements represent the missing 0.1 may be more useful in affording an explanation of the defects in a material than all the rest of the analysis. This matter is of growing interest to practical men, and may explain their marked preference for chemists who have been trained in works to those who have been educated in a college laboratory.

It has been found by Prof. E. Shulze, of Zurich, and W. Maxwell, of Harvard College, that in the estimation of fatty matters in vegetable organisms the substituted glycerides do not become wholly separated by extraction with ether even in a great duration of time. If the materials which had been already extracted with ether were still further extracted with absolute alcohol, another portion of substituted glycerides was obtained, which in most instances was greater than the amount separated by the ether. The process of the alcohol extraction consisted in merely extracting the material already treated with ether and evaporating off the alcohol, and re-extracting the alcohol extract residue with ether. The reason for taking up the lecithins out of the alcohol extract was that it had been observed that those lecithins which were originally insoluble in ether became soluble in that menstruum when previously acted upon by alco-

hol. In cotton seed the proportion of lecithin to the total fatty bodies is very small, yet about 50 per cent. of those substituted glycerides were left in the material after extraction with ether for a period of fifteen hours. In certain other varieties of seeds, such as the legumes, beans, peas, vetches, etc., the total ether and alcohol extracts were composed of lecithins varying from 25 to 45 per cent.

The method of J. Weirich for detecting coloring matters fraudulently added to wine is founded on the action of air and light upon the coloring matters of wine spread out in an extremely thin layer. The wine is applied with a brush upon a piece of paper of good quality which is not pervious. It is kept for an instant in contact with the paper, which is then drained off and let dry. The coloring matters of wine give the paper a different tone from those of the coloring matters—vegetable, animal, or artificial—which serve for the sophistication of wines. The natural colors of wine and vegetable colors are transformed upon paper, each according to its nature. The artificial colors are transformed either very slightly or not at all. The process of A. Pagnoul depends on the property of soap lyes to destroy the natural coloring matter of wines without giving them the greenish tint communicated by other alkaline solutions and without affecting strange colors. Foreign coloring matters which are not decomposed by alkalies at an ordinary temperature (like safranin, eosin, etc.), or which they turn to a violet (like the tropeolins and cochineal), are detected by L. Sostigni's method by shaking the wine for five minutes with a solution of potassa one tenth its volume, and pouring the liquid into a filter of parchment paper in contact externally with water. After some hours a yellow liquid containing the oxidation products of the tannin is diffused. The coloring matters foreign to wine are fixed upon the parchment paper with their own colors. Natural wines color the paper yellow.

The reaction with nitric solution of ammonium molybdate is applied by G. Denigès for distinguishing arsenical spots from those of antimony. The suspected spots are mixed with a few drops of nitric acid; they dissolve instantly, whether they consist of antimony or arsenic. Heat is applied for a few moments and a few drops of ammonium molybdate in a nitric solution are applied. When arsenic is present, even if only in traces, a yellow precipitate soon appears, showing the forms of crystals—fine yellow stars with triangular branches, generally six in number, arranged in rectangular planes according to the axes of a cube—characteristic of ammonium arsenio-molybdate. Antimony gives nothing analogous.

G. Vortmann shows that in the determination of metals by electrolysis of their solutions it is essential, first, that the metal be separated out quantitatively, as such or in the state of a known compound; and, second, that the precipitate detained forms a uniform coating on the platinum capsule used as an electrode and adheres so firmly that no loss takes place on rinsing with water and alcohol, and that it undergoes no change during drying. Among the metals that have been hitherto determined electrolytically, iron,

cobalt, nickel, zinc, cadmium, bismuth, copper, mercury, silver, gold, tin, platinum, and antimony have been separated as metals, and manganese and lead as peroxides. Some of these metals present difficulties in electrolysis, because they form a uniform adhesive stratum only if present in small quantities. A uniform adhesive coating may be obtained by adding such metals as are apt to be deposited as a spongy mass, for which purpose mercury is convenient. By this method Vortmann has made a series of very interesting electrolyses, which are described in detail in his paper in the *Berichte* of the *Deutsche Chemische Gesellschaft*.

The asbestos method of milk analysis as described by Thomas Macfarlane to the Royal Society of Canada, in May, 1887, has proved so satisfactory at the Canada Experimental Farm, both as to accuracy and rapidity, that it has been adopted in the laboratory of the farm. Mr. Frank T. Shutt gives accounts of experiments, contrasting this process with others in which the total solids are estimated by evaporation in platinum dishes, and in which the fat is determined by weighing in flasks after exhaustion of the milk solids in a Soxhlet tube. In the former experiments the solids obtained were higher by the platinum method, but are believed to have been too high. It is observed that while the milk solids in the asbestos method are always white, those in the platinum method are more or less brown, showing that a change takes place in the latter process which does not ensue by the asbestos method. In the second series of experiments the results obtained by direct weighing were slightly the higher of the two. If it be granted that the total solids and fat can be accurately determined by this method, Mr. Shutt's tables show that the results are not variable, and that when duplicates are performed no large differences will have to be averaged in order to arrive at the truth.

It is remarked by Mr. T. W. Hogg that the method of determining iron in its alloys by decomposing with dilute hydrochloric or sulphuric acid, and oxidizing by means of a standard solution of bichromate of potash, is liable to error when copper is present. In such case the author advises solution in dilute hydrochloric acid, adding potassic chlorate, and boiling to expel chlorine compounds. The iron may then be reduced by means of a solution of sodium sulphite, and, after boiling away the excess of sodium sulphite, adding the bichromate in the usual manner.

For detecting metallic silver in the presence of lead, Alexander Johnstone suggests boiling the product obtained by heating the mineral with fusion mixture in nitric acid; neutralizing the solution with sodium carbonate, but leaving it slightly acid; and inserting in the prepared solution a strip of copper and one of zinc. The lead of the solution is deposited on the zinc, and most of the silver on the copper. This is then tested. If no silver is present in the solution, the copper foil when placed in it is hardly coated.

The novelty in Herr J. Wiborgh's volumetric method of estimating carbon in iron consists in the direct measurement of the carbonic acid produced from the oxidation of the carbon in the sample under investigation instead of weighing

it as potassium carbonate, as is usually done. This simplifies the operation, allows the analysis to be quickly performed, and admits of greater accuracy when working with small samples.

For the complete separation of copper from bismuth, instead of the inconvenient process of fusion with bismuth sulphide, Edward Matthey recommends as an effective method to fuse the alloy, and at a temperature a little above its melting point to add a small proportion of sodium monosulphide.

Hydriodic acid has been found by F. A. Gooch and E. W. Danner a satisfactory substitute in the separation of antimony from arsenic for the ferrous chloride of Fischer's original method and for the ferrous sulphate of the modification of Classen and Ludwig. In these methods the chlorides are reduced by means of ferrous chloride or ferrous sulphate and ammonio-ferrous sulphate, and the arsenic is volatilized by repeated distillations of the mixture with hydrochloric acid.

Chemical Synthesis.—An effort toward the solution of the complex problem of the synthesis of the proteids has been made by P. Schützen. The author had determined in previous researches the terms resulting from the decomposition of the proteic matters by hydration under the influence of bases. The question arose whether, in the inverse problem, the amides and amido-compounds of a relatively simple constitution produced in the decomposition could be recombined so as to form complex bodies approaching the proteic matters in constitution and the totality of their chemical characters. The author solved this question in the affirmative, and succeeded, by eliminating water and combining the ultimate and crystallizable products derived from the decomposition of albumen and fibrin under the influence of baryta, in forming a nitrogenous compound presenting great analogy with the peptones, which may rank in the class of the proteic compounds.

The mineral hornblende has been artificially reproduced in well-formed crystals by M. Krontschoff. His process essentially consists in digesting together in the presence of water, for a long period of time, in a vacuum, the various oxides contained in natural hornblende amphiboles. These ingredients were aqueous solutions of silica, alumina, ferric oxide (all dialyzed), pure ferrous hydrate, lime water, hydrate of magnesia, and caustic soda and potash, in suitable proportions. The mixture, which presented the appearance of a gelatinous mud, was heated in exhausted and sealed flasks to a temperature of 550° C. for three months. At the end of this time the mud had become much darker in color, with numerous brilliant little crystals, almost black, distributed through it. These, on examination, were found to consist of flattened prisms identical in character with hornblende.

The compound $3\text{Ti}_2\text{N}_2 + \text{TiCy}_2$, which is often found in iron furnaces on smelting titaniferous ores, may be formed, according to C. Ludeking, of St. Louis, in the inner flame of a Bunsen burner, which is made slightly luminous by a proper regulation of the supply of air. On account of the characteristic appearance of this compound, very small quantities of titanic acid can be quickly detected. The substance in question is dissolved with a little sodium carbonate

in the loop of a thin platinum cone, and all the sodium is volatilized in the inner flame. If titanium is present, the coppery-red compound represented by the formula is found, and may be easily recognized on the platinum wire. Inversely the reaction serves for the detection of cyanogen in flames.

Indigocarmin, the commercially important disulphonic acid of indigo, has been synthesized by Dr. Heymann at Elberfeld. The reaction consists merely in acting with excess of fuming sulphuric acid upon phenyl glycol, the aniline derivative of glycollic acid. The tints obtained with this product are much superior in beauty and clearness, because of its greater purity, to those obtained with even the better kinds of commercial indigocarmin. Sixty per cent. of the theoretical yield of the process has been obtained in Dr. Heymann's experiments.

The mineral daubreelite, or schreibersite, has been artificially reproduced by M. Stanislas Meunier by treating at a red heat with sulphuretted hydrogen (1) a mixture in the proper proportions of ferrous chloride and chromic chloride; (2) very finely powdered natural chrome iron ore; and (3) an alloy of iron and chromium. The last method yields the best result.

A. Baur obtains artificial musk by the nitration of isobutyltoluene. It is a solid substance, crystallizing in small white laminae, which have the pure odor of musk in extraordinary intensity. The process has been patented and sold to certain perfumers in Mulhouse.

Assuming that methyl alcohol, H_2COH , is the primordial alcohol, from which the primary, secondary, and tertiary alcohols are derived by the respective substitution of carbon radicals C_nH_x for one, two, or three atoms of hydrogen, Paul Henry has effected the direct synthesis of the primary alcohols by the reaction of the organo-zinc compounds upon the simple monoclinic methylic ethers.

Agricultural Chemistry.—The experiments at Rothamstead since 1889 on the fixation of free nitrogen by papilionaceous plants have been made on annual plants and on plants of longer life. In the first experiments the results at mature growth, or when the plants were nearly ripe, were observed. It was found that without microbe seeding of the soil there was neither formation of nodules on the roots nor assimilation of free nitrogen. In another series of experiments the roots and nodules were examined at different stages of growth. The general results pointed to the conclusion that in the case of the annual when the seed is formed and the plant is more or less exhausted both the actual amount of nitrogen in the nodules and its percentage in the dry substance are greatly reduced, but that with the plant of longer life, although the earlier-formed nodules become exhausted, others are formed, making provision for future growth. The facts at command did not favor the conclusion that under the influence of the symbiosis the higher plant itself was enabled to fix the free nitrogen of the air by its leaves. Nor did the evidence point to the conclusion that the nodule-bacteria became distributed through the soil and there fixed free nitrogen, the compounds of nitrogen so produced being taken up by the higher plant. It seemed more consistent with

experimental results and with general ideas to suppose that the nodule-bacteria fixed free nitrogen within the plant, and that the higher plant absorbed the nitrogenous compounds produced. In other words, there was no evidence that the chlorophyllous plant itself fixed free nitrogen, or that the fixation takes place within the soil, but it was more probable that the lower organisms fix the free nitrogen. If this should eventually be established, we have to recognize a new power of living organisms—that of assimilating an elementary substance. But this would only be an extension of the fact that lower organisms are capable of performing assimilation, a work which the higher can not accomplish; while it would be a further instance of lower organisms serving the higher.

According to the researches of MM. Berthelot and André, plants take up sulphur incessantly until they flower, the relative proportion of the element being greater by one third during the first period of vegetation. The sulphur in the state of organic compounds reaches its maximum during inflorescence, and then declines. It seems as if the sulphates derived from the soil were reduced at first and then regenerated after flowering in consequence of an internal oxidation. But this supposes that the sulphur is entirely derived from the soil in the state of sulphates, while a portion may be derived directly from organic sulphur compounds that exist in plenty in the soil. The latter opinion is supported by the fact that organic sulphur is found in quantity in the roots, except at the beginning of flowering. Toward the end of flowering it abounds at once in the roots and stems.

The occasional existence of copper in cereals, peas, beans, etc., as a natural constituent long known, has been brought under the attention of Mr. William Johnstone in a manner that necessitated the examination of a large number of samples of wheat and barley. Fifteen per cent. of the samples were found to contain greater or less proportions of copper. The author supposes that it is derived from the sulphate of copper with which the ground is dressed for the protection of the seed from vermin.

For the estimation of nitrogen in such fertilizing substances as dried blood, shoddy, fleshings, soot, etc., Vincent Edwards recommends as an accurate and reliable method, and yet not too costly, a modification of Kjeldahl's process, particularly in the apparatus.

Percy T. and Grace C. Frankland have been engaged during the last three years in endeavoring to isolate the nitrifying organisms. Nitrification having been in the first instance induced in a particular ammoniacal solution, was carried on through 24 generations. Transferred to gelatin, the organism either failed to grow there, or growing, refused to nitrify after being passed through the medium. Experiments were then made in isolating the organism by the dilution method; and, after a large number of experiments, the authors obtained an attenuation of about one millionth of the original nitrifying solution employed, which nitrified, but on inoculation with gelatin-peptone refused to grow, and was seen under the microscope to consist of numerous characteristic bacilli hardly longer than broad, which may be described as bacillo-

cocci. Although the bacillo-coccus obstinately refuses to grow in gelatin when inoculated from these dilute media, it produces a characteristic though slow growth in broth. Nitrification was also induced in ammoniacal solutions by inoculating from such broth cultivations.

Chemistry of Foods.—When milk is sterilized by heating in loosely plugged flasks immersed in a steam bath, surface evaporation does not occur, and little or no pellicle is formed on the surface. Dr. A. R. Leeds has found that the differences in the behavior of raw, boiled, and sterilized milk when treated with dilute acid were not as striking as had been anticipated. But when ordinary raw milk was diluted with 20 times its volume of water and the precipitate was filtered off, the dilute acid filtrate gave on boiling an additional precipitate. Milk which had been heated for an hour (sterilized) or boiled for half an hour behaved differently. It gave a larger amount of precipitate with dilute acid, but yielded no further precipitate on boiling the filtrate. Plate cultures of Swiss condensed milk showed it to be entirely sterile, no bacterial colonies appearing in it when the plates were kept several days. Polariscopic determinations were made of the amount of milk-sugar present after each heating; the raw milk contained 4.18 per cent. No change could be perceived till the end of six hours in the steam bath, when the sterilized milk had become strongly brownish yellow, like an infusion of coffee to which a large amount of milk had been added, and the percentage of milk-sugar had fallen to 3.94. It then steadily diminished until at the end of forty-eight hours the milk-sugar had disappeared. The process of heating to prepare the sterilized condensed milks of commerce is not carried far enough to lower perceptibly their percentage of milk-sugar. This is shown by an analysis of both an American and a Swiss preparation, concerning which it is remarked that the composition of the two milks is surprisingly similar when we consider that the cattle fed on the Swiss Alps and in the Western State from which the American sample came were of different breed, and that their feeding, care, etc., were also widely diverse. Condensed milk properly prepared is, in fact, sterilized milk in a concentrated, convenient, and portable form. It is important to compare it with sterilized milk, prepared and sold in sterilized flasks, but without condensation. Samples of a particular brand of sterilized milk obtained in midsummer exhibited a separation or fats in masses of considerable size. By moderate warming and shaking this fat could be partially diffused through the milk, but not in such a manner as to bring the sterilized milk back to the appearance of ordinary milk, or of milk on which the cream has risen on standing and then has been shaken up again with the milk. Samples obtained in December did not exhibit this appearance, but resembled rich milk; and the separation of the fat in the former case was probably due to the samples having been kept for some time in the laboratory. The most striking feature of the samples was their high percentage of solids. The author is of the opinion that the period of one hour usually recommended for keeping milk at the tempera-

ture of boiling water in order to sterilize it is excessive. Experiments have shown that in the majority of cases the sterilization is complete in half an hour or less time.

An albumose and a ptomaine have been isolated by E. A. von Schweinitz from the products severally of the germs of the hog cholera and the swine plague. The names *sucholotoxin* and *sucholoalbumin* have been given to the substances derived from the hog-cholera cultures, and *suplagoatoxin* and *suplagoalbumin* to those derived from the swine-plague cultures. A subcutaneous injection of a small quantity of these substances is sufficient to produce death in guinea-pigs in from twenty-four to forty-eight hours. If, however, a much smaller quantity is injected and the injection is repeated a number of times, the animals are protected from the corresponding disease when communicated by direct inoculation with the germ. The author and Dr. W. H. Gray have also produced great resistance and subsequently immunity from diphtheria in guinea-pigs by first treating them with the chemical products obtained from cultures with the germ.

Two persons in Mansfield, Ohio, having been made sick by eating pie made from canned pumpkin, the attending physician pronounced the case one of lead poisoning. A specimen of the canned pumpkin was examined by Prof. H. A. Weber, who found that it contained an amount of stannous salts equivalent to 6.4 maximum and 5.14 minimum doses of stannous chloride per pound. Another can from the same lot contained tin salts equivalent to 7 maximum and 56 minimum doses of stannous chloride per pound. The unexpected large amount of tin salts in such an insipid article as canned pumpkin, and the ill effects of the consumption of the viand, suggested the advisability of extending the investigation to other canned goods in common use. A line of articles was purchased in open market as sold to consumers, no pains being taken to procure old samples. The collection embraced fruits, vegetables, fish, and condensed milk. Except the condensed milk, every article examined was contaminated with salts of tin. In most cases the amount present was so large that there could be no doubt of danger to health from the consumption of the food.

The experiments of Dr. J. H. Garrett as described in his book on "The Action of Water on Lead," show that if a water is fairly pure it will act upon lead or dissolve it to a certain extent, even if no acid is present. The author observed that distilled waters that are neutral or even very faintly alkaline can act upon lead. The lead, it seems, derives the oxygen necessary for its corrosion, not so much from the free oxygen or any other oxygenous gas existing in solution in the water, as from nitrates and nitrites present. The quantity requisite for action, at least in the absence of any alkaline-earthly carbonates, is extremely small. Its origin may be sought "in the decomposition of the organic matter which such waters invariably contain."

A new method proposed by Raoul Brullé for detecting olive oil and seed oil in natural butters and oleomargarine depends on the changes of color produced by contact with solution of silver nitrate in ethylic alcohol. Olive oils sooner or later take a fine green color, which is lighter in

the superior qualities; pure cotton-seed oil is turned black; oil of earth-nuts (*Arachis*) takes a red-brown color and finally turns green, losing its transparency; oil of sesame takes a deep-red color and remains reddish; oil of colza takes yellowish-green colors and becomes turbid; natural butter preserves its natural color; oleo-margarine becomes a brick red, and this may be detected even in samples containing as little as 5 per cent. of margarine.

A discussion in the American Chemical Society at its annual meeting for 1891 resulted in the conclusion that carbonate of ammonia is the best substance of the kind for use in making bread and in baking-powders. Ammonia, it was said, makes the gluten of the flour more soluble, to the consequent improvement of the bread in digestibility. Because of its extreme volatility, the salt is completely expelled from the bread in the process of baking. Experiments by Prof. J. W. Mallet show further that the ammonia serves to neutralize any organic or lactic acid present in the flour.

Vegetable transformations, according to M. Em. Bourquelot, go on in mushrooms even after they are gathered, and may in a few hours affect the disappearance of trehalose and the production of mannite. The author has therefore taken the precaution of plunging his mushrooms into boiling water immediately after they are gathered, so as to arrest all change.

A manufactory of spurious coffee has been detected at Lille, at which were used 15 kilogrammes of chickory, 35 kilogrammes of flour, and 500 grammes of iron sulphate—the last to imitate the natural color of the grain. Luster was given by means of an oil.

Miscellaneous.—Continuing his investigations of allotropic silver, Mr. M. Carey Lea has found that the gold and copper colored forms on the one hand, and the blue, bluish-green, and steel forms stand in close relations to each other. Both are capable of passing into the yellow intermediate form indifferent to reagents. Blue silver can also be converted, through the agency of sulphuric acid, into yellow at ordinary temperatures, with retention of its active properties. By other experiments the author finds that from a single solution, and using one substance only as a precipitant, the whole range of different forms of allotropic silver can be obtained, by simply varying the proportions of the precipitant. A well-marked tendency of acids is to give rise to the yellow product, and of alkalis to the blue. Both substances can be obtained from neutral solutions, and slight changes are sufficient to alter the product. While the presence of an organic substance has been found most usually conducive to the production of the allotropic form, this is not essential, and the author has obtained it, transitorily, with hypophosphorous and phosphorous acids. Light has a reversing effect upon this form of silver, first exalting its sensitiveness, and then destroying it. The phenomena connected with the reduction of silver, observed under a variety of conditions, seem to lead up to the conclusion that when the reduction is direct—from the condition of the normal salt or oxide to that of the metal—the reduced silver always appears in its ordinary form; but when the reduction is indirect, when the change is first to

suboxide or to a corresponding subsalt, the silver presents itself in one of its allotropic states. The facts on which this conclusion is based lead to the question whether silver exists in its subsalts in the allotropic form. Among the facts that support this view is the rich and varied coloration of the subsalts corresponding to the variety of color of allotropic silver, while the normal salts when formed with colorless acids are mostly colorless. On the other hand, the greater activity of allotropic silver and its less specific gravity seem to indicate a simpler molecular constitution than that of normal silver.

To obtain a fuller knowledge of the behavior of palladium toward the electric current, Edgar F. Smith and Harry F. Keller first experimented in the electrolysis of the double cyanide in an excess of potassium cyanide. Metallic deposition did not occur until after the expiration of thirty-six hours, or till the excess of potassium cyanide had been converted into alkaline carbonates. The deposition was black, but the precipitation was not at all complete. No deposition of oxide was noticed on the positive pole. With a feeble current acting on a solution of palladium chloride in the presence of a large excess of potassium sulpho-cyanide, the deposition was exceedingly rapid, accompanied with noticeable spongy spots, and black. The next attempt was made with palladamium chloride, in just sufficient ammonium hydroxide to retain it in solution. The precipitation was incomplete after a night of action, but a deposition at the positive pole, which first gradually increased in mass and assumed a black color, had disappeared; and in all instances where the ammonium hydroxide was in decided excess the precipitation of oxide at the positive pole was not observed. The palladium thrown out upon the platinum dish in these experiments being very slow in dissolving, the platinum dishes were in subsequent experiments first coated with a layer of silver. In these experiments, of which six are described, the precipitations were complete, the differences between the amounts found and the amounts calculated coming within the limit of error, and the deposits were bright, metallic, and dense, without sponginess.

Continuing his experiments in electrolytic separations, Mr. Smith, assisted by Leo K. Frankel, acting upon the observation made in the palladium experiments that the deposition of that metal from the solution of its double cyanide was not possible so long as any undecomposed potassium cyanide remained in the solution, attempted the separation of the palladium from the metals which are deposited from their double cyanide solutions. With solutions of mercuric chloride and palladium chloride *plus* potassium cyanide, the separation of mercury was satisfactorily effected in sixteen hours. The separation of mercury from arsenic likewise proceeded without difficulty. The separation of cadmium from arsenic was not complete unless the arsenic existed in the solution as the higher oxide. Similar conditions control the separation of silver from arsenic and of copper from arsenic, but in the latter case a stronger current is necessary. Satisfactory results were obtained in the separation of copper from arsenic in a solution containing an excess of ammonia; but

the method requires skill and close attention to details. Similar experiments, with successful results, are recorded in the separation of mercury, silver, and cadmium from tungsten and from molybdenum, and of copper from bismuth.

According to investigations by Prof. W. R. Dunstan and T. S. Dymond of the conditions, under which hydrogen peroxide is formed from ether, ordinary ether, prepared from methylated spirit, yields that compound when it is exposed for several months to sunlight or the electric light. Contrary, however, to the usual statements, pure ether and ordinary ether which has been purified by treatment with dry chromic acid do not give a trace of hydrogen peroxide when exposed to light under similar conditions. Neither water nor dilute sulphuric acid was found to form hydrogen peroxide when exposed to light in contact with air. The production of the peroxide from ether was referred by the authors to the presence of a minute quantity of impurity in the ether employed. Hydrogen peroxide is formed when ozone acts on ether in the presence of water, and is also produced under certain conditions during the slow combustion of ether in contact with water.

The methods in use for the disposal of sewage are divided by Mr. C. G. Moore into three classes: Lime processes, in which a good effluent is the only thing aimed at, while the sludge is worthless; processes in which lime is not used, the best known of which is that of precipitation by a mixture of clay, alum, and charcoal with a little blood, whereby a sludge of some little value is obtained; and irrigation, which is objectionable on practical and sanitary grounds. Mr. Moore proposes a way of distilling ammonia from the sludge cake, in which the residue is made to descend in the furnace to serve as fuel for the succeeding charge. The furnace was kept burning continuously, and fed with sludge cake alone. The sludge, although some of it contained 30 per cent. of water, gave ample heat for its own combustion; and it might be used, if desired, to raise steam in the same furnace. The ammonia comes over with the liquor just as in gas works, together with a quantity of light, buttery tar, which floats on the liquor. The cakes are reduced to a fine ash, which, if the temperature is raised by increasing the blast, can be changed into clinker. A very slight blast is sufficient to distill with. By this method the author obtained 80 per cent. of the theoretical yield of ammonia.

CHILI, a republic in South America. The executive power is exercised by a President, elected for five years by the indirect vote of the nation, and not re-eligible for the succeeding term. He is assisted by five Cabinet ministers, in charge of the main departments, and shares his authority with a Council of State, of which five members are nominated by him and six are elected by Congress. The members of the Cabinet are members of the Council of State *ex officio*. The legislative power is vested in the Congress, consisting of the Senate, the members of which are elected for six years, and of the Chamber of Deputies, in which the term is three years. The Senators, forty in number, are elected to represent the provinces by the direct vote of the people, and the Deputies, of whom

there are 125, are chosen by the same electors (every Chilean having a vote who can read and write and is twenty-one years of age), in the proportion of one for every 30,000 inhabitants and fraction thereof in excess of 15,000 in each department. José Manuel Balmaceda was elected President in 1886, to serve till Sept. 18, 1891. The ministry constituted on May 30, 1890, consisted of the following members: Secretary of the Interior, E. S. Sanfuentes; Minister of Foreign Affairs, Worship, and Colonization, J. E. Mackenna; Minister of Justice and Education, Bañados Espinosa; Minister of Finance, T. N. Gandarillas; Minister of War and Marine, J. Velasquez; Minister of Industry and Public Works, J. M. Valdes Carrere.

Area and Population.—The area of Chili is 293,970 square miles, including 75,292 square miles in Patagonia and Tierra del Fuegos; the territory of Antofagasta, that formerly belonged to Bolivia, of which the area is 60,968 square miles, the district of Tarapaca, 19,300 square miles in extent, that was ceded by Peru in the treaty of Oct. 20, 1883; and the Tacna province, with an area of 8,685 square miles, the inhabitants of which are to decide at the end of ten years whether it shall be Peruvian or Chilean territory. The population of the 23 provinces was estimated in the beginning of 1890 at 2,715,400, including 2,757 in the territory of Magalanes, embracing the Chilean possessions south of 47° of south latitude. Santiago, the capital, had 200,000 inhabitants in 1885, and Valparaiso, its seaport, had 105,000. The next largest towns are Talca and Concepcion, with 24,000 each. There were 87,077 foreign residents in Chili in 1885, of whom 57,882 came from Peru, Bolivia, and the Argentine Republic, 6,808 were Germans, 5,303 British, 4,198 French, 4,114 Italians, 2,508 Spaniards, 1,275 Swiss, 1,164 Chinese, 924 Americans, and the rest from other parts of Europe and America. The estimates of population are based on the census of 1885, which is known to be imperfect. The country is supposed to have not less than 3,173,000 inhabitants, including 50,000 savage Indians.

Finance.—Aside from the nitrate duty, which pays one third of the expenses of the state, import duties constitute the main source of revenue. The total receipts in 1888 were stated to be 71,135,501 pesos, or dollars, and the expenditures 46,135,501 pesos. The budget for 1890 made the revenue 90,645,735 pesos, and expenditures 59,387,200 pesos. For 1890 a revenue of 58,000,000 pesos was expected in addition to the balance of 31,257,526 pesos brought over from 1889, and the total ordinary expenditure was estimated at 67,069,809 pesos. The public debt on Jan. 1, 1890, amounted to 93,617,955 pesos, including 22,487,916 pesos of paper currency. The foreign debt was 47,116,460 pesos, and the internal debt 24,013,579 pesos.

The Army and Navy.—The military law of Dec. 30, 1887, fixed the strength of the army at 5,835 men, consisting of 2 regiments of field artillery, a battalion of coast artillery, 8 battalions of infantry, 1 of engineers, and 3 regiments of cavalry. The National Guard consisted of 48,530 men. The regular army had 5 major-generals, 7 brigadiers, 29 colonels, 76 lieutenant-colonels, and 824 subordinate officers.

The navy in January, 1890, comprised 3 iron-clad battle ships, 1 deck-protected cruiser, 2 torpedo cruisers, 3 corvettes, 3 rams, 2 transports, 2 gunboats, and 10 first-class and 2 second-class torpedo boats. The "Almirante Cochrane" and the "Blanco Encalada" were built in England, by Sir. E. J. Reed, in 1874 and 1875, and each had a displacement of 3,500 tons, engines of 2,900 horse-power, and compound armor 9 inches at the water line, and could steam 12 knots an hour. The armament of the former consisted of 6 12½-ton guns mounted in a central battery, and that of the latter of 4 18-ton and 2 7½-ton guns, in a casemate covered with 8-inch compound plates. The third ironclad is the "Huascar," built in 1865, and captured from Peru in the war of 1879, having 2,000 tons displacement, 1,050 horse-power, 4½-inch armor at the water line, and 2 12-ton guns mounted in a turret, protected by 5½-inch armor, besides 2 40-pounders. The protected cruiser "Esmeralda," built by Armstrong, in 1883, is of 2,810 tons displacement, with 1-inch armor on her convex deck running down below the water line, 6,500-horse engines, a speed of 18½ knots, a cruising radius of 2,200 miles at 10 knots speed, and an armament of 2 25-ton breech-loaders and 6 4-ton guns, besides machine guns and 3 torpedo tubes. The "Almirante Lynch" and the "Almirante Condell," twin torpedo cruisers of 750 tons, are reputed to be able to make 21 knots an hour and to carry coal for a cruise of 2,700 miles. Besides automatic torpedoes, they carry 3 14-pounder and 4 3-pounder rapid-firing guns. The other vessels are of old types, including the "O'Higgins" and the "Chacabuco," wooden vessels of 1,100 tons; the "Magallanes" and the "Pilcomayo," of 800 and 600 tons respectively, built of wood and iron; and the "Abtao," also a composite ship, of 1,050 tons, all slow, and armed with light guns. In 1890 the *personnel* of the navy comprised 5 rear-admirals, 59 captains, 27 lieutenants, 160 other officers, and 1,609 sailors. There were 90 cadets in the naval academy at Valparaiso. The "Presidente Pinto" and the "Presidente Errazuriz," steel deck-protected cruisers of 2,080 tons, with wood and copper sheathing, calculated to steam 19 knots and carry coal for a voyage of 4,500 miles, and each intended to carry 4 6-inch and 2 4½-inch Armstrong breech-loaders, 10 rapid-fire and machine guns, and 3 tubes for Whitehead torpedoes, were then building in France. The "Capitan Pratt," a steel armor-clad of 6,000 tons, designed to steam 17 knots, was in a less advanced stage, and another deck-armored cruiser of 4,500 tons and two torpedo gunboats were begun.

Production and Commerce.—The majority of the population follow agriculture. The wheat crop averages 21,000,000 bushels. The annual wine product amounts to 24,000,000 gallons. The country is rich in valuable minerals, producing an average of 750,000 tons of nitrates, 40,000 tons of copper, and considerable quantities of silver and gold. The total value of the imports in 1889 was 65,090,013 pesos, of which 10,887,636 pesos represent textile manufactures, 6,766,985 pesos stand for sugar, 5,083,715 pesos for cattle, 2,992,905 pesos for coal, 2,895,630 pesos for manufactures of iron, 1,415,246 pesos for bagging, 870,194 pesos for timber, 817,-

940 pesos for tea, and 793,425 pesos for wine. The exports of mineral products amounted to 56,452,089 pesos; agricultural products, 7,481,478 pesos; specie, 794,017 pesos; manufactures, 52,966 pesos; various products, 55,453 pesos; re-exports, 1,127,097 pesos. The values exported of the staple articles were as follow: Nitre, 36,387,210 pesos, against 33,866,196 in 1888 and 28,690,970 in 1887; bar copper, 5,689,329 pesos, against 13,878,439 in 1888 and 6,993,137 in 1887; silver, 4,906,791 pesos, against 7,723,957 in 1888 and 8,291,920 in 1887; wheat, 2,915,215 pesos, against 4,548,729 in 1888 and 5,663,333 in 1887. Of the total imports in 1889, the port of Valparaiso received 45,752,290 pesos; Iquique, 5,575,521 pesos; Talcahuana, 4,974,425 pesos; and the rest passed through Coquimbo, Antofagasta, Pisagua, and Coronel. Of the total exports, Iquique shipped 22,896,805 pesos; Pisagua, 15,536,174 pesos; Valparaiso, 9,691,920 pesos; and the other ports between 2,000,000 and 4,000,000 pesos each. The exports to Great Britain amounted to 56,898,407 pesos; to Germany, 4,751,990 pesos; to France, 4,295,055 pesos; to the United States, 2,070,804,694 pesos; to Peru, 2,071,304 pesos. In 1888 the imports from Great Britain were 26,351,141 pesos in value; from Germany, 14,046,577 pesos; from France, 6,181,513 pesos; from the United States, 3,133,173 pesos; from Peru, 4,345,497 pesos.

Navigation.—The number of vessels of over 100 tons in the Chilean commercial marine on Jan. 1, 1890, was 152, of the aggregate burden of 102,391 tons, and of these 29, of 30,934 tons, were steamers. During 1889 there were 11,109 vessels, of 9,723,998 tons, entered, and 11,286, of 10,174,173 tons, cleared, at all the ports. Of these, about 40 per cent. were Chilean, 30 per cent. British, and 30 per cent. of other nationalities. English, French, and German steamers run between Chilean ports and Europe by way of Cape Horn, and English and Chilean lines along the Pacific coast northward.

Communications.—The first railroads in South America were built in Chili by American engineers. The aggregate mileage open in 1890 was 1,700, of which 670 miles, built at a cost of 48,247,398 pesos, were state property. The telegraph system embraced 13,730 miles, the state owning 8,000 miles, over which 603,628 messages were dispatched in 1889. The postal traffic consisted of 17,606,056 letters and 24,715,629 newspapers and circulars.

Constitutional Conflict.—The Chilean Constitution, adopted in 1833, was copied from that of the United States. The social organization of the country was rather feudalistic than democratic. The owners of the soil and of the mines, descendants of the Spanish conquerors, constituted an oligarchy which for many years ruled in accordance with its aristocratic predilections and the views of the clergy, under the name of the Partido Conservador or Conservative party. The clash with modern ideas and rivalry between leaders led to revolutionary outbreaks in the middle of the century, which ended in the triumph of a form of Liberalism that was far from satisfactory to the Radicals, and a period of quiet progress succeeded under the rigorous administration of President Montt and his minister, Varas. The Constitution was revised in 1874, and some belated reforms were introduced

in the way of extension of the voting franchise, public education, and religious tolerance. Save in the one struggle in which the parties resorted to arms, the political development of Chili was free from civil disturbances, and the ruling class was distinguished among the Spanish-American nations not only for wealth and education, but for its talent for government and love of constitutional liberty. The republic was called "the England of South America," and it was a common boast that in Chili a *pronunciamiento* or a revolution was impossible. The spirit of modern Liberalism became more prevalent. The Conservative or Clerical party withdrew from electoral contests, although it still exercised a restraining influence in political life, being composed of the wealthiest families and the whole body of the clergy. The Nationalists, as the *Monttvaristas* came to call themselves, counting in their ranks many distinguished lawyers, judges, scholars, and diplomatists, lost ground, and the Advanced Liberals grew in influence and power.

As the Liberal party became all-powerful it split into factions, divided by questions of principle and by struggles for leadership and office. Practices have sprung up in the system of government, founded rather on custom than on constitutional law, by which it is assimilated in some respects to the responsible or parliamentary government of European states, and especially of England. Almost from the beginning it has been the custom of Presidents to choose as ministers representatives of the dominant elements in Congress and to dismiss them after a vote of censure. Congress can withhold supplies, and has another effective check over the Executive in the annual bill to fix the forces on land and sea, which corresponds exactly to the English mutiny act. These safeguards have compelled Presidents generally to act in harmony with the majority in Congress. The patronage of the Chilean President is enormous, embracing not only the general civil service, but local officials, except in the municipalities, and all appointments in the army and navy and in the telegraph and railroad services and the giving out of contracts. The President has always been able to select his successor, and has exercised this power, usually in harmony with the wishes of influential statesmen, sometimes calling a conference of party chiefs to decide on a candidate.

In the course of time the more advanced wing of the Liberals grew more numerous than the Moderates. The most radical section had its nucleus in a Reform Club in Santiago, composed of young university men, of whom Balmaceda was the finest orator. Entering Congress in 1868, he took a leading part in debates. He was one of the founders of the new Liberal party that demanded large changes in the Constitution and gained rapidly in strength, particularly when the wave of national enthusiasm that followed the victory over Peru swept over the country. He added greatly to his reputation by his services as minister to the Argentine Republic during the Peruvian war, and when made Minister of Foreign Affairs, by President Santa Maria, in 1885, he was the most popular man in the country; but his claim to the presidential succession was contested by various other aspirants—older politicians and leaders of factions striving for

supremacy in Congress. He was elected by an overwhelming majority, and as President enjoyed an unexampled degree of popularity. For two or three years the politicians who had been his party associates worked in harmony with his ideas. A thorough system of popular education, the separation of church and state, and the development of democratic government were the aims he followed with the support of the majority in Congress. A system of normal schools was established, and expensive school-houses were built in all parts of the country. The cemeteries were secularized, a civil-marriage law was passed, religious freedom was decreed, and sectarian teaching was banished from the schools and colleges. The Government carried out internal improvements on a grand scale, building railroads, dredging harbors, making dry docks, wharves, and piers, and the success of the administration was so striking, the progress and prosperity of the country so undeniable, that many of Balmaceda's former enemies came over to his side. At the flood of the democratic tide he was the most popular man in South America. But when the old territorial families saw the seats in Congress and the posts in the civil service that had been their prerogative filled by new men, and fortunes made by upstarts where all chances had been at their disposal, then a reaction set in, corruption was scented, and Moderate Liberals, joining hands with the Nationalists and the reviving Conservative party, formed an opposition of respectable strength. In the earlier part of his administration Balmaceda had the co-operation of the Nationalists, who were represented in the Cabinet. In the last two years of his term, when the time drew near for selecting his successor, defection and revolt and the rivalries of aspirants for the succession threw the party into disorder and angered its hitherto unquestioned leader. After the resignation of the Cabinet in 1888 the Nationalists declined to take part in the next one, and their secession was followed by the breaking up of the administration party into warring factions. When coolness arose between him and the leaders of the party, he sought other advisers, and made the broker Sanfuentes, who had been his business agent, his chief confidant. President Balmaceda had appointed one ministry after another, seeking to satisfy the different wings of the Liberal party. The ministry of October, 1889, of which Mariano Sanchez Fontecilla was chief, with whom were associated Isidoro Errazuriz, Pedro Montt, Juan Costellon, and others chosen from various groups, was designed to bring about harmony in the party, as it contained the chiefs of five separate factions of the Liberal party, and at first it had a majority in the Chamber of Deputies of 73 to 64. The hostility that the President had aroused in society, to which the press gave free expression, was very bitter before the opposition in Congress grew formidable, and he had obtained the power of the Executive and given grounds for charges of arbitrary conduct that was contrary to precedents, if not against the letter of the Constitution, in carrying out the important innovations that Congress had sanctioned in the face of obstacles raised by powerful opponents. When the Conservatives and *Monttvaristas* united and were

joined by dissentient Liberals, it was suspected that the coalition intended to take advantage of the division in the Liberal party to elect the head of the Conservative party, Augustin Edwards, to the presidency and undo the democratic reforms. The President, on the other hand, persisting in the policy that had at first won praise from every quarter, and finding new agents when his old coadjutors stood aloof or went over to the other side, was accused of seeking to form a personal party in order to perpetuate his power by nominating some mere tool to succeed him as President. In January, 1890, the Opposition were strong enough to place their candidate in the chair when the House of Representatives organized. The ministry resigned, and a conflict between the Executive and legislative branches of the Government was openly begun when the President appointed a Cabinet of his own selection, giving a portfolio to the obnoxious Sanfuentes, and placing at its head Adolfo Ibañez, who could receive no support from Congress. This ministry had to face an overwhelming majority against the President, which treated him as a dictator and began to pass hostile laws and resolutions that were vetoed, and refused to consider the measures that he recommended.

The ministers were cited before the Chambers and questioned about the manner of their appointment. They either declined to answer, or answered in a way that increased the animosity of Congress, which finally passed a vote of censure, in obedience to which, as was usual, the Cabinet resigned. Then Balmaceda appointed a ministry in open defiance of Congress, with Sanfuentes at its head, the man who was already spoken of as his selected candidate for the presidency. He prepared for the struggle that he invited by removing the chiefs of the administration of the departments and replacing them with men devoted to himself and his policy, and making changes in the police, the militia, and, to some extent, in the army and navy commands. The press denounced him as a dictator, and indignation meetings were held in every town. Balmaceda and his supporters pretended to be not only the champions of the people against the aristocracy, but of the principle of Chili for the Chilians. The banking house of Edwards, the firm of the Conservative leader, was associated with Col. North, the Englishman, in the ownership of vast nitrate deposits in the north. The Chilians are as jealous of foreign influence as any of the South American peoples, and looked on the growing activity of foreign enterprise in the country with mistrust. The acquisition of railroads not already owned by the state and the reservation of mining rights for Chilian citizens formed a part of Balmaceda's declared policy. The presence of European workmen in the mines, seaports, and nitrate districts was resented by the native laborers, and in June a series of riots broke out in Valparaiso, Coquimbo, Iquique, Arica, and other places. These were ascribed by the Opposition to machinations of the President, whose motives were supposed to be to gain a popular following and to produce disturbances that would furnish an excuse for a dictatorship. The administrative *personnel* was so changed that *intendentes* of provinces, gov-

ernors of departments, *subdelegados* of counties, inspectors of police, commanders of the national guard, and chiefs of police stood at the beck of Balmaceda, ready to act in concert.

The Congress, when it met in ordinary session on June 1, instead of summoning the ministers before it for explanations, as was usual, carried a vote of censure in both houses, and showed a firm determination to compel the President to take his Cabinet officers from the majority and remove all officials who were attached to his political fortunes. The time was approaching for the election of municipal officers, Deputies, and Senators. These minor elections would virtually decide the subsequent election of the President. It was a novel thing for the Congress to be in antagonism to the President, and for it to attempt to secure the nomination and election of a successor opposed to his policy. Yet such a contingency had long been contemplated by Balmaceda's former party, which had adopted the principle of liberty of election as the main plank in its platform, and proposed schemes for purifying the ballot and taking the electoral machinery out of the hands of the Central Government. To deprive the President of his power to control the elections and prevent the election of Sanfuentes, who was already announced as the official candidate, a municipal bill was introduced in Congress which would have substituted municipal for Executive influence at the polls very effectually. This bill the President declared he would never allow to become a law, because it was directed against himself, and was contrary to the spirit of the Constitution. The outcry against Sanfuentes as a puppet of Balmaceda caused the President to ask him to resign his portfolio and his candidacy. The Congress attempted to force the President to dismiss his personal Cabinet and appoint parliamentary ministers, by not passing the contribution bill for the collection of revenue in the custom house and other branches of the public service. The period of eighteen months for which it had been voted expired when the session came to an end on Sept. 30. To end the deadlock by a settlement of the practical question at issue, the President made a proposition that a presidential candidate should be selected by a convention of all the parties. With the object of enabling the Conservatives to take part, he suggested that no political programme should be drawn up, and in order to insure the election of a candidate not distasteful to either the Nationalists, the Conservatives, the Radicals, or the various Liberal groups, he requested that a two-third vote of the convention should be necessary to proclaim a candidate. If the majority in Congress thought that the President could influence that proportion, they might make it a three-fourth vote, or four-fifth, or any number that they chose. This scheme was at first regarded with favor, but on the following day the House decided to reject it, and continue the contest with the Executive.

The Capitol was filled with people from all parts of the country, who demanded that Balmaceda should make terms with Congress and keep the government on a legal basis or resign the presidency. A committee of influential citizens, representing all parties and classes of society, with

the Archbishop of Chili for their spokesman, extracted from him an agreement that, in order to avert revolutionary conditions, he would dismiss his Cabinet and return to the methods of responsible government, and would permit presidential candidates to be put forward as the free choice of party conventions. After several conferences with the citizens' committee, a Cabinet was named which gave general satisfaction, consisting of Belisario Prats, Salustio Hernandez, Gregorio Donoso, Macario Vial, Federico Errazuriz, and Enrique Focornal. The new ministers, after taking the oath of office, entered the hall of Congress escorted by a throng of citizens, and the Prime Minister announced the programme that had been agreed on between them and the President. There would be no official candidate for the presidency, and the Executive and all his subordinates would abstain from interference with the elections. Officials disregarding this rule or molesting any citizen for having opposed the President would be removed. Things ran smoothly for a short time. Many bills that had been tabled were passed, and the President acted in harmony with his ministers. The legal period of the session passed without the passage of the annual military bill and the appropriation bill. To have these passed the President convoked an extra session. Differences arose when the ministers proposed to change all the *intendentes* and governors, and when the majority in Congress and their friends outside began to form committees of elections and canvass the provinces, and entered into an electoral campaign in which the remnant of the party still faithful to Balmaceda were allowed no voice. On consultation with his old advisers, the President decided to make no removals, and prepared anew for the contest. The popular agitation against the President was renewed. Political passions rose to a higher pitch than before the truce. In the capital the *intendente* and the chief of police increased the police force and took measures for the public safety. The Minister of the Interior ordered the *intendente* to remove the chief of police, and when he refused appealed to the President, who sustained his subordinate against the minister. The ministers called on the President in a body, and in answer to their demands, he said that appointments and removals were the prerogative of the chief of the state; and that, having appointed officers in whom he had confidence, he would not dismiss them at the dictation of Congress, and would by no means take orders from his secretaries. This decision caused Congress to shelve the bills recommended by the President, providing for an increase in the salaries of custom-house employés, treasury clerks, employés in the Department of Education and in the courts, and of army officers, and for a savings bank for public servants, water works and sewers in the large towns, railroad construction, and other objects.

The ministry resigned, and a new one was immediately appointed, with Claudio Vicuña at its head as Minister of the Interior. When the Congress was informed on the following day, the President of the Senate invited the new ministers before Congress to explain the intentions of the President. They paid no attention to this

summons, and when Congress passed a vote of censure the chief of the Cabinet announced that the ministers were responsible, under the Constitution, to the President, and would retain their places as long as they possessed his confidence. The Presidents of both houses sent a note to President Balmaceda, asking him to order his ministers to appear and explain the situation. His answer was the immediate closure of Congress on Oct. 15. He acted promptly in order to forestall Congress, which had before it a motion to impeach the Sanfuentes ministry. Under the Constitution a ministry can be impeached while in office, or within six months after it has retired, on articles adopted by the House of Deputies; and while the trial is proceeding in the Senate the President has no right to prorogue Congress.

The Constitution of Chili provides for a provisional chamber called the *Comision Conservadora*, composed of fourteen members from both houses, which sits during the recess to supervise the acts of the Government, and possesses advisory but no legislative powers. The two parties in the constitutional controversy prepared for a crisis. The elections took place in November. Balmaceda's party, in districts where it was naturally in a minority, either carried the elections, or, if it lost, contested the results. This caused great popular excitement, and led to the intervention of members of Congress and questioning in the *Comision Conservadora*, and the appointment of semi-official investigating committees. The police began to interfere with freedom of assembly and of speech. Without constitutional authority the President declared Congress dissolved and the elections postponed. The President was mobbed when he went to open the new docks at Talcahuano, at Concepcion on his way back, and a third time on his return to Santiago. Processes and prosecutions were instituted against army men charged with disaffection toward the Administration, and a feverish activity was observed in the Ministry of War, at the head of which was Gen. Gana, who had made himself very popular among the officers. All the ministers were known to be men of action and of energy and deeply committed to the President's side in the controversy with Congress. The President, as commander-in-chief of the military forces, ordered the arms of the National Guard to be collected in the arsenals, brought the standing army to the capital, replacing with militia the garrisons in the provinces, and, on the pretext of maintaining peace, commanded the firearms in the possession of private citizens to be delivered up to the authorities. The *Comision Conservadora*, which passed a resolution permitting Senators and Deputies to take part in its proceedings, met daily to discuss the situation. According to the usual procedure, this commission called on the President to summon an extraordinary session of the Congress for the purpose of voting the annual budget and passing the regular army and navy bill. Balmaceda declined to comply, saying that he would find no difficulty in carrying on the Government. To notes petitioning him to change his ministers, and pointing out that after Dec. 31, according to the Constitution, no salaries could be legally paid out of the treasury, no public works continued, no taxes or duties collected, and that the

legal existence of the army and navy would cease, the President sent no reply. During November and December, army officers not in sympathy with the President were removed from command, military men were placed in civil posts, partisans of the President were promoted out of turn, and the army was so manipulated that it could be depended upon to defend the Government if civil war should result. Changes were made in the naval commands more cautiously because the Opposition had many adherents in that branch of the service. Public meetings were interdicted, and on Dec. 19 the Liberal and the Conservative Clubs were both closed by the police. Macario Ossa, a young member of the Conservative party, in the fray that took place when a meeting at the Conservative Club was suppressed, was shot by the police. His funeral was the occasion of a political demonstration. Diego Barros Arana and the other members of the commission to delimitate the Argentine frontier resigned as a protest against the arbitrary acts of the Government. The members of the Montt-uarista, the Conservative, the Independent Liberal, and the Radical parties united and organized and decided on a plan of action.

Revolt of Congress and the Navy.—The year expired without the convocation of Congress. On Jan. 1 the Opposition members of Congress—those of them who were ready to proceed to extremities—held what they called an extraordinary session, although the Constitution provides that Congress, except in regular session from June till the end of September, can only meet when it is called together by the President. A solemn act was signed by all the members present, which declared the President unworthy of his post, and no longer chief of the state or President of the republic, because he had violated the Constitution and was guilty of treason. The Congressional party had long been preparing their *pronunciamiento*. They had the land-holding aristocracy, the wealth, the clergy, and the foreign element at their back, and had secured the co-operation of the fleet, and still had adherents among the commanders of the army, who would be able, they supposed, to seize the Moneda or old Spanish mint that serves as the state Capitol, and permit a popular rising to achieve a bloodless revolution. The 7th of January was the day selected. The Opposition members of Congress went on board the "Blanco Encalada," the commander of the fleet having invited them to hold the session of Congress there, since there was no safety on shore. The ships sailed out of the harbor, and on the following day returned and hoisted the revolutionary flag that was expected to be the signal for the overthrow of the Government.

The Government had received timely notice of the design from some officers of the army, and Godoy and the other ministers and their subordinates acted promptly and with energy. People suspected of sympathy with the Opposition were arrested in hundreds. The Revolutionary Committee barely escaped with their lives—some, in disguise, to the ships, and others across the Andes to the Argentine Republic. The President proclaimed martial law, and declared the *intendentes* and governors his sole representatives in the provinces. The fleet waited

vainly in the harbor of Valparaiso for a favorable response from shore.

The lack of an army bill was exemplified by the opinion of the procurator fiscal, or military judge, that there was no authority to punish or hold a deserter, because the army had no legal existence from Dec. 31, 1890. The procurator was removed, and one more subservient appointed, but the country applauded his firmness and courage. The Supreme Court decided that the President had no power to pay out money without the consent of Congress, the question having been raised by the directors of the National Bank, who declined to honor Balmaceda's drafts lest they should be held liable. In consequence of this decision the judges were removed. The Treasurer of the republic refused to pay out money on the President's order, and was replaced by another man. Balmaceda, who had always been noted for his urbane manners and gentle disposition rather than for determination and self-will, hesitated before plunging the country into civil war, and is said to have written out his resignation. If he thought of yielding, he was dissuaded by Juan Mackenna and other resolute and uncompromising counselors. Officers of the army who asked to be relieved of their commands because they thought the President's attitude unconstitutional, were thrown into prison. Lauro Barros, who retired from the Ministry of Finance, was succeeded by Antonio Muñoz, a subordinate official, who held the post only a few days, giving it up on Jan. 6 to Julio Carrero, ex-Minister of Public Works.

Balmaceda's Manifesto.—The President forestalled the revolutionists by issuing on Jan. 1 a manifesto assuming a virtual dictatorship, although disclaiming the name of dictator, and defending his acts on constitutional grounds. His right to choose his Cabinet ministers was based on the text of the Constitution, which defines among the powers of the President that of "appointing and removing at will the ministers and the clerks of all the executive departments." The parliamentary system upheld by the coalition against him he declared to be incompatible with republican government. "The parliamentary regimen is monarchical government with republican ideas. A republic with a parliamentary government is an idea that finds no place within the experience and science of modern public law. Parliamentary government presupposes an irresponsible hereditary sovereign. The chief of the executive in such a government is practically the minister who commands a parliamentary majority, and who governs in its name. The Government of the republic is carried on by a chief and responsible ministers with temporary powers, and the President is elected, like Congress, by the people. The chief of the executive power, practically and by the Constitution, is the President of the republic." Chili is governed under the representative system, of which the characteristics are a responsible chief of state, an administrative cabinet, and the power to veto laws, not to dissolve parliament, vested in the elective head of the nation. If Congress had of deliberate purpose omitted to enact laws necessary for the legal continuance of the public powers, placing the President in an irregular position, its mem-

bers had failed to discharge their duty as laid down in the Constitution, and could not thereby create a right for any one to appeal to revolution. "Even in the event of the chief of the nation being liable for the shortcomings of the majority of Congress, a revolution can not be proclaimed as a remedy. The Constitution has foreseen the case when the President or his ministers may violate the Constitution and laws, and established the manner and procedure for making effective their responsibility for such action, which, on the part of any one else, is subversive and revolutionary." He had refrained from invoking Congress to an extra session because of the attitude that the majority might assume. He was bound to follow his judgment and exercise his discretionary powers to avert danger to the public welfare. The Constitution charges the President with the duty of maintaining public order at home and looking after the safety of the republic abroad, and declares that he shall use any means for these objects, always observing the Constitution and causing it to be observed. Without the civil service and the military forces he could not discharge this duty. The laws to provide for these are not exclusively in the power of Congress, but require the concurrent assent of the President and of the Council of State. The same situation had occurred before in his term of office when, during January and a part of February, 1887, he had carried on the Government without an appropriation bill or an army bill, and every President since the establishment of the republic had governed the country for days and even for months when Congress had neglected to pass these acts without being treated as a tyrant or dictator. "As a Chilean," he said "as the Chief of the State, I could not, with my convictions, accept the political position that the parliamentary coalition pretended to impose on me." He assumed no dictatorship because he declined to submit to the dictatorship of Congress, and to surrender the reins of government to those who traduced his purposes and sought to deprive him of his constitutional rights.

Preparations for War.—The President had the standing army of about 3,500 men and the funds in the treasury, amounting to several million dollars, partly in the banks. The proclamation of the Congressionalists leaders was answered by one from Balmaceda assuming a military dictatorship, and declaring the whole country under martial law. All newspapers were suppressed, except two, official organs that were established. Clubs and societies were closed, and people were forbidden to leave their houses after five o'clock. Private houses were watched and searched, and men of social position were bastinadoed to compel them to reveal the hiding-places of political refugees. The prisons were choked with persons prominent in social, professional, and commercial circles who were identified with the various parties. The farms and estates of leading rebels were pillaged, their crops burned, the houses sacked, and their blooded horses and cattle taken to mount and feed the troops. Servants, tradesmen, and guests acted as spies in every house, and through the month of January a reign of terror prevailed in Santiago and Valparaiso. Nevertheless, the

Revolutionary Committee was reorganized and intermittent communication was kept up with the navy and the revolutionary leaders. The families of Congressionalists emigrated, and thousands of suspected partisans fled into the Andes or across the frontier. The armed police force in the capital and its port numbered 2,000. The populace of Santiago and Valparaiso and of most of the southern cities and of the farming districts in the valleys of the Andes generally sympathized with Balmaceda, and regarded him as the champion of the democracy against the land barons, foreign priests, and alien capitalists, while the industrial and mining population supported Congress. The soldiers were confined in the barracks, and the sentiments of the officers and men were investigated, the less trusty troops being sent away and replaced by drafts from agricultural districts. The Congressionalist leaders were not prepared for the energetic measures of the Administration, which prevented any rising in the capital or in the cities of the south that they counted on. When the banks refused to pay out money on Balmaceda's orders, they were declared abettors of the revolution, the directors fled from arrest, and an official examiner took possession. The bank of Edwards was closed by order of the Government, and all the officials and clerks were imprisoned. The National Bank and the Bank of Valparaiso were unable to pay the 6,000,000 pesos that they held of Government funds, as depositors had drawn out their cash reserves to hoard. The directors were therefore induced to sign a request to the Government to issue 12,000,000 pesos of paper, on condition that they might use 1,600,000 to tide over their difficulties. The Government resorted also to wholesale confiscation and attached the bank accounts of all the Congressionalists.

President Balmaceda increased his army till he soon had 30,000 men under arms. The pay of the soldiers was increased to \$30 a month. The people in the interior, in the center, and south showed little interest in the struggle, and no active sympathy with Congress. Ignorant agriculturalists were drawn to the army by bounties, leaving the wheat fields without harvesters. The public works were stopped, and a large proportion of the 25,000 laborers enlisted. Admiral Viel set about completing the fortifications of Valparaiso, which was at no time safe from bombardment, except for the reason that the city was mainly owned by Congressionalists. The forces were placed under the supreme command of the Minister of War. Having all the railroads and some swift transports that could evade the fleet, the Government re-enforced the garrisons at all the ports, and had a military force in every district. In the vicinity of the capital there was an army of 16,000 infantry, 1,200 cavalry, and six batteries of field artillery, and in other parts of the country 14,000 men were garrisoned. Balmaceda issued proclamations ordering the pay of officers and men who fell in battle to be continued permanently to their families, increasing their salaries by 50 per cent., and offering two years' pay to sailors who would desert to the Government and a free pardon to officers who had joined the insurrection under orders from their superiors. There was some guerilla fighting in the center. Bridges and railroads were

destroyed to cut off the food supply of the capital. When insurgents appeared in numbers they were driven into the mountains. On Jan. 21 a mutiny broke out in the barracks at Valparaíso, and, though it was quelled, many soldiers deserted with their arms. Under Gen. José Francisco Gana as commander-in-chief, the army was organized in seven divisions, the first commanded by Maj.-Gen. Barbosa, with headquarters at Santiago; the second by Col. Guitterrez, with headquarters at Valparaíso; the third by Col. Wood, with headquarters at Quillota; the fourth by Lieut.-Col. Jarpa, with headquarters at Talca; the fifth by Col. Ruiz, with headquarters at Chillan; the sixth by Col. Soto Zalvidar, with headquarters at Angol; and the seventh by Lieut.-Col. García, with headquarters at Concepcion.

The Congressional proclamation, appointing Capt. Jorge Montt commander-in-chief of the naval division for the restoration of constitutional government, was signed by Waldo Silva, Vice-president of the Senate; Ramon Barros Luco, President of the Chamber; Pedro Montt, leader of the National party; Señor Arana, ex-President of the Delimitation Commission; Gen. Manuel Vaquedano, senior major-general; Senators Augustin Edwards and Manuel Irarrazabal, leaders of the Conservative party; Deputy Eduardo Matta; and Senator Altamirano. Capitalists placed their fortunes at the disposal of the Parliamentary Committee, ladies sacrificed their jewels, and money and credit were not lacking in Europe and the United States, it being said that the nitrate speculators were ready to give material aid to the revolution. The admirals in the navy held themselves neutral or sided with the Government, and of the nine generals of division the majority kept out of the contest. Gen. Urrutia and Commander Canto organized the Congressional Volunteers, who were encamped on the island of Santa Maria, in the southern province of Arauco. Men were recruited in all the ports. Parties of volunteers went down to the shore, and were taken off at night by boats sent from the men-of-war. There was an insufficient supply of arms that had been secretly taken from the Government stores. Men came on rafts and boats from the mainland, and for lack of muskets were trained with sticks of wood in the practice of arms. The parliamentary party had not anticipated a war, and were behind the Government in their preparations. Gen. Vaquedano took the chief command of the land forces, and had under him Gen. Urrutia, Gen. Saavedra, Gen. Sotomayor Col. Canto, and others.

Movements of the Fleet.—When the fleet revolted the squadron at Valparaíso consisted of the ironclads "Almirante Cochrane" and "Blanco Encalada," the latter of which was made Admiral Montt's flagship, the cruiser "Esmeralda," the ram "Magallanes," and a corvette. The "Huascar," which was undergoing repairs, was afterward cut out by the rebels, who captured the torpedo boats, seized all the tugs and launches, took all the stores that were in the harbor, and carried off the Congressionals desiring to reach the fleet who could evade the police and soldiery. Troops lining the esplanade fired on the boats, and the crews answered by

firing over their heads, desiring to avoid bloodshed. The "Blanco Encalada" sailed for the Strait of Magellan to intercept the corvette "Abtao" and the two new torpedo cruisers expected from Europe. Officers declaring for the Government were put on shore. The "Aconcagua" and other captured vessels of the Chilean Steamship Company were converted into transports, storeships, or armed cruisers. The transport "Amazonas" was taken with a regiment of Government troops and a large store of provisions bound for the port of Antofagasta. These soldiers readily enlisted in the Congressional cause. The coast was declared blockaded by the Congressional Junta. President Balmaceda, in proclaiming the rebel fleet outlawed and piratical at the outset, had hoped for the intervention of European nations; but, following the lead of Mr. Kennedy, the British minister, the diplomatic corps offered no protest, and their governments decided to ignore the blockade, since to recognize it would involve the concession of belligerent rights. The blockade was not enforced against foreign vessels. The blockade of Valparaíso began on Jan. 16. The fort opened fire on the "Blanco Encalada," and a shell exploded in the men's quarters, killing six and wounding many more. Admiral Montt could hardly restrain the crew from returning the fire, and threatened to shell the fort if it fired again.

Campaign in the North.—After a few weeks of drilling at Santa Maria, the nucleus of the Congressional army, consisting of a few hundred ardent young men, embarked on the fleet for the northern province of Tarapaca. Half the men had no arms except the national *cuchillo* or dagger. The people in the north were all for Congress. The garrison at Pisagua revolted on Jan. 19, and the commander of the "Magallanes," which had arrived in the harbor three days before, took possession of the place in the name of Congress. Government troops were sent from Iquique to recapture it. Fighting took place at Zapiga on the 21st, and at the Izipiza Hospicio in front of the town on the 23d, which resulted in the defeat of the Congressionals, of whom 100 were killed, but the Iquique troops did not reoccupy the place till the 25th, when they came in stronger force, and marched in at night to escape being fired upon by the three naval vessels in the harbor. Another landing was made, and the Congressionals were repelled, but succeeded in bringing away about 200 of Col. Canto's scattered soldiers. The first attempt to gain a foothold in the nitrate province thus proved a failure. A large part of the patriot force was without arms and ammunition, and the squadron was running short of coal and provisions. To provide these a landing was made in the province of Coquimbo. At the rich commercial port of that name, which is the outlet of a flourishing mining district, the Congress party were received with open arms. The troops of the Government made only a pretense of resistance. Balmaceda's Minister of War made every attempt to recover the province, but the first regiment that was sent by land from Santiago deserted to the enemy. This province, being connected by railroad with Santiago, could not be held by the insurgents. The fleet was in constant need of coal, having to depend on the colliers that were

caught on the sea. There were large quantities stored at Coronel, in the province of Arauco, opposite the island of Santa Maria. Before the rebels established themselves in Tarapaca and removed their military base from that island, the fleet captured that town, which is the shipping point for the principal coal mines of Chili, and carried off all the stocks at the water side. To prevent this the Government had posted a strong garrison at Coronel. The "Esmeralda" steamed into the harbor and demanded the surrender of the town. When it was refused, grape and canister were poured into the town without preliminary warning to the population, and solid shot followed, which demolished the railroad station, burying 67 corpses in the ruins. After that the commandant capitulated.

Having supplied themselves with cattle and other provisions at Coquimbo and Serena, and about 200 rifles, the Congressional expedition returned to the northern coast with the intention of attacking Iquique. This intention they abandoned when they learned that Col. Robles had re-enforced the garrison with 500 regulars, landed at Patiblos. They determined to deliver the first blow at Pisagua, defended by only 340 men, under Col. Valenzuela. The "Cochrane," "O'Higgins," "Magellanes," and "Cachapoal" entered the harbor early in the morning of Feb. 5, and the land force was debarked under cover of the guns. The Congressionalists succeeded in gaining the heights and capturing the artillery planted there to receive the fleet. The Government force in the town and forts on the plain was between two fires, and, after a severe infantry engagement and a bombardment, which destroyed the greater part of the town and caused many deaths as the result of explosions of the oil tanks and nitrate works, marines landed and the infantry division executed an assault from the other side. After a brief struggle, the enemy surrendered. All the men and officers remaining, about 200, were taken prisoners and four Krupp guns were captured. The people of the district were eager to volunteer, and with the rifles captured from the enemy a division of 1,200 men was formed in a few days, including 200 men from the squadron. This force set out for Iquique by the railroad. It was calculated that if the advance was made by land the Government commander would be compelled to divide his forces in order to meet the column outside the town, and yet leave enough to prevent the town from being occupied by the naval forces. The harbor had been blockaded since Jan. 20. The land column had not advanced beyond Dolores when it met the advance guard of Col. Robles. The troops of Congress drew up on the heights, and charged the regular troops that formed in line on the plain at San Francisco, while the irregulars took position on the hill behind. Col. Robles, who commanded the body near the railroad, had to retreat with all the men he could get away at the first onset. The men on the hill held their ground till both commanders, Villagran and Requiene, were killed and few of their men left. The Fourth Regiment was reduced to 60 men, who joined the Congressionalists. The killed on the side of Congress numbered about 125, and on the other side four times as many. This battle

was fought on Feb. 15. The victory made the rebels overconfident, as Col. Robles had succeeded in getting away with only 200 men, and, after capturing a train of mules left by a party of cavalry that wandered into their camp by mistake, and finding the baggage to consist of 200 rifles and 200,000 cartridges, of which they were in great need, they determined to fight the enemy wherever they were encountered. They met them again at Huara and underestimated their strength, for Col. Silinas had re-enforced Robles with the entire garrison of Iquique, 1,000 regulars and militia. An important reason for not delaying the battle was the fact that large re-enforcements of Government troops were advancing by forced marches from the north, the "Imperial" having landed a division in the Peruvian port of Ito and the "Santa Rosa" another at Arica. The fight began in the afternoon of Feb. 17. The rebels gained ground until they had discharged the whole of their forty rounds of ammunition, and then they fled in disorder, with the loss of 300 men, and 30 officers, among them Col. Manuel Aguirre, a large number of rifles, and the three Gatling guns and two cannons that they had captured at Pisagua and San Francisco.

The troops had all been withdrawn from Iquique to inflict this severe blow on the land force with the idea that the town could easily be recaptured if occupied by the marines. The naval forces took possession of the place on the 16th. On the 19th Col. Soto returned to take possession of the place, which was garrisoned by only 40 sailors, who were ordered on board; but Merino Jarpa, the commander, having heard of the reverse at Huara, determined to resist, and shut himself in the custom house. The fight lasted from dawn till dark. The people on the ships did not know the condition of affairs till noon. In order to drive out the little band, Soto's men set fire to the neighboring buildings, and the whole of the business quarter of the city was destroyed. Great damage was done also by the firing from the ships to protect the men besieged in the custom house and cover the landing of a relieving force. Admiral Hotham, commanding the British naval force, endeavored to intervene to prevent the destruction of property. The bombardment enabled the Congressionalists to achieve a complete victory, and on the following day Col. Soto surrendered the city and the remnant of his force joined the Congress party. Troops were landed to hold the town and strengthen the broken ranks of Col. Canto's little army. The intention was to bring up troops from Pisagua and fall upon Col. Robles, who, after the loss of Soto's command, had but 500 or 600 men remaining. On the 21st 1,000 of the Congressionalist soldiers arrived; but the contest was put off because one of the Government divisions joined the enemy at the same time, and on the 24th the other arrived. For this reason the Congressionalists camped in the town, protected by the guns of the fleet, until they could organize a larger force. The Congressional navy was now guarding the coast effectually. The last Government re-enforcements were landed on Peruvian territory, for which due apologies were demanded and given. However, it was reported that a third division was advancing across

the desert from Antofagasta, and the Congressionalists therefore made up their minds to advance upon the enemy's position. Col. Canto had 1,650 men and Col. Robles about an equal number, who were encamped at the junction of the railroads, but retired northward and took up a position at Pozo Almonte, about 30 miles east of Iquique. The Congressionalists, who had to repair the railroad that was destroyed by dynamite by the others as they retired, came up to them on the evening of the 6th of March. The Chilenos waste hundreds of cartridges without hitting a man; but in hand-to-hand conflict, when they throw down their rifles, disdaining the bayonet, and draw their knives, the combat is deadly. The Congressionalists advanced to the attack as soon as it was light in the morning, and when the shock was over 1,000 men lay dead or helpless on the field, and the Government troops were driven back away from the railroad, which was their only line of retreat. They broke and scattered, having lost in killed and wounded 700 men and many officers, and 400 taken prisoners. On the other side about 400 men and officers were killed or disabled. Col. Robles was fatally wounded, and while in an ambulance was murdered and mutilated by the savage soldiery. The conflict assumed early a cruel and vindictive character, the authorities at Santiago having set the example. Robles was believed to have shot all prisoners and wounded who fell into his hands, and to have done so by order of Balmaceda. The mutinous regiment which delivered up Pisagua to the navy massacred the Balmacedist officers, and when the place was retaken by Government troops every captured officer of the Congressionalist garrison was shot.

The last battle left the entire seaboard in the hands of the Congressionalists. The remaining forces of the Government retreated to the city of Tarapaca. On March 9 the "Esmeralda" entered the harbor of Antofagasta, and demanded the surrender of the town within three days under a threat of bombardment. One of the battalions of the garrison mutinied, killed the officers, and went on board the ship, and others were willing to desert. To prevent the whole command from going over to the enemy, Col. Camus, taking the rolling stock of the railroad, retreated to Calama, 180 miles up the line. Engines were found in the hold of a vessel by Col. Canto after he had occupied the place, enabling him to cross the desert to Calama, where the Congressionalists, after a week or two of preparation, suddenly appeared in force, causing the Government commander to flee into Bolivia with his division of 2,450 men, leaving behind a large quantity of munitions of war and commissariat stores. Despite the repressive measures of Col. Camus, who had a large number shot who showed signs of insubordination, one fourth of the command got away and joined the rebels.

The interior of Tarapaca was cleared of Balmaceda's soldiers. The fleet was augmented by the transport "Maipo," which was seized by Capt. Valduresio, of the Santiago garrison, who deserted with 120 men, and, with the aid of accomplices among the officers at Valparaiso, got away with the ship and a large quantity of Gatling guns, rifles, and ammunition. In the extreme north the Government still held the port of

Arica and the fertile province of Tacna in the mountains behind Arica. The troops of Congress had no difficulty in landing at Arica, and, on April 7, both places were taken without fighting. Balmaceda's commander had a division of 1,500 men, which broke up on the appearance of the rebel forces, a part going over to Congress, while the rest fled into Bolivia. Caldera and other points south of the desert were occupied, and thus, in addition to the nitrate fields, the rebels possessed two fertile districts from which they could get supplies, and had full command of the whole of northern Chili as far south as Copiapo. President Balmaceda declared all the ports in control of the insurgents to be closed; but this order could have no effect, except in cases like that of a German vessel, which, after loading with nitrate, put into a Government port, where the cargo was confiscated by Balmaceda's officials. After the period of war, famine, and anarchy was over the nitrate works began operations again, and the export trade revived to a considerable extent, the duties being paid to the officials of Congress. Caldera, betrayed by the garrison, fell into the insurgents' hands on April 16. Three companies, according to a prearranged plan, mutinied when drilling in the plaza, and fought fiercely with four other companies and the police. The gunners in the fort had been won over, and when the "Esmeralda" steamed into the port they turned their guns on the Government house. Upon that the loyal soldiers and inhabitants fled, and the place was occupied by the Congressionalists. In the sharp hand-to-hand fight between the rebellious and the loyal troops about 200 were killed.

The nitrate provinces of Tarapaca and Atacama afforded the forces of Congress a safe base of operations. Balmaceda's army was ten times as numerous at that time, but it could not cross the 150 miles of sandy desert and impassable ravines. The loss of the nitrate revenues, in ordinary times \$2,500,000 a month, was fatal to the Government at Santiago; while the greatly reduced receipts would enable the Congressional Junta to maintain its position and support the fleet and its army of 5,000 or 6,000 men till Balmaceda's term of office expired. The nitrate districts produced no food, but with money they could organize a commissariat and draw supplies from the southern provinces or from Peru, Bolivia, or California as long as they held the sea. From the ports of Iquique, Pisagua, Tocopilla, Antofagasta, and Taltal more than two thirds of the exports of the country were sent in 1889 and three quarters of the revenue was collected. An attempt was made to gain possession of the fertile islands of the Chiloe Peninsula. Both parties had earnest partisans there, and in connection with naval operations an insurrection was begun. This came to naught, because the Government concentrated troops there and fortified the seaports and important positions.

Balmaceda's Congress.—The elections of members of Congress and of presidential electors took place on March 20. Domingo Godoy, the Premier, issued orders that no official pressure should be exercised. Nevertheless, the military had charge of the polls. No one voted but members of Balmaceda's party, who elected a Congress entirely Liberal. The President-elect,

Claudio Vicuña, who had been put forward in the place of Sanfuentes and had retired from the Cabinet in order to become the official candidate, was a man of wealth, well known to the people, having held several Cabinet offices. The Congress irregularly elected, when most of the officers who should direct and supervise the elections were in prison or proscribed, met on April 20, to hear the President's message, in which changes in the Constitution, to deprive Congress of its power over the public purse and its control of the Executive, were recommended. As he was charged, he said, with the duty of administering the state and guarding the internal security, the position of Congress, which tended to the overthrow of the established order, obliged him to "assume all the public powers and bring together the elements necessary to make triumphant the principle of authority in Chili, without which nothing durable can exist." Under these circumstances he found imposed on him the "painful duty of reducing the chiefs and promoters of revolt to impotence by arresting them or driving them away from the scene of their activity." Among the cruelties credited to Balmaceda and his officers the worst were connected with the pursuit of supporters of the revolution, the torture of their friends who refused to reveal their asylums, and the assassination of the leaders who were arrested. The nominating convention chose Claudio Vicuña as the candidate for the presidency by 294 votes out of 296. The Congress passed a bill of indemnity for all the acts of President Balmaceda since Jan. 1, and another conferring on him extraordinary powers. He was authorized to arrest, imprison, and punish any person inimical to the Government; to expend the public revenue according to his own judgment without being called upon for estimates; to borrow money on the credit of the state without the previous authorization of Congress; to suspend the judicial power, dismiss judges, and deal with political offenses by executive decree; to suppress the rights of free speech, public meeting, and liberty of the press; to organize military tribunals and define their jurisdiction and authority; and to declare any part of the territory of the republic to be in a state of siege. The gold and silver reserve held by the treasury against the paper currency was ordered to be sold by Congress, and a new forced loan of \$20,000,000 was authorized. A new ministry was appointed by President Balmaceda in June, which was composed as follows: Premier and Minister of the Interior, Jules Barnabas Espinoza; Minister of Foreign Affairs and Worship, Manuel Maria Aldunate; Minister of Justice and Education, Francisco Xavier Concha; Minister of Finance, Manuel Aristides Zanartu; Minister of War and Marine, José Velasquez; Minister of Industry and Public Works, Nicanor Agulde Espinoza. On July 25 the electoral college unanimously elected Claudio Vicuña President of the republic for the term beginning Sept. 18, 1891.

Organization of the Junta.—A *Junta de Gobierno*, or Provisional Government, was formally constituted at Iquique on April 12, for the administration in the name of Congress of the eight departments held by the revolutionists. The Junta was composed of Waldo Silva, Vice-

President of the Senate; R. Barros Luco, President of the Chamber of Deputies; and Jorge Montt, Commander of the Squadron. They appointed a Cabinet consisting of Isidor Errazuriz, Secretary of the Junta for Foreign Affairs, Justice, and Education; Joaquin Walker Martinez, Secretary of Finance; and Col. Holley, Secretary of War and Marine.

Naval Operations.—The fleet torpedo cruisers "Lynch" and "Condell," after a series of exciting escapes from the insurgent vessels, were brought safely into port at Valparaiso before the middle of March. Besides these, the Government possessed three small gunboats and a fast armed steamer, the "Imperiale," chartered from the Pacific Steam Navigation Company, which had successfully run the blockade five times to convey troops to the north. The "Cousino," another converted cruiser, after several voyages was captured by the revolutionists, who made an attempt to seize the "Pilcomayo," a new gunvessel that was waiting in the harbor of Montivideo, with a full force of sailors and marines, for a favorable opportunity to make the voyage to Valparaiso without being caught by the Congressional cruisers. A party of armed Chilians went on board with the intention of surprising the crew; but the object was detected, and they were overpowered after a pitched battle on the deck. The "Blanco Encalada" entered Valparaiso in a dark night with the intention of blowing up the "Mary Florence," a tug fitted up as a gunboat, with a fish torpedo. This missed its mark and destroyed the dry dock. The ship escaped unhurt from the fire of the fort. The "Mary Florence" and a torpedo boat that stole out after her were descried, and destroyed with their crews by shells from the "Blanco" and the "O'Higgins," which engaged the batteries at long range, and during the battle shells from the fort hit the hull and one of the guns of the "O'Higgins." After the arrival of the first of the two torpedo catchers, the "Condell," three rebel agents went into Valparaiso and nearly succeeded in getting possession of her. The whole crew and the officer in command were in the plot. The captain from on shore, seeing them starting the engine, got aboard before the gunboat began to move, and before he was seized and bound he gave the alarm; so that before she could get out of the harbor the other vessels surrounded her. A revolutionist named Gomez found means to spike the Armstrong guns in Fort Andes at Valparaiso. The Government at first hesitated to risk their flotilla in active operations, expecting soon to be able to crush the rebellion with a superior naval force. The "Errazuriz" and "Pinto" were ready, except their armament and crews. A severe check to the plans of Balmaceda was caused by the refusal of the French Government to let them leave France. The embargo, granted on representations of Congressional envoys, was removed in June after both sides were heard, but the French authorities still refused to allow crews to be recruited in France. A loan of £1,500,000, that had been subscribed in Germany for the construction of railroads, the bankers refused to allow Balmaceda to divert to military objects. His offers for a Greek war ship, for the crack new Argentine cruiser, and for fast merchant

steamers, were rejected. Joaquin Godoy was sent to Europe to endeavor to raise a loan and purchase ships. Meanwhile people were growing tired of the tyranny and cruelties of the military despotism, and to save the failing cause it was necessary to gain some success over the revolutionists, who were protected now from a land attack by the Atacama desert.

The torpedo gunboats were therefore got ready for an attack on the rebel fleet, aided by the torpedo boats, with the "Imperiale" as tender. On April 23 the torpedo cruisers surprised the "Blanco Encalada" at anchor in Caldera Bay, while she was undergoing repairs and unable to bring her guns into position. The attack was made before dawn. The ironclad had no torpedo net, had no picket boats out, and did not use search lights. Captain Moraga, approaching unobserved, fired end-on at a distance of 110 yards the bow torpedo, which missed the ironclad and sank an English merchantman. The torpedo catcher then sheered off, and at 65 yards discharged first one and then the other of the port torpedoes, both of which struck the "Blanco" in the bow. When first struck, the ironclad opened a heavy mitrailleuse fire on the "Condell." The "Lynch," following in the same course about 60 yards behind her consort, likewise sent her bow torpedo ahead of the ironclad, and when broadside-on struck her amidships. Two minutes later, nine minutes after the firing of the "Condell's" first torpedo, she foundered. The weapons were self-acting Whitehead torpedoes, of which each boat carried five. The "Lynch" was manoeuvred by Capt. Fuentes, who had been so successful in evading the blockade with the "Imperiale." Capt. Goni, of the "Blanco Encalada," was rescued with about 40 others, but 180 of the crew were drowned. The torpedo cruisers, after sinking the ironclad, met and engaged the transport "Aconcagua," which had 1,300 revolutionary soldiers on board, as she was entering the harbor, and during a combat lasting an hour and a half the "Aconcagua," commanded by Merino Jarpa, fired 190 shots without damaging the torpedo catchers, and finally forced her way into the harbor. On the following morning the two torpedo catchers and the "Sargeanto Aldea" attacked the cruiser "Magellanes" in Chañaral harbor. The smaller craft manoeuvred so that the big guns could not be brought to bear on them, and with their quick-firing and machine guns damaged one of the batteries and the rigging of the ship and killed 23 of her crew, but they suffered more severely, each of them being hit. They could not get within close enough range to use their torpedoes, and fired only one, which destroyed a merchant vessel. On April 28 the "Magellanes" stole into Valparaiso harbor in the night time; poured a broadside into the "Sargeanto Aldea," riddling her and killing or wounding half the crew; fired on the "Almirante Lynch," receiving a heavy fire in return; blew out of water a boat with 10 men sent to attack her with a torpedo; slipped astern out of a murderous cross fire of the "Lynch" and "Condell," leaving the Government vessels firing at each other in the darkness; got into position to rake the "Lynch" with a broadside that dismantled every gun; and steamed out of the

harbor at full speed as the forts opened fire, which they dared not do before for fear of destroying the Government vessels. One shell fell on deck, dismounting the pivot gun. The "Almirante Condell" was nearly sunk by her sister gunboat. On the "Magellanes" 40 men were killed, and on the other vessels double that number. The torpedo boat "Guacolda" was chased and sunk by the "Magellanes." The "Lynch" and "Condell" patrolled the coast and fired at long range into the rebel harbors. The officers and crew ran the torpedo launch "Guale" out of Valparaiso Bay to hand her over to the Congress party. The "Lynch" overtook and recaptured the launch at Papudo, and the 12 deserters were taken to Santiago and shot. An attempt was made to blow up both the "Lynch" and the "Condell" with dynamite. One of the minor accomplices in these plots betrayed the instigators, who were a quarter-master, who killed himself before he could be arrested, and a respectable merchant named Ricardo Cummings, who was shot with the man who betrayed him and another agent in the conspiracy.

Negotiations for Peace.—A large assembly of influential citizens who had taken no part in politics passed resolutions at Santiago on Feb. 1, in pursuance of which a committee waited on the President and urged him to change his advisers and restore peace. One of the committee spoke of the opportunity he had of following the patriotic example of O'Higgins and resigning, on which he closed the interview, saying that he was prepared to "go on to the end." After the Congressionalists had undisputed possession of northern Chili the Uruguayan Government offered to mediate, and received the reply from Balmaceda that there was no revolution, but a local revolt that would be suppressed in a few weeks. Not long afterward the diplomatic body arranged a conference between Balmaceda and Congressional delegates to discuss terms of peace. As commissioners of the insurgents, Eulogio Alamarin, Carlos Walker Martinez, Pedro Montt, Gregorio Donoso, and Belisario Prats went to Santiago. Bombs were thrown into the room during a Cabinet meeting and at ministers on the street, upon which Balmaceda broke off the conference after two days. He accused the commissioners of having instigated the bomb-throwing, canceled their safe conducts, and demanded of the foreign ministers, who had guaranteed their safety, that they should be surrendered for punishment. The ministers received them in the legations, and extended their protection until they were got on board the United States cruiser "Baltimore." The revolutionists supposed that the bomb-throwing was a trick planned by Balmaceda or his associates for the purpose of putting an end to the conference, because it took place immediately after the "Blanco Encalada" was sunk.

The peace proposals first emanated from Balmaceda's Government. While the representatives of England and Germany were treating with the Congressional authorities at Iquique, Balmaceda signified his acceptance of the mediation of Brazil, France, and the United States, not wishing the British and German ministers to take part in the negotiations, notwithstanding the fact that they had taken the initiative in the

matter with his knowledge and approval. The representatives of Brazil, France, and the United States, on accepting the office of mediators, proposed that both parties should formulate their proposals and demands, in order that the mediators could deduce concrete propositions to serve as a basis for negotiations. The Provisional Government consented, whereas Balmaceda's minister, Domingo Godoy, refused to present his views in writing until he had seen the conditions proposed by his adversaries. At this stage negotiations were abruptly terminated. The demands of the insurgent commissioners were the resignation and impeachment of Balmaceda, disbandment of army and navy, and reassembling of the old Congress pending the election of a new one.

On May 27th the Bolivian Government issued a decree recognizing the belligerent standing and rights of the Chilean Junta at Iquique.

The Itata.—The sinking of the "Blanco Encalada" did not end the war in Balmaceda's favor, as he expected it would. The revolutionists, though disheartened, were morally, financially, and strategically stronger than the Government. The position would be reversed when the ships came over from Europe, or if Balmaceda's Government could use the credit of the nation. The naval blockade could not be long continued, owing to the lack of coal, and to feed the force in the north provisions must be brought from distant places. It was necessary to strike at Balmaceda in the center of Chili. For this purpose an army must be raised and equipped. The main want was arms and munition. All the rifles and cannons, and even the clothes, of the Congressional army had been taken from the enemy. There was no difficulty in recruiting an army from the best fighting material in Chili. While Balmaceda resorted to the harshest kind of conscription, and forced Peruvian and Bolivian residents to join his army, and even drafted into it the convicts in the prisons, the Congressional leaders found two eager volunteers for every rifle they could furnish. In their seven battles in Tarapaca their fighting line was usually smaller than the enemy's; but reserves were sent up from the rear to snatch the arms of the men who fell and close up the ranks. To arm a force able to meet Balmaceda's army, Ricardo Trumbull, the agent of the Provisional Government, purchased munitions in the United States, some of which reached Chili. The largest consignment, consisting of 10,000 Remington rifles and 2,500,000 cartridges, was taken out of San Francisco on the American schooner "Robert and Minnie," which anchored off the Catalina Islands on April 25. The Congressional transport "Itata," one of the steamers chartered to the Provisional Government by the Chilean Transportation Company, was then in San Diego harbor, taking on a cargo of meat, flour, and other provisions for the army. The collector of customs at Wilmington asked for instructions, and was told in a telegram from Secretary Foster not to interfere with the transfer of the arms to the "Itata," as it would be no violation of the neutrality laws. The Attorney-General held a different view, and to keep the "Itata" from carrying off the arms, she was seized while in port by the United States

marshal, who left his deputy in charge. The commander of the Chilean steamer steamed out of port when he was ready, with the United States officer on board. He was afterward put on a pilot boat. The munitions were transhipped at night, and the "Itata" put out to sea. The question of the duties and responsibilities of the United States Government was a matter for the earnest consideration of the authorities at Washington. In the case of the "Alabama" the United States contended, and the arbitration court at Geneva decided, that a neutral Government must use due diligence to prevent the equipment or fitting out of armed cruisers or the use of its ports and waters for the renewal or augmentation of military supplies or arms. In the State Department it was held that the Government, having exercised ordinary vigilance and exhausted the means at hand to prevent a violation of neutral obligations, although it might have a right to take the vessel in outside waters, was not bound by international law to make the attempt. The Attorney-General and the Secretary of State were of the opinion that the pursuit and capture, if possible, of the escaped vessel, aside from the question of vindicating the insulted authority of the United States Government, belonged among the pacific duties of a neutral and friendly state. Accordingly, the cruiser "Charleston" was ordered to give chase. She was much faster than the "Itata," but the latter had a long start, and her course and whereabouts were unknown. The "Esmeralda" was in Mexican waters, waiting to convoy the transport, or to take off her cargo. The commander of the Chilean cruiser was Capt. Silva Palma, who had navigated the "Itata," with an armed force in concealment and guns masked, into San Diego, and carried off the deputy marshal, rejoining his vessel, while the "Itata" took a westerly course to elude pursuit. He made ready to fight the "Charleston" as she came up. On board the American war ship the guns were manned, and officers and crew were eager for the combat. Such a complication the members of the Junta were anxious to avoid, for it would prove a more serious drawback to their cause than the loss of the munitions. Through their representatives in Paris, they had already offered to deliver up the "Itata" to the American naval commander at Iquique as soon as she arrived at that port, outside which the American cruiser "San Francisco" was waiting with orders to intercept her. She was met by the "Esmeralda" off the Mexican coast, and was supposed to have transferred a part of her cargo, and on June 4 arrived at Iquique ahead of the "Charleston," and was surrendered to Rear-Admiral Brown, commander of the American naval forces, in accordance with a promise previously made to him by the Junta's Minister of Foreign Affairs. When she was restored to the custody of the United States district court at San Diego, the trial was continued, with the result that the court dismissed the libel on the ground that there was no violation of the United States neutrality laws, inasmuch as the Provisional Government in Chili had not been recognized as a belligerent. As this decision was at variance with the principles laid down in the "Alabama" case, the United States Government appealed from it, in

order that steps may be taken to amend the Federal law, if the court's construction of the statute is correct, so as to make it conform with international obligations.

The New Cruisers.—The "Presidente Pinto" and "Presidente Errazuriz," built for the Chilean Government in France, were completed, and lacked only their guns soon after the hostilities begun. The "Arturo Prats" was not ready, but even the two cruisers would be enough to enable the President to cope with the naval forces of Congress. It was therefore a serious disappointment to him when the French Government, in judicial proceedings taken at the instance of the agents of the Junta, placed an embargo on the two ships, in order to determine whether Balmaceda was, in international law, the ruler of Chili. The arguments dragged on till the middle of June, and resulted in the decision of the court that Balmaceda was President *de facto* until another person should be placed in the seat of power. The Junta met with the same response when it appealed to the Governments of Europe and of the United States and the sister republics in South America, excepting Bolivia. Financiers to whom Balmaceda applied for aid found his title questionable, and he met with delays in getting guns and in hiring crews and paying the expenses of the cruisers after they were released. The French Government prohibited its citizens from taking service, in accordance with its municipal law of neutrality. Lieut. Armit and another British naval officer accepted Chilean commissions, and enlisted men who shipped on the "Errazuriz," who took her to Lisbon. Chilean officers and marines had gone across the Atlantic to form the military force on the war ships. Men who joined the crew were put ashore or placed in irons when they demanded advanced pay, according to contract. Guns, the French contractors being unable to supply them in time, were obtained from the Armstrong firm. The officers had great difficulty in completing the crew in Lisbon, for the Portuguese Government forbade its subjects to go, took off Frenchmen at the request of the French consul, and required every foreign seaman who shipped to show a passport properly viséed. The "Presidente Pinto" met with worse mishaps. After leaving the French port, probably through treachery, for the Congressional agents were fertile in resources, she ran aground, and after being got off again and repaired, she was taken to Genoa and then to Kiel, in the vain endeavor to get on board the armament furnished by the Armstrongs, which the neutrality laws would not permit to be transhipped from the steamer that brought the guns from England in any European harbor. The "Errazuriz" was finally able to start for South America with a rough crew of many nationalities. This spurred the revolutionary leaders to extraordinary efforts to bring the conflict to an end before the President could make use of the new war ship.

The Final Campaign.—The Congressional army was trained in the German manner of fighting by Commandante Körner, who had served under Moltke on the Prussian staff. It was well supplied with modern repeating rifles, not only Winchesters and Remingtons, but Mannlichers, and smokeless powder. The "Maipo" arrived

at Iquique on June 27, with 8,000 rifles and other war material, and later the "Esmeralda" returned with a larger supply. Balmaceda's officers made ready for a campaign in the Coquimbo province, where the revolutionists landed in the latter part of June and occupied the seaport of Huasco. Balmaceda's forced levies offered no defense, but ran away after the first exchange of shots with the enemy's advanced guard, falling back on Villanar. That town was evacuated also when the Congressionalists appeared, and immediately afterward was retaken by the strong force of presidential troops that was hurried up from Coquimbo. The insurgents were likewise re-enforced by foot and artillery landed from the ships and cavalry advancing from Copiapo, and again drove back the enemy. Troops were sent up to contest the ground, a severe engagement took place on June 28, and skirmishing was continued for some weeks, the insurgents taking a strong position at Villanar that they could maintain against a superior force. The Government generals deemed it of importance to regain possession of this point, for from the valley it was possible for the rebels to strike Coquimbo in the rear. They had massed their army at three points, holding a force of 6,500 men at Coquimbo and La Serena, where the next struggle was expected to be, and a smaller division at Concepcion, ready for an attack or uprising in the south, besides the main body around Santiago. The rainy season made rapid movements of troops on land impossible. When the fighting began, Balmaceda sent re-enforcements as fast as he could, and after a while there were from 10,000 to 12,000 of his soldiers in Coquimbo. The operations on this coast were in reality a feint intended to draw away troops from Santiago and Valparaiso.

Balmaceda and his generals were surprised when a fleet of twenty ships anchored in Quinteros Bay, north of Valparaiso, on Aug. 20, and could scarcely believe that the rebels intended to fight his army of twice their strength, with other forces within call and the command of all the roads and strategic positions. There was doubt as to what part of the coast they intended to land on. Admiral Brown went down on the "San Francisco" to observe, and from the circumstance that the Government troops moved down to Valparaiso after his return, the Chileans afterward charged that American sailors must have acquainted Balmaceda's friends with the fact of troops debarking at Quinteros, within 20 miles of Valparaiso. In twelve hours all their forces were landed, consisting of 8,200 infantry, 3 batteries of field artillery and a naval battery, making 800 artillery, and 600 cavalry. The Secretary of War, Beñados Espinosa, who was chief in command under the direction of Balmaceda, had time to place in the first line of defense, in a strongly intrenched position at Conceon, 12 miles south of Quinteros, an army of over 8,000 men. The Government commanders were Gen. Barbosa and Gen. Alzarreca. Contrary to the judgment and instructions of Balmaceda, who intended that his generals should draw the enemy inland, and not engage unless they could oppose a force at least half as great again as the invading army, Barbosa determined to dispute the passage of the Aconcagua river, because beyond was the railroad to Santiago, that the revolutionary forces could

cut by taking the fortified position at Viña del Mar with the aid of their ships, or by turning it and destroying one of the bridges or the tunnel between Quilpue and Salto. The Congressional army, led by Col. Estanislao del Canto as commander-in-chief of the land forces, was divided into three brigades, of which the first was commanded by Col. Annibal Frias, the second by Col. Salvador Vergara, and the third by Col. Enrique del Canto. They marched through the night of Aug. 20, and took a position in the same order in which they marched, with the first brigade on the right, the second in the center, and the third on the left, their front extending for three miles along a ridge of hills facing the enemy, whose line of intrenchments stretched for four miles along the opposite bank of the Aconcagua. The battle was opened by the guns of Col. Canto's battery, and was taken up by the artillery along the whole line. The "Esmeralda" and three smaller vessels in Concepcion Bay, five miles from the ford, with heavy batteries and machine guns, kept up a well-directed fire on the enemy's position during the cannonading, which lasted an hour and a half. A naval battery of 12 Gardner mitrailleuses and a regiment of sharpshooters effectively supported the three brigades from good positions on the north bank. At one o'clock the infantry crossed the swollen river and climbed the hill under a hot fire, and, after an hour's hard fighting, the advanced guard of the Government was driven out, falling back on the strongly intrenched position of the main body on higher ground beyond. Supported by the artillery, the Congressional infantry assailed them there, and, after two hours more of desperate fighting, the President's commander drew off what he could save of his army. He began the fight with a force nearly equal to the enemy, and held a position that would have been impregnable, despite the deadly and distracting bombardment from the ships, if all his troops had the heart that a large part of them displayed. Such strenuous and courageous fighting between two tired armies has rarely been seen. The commanders knew better than Balmaceda the untrustworthy elements of which his army was largely composed and the dangerous temper of the population, imbittered by his barbarities, which he had crowned the day before the troops of Congress landed by having shot in relays 60 well-connected youths who had been caught meeting for some political purpose at Los Caños, an estate near Santiago. Railroad communication with Santiago was already closed by friends of the insurgents, who had destroyed the bridges with dynamite. There were enough troops in the field to overwhelm the Congressional army if the President's soldiers would fight. The events of the battle field at the Aconcagua crossing showed how necessary it was to strike quickly at Canto's army, and cripple it at whatever sacrifice. Although they were crippled, losing 300 killed and 700 wounded, their complete victory turned the chances of war in their favor. Their loss was made good by 1,500 men of the opposing army who deserted to them, some of them without breaking their formations. They took 18 field pieces and a large train of ammunition. On the Government side two whole regiments were annihilated and the killed exceeded 1,000, the wounded a much greater number. In the

retreat a part of the forces went off in good order, but a large part was scattered, and many ran off into the hills and eagerly threw off their uniforms and put on ordinary clothes that citizens gave them.

For the second line of defense Balmaceda had Viña del Mar, where his whole army of 13,000 men was intrenched in front of forts that commanded both the approach by sea and a part of the land approaches. The Junta's army marched down the south bank of the river over 15 miles of broken country, driving back the small detachments that had been posted at favorable places to impede its advance. In the evening of Aug. 23 Gen. Canto arrived in front of the main line of defense on the beach. The position was protected on the north by the estuary of Viña del Mar, and the intrenchments, on which the soldiers had been busy for two days, were guarded by the heavy guns of Fort Callao.

On the morning of Sunday, Aug. 23, Canto assailed this formidable position, and a furious battle raged during the greater part of the day. The Congressionalists dared not expose their ships to the guns of the fort, and therefore the navy could only aid them by an ineffective bombardment at long range, except on shore, where all the men that could be spared from the ships joined the land forces and did good service with their machine and quick-firing guns. The losses on both sides were heavy, and the combat was a drawn battle, as Balmaceda, who had come to the front to take command, was able to hold his forces together and defend the narrow line, in front of which there was not room for Canto to deploy his infantry. Finding that he could not force this position and co-operate with the navy in reducing Fort Callao, the northern defense of Valparaiso, Gen. Canto could not continue the campaign without parting from the fleet and running a great risk of having his retreat cut off. On Aug. 24 he drew off his forces, while the "Esmeralda" and the "Cochrane" kept up a fire on the forts at Viña del Mar to divert the attention of the Government troops, and pushed inland. Completing the obstruction of the railroad at Salto, they rested for a day at Quilpue, and on the 26th proceeded to march on Valparaiso by way of Las Palmas and Placilla, making a *détour* around the city in order to attack it from the south side, where there was the least exposure to the guns of the forts. Balmaceda manoeuvred to maintain a defensive position. When the enemy approached Placilla, he took up a strong position on the heights beyond the village, two miles nearer to Valparaiso. Desertions from Balmaceda's troops swelled the Congressional army to about 12,000 men.

On the morning of Aug. 28, long before daylight, the third and first brigades moved into position on the right and the left of the enemy's position, which extended two miles on the high ground overlooking the Placilla plain. The Government troops had no cavalry scouts out, but held their cavalry in reserve for the end of the battle, which the Balmacedists felt sure of winning if they were attacked, for their artillery was posted on hills commanding the village and the plain in front and on the right. Under cover of the darkness, the woods, and the undulating ground, the first and third brigades of

Canto's army got into place on the two flanks unobserved. About seven o'clock the second brigade descended the slopes, and the Government batteries opened fire on them as they advanced on the double quick over the plain. Thinking them the leading columns, the Government forces were concentrated to repel an attack in front. The wings advanced, and first the infantry on the Government right was driven back. Soon afterward the Congressional right wing began to advance, and at the end of two hours of fighting the weakened left of the President was nearly outflanked. The artillery in the center was turned to this quarter and checked the advance. The Tarapaca regiment melted under the destructive fire. Körner, coming to their support with two regiments, by a long *détour* turned the enemy's left flank completely. In the mean time the Congressional left was gaining ground, and the center advanced steadily. The artillery ammunition at the front began to run short, and the Government wings had both spent nearly all their cartridges. The Congressional batteries had advanced sufficiently to cover a cavalry attack up the hill from Placilla. The first charge was beaten back with great loss to the insurgents. A second followed, and the riflemen who were advanced to repel it were deceived by a detachment which gained the brow of the hill where Gen. Barbosa and Gen. Alzarrea were and sabered both the commanders. Meanwhile the Congressional right had gained the heights, having both flanked and pierced the defending line. The Government infantry broke and ran, except such as were eager for a chance to throw down their arms and surrender. The gunners still stood to their guns, and the cavalry came up under fire and charged the Congressional cavalry, to protect the retreating infantry as it fled down the road to Valparaiso. By eleven o'clock the battle was over. Of the Government troops, 3,000 were taken prisoners, 1,000 were killed, and 1,500 were wounded. The Opposition had 400 killed and nearly 1,000 wounded.

All resistance was now at an end, and nothing remained but to take possession of the town. Admiral Viel, the *intendente*, resigned his authority into the hands of the foreign admirals, who, in conference with Gen. Canto, named Carlos Walker Martinez as provisional governor. The victorious army began to enter the city at one o'clock, cheered by the entire populace. Capt. Alberto Fuentes, of the "Lynch," fled, but left the flag flying, and the boat was fired on from the shore until the colors were lowered. Insufficient guards were placed in the streets, and at night a drunken and frenzied mob held possession, firing buildings and terrifying citizens by the reckless firing of the discarded arms of Balmaceda's troops, murdering about 600 men, women, and children. The behavior of the victorious army was exemplary, with few exceptions. President-elect Vicuña, Capt. Fuentes, ex-Minister Godoy, and other men who were prominent in Balmaceda's Government fled on board the foreign ships.

Early in the morning of Aug. 29 Balmaceda's representatives at the capital asked for a conference with a view to its surrender, and Gen. Baquedano was commissioned to act for the Junta. The Congressional fleet entered the harbor of

Valparaiso, and Admiral Montt went ashore, and, at a conference with the foreign admirals and the *intendente*, demanded and was formally tendered the unconditional surrender of the city and of all the officers and troops as prisoners of war. The members of the Junta arrived from Iquique, and were installed at the capital on Sept. 3. Before the victors took possession of Santiago, the chief members and supporters of Balmaceda's government had escaped or hidden, or taken refuge in the foreign legations, where the hunted objects of their vengeance had received protection. The same vindictive fury was now exhibited by their adversaries. The corpses of the dead generals were paraded through the streets of Valparaiso. The wounded on the battle field were murdered by degraded savages, and those who escaped this fate were left to suffer for days where they lay by their victors, who neglected at first to organize a hospital service even for their own wounded. The houses of Balmaceda's friends were burned and their estates ravaged. A ceaseless hunt was kept up for the fallen President. When it was supposed that he had been taken on to the "San Francisco," the lives of Americans were not safe. He left Santiago on Aug. 29, in the hope of escaping on the "Condell," but returned on Sept. 2, because the passes of the Andes were blocked with snow, and remained concealed in the Argentine legation, where, on Sept. 19, he took his own life (see OBITUARIES, FOREIGN). The vengeance visited on Balmacedadists by the mob was not countenanced by the new Government, which sought to restrain lawless violence. One of the Dictator's ministers, Aldunate, was murdered by his escort at Quillota. The military authorities, after the capture of Valparaiso, asked for the surrender of the military and civil officers of Balmaceda's Government who had escaped to the foreign vessels, but the American, German, and English naval commanders refused.

Rule of the Junta.—When the Provisional Government was established in Santiago the United States, Germany, and the other foreign countries formally recognized it as the *de facto* Government, and received its accredited diplomatic representatives. The internal administration was got into working order after some disturbance in Coronel and other places. Balmaceda's officials were dismissed, and many of the old ones reinstated. One of the first acts was to restore the judges, who had all been removed unconstitutionally by Balmaceda, because they would not give legal sanction to his irregularities. The acts of confiscation carried out by the Dictator's officers were required by the confiscation of their property. Balmaceda's issues of paper money, amounting to 27,000,000 pesos, held largely by the banks, presented a troublesome problem. To avert a financial panic, the Junta decided to recognize certain issues and to assume the forced loans raised from the banks by Balmaceda, which amounted to 9,000,000 pesos. A general election for Senators, Deputies, municipal officers, and presidential electors was ordered to be held in the middle of October. Two months before his fall, Balmaceda had transferred from the treasury vaults to the British war vessel "Espígle" silver bars weighing 30 tons, of the value of \$1,000,000, which the gunboat conveyed to Montevideo to be consigned to England in payment

for an Italian vessel in Montevideo and for Armstrong guns. As this was the property of the state and part of a specific reserve created by law, the Junta obtained an injunction in the English courts while it was still on the sea. The Cabinet of the Provisional Government was completed by the accession of Augustin Edwards as Minister of Public Works and Manuel Alatta as Minister of Foreign Affairs. This formed a coalition of all the political parties except the Balmacedists. Minister of Justice Errazuriz issued many orders for the arrest of persons accused of having participated in acts of pillage, in flogging or torturing friends of the Junta, in violating the mails, in the massacre at Los Caños on Aug. 18, in the shooting of Cummings, and other outrages committed under Balmaceda's Government. In the elections in October the Liberals and Radicals, united under the name of the Liberal party, obtained a majority of 21 to 5 in the Senate and of 56 to 38 in the Chamber of Deputies. The Liberals and Conservatives were the only parties. The new Congress assembled on the last day of that month. Waldo Silva was re-elected Vice-president of the Senate and Barros Luco President of the Chamber. The Council of State having been constituted without giving representation to the Conservative party, Minister of the Interior Irrarazaval and Minister of Agriculture Joaquin Walker Martinez offered their resignations. Afterward arrangements were made for the inclusion of their party, in consequence of which they consented to retain their portfolios. Conventions of both parties nominated Admiral Jorge Montt to be the next constitutional President, and he was elected by the electoral college in November. Pending his formal election and inauguration on Dec. 26, he was empowered by Congress to assume all the authority of Chief Executive.

Difficulties with the United States.—During the civil war the partisans of the Junta conceived an idea that Patrick Egan, United States minister in Santiago, was hostile to their cause, and that the Government at Washington acted in an unfriendly manner in the "Itata" incident and in withholding the recognition of belligerent rights. Animosity toward the United States has been felt from the time when Chilean miners were driven out of California, and was revived by the attitude of the American Government during the Peruvian war, when it exerted its influence to prevent the annexation of the nitrate provinces. English influences contributed to the misconstruction of Minister Egan's pacific exertions and correctly neutral conduct. The prejudice against Mr. Egan and the country that he represented afterward moderated when it became known that throughout the war he had harbored in his house Augustin Edwards and other hunted chiefs of the Opposition. During the period of reconstruction, before the passions of the war had abated and when the authority of law was still in abeyance and public order constantly disturbed, it was remembered that Mr. Egan's dispatches to his Government belittled the rebellion and magnified Balmaceda's strength, and the anti-American feeling was intensified through his demand for a safe conduct for the Balmacedist fugitives who found an asylum in the legation, which was refused by

the Junta, although supported by the Spanish and other ministers in Santiago. Special animosity was entertained toward the American naval officers and sailors, because they were believed to have communicated military intelligence to Balmaceda's army. The "Baltimore" really performed an important service for Balmaceda in assisting agents of the American Cable Company to cut the cable at Iquique, closing telegraphic communications with the insurgents and opening a connection with Valparaiso.

On Oct. 16, when two boats' crews from the "Baltimore" and other American sailors were ashore, an altercation arose between Chilean sailors and some of the "Baltimore's" men in a drinking saloon, and one of the Chileans was knocked down. The Americans were then assaulted with knives and other weapons, and when they boarded a street car they were pursued by a great mob and were dragged from the car. The affair grew into a riot. Chilean sailors and police constables interfered to protect the men from the fury of the armed mob, though certain members of the police guard were said by the sailors and other witnesses to have joined in the attack, and to have used their weapons on the unarmed strangers.

Charles W. Riffin, boatswain's mate, who was believed to be the man that struck the Chilean, was shot, and died in the arms of Petty Officer Johnson, who thought that the shot was fired by a policeman. More than a hundred armed men fell upon the sailors when they were dragged off the car. George Panter, Patrick McWilliams, and William Turnbull, coal-heavers, David W. Anderson, painter, John Hamilton, carpenter's mate, John W. Talbott and Francis D. Williams, apprentices, and John H. Davidson, landsman, were assaulted with clubs, stones, and knives. Anderson, Turnbull, Panter, Davidson, and Hamilton received dangerous stab wounds in the back. About fifteen were slightly injured. Turnbull subsequently died of his injuries. American sailors not of the party that began the affray were set upon in various parts of the city. The police finally suppressed the riot and arrested all who were suspected of having a part in it. The Chilean disturbers easily concealed themselves, only three being arrested at the time. American men-of-war's men, being in uniform and having no place to escape to, were arrested wherever seen, thirty-six in all, and while being taken to jail and after they were there they were subjected to ill treatment. Apprentice Williams said that a mounted policeman placed catgut nippers around his wrists and then spurred his horse, throwing the prisoner down. Quigley, a coal-heaver, while trying to escape from the mob, was struck by a police officer with a sword. Hamilton, dangerously wounded, was dragged to prison, and one of his mates was threatened with a clubbed musket for trying to relieve him. At the prison the sailors were made to sign a paper, and when Rhinehardt, one of the prisoners, asked its meaning, he was told that it was a formal declaration that the signer was not engaged in the trouble. Commander W. S. Schley, of the "Baltimore," ordered an investigation, the results of which he telegraphed to Washington on Oct. 22. On receipt of his report, President Harrison consulted with the

Secretaries of State and of the Navy, and on the day following a dispatch was sent to Minister Egan, in which he was instructed to demand of the Chilian Government, which had expressed as yet no regret or purpose to investigate or bring the guilty parties to justice, whether it possessed qualifying evidence or could give any "explanation of an event which has deeply pained the people of the United States, not only by reason that it resulted in the death of one of our sailors and the pitiless wounding of others, but even more as an apparent expression of unfriendliness toward this Government, which might put in peril the maintenance of amicable relations between the two countries." The dispatch concluded with a demand for reparation. The attack on American sailors, which was regarded in Washington as a national insult, since they wore the uniform of the American navy, occurred at a time when the relations between the two governments were already strained through the action of the Junta with reference to the refugees sheltered by Minister Egan. The provisional authorities not only refused to grant safe conducts for these men, but demanded their surrender on the ground that they were criminals, and when the American minister would not give them up a guard was placed near his house and persons going in and out were arrested, among them three American citizens.

The "Yorktown" and "Boston" were ordered to Chili to back up the demand for satisfaction. The reply of the Junta was that the Government of the United States formulated demands and advanced threats that were not acceptable, and could not be accepted in the present case nor in any case of like nature; and that the affair would be investigated and dealt with according to the procedure of the municipal law of Chili, but that the results of the inquiry would be communicated to the United States Government, without recognizing, however, any right of intervention in the course of justice. This reply, couched in terms so offensive that no answer was returned, coupled with the refusal of Judge of Crimes Foster, who conducted the secret preliminary examination, to allow American officers to be present, gave rise to fears of severely strained relations between the two nations that might end in a diplomatic rupture, possibly in war. Judge Foster subsequently consented to the appearance of an officer of the "Baltimore" at the secret inquiry, and agreed to furnish the American representatives with copies of all the depositions. Before taking any action in the matter, the United States Government waited to give the Chilian Government time and opportunity to communicate the results of the judicial investigation and to reply in pertinent and satisfactory terms to the representations contained in the American note relating to the incident. If these expectations should be disappointed, or if further needless delays should ensue, President Harrison, in his annual message, announced his purpose to bring the matter to the attention of Congress in a special message. The Procurator found three Chilians guilty of stabbing Americans, and Davidson guilty of assaulting a Chilian. After his inauguration and the reconstitution of the Cabinet, President Montt directed Minister Montt to withdraw Matta's note.

CHINA, an empire in eastern Asia. The reigning sovereign, Kwangsu, born in 1871, was proclaimed Emperor on the death of Tungchi, on Jan. 22, 1875, and assumed the government personally in March, 1887, when he became of age, but first took the direction of affairs in February, 1889, when he married and the Empress Dowager, who had acted as Regent during his minority, retired.

Area and Population.—The area of the eighteen provinces forming China proper is estimated at 1,297,990 square miles and the population at 383,000,000 souls. The outlying dependencies, exclusive of Corea, are Manchuria, with an area of 362,310 square miles and about 12,000,000 population; Mongolia, of which the area is 1,288,000 square miles and the population 2,000,000; Tibet, having an area of 651,500 square miles and about 6,000,000 inhabitants; Jungaria, covering 147,950 square miles, with 600,000 inhabitants; and eastern Turkestan, occupying an area of 431,800 square miles, with a population of 580,000. The Confucian religious system is generally accepted among the Chinese, though there are multitudes of Buddhists and many adherents of Taoism. The Roman Catholic Church counted in 1881 1,092,818 converts, ministered to by 41 bishops, 664 European priests, and 559 native priests. The Protestant Christians were estimated in 1881 at 19,000 and in 1887 at 33,750. The number of foreigners residing in the open ports on Jan. 1, 1890, was 7,905, of whom 3,276 were British subjects, 1,061 Americans, 794 Japanese, 596 Germans, 551 Frenchmen, and 348 Spaniards. About half of them were resident at Shanghai.

Finance.—The total receipts of the imperial treasury from the land tax, the grain tax, and duties on salt, customs duties, and other imposts are supposed to amount to \$125,000,000 annually. The land tax, partly payable in silver, yields about 20,000,000 haikwan taels. (The haikwan or customs tael is a weight of silver of the value of \$1.17.) This tax varies from 75 cents in the north to \$3.25 in the south per acre. The maritime customs, which are under European supervision, amount to 23,200,000 haikwan taels a year. This includes the *likin* or internal transit duty on opium, which can be commuted and paid in at the port of entry according to the new convention with Great Britain. The rice tribute is estimated at 2,800,000 taels a year, the salt tax at 9,600,000 taels, the native maritime and inland customs at 6,000,000 taels, transit duties on opium and other foreign and native products at 11,000,000 taels, and license fees at 2,000,000 taels. The annual expenditure on the army is about \$75,000,000.

The foreign debts of China are £627,675, borrowed at 8 per cent. in 1874, and £1,604,276, borrowed in 1878 at the same rate of interest, both loans being secured on the customs revenue; a silver loan of £1,505,000 raised in 1884; loans amounting to £2,250,000 contracted in 1886; and one of £250,000 obtained in Germany in 1887.

The Army.—The Chinese Empire is divided into five military districts, corresponding with political divisions, viz.: Manchuria, the eighteen provinces, Chinese Turkestan, Mongolia, and Tibet. The Manchus or soldiers of the Eight Banners, forming the old imperial army and en-

dowed with special privileges, number about 288,000, of whom only about 90,000, including the Pekin garrison of 13,000 men, can be counted on for effective service in war, being drilled in the European manner and armed with modern firearms. The troops of the eighteen provinces, the Green Flag or Chinese army, numbers 539,000; but of these not more than 98,000 *yuns* or volunteers and 161,000 *hjan-djuns* are effective. The capital province of Pechili is defended by 99,000 soldiers, all well trained, with 581 cannons, of which 245 are of the patterns now used in war. In the province of Kwangsi and on the island of Formosa are strong bodies of instructed and disciplined troops provided with a superior armament.

The frontier provinces of eastern Turkestan, Ili, and Tarbagatai are guarded by 30,000 soldiers, of whom 8,100 have received military instruction. Mongolia has its own militia, numbering 117,000 men, and Tibet its two bodies of militia, numbering 64,000 men, including 14,000 cavalry; but of both bodies only 30,000 men are kept under arms. According to these estimates, the total numerical strength of the Chinese army is 1,088,000 men, of which number not more than 387,000 could perform service in case of war.

The Navy.—The Chinese Minister of Marine began the reorganization of the war fleet on European lines in 1885. The three squadrons—those of Canton, Foochow, and Shanghai—were then ordered to be combined to form the squadron of the north and that of the south. The Northern or Pei-Yang Squadron consists of 3 large ironclads, 2 small ironclads, 2 cruisers, 11 gunboats, 4 torpedo cruisers, and 27 torpedo boats. The Nan-Yang or Southern Squadron is still in process of formation. There are 9 cruisers, 3 gunboats, and 9 dispatch boats in the Foochow squadron. The Shanghai flotilla has an armor-clad frigate, a gunboat, and several wooden monitors, and the Canton flotilla consists of about a dozen river gunboats.

Commerce and Production.—The value of the imports, as returned by the Bureau of Maritime Customs for 1889, was 110,884,355 haikwan taels, and the value of the exports 96,947,832 taels. The direct imports from Great Britain were 21,167,357, and the exports to Great Britain 15,656,907 taels; the imports from Hong-Kong 63,371,081, and exports to Hong-Kong 35,186,644 taels; imports direct from India 7,906,579, and exports to India 1,089,965 taels; imports direct from the United States 3,805,664, and exports to the United States 7,084,121 taels; imports from Russia 766,170, and exports to Russia 7,289,322 taels; imports from other European countries 2,205,988, and exports to those countries 17,533,707 taels; imports from Japan 6,601,833, and exports to Japan 6,469,030 taels. These figures include both the imports and exports of the open treaty ports and the junk trade of Hong-Kong and Macao with the south of China, which is declared at the custom houses of Kowloon and Lappa.

The imports of cotton goods in 1889 had a total value of 36,135,596 haikwan taels, of which 13,019,000 taels represent cotton yarns; imports of opium, 30,444,869 taels; of metals, 6,728,394 taels; of rice, 6,021,000 taels; of *beche de mer* and other sea products, 4,508,937 taels; of woolen

goods, 3,975,476 taels; of kerosene oil, 2,875,490 taels; of coal, 2,376,777 taels; of timber, 2,354,000 taels; of raw cotton, 1,213,349 taels. The quantity of tea exported fell off from 2,167,552 piculs of 133½ pounds in 1888 to 1,807,308 piculs, of which 603,738 went to Great Britain, 296,148 to the United States, 130,405 to Hong-Kong, 139,623 to Australia, and 536,494 to Russia. The value of the tea exports was 28,257,000 taels, falling a little behind the figure for raw silk, which was 28,257,000 taels. Silk manufactures were exported of the value of 7,760,000 taels; cotton, 5,045,000 taels; sugar, 2,723,062 taels; straw goods, 2,033,775 taels; clothing, 1,709,591 taels; paper, 1,422,825 taels; mats, 1,241,000 taels; fireworks, 1,215,000 taels; chinaware, 638,428 taels. Of the total imports, agricultural products made 40 per cent.; fishery products, 2·8 per cent.; forest products, 2·5 per cent.; mineral products, 11 per cent.; and products of industries, 43·7 per cent. Of the exports, 45 per cent. consisted of agricultural, 35·8 of animal, and 19·2 of industrial products.

The report of the Maritime Customs for 1890 shows an increase of the imports to 127,093,481 taels, while exports declined to 87,144,480 taels. The decline was due to inundations and the increased competition of India and Ceylon in the tea trade; while the increase of 14 per cent. in the imports was owing to the rise in the gold value of silver, which acted also as a deterrent of exportation. There was a much greater import of rice. The import of cotton goods increased 25 per cent. The consumption of Indian yarn expanded in a remarkable degree, the imports rising from 678,558 piculs in 1889 to 1,081,495 piculs, valued at 19,300,000 taels. The export of tea fell off to 1,665,396 piculs, valued at 26,663,450 taels. Silk, raw and manufactured, declined from 36,401,967 to 30,255,905 taels. The duties collected by the Maritime Customs in 1890 were 21,996,226 taels.

Navigation.—In 1889 there were 29,145 vessels, of the aggregate capacity of 23,517,884 tons, entered and cleared at the ports of China. Of these, 24,604, of 22,684,132 tons, were steamers. Of the total number 15,763, of 14,903,750 tons, were British; 9,427, of 6,020,526 tons, Chinese; 2,656, of 1,582,648 tons, German; 528, of 441,667 tons, Japanese; 179, of 269,002 tons, French; and 178, of 75,077 tons, American.

Communications.—The coal railroad from the mines at Kaiping to the head of navigation on the Petang was continued by way of Taku to Tientsin, the total length being 86 miles. The order to extend it to Tungechow, near Pekin, was rescinded, and nothing has yet been done to carry out the great scheme for a strategic railroad from Pekin to Hankow, on the Yangtse-Kiang, which was approved by the Emperor in 1889. The net of telegraphs connects the capital with all the ports and the chief centers in the interior.

Anti-Christian Riots.—The enmity of the Chinese toward Europeans springs not merely from race antipathy and superstitious prejudice. The natural animosity that is felt in all parts of the world, especially among the ignorant classes, against people alien in race and civilization, is intensified in China by intelligent motives of self-interest arising from the treaty rights and

privileges secured to Europeans as the result of victorious wars and enforced by gunboats. The presence of Europeans has caused a great increase in the imperial taxes, and for every outbreak of mob violence against the "foreign devils" a heavy indemnity is exacted from the offending district. Before the French and British governments assumed the protection of missionaries and made their grievances a plea for demanding humiliating concessions, the Roman Catholic missionary orders made thousands of converts; since the missionaries were made a counter in the political and commercial game and, relying on being backed by armed force, assumed offensive airs of authority, their labors have not been fruitful, and they have provoked many riotous attacks, ending usually in the destruction of their churches and mission buildings, which have been rebuilt on the demand of the European diplomatic representatives at the cost of the native community. The Christian converts are not respected or liked by the Chinamen who cling to the ideas and civilization of their fathers, and they become an outcast class, and continue so even when they have fallen away from their Christian teachings. The Taiping sect was largely composed of descendants of Christian converts, and since the great rebellion conservative Chinamen have regarded with anxiety the prospect of a spread of Christianity and of European influence and civilization. The anti-foreign sentiment is strongest in the places where Europeans have most recently made their appearance, and where a disturbance of the customary channels of trade and the professions by which people gain their living is anticipated from their competition and the introduction of steamboats and other modern inventions. Ichang and the other treaty ports on the Yangtse river are the only places in the interior of China in which Europeans other than missionaries are permitted to reside and carry on business. The people of the river towns have been exasperated lately by the persistent demands of the English Government to have Chungking, the commercial capital of the great province of Szechuan, made an open treaty port. The Chinese authorities resisted this claim for years, denying that the Chefoo convention required them to open that town to trade or the Yangtse to foreign vessels beyond Ichang. The place was nominally opened and a custom house inaugurated at last on March 1, 1891, though the fear of mobs still prevents the English from taking advantage of it, for they have obtained no concession of wharves and building sites and have agreed not to run steamboats in the upper river. The populace in the Yangtse valley in 1891 was in a condition to be easily excited against the Europeans or against the Government that had shown complaisance to foreign demands. The foreign tea trade had been taken away from them by the great planters of Assam and Ceylon, causing an increasing amount of idleness and distress year by year, and in this year a drought had prevented the farmers from raising crops and deprived farm hands of work.

This country, in which these special conditions worked together to cause a recrudescence of the anti-foreign spirit, had been the theatre of some of the chief conflicts of the Taiping war, and

the army that put down the rebellion was largely drawn, as is the Chinese army to-day, from the rude and truculent peasantry of the Yangtse country, and particularly from the great province of Hunan. In Hunan was founded, about fifty years ago as a mutual benefit and protective association, a secret order called the Kolao Hui, which was composed in the beginning entirely of active and discharged soldiers of the Chinese army. This society attained great power among the soldiers engaged on the imperial side during the Taiping rebellion. Its chief object was to protect them from the plunder and extortion of the civil officials, who used them, as they do now, to embezzle money appropriated by the Central Government for the pay and maintenance of troops. Authorities who ill-treated the soldiers incurred the vengeance of this secret society. Some were assassinated, others had their houses or property destroyed, or sometimes their punishment consisted in sudden and turbulent disorders that were incited in their districts for the mere purpose of bringing about their official disgrace. Oaths and ceremonies characteristic of Chinese secret societies were gradually introduced, such as killing a cock and drinking its blood in wine at initiation, and the importation of the supernatural by reading the oracles traced by a pencil suspended from a board and moved involuntarily by superimposed hands. As the society grew in size and came to admit civilians, as well as soldiers and officers, the scope and purposes were enlarged, though its original military objects were not lost sight of; and it preserved its secular character, keeping free from the religious tendencies that distinguish some of the great secret societies, and thus inclining the more readily to political activity. Like others of these bodies, it entertained a strong hostility toward foreigners, and has long been known to be specially antagonistic to Christians and missionaries, probably owing to its traditions in connection with the Taiping rebellion. The persecutions of the Jesuit priests and their congregations in Yunnan and Szechuan have been attributed to the machinations of the Kolao Hui. The society is supposed to have a membership of 40,000,000. Its ramifications extend into all parts of northern and central China. It has representatives in all classes, even among high-placed mandarins. Powerful viceroys have endeavored to crush it out, but it has continued to spread and flourish, owing to the corruption and timidity of local officials. In troubled times it is suspected of anarchistic and anti-dynastic plots, and then the detection of a ticket of membership is followed by the immediate execution of the holder. Apart from political objects, the association has a criminal character, for members are sworn to avenge one another's private wrongs. When Chinese officials give offense to the people, it is a common practice to compel them to amend their faults by producing riotous disturbances that have no immediate connection with the question at issue. Any matter on which the mind of the mob can be easily inflamed will accomplish the object. The Kolao Hui has recently had a special grievance in the discontinuance of a pension of 50,000 taels a month that has been distributed since 1864 among the veterans of the Taiping war by the Kiangnan viceroy.

Whatever was the inciting cause, a series of disturbances that could only be due to a widespread conspiracy occurred in the valley of the Yangtse-Kiang in 1891. The avowed object was to drive the missionaries out of the country. The Kolao Hui was suspected both by the Europeans and by the Chinese authorities to be the only agency by which such disorders could be instigated in places far apart. The ultimate object was supposed to be to drive Europeans away from China and revoke their treaty rights. There was a suspicion that the conspirators even aimed at the overthrow of the Manchu dynasty, either for the more effectual banishment of the barbarians, to whom the ruling powers at Peking were too deeply committed, or for the accomplishment of the designs of ambitious statesmen, or the realization of the dream, which has more than once cropped out in troubled times, of the restoration of native Chinese rulers.

When it is the object of agitators to incite the Chinese mob to attack the Christian missions, it is only necessary to revive an old slander that is readily swallowed by the ignorant, and even by some who make pretensions to education. It is a common belief that the Catholic fathers procure Chinese babies for the purpose of compounding a medicine of their eyes and other parts of their bodies. That the missionaries receive deserted and sick children into their orphanages is a fact within the knowledge of all. Among these children the mortality is necessarily great, and the fable has arisen from the fact that many children have died and never again been seen by inquiring relatives. The Catholics seclude their pupils and keep their methods of instruction out of the public view, and this secrecy gives greater currency to the report. The Protestants, who have been less successful in their missionary efforts, say that their rivals rescue children from infanticide and neglect not purely from humane motives, but because each child adds one to the list of converts that they can report to their superiors in Europe.

At the bottom of all anti-foreign outbreaks in China have always been men of the numerous literary class, expectant officials who have passed the lower examinations and hope by causing the displacement of functionaries to obtain offices, and who hate Christianity because it diminishes their influence over the people.

The first outbreak of fanaticism occurred early in May, 1891, at Yangchow, where a mob destroyed the property of the Roman Catholic mission. This was followed by a more serious disturbance on May 12 and 13 at Wuhu, a treaty port of 100,000 inhabitants on the lower Yangtse, about 60 miles above Nankin. This is in the ecclesiastical province of Kiangnan, covering 243,000 square miles, where the French Jesuits have 102 missions, with 110 priests and a Catholic population of 100,000, which is less than 1 to every 700 inhabitants. In Wuhu the jealousy of the people toward the priests is the liveliest because the latter have acquired much of the best real estate and wharves, for which they collect high rents. Secret agents started a rumor that female kidnappers had been detected in abducting children with the aid of stupefying drugs and even of magic and bringing them from distant places to the Wuhu mission. Par-

ents were said to have gone to the mission and there discovered human bones and other evidence of the ghastly crimes charged against the missionaries. Placards were posted in public places giving circumstantial details and the names of parents who had lost their children. The converts were said to be bribed to join the churches, otherwise they would not commit such a breach of morality and custom as to sit, both sexes together, in the congregations.

A few days before the riot an anonymous letter was sent to the priests demanding the surrender of certain children that they were accused of having stolen, on pain of having their orphanage burned down. They applied to the *taotai*, or local governor, for protection, and he gave them a guard of soldiers. All that there were in the place was 50, although the officials received money for the pay and maintenance of ten times as many. On May 10 two Chinese nuns were arrested on the charge of having drugged two children, depriving them of the power of speech. On May 12 a woman presented herself at the gate of the mission and began screaming that her child had been murdered. In a short time a mob of 10,000 people gathered about the mission buildings. The French priests were roughly handled, but allowed to escape. The buildings were sacked and burned. Then they tore up the graves in the Christian cemetery in search of evidence of the murderous practices of which the priests were suspected. The small guard of soldiers could not prevent the destruction of the new cathedral and all the buildings. The *taotai* issued a manifesto warning the people to disperse, and was answered by a fresh placard accusing him and the military commander of accepting Christian bribes and being in league with the barbarians. The mob had acted thus far within the prearranged programme, which they exceeded when they destroyed the dwellings of the other European residents and attacked the custom house, where the Europeans of the town had taken refuge. The men stood a siege, keeping guard with firearms during that and the following day. At one time they charged into the crowd with bayonets. The British consulate was looted, and the consul and his wife escaped with difficulty in disguise. The arrival of 3 Chinese gunboats that were escorting a viceroy to his province put an end to the disturbances. The Chinese officer landed 250 marines, who fired blank cartridges, scattering the mob, and preserved order until a French vessel came to relieve them. The *taotai* issued a proclamation in which he called upon people who found that the Christian institutions steal children to lay the matter before the proper judicial authorities. Three days after the riot a violent incendiary placard invited the people to rise in their tens of thousands on the 20th and complete the destruction of all the Catholic and Protestant mission property and churches in the district, and allow none to be rebuilt. Before the end of the month riots occurred at Tanyang, Wuhshih, Nankin, and other places on the Yangtse river, the object in all cases being the destruction of mission buildings. At Nankin a mob destroyed some of the Catholic buildings on May 25, and then set fire to the girls' school of the American Methodist mission. The action of the military

soon checked the disorder there, although the viceroy, Liu Kung-yi, seems to have taken little interest in preserving order. The missionaries had all fled by steamer, having been warned by the authorities. At Wuchen, on Lake Poyang, the property of both the Catholic and the Protestant communities was destroyed by fire. At Wusih, near Suchow, the French church and orphanage were razed to the ground. In a riot at Takatang the troops that were sent to quell the disturbance joined the mob. Riots took place also at Nganking, where the priests defended themselves successfully, and at Wuchow. At Tanyang the old French church that had stood for two hundred years was burned and the Christian cemetery dug up. The mandarin when he attempted to stop these proceedings was maltreated. At Hochow the mob was dispersed by soldiers. Not fewer than 10 missionary establishments in the provinces of Anwei, Kiangsu, Hunan, and Szechuan were utterly destroyed, their churches, orphanages, founding asylums, and hospitals burned to the ground, and their inmates compelled to flee, all within a few weeks. In none of these attacks was an attempt made on the lives of the Catholic fathers. On the contrary, the organizers of the riots seem to have taken precautions to provide them always with some way of escape. Nor in any instance were their converts molested. In other places about 20 churches, schools, and hospitals were burned or wrecked.

On June 5 a more serious outbreak occurred at Wusueh, 500 miles from the mouth of the Yangtse, situated in the vice-royalty of Chang-Chih-tung, who is Governor-General of the Hu provinces. A man appeared in the streets with four children that he had brought from a neighboring town, and openly told the people that he was carrying them to the missionary station at Kinkiang to be cut up and made into medicine. The town in a short time was in high excitement. People went to the mandarin and asked him to take the children away. This he declined to do, laughing at their story. Soon a mob of 5,000 persons collected around the English Wesleyan mission premises, and set one of the houses afire. The only male Europeans in the town, a young missionary named Argent, and the English collector of customs, whose name was Green, ran to the spot to help put out the fire. Mr. Argent, who came first, was instantly set upon and killed. The same fate was Mr. Green's, who had served in the British navy, and fought desperately until he was pierced and hacked with more than a hundred wounds. One of the mandarins implored the mob to desist, and offered his own life as a sacrifice to their vengeance. The women and children of the mission escaped to the custom house, where they were bravely defended by the Chinese employes. They had first sought refuge at the *yamen* of the head mandarin, who barbarously ejected them. The three ladies, Mrs. Prothero, Mrs. Warren, and Mrs. Boden, were murderously assaulted after they were thrown out of the mandarin's house. Two days later the premises of the American Presbyterian mission at Kiu-Kiang were attacked, but the Chinese mandarin there acted with promptitude, and placed a guard of soldiers around the mission. The American steamer "Palos" and

French and German gunboats arrived at the places where disturbances had taken place, and by their presence prevented their recurrence. The English people had been the first to ask for naval protection, but none of their numerous gunboats had been sent to the scene of the troubles. The French minister sent all the French men-of-war to the threatened ports, with orders to make a sufficient display of force, and even to fire if necessary for the protection of the French missions. The outrages put a stop to nearly all missionary work in the middle and north of China. In the course of a few days the French fathers had lost many millions of dollars' worth of property. The American Baptist and Presbyterian missionaries in the neighborhood of Shanghai and at Soochow were attacked, and by the advice of Consul-General J. A. Leonard they went to Shanghai, where the foreign residents raised and armed a strong corps of volunteers to defend their lives and property, declining a detachment of imperial troops that the *taotai* offered to furnish for their protection.

The local authorities in the beginning of the disturbances showed their usual mildness and timidity, though a few acted with prompt energy. After the riots, all took measures to prevent a repetition, posting troops to guard Christian property. The Viceroy of Nankin, within whose jurisdiction the greater part of the destruction took place, asked for powers to deal summarily with the promoters of riot and sedition, who were, he said, members of secret societies and disbanded soldiers. According to his request, the local magistrates were authorized to try persons accused of murder, incendiarism, and rioting, and to the Viceroy the Peking government delegated the power to order the instant decapitation of any one found guilty. In Wuhu two rioters were beheaded, and the magistrates were authorized to deal peremptorily with all who could be caught. The ministers of the western powers presented a collective note to the Tsungli-Yamen, and on June 12 the Emperor issued a decree commanding the governors or viceroys to arrest at once, try, and execute leaders in the riots, put down with a high hand such acts as the printing or posting of incendiary placards, and take measures to degrade all officials suspected of connivance or remiss in their efforts for the protection of Christian missionaries. The French and British representatives presented claims of indemnity for losses amounting to 6,500,000 taels. France, Great Britain, the United States, and Germany strengthened their naval forces in Chinese waters. The Government at Washington sent the cruiser "Charleston" and the "Marion," "Alert," and "Mohican" to join the "Monocacy," the "Palos," and the corvette "Alliance." Incendiary placards were posted in Foochow, where European houses are scattered and not collected in a compound near the water. No disturbance took place, and the towns on the Yangtse remained quiet, for they were guarded by 20 foreign war ships. The Chinese fleet remained away. At Peking the British, French, and German ministers, acting in concert, used pressure on the Tsungli-Yamen, demanding that secret societies should be extirpated, Hunan thrown open to foreign commerce, and all man-

darins implicated in the riots degraded. The Government could not depend on the local officials nor on the army to carry out a strong policy, and was compelled to confess that if the powers persisted in their demands they would bring about the fall of the dynasty and general anarchy. The Emperor's edict was not sent by telegraph, but by couriers. After a long delay, two persons were executed for the murders at Wusueh. No magistrate was degraded except the Wusueh mandarin, who tried to stop the riots, and offered his life as a sacrifice to the fury of the mob. Five, however, were reported to the Peking authorities for negligence. The two viceroys ruling over the Yangtse districts, after Lord Salisbury had made a menacing communication to the Chinese minister at London, settled all damages claimed, without disputing about amounts. The foreign ministers in another collective note demanded complete satisfaction, including punishment of the true ringleaders at Wuhu.

The riotous disturbances broke out again on Sept. 3, at Ichang, 600 miles from the first violent demonstration. The same marks of a deliberate plot were observable. A stranger brought an unknown child to the Catholic mission. An outcry was raised that it had been stolen, and a mob of beggars and disbanded soldiers plundered and burned some of the buildings and those of the American Protestant mission and others belonging to the few European residents, sparing only the British consulate. The mob, which was led by disguised Hunan soldiers, after obtaining a rich booty, turned their attention to the Europeans, of whom twenty escaped, not without injuries, to a steamboat. The civil and military mandarins, although they had a large force of soldiers within call, did nothing to check the outrages, but said they were powerless. No steps were taken afterward to arrest the leaders. A force of British sailors was sent on a steamer to protect the remaining buildings of the foreign settlement.

The presence of European forces on the Yangtse and the measures taken by the Peking authorities, under foreign pressure, to repress the movement suited well with the plans of its secret authors. The ferment in the Yangtse valley extended, and soon took the form of organized revolt. The Chinese Government, when threatened with naval action of the powers in the troubled districts, which portended nothing less than a joint or British occupation of the Yangtse ports, protested its ability to preserve order, and ordered the North China and Nankin squadrons to patrol the Yangtse. In Wuchang, the seat of the viceroy of Hunan and Hupeh, the neighboring city of Hankow, one of the largest in the world, and in all the centers of population, a restless spirit of sedition was observed. Anti-foreign placards were posted everywhere. An English custom-house official at Shanghai named Mason was detected in attempting to smuggle from Hong-Kong a large number of Winchester and Martini rifles and a quantity of dynamite destined for the Kolao Hui in Chinkiang. Six or seven other Europeans were arrested on suspicion of being engaged in a similar business. Among the candidates for degrees who came to Shanghai for the annual examinations circulars

were distributed accusing missionaries of shameful misdeeds and the European physicians of criminal malpractice. At Newchang, in Manchuria, Dr. Greig, an English missionary, was murdered in August, but this act was not supposed to be connected with the machinations of secret societies. In Hunan a society was organized to prevent the extension of the telegraphs and cut down the poles already erected. In the province of Fukien, at Tehhua, not far from Foochow, a serious riot occurred in October. About 3,000 insurgents attacked the town and held it for several days, until a detachment of imperial troops arrived.

When the troubles began to assume the appearance of civil war the provincial authorities proceeded with energy against the Kolao Hui. One of the chiefs of the society, Chen Kinlung, was arrested in Shanghai, and by order of the Kiunguan viceroy was put to the torture to make him reveal his secrets and accomplices, but in vain. Among the persons arrested for instigating the riot at Chinkiang were 17 Manchou officials. In Hankow two secret printing offices and a quantity of anti-Christian pamphlets were discovered.

In November a movement began in Manchuria and Mongolia similar to that in the Yangtse valley, but more portentous, because the active troops took part in it. Two Belgian priests were massacred at Taku, the missions were everywhere destroyed, and the missionaries fled to save their lives. Large numbers of native Christians were slaughtered. The local authorities, who did nothing to check the atrocities, fed and encouraged bands of insurgents and mutinous troops that marched about the country to join the main body, which grew into an army and advanced in the direction of Peking.

Secret Societies.—The Hui, or secret brotherhoods, in China have always followed revolutionary aims, and often have assumed the character of a religious sect for the purpose of cloaking their real objects. Under the Tsing dynasty open political activity has been repressed with inexorable rigor. The Tartar conquest was consummated by means of a persecution so merciless that patriots had to resort to a sign language to communicate one with another. Soon after the overthrow of the native Ming dynasty, in 1644, the oldest of the existing secret societies, the Kihing, was founded for its restoration. Patriots have never ceased to deplore the loss of the freer national life under the Chinese emperors, and no occupant of the throne has been exempt from the dread of revolution, or has failed to pursue the secret fraternities that have plotted insurrections, and once or twice have nearly compassed the overthrow of the foreign rulers. In peaceful times persecutions have ceased because they would rekindle the fires of revolution. In times of political unrest the possession of the badge of membership often costs the wearer's life, and often high officials have suddenly disappeared, doomed to death or lifelong banishment in Tartary. When a society has been nearly exterminated, like that of Peilinkoa, or the White Water Lily, which in the early part of this century, under cover of religious and vegetarian propaganda, organized revolts against the Emperor Kianging, others,

like the Kolao, have sprung up in its place. These Chinese Nihilists not only plan rebellions, but give aid and encouragement to revolts not connected with their schemes, such as the Mohammedan uprising and the insurrection of the Miaotsi mountaineers. Even robbery and brigandage are cultivated to bring about a state of anarchy that will lead to revolution. In this way the societies have sometimes degenerated into gangs of robbers and secret assassins, and been joined by people of criminal impulses or who have private grudges to wreak on their enemies, for the rule that no brother shall be betrayed to the authorities for any cause can only be broken under penalty of death. Formerly the great secret societies encouraged the propagation of Christianity, looking to Europe for aid in expelling the Manchus. The Emperor Kianking, who was compelled to keep his army constantly under arms by the White Lily Society, conceived a bitter hatred of all religious sects, which he visited most severely on the Roman Catholic Christians, causing many thousands to be put to death. Under these circumstances a natural sympathy sprang up between the Christians and the Taiping sect, composed partly of survivors of the broken Christian congregations and children of those who were massacred. In the earlier period of the Taiping rebellion European sympathy was largely with the revolution, but when the governments came to act it was to crush it and save the dynasty, exacting in return concessions that the Chinese consider prejudicial to their interests and repugnant to their national honor. Since then the secret fraternities have coupled together Europe and the Manchu conquerors, and the next great revolutionary society that sprang up in central and northern China made the expulsion of the Christians a prime article of its creed. The Roman Catholics are the special object of Chinese animosity because of the losses and humiliation inflicted by the French in the Tonquin war. This feeling is strongest in the south of China. There the Cantonese Triad Society flourishes and but few representatives of the Kolao Hui are found, and therefore the present movement has not penetrated to that region. The organization of a native militia among the Christian converts in Tonquin was the cause of an outbreak of national fury and fanaticism in southern China in 1884, and again in 1886, when the scattered Christian communities were objects of savage and murderous persecutions.

After the suppression of the Taiping rebellion the activity of the Chinese patriotic organizations was confined for many years to saving those of their numbers who fell under suspicion from the vengeance of the Government, by providing them with means to emigrate. Thus it has come about that the impulse to the anti-dynastic movement originates to a great extent in Singapore, and the Chinese papers printed there reveal the national aspirations in a way that is impossible under the stringent press supervision that has been exercised in China ever since the Manchus achieved their sanguinary conquest. In addition to the famous and widespread secret societies, there are a great many having similar purposes of minor importance. Every province has one or more of its own. The organization that had most to do with the Taip-

ing rebellion was that of the Three Societies, the Sanhop Hui. The English authorities in Singapore have several times attempted to suppress the secret societies there. In that city about ten years ago the rules of the White Lily Society were discovered, which make death the penalty for refusing to stand by a fellow-member in a quarrel, even against one's own brother, or betraying him to the police, or failing to aid him with means to escape the clutches of the authorities and flee from the country, even if one's clothing and furniture must be pawned.

The literary class takes a leading part in every movement against the dynasty, because the principles of the Tartar rule seem barbarous to the educated Chinese mind. Two or three of the Manchu emperors fostered letters, and were themselves distinguished writers. The majority have shown themselves apathetic to science and literature, and have allowed them to languish. Some have been distinctly hostile, like Kianking, who said that it was more becoming for a noble to master archery and horsemanship than to sit over books. The present *régime* seems to the Chinese a system revolting to their habit of mind, that of a military despotism. The sale of offices, resorted to in recent times to provide means for wars and armaments against Europe because the Government dared not impose taxes, has done much to make the dynasty hated.

It is supposed that a revolution to be successful must be managed by persons in power. During the present reign Chinese statesmen in the natural course of events have come to the front and prominent Manchu administrators are passing from the stage. The most powerful man in China is the aged Viceroy of Pechili, Li-Hung-Chang, who has the defense of the throne and of the person of the Emperor in his care, has organized and commands the only efficient naval and military forces, controls to a great extent the foreign relations, and has placed his friends and relatives at the head of the chief provincial administrations. His policy has been to build upon the military traditions of the Tartar rule and improve the defensive resources of the empire, in order to bear the strain of European relations and guard the frontiers from aggression.

The Audience Question.—The theory that China is the Middle Kingdom and the Emperor the rightful lord over all nations is so deeply rooted that France was compelled to accept the position of a vassal in respect to Tonquin, and Great Britain renders nominal homage in Burmah and does not even restrain the princes of Himalayan states from sending tribute to the Sun of Heaven. When European troops had possession of Peking they exacted material advantages, but did not venture to disturb the belief in the universal suzerainty of the Emperor; and when the English and French forces assisted in putting down the native rebels, the Chinese supposed it was an act of filial duty to the paternal sovereign of "all under heaven." The European envoys, after gaining admission to Peking thirty years ago by the power of the sword, found it impossible to communicate their demands and representatives to the competent authorities until fresh menaces and displays of force brought about the development of the Tsungli-Yamen into a proper medium of diplomatic action. They never

demanding the right to present their credentials to the Emperor in person, as to European sovereigns. England and the other powers have found anomalous relations with Oriental despots a practical advantage, for the international principle of the equality of states would otherwise preclude them from forcing the admission of opium, dictating a tariff, and exercising extra-territorial sovereignty. A so-called audience was granted to the foreign representatives in 1873, which was more like a review. During the minority of the Emperor the audience question could not be pressed, and while Chinese ministers in Europe were received with great honor, the diplomatic corps at Peking has been humiliated and reduced to impotence in the degree in which the military power of China has been strengthened. After the Emperor assumed the Government the European envoys began to press to be received at court, the English minister taking the lead. The Emperor was not unwilling, and the Tsungli-Yamen arranged the forms and manner of an audience, exacting in return the right, always refused before by England, of maintaining consuls-general and other consular representatives in Hong-Kong, Singapore, and other cities of the British Empire. The place and ceremonial were discussed, and some of the ministers were inclined to draw back, but they finally accepted the plan proposed by the Tsungli-Yamen. The reception took place on March 5, 1891, in the *tze kuang ko*, or audience hall, in which the Emperor receives the envoys of Corea, Annam, and other vassal states, the Chinese ministers having overcome their objections by promising that a special edifice for the reception of foreign envoys should be built without delay. They were received in a body, not singly, as they wished, by the Emperor, who replied in a set formula to the speech made by Herr von Brandt, the German minister, which was interpreted in Manchu by Prince Ch'ing, kneeling before the throne. The Chinese envoys in Europe have urged the advisability of placing diplomatic intercourse at Peking on the same footing as in Europe as a prelude to demanding a revision of the treaties and the equal treatment guaranteed by international law. A more important step than the March audience was the reception of the French and Russian ambassadors in November in the imperial palace.

CHRISTIAN ENDEAVOR, SOCIETIES

OF. The tenth International Convention of Christian Endeavor Societies met in Minneapolis, July 9. President Francis E. Clark presided. The report showed that the number of local societies was 16,274 (against 11,013 in 1890), and of members 1,008,980 (against 660,000 in 1890). The societies had been organized in 30 denominations. The five churches having the largest number of societies reported were, in their order, Presbyterian, 4,019 societies; Congregationalist, 3,545; Baptist, 2,381; Methodist, 2,068; and Disciples of Christ, 801. Three hundred and seven societies were reported in foreign countries, of which 120 were in England, 82 in Australia, 30 in India, 12 in Turkey, and 7 in China. Of junior societies, 855 were reported, and the existence of others was known. Stress was laid in the report on the interdenominational character of the societies as distinguished from undenom-

inational, and their agency in promoting the spirit of federation and Christian fellowship. All the local societies were advised by resolution to adopt what is called the "revised pledge," containing the clause, "I will make it the rule of my life to support my own church in every way, especially in attending all her regular Sunday and mid-week services, unless prevented by a reason which I can conscientiously give to the Saviour"; and the lookout committees were directed to use every effort to promote this, as well as the other requirements in the pledge. To emphasize this underlying principle, the societies were advised to submit important measures and proposed lists of officers to the pastor and officers of the church for their approval. Union with societies not connected with any evangelical church was discouraged. In reaffirming the principles of the society, prominence was given to those of the utmost loyalty to their respective denominations on the part of all the societies, and steadfast personal love and service for the local church of each, and a declaration was inserted that "Christian Endeavor interposes no barrier to the denominational control of the young people," and rejoices when denominations suggest special lines of duty or activity. The convention sermon was preached by the Rev. Dr. O. H. Tiffany. The president's address presented fidelity and fellowship as the two great factors of the society. Papers were read and discussions held at the several sessions on various topics pertaining to the history, work, objects, scope, and influence of the societies:

CITIES, AMERICAN, RECENT GROWTH

OF. This subject, begun in the "Annual Cyclopædia" for 1886, has been continued through every succeeding volume. In the six volumes—1886 to 1891—the recent progress of 360 cities is set forth.

Aberdeen, a city of Washington, the largest on Gray's Harbor, at the apex of that body of water, 16 miles from the bar, on both sides of Chehalis river, about a mile from its mouth. The northern part of the city is divided by Wishkah river, a narrow but deep stream, which affords excellent wharfage for vessels of the largest tonnage in the heart of the city, and is navigable 16 miles above its mouth. The Chehalis has a depth at Aberdeen of from 40 to 75 feet, and a width of from 2,000 to 3,000 feet. The entire water frontage of the city is over 2 miles, easily approached by two channels leading from the entrance of the harbor, one on the north and the other on the south. The harbor—named from Capt. Robert Gray, who first carried the United States flag around the world, and in 1791 discovered Columbia river, establishing the claim of the United States on Oregon—is one of the safest and most accessible on the Pacific coast. It has an area of 70,000 acres, and a depth at low tide on the bar of 22 feet. It is completely landlocked, and during the past year more than 100 sailing vessels and from 4 to 6 steamers a month have crossed the bar without accident. It is 350 miles nearer San Francisco than the cities of Puget Sound, and 600 miles nearer Oriental ports than that city. The business portion of the city has been built on tide lands reclaimed at great expense, and a short distance from the harbor the land rises by easy

grades to a height of 50 to 75 feet, spreading out into level plateaus, where the fine residence portion is being built. The Northern Pacific Railroad has division headquarters within the corporate limits, owning 22 sections of land. In 1890 the road was operating within 10 miles of the city, and there are regular lines of steamers to Portland and San Francisco. A steam ferry plies between the portions of the city separated by Chehalis river, and two bridges will shortly be erected across the Wishkah. Bonds have been deposited for an electric road to connect with Hoquiam, to cost \$100,000. Six years ago the city was a mere mill site. By the census of 1890 it had a population of 1,638. Increase is shown by the post-office receipts, which for the quarter ending Jan. 1, 1890, were \$450.96, and for that ending Jan. 1, 1891, \$908. The sum of \$50,000 was expended by the city during the last six months of the year on street improvements. Water works are being erected, at a cost of \$75,000, the supply being obtained from springs within half a mile of the city limits by the Holly principle of direct pressure. For protection against fire, water is pumped from the harbor by stationary engines running night and day, and there is a volunteer fire department of 84 members. Electric lights are in use. The enrollment in the 2 graded public schools, Oct. 30, 1891, was 272; a new central school building is to be erected, to cost \$25,000, and there is a Catholic school. The Catholics also have a hospital. There are five churches. The monthly pay-roll of manufactures aggregates \$35,000, the city having the only foundry on the harbor. From the ship-yard a large three-masted schooner was launched in September, 1890. Four saw mills have a combined daily capacity of 300,000 feet, the shipment abroad of lumber for 1890 being 33,000,000 feet, and the amount consumed at home 9,000,000. Three sash, door, and blind factories, 2 planing mills, 1 shingle mill, a cigar factory, and an ice factory are in operation; and the yearly pack of 3 salmon canneries is 41,000 cases, valued at \$73,000. There are 2 banks (1 national, with an aggregate capital of \$550,000), and a building and loan association has been organized. A weekly and a semi-weekly newspaper are published.

Akron, a city of Ohio, county seat of Summit County, in the northern part of the State, at the junction of the Ohio and Erie and Pennsylvania and Ohio Canals, 40 miles from Cleveland and 246 from Cincinnati. It is 400 feet above the level of Lake Erie, and is the highest point of the Ohio and Erie Canal. The railroads are the New York, Lake Erie and Western, the Cleveland, Akron and Columbus Valley, the Pittsburgh and Western, and the Valley. The surrounding country is fertile, and wheat is exported, together with mineral fire-proof paint from deposits in the vicinity of the city. A milling plant established at Akron in 1852 operated the first oatmeal mill in America, in 1856, with capacity of 20 barrels a day. In 1890 the total product of 5 mills owned by it was 2,500 barrels daily. A capital of \$10,000,000 is invested in 300 manufactories, water power being supplied (in addition to steam) from the Canal and Little Cuyahoga river. These include the largest match factory in the world, producing one fifth

of all the matches made in the United States, using annually 3,000,000 feet of pine lumber, 70 tons of brimstone, 17,900 pounds of phosphorus, 35,000 pounds of chlorate of potash, 30,000 pounds of glue, and 50,000 pounds of paraffine wax. Six sewer-pipe factories are supplied from inexhaustible beds of clay, long one of the chief contributions to the wealth of the city, which is vitrified, and thus rendered impervious to acid, steam, or gas. There are also 9 stone-ware works, 7 planing mills, 5 foundries, 2 galvanized-iron works, 6 brick and 2 fire-brick works, 4 boiler works, 3 breweries, 2 box, 3 soap, 1 chain, 1 church furniture, and 2 barrel factories, 2 of the largest agricultural-implement works in the United States (employing upward of 1,000 men), 2 harness-specialty factories, 4 stone quarries, 2 marble works, polishing and plating works, factories of hard-rubber goods, woolen, leather belting, wagon-gear, paper-sack, and other factories turning out machine knives, twine and cordage, flour sacks, gymnasium supplies, stoves, files, canal boats, etc. Akron was founded in 1825, and became the county seat in 1841. The population in 1870 was 10,006; in 1880, 16,512; and in 1890, 27,601. The assessed valuation is near \$15,000,000 and the tax rate in 1889 was 27.4. The debt in March, 1891, was \$111,281.83. There are 12 miles of street railway (electric, Sprague overhead system), costing \$300,000. Water is supplied from springs. The churches number 23, and there are a Masonic temple, and 14 other halls, in addition to 2 armories. Five banks, 3 of which are national, have a total capital of \$575,000, and a surplus of \$102,000; 2 savings institutions have a capital of \$150,000, and 1 savings and loan association has a capital of \$100,000. One daily paper is published, 2 tri-weeklies, 4 weeklies (1 in German, 1 semi-monthly, by the students of Buchtel College), and 2 monthlies. There are 11 public schools, including the high school, and 99 teachers are employed. The enrollment in the public schools in 1887-'88 was 4,654, and in the private and parochial schools 957. Of the last class, 3 are Catholic, 1 German Lutheran, and 1 Hebrew. Two business colleges and a school of design are flourishing; Buchtel College (Universalist), opened in 1873, has 14 professors and instructors. The streets are well laid, and the principal ones paved. There are free public libraries, 8 parks, and 2 theatres. The Ohio Canal was begun July 4, 1825, and the first boat for it was built on the lower basin near Lock One, at Akron.

Alpena, a city of Michigan, county seat of Alpena County, 120 miles from Bay City and 250 from Detroit, by water, in the northeastern part of the State, on Thunder Bay, which is an inlet of Lake Huron, 10 miles wide at its mouth, and affords one of the safest harbors on the great lakes. There are 3 lines of passenger steamers. The city is the terminus of the Detroit, Bay City and Alpena Railroad, and has notable manufacturing interests, chief among which are 14 saw mills, which in 1889 exported 219,915,000 feet of lumber, 53,936,000 laths, 36,610,000 shingles, 242,570 railroad ties, 145,000 cedar posts, and 1,000 telegraph poles. There are also 2 large engine and machine works, one of the largest sulphite fiber pulp mills in the United States (employing 75 hands), 5 shingle and 4

planing mills, 2 foundries, 1 knitting factory, 2 cigar factories, and industrial works. The population in 1880 was 6,153, and in 1890 (in three wards) 11,283, showing an increase of 83.37 per cent. The first settlement was made in 1856 at Alpena, and lumbering was begun in 1858. In 1864 there were 674 inhabitants. In 1871 it was incorporated, and in 1872 was devastated by a great fire. In 1879 water works of the Holly system were erected, with a pumping capacity of 3,000,000 gallons, the crib being placed in the bay, and the wheel (then one of the largest in Michigan) the first of its size ever constructed. The assessed valuation of the city in 1889 was \$4,084,900, and the debt was less than \$10,000. The streets are wide, and in 1890 five miles were paved and five more under way. Gas and electric lighting are in use, and there are 12 churches, 9 public-school buildings, and 8 private and parochial schools. Fishing is carried on extensively, and there is a United States fish hatchery, established in 1882, from which 30,000,000 young white fish were shipped in 1883. There are 2 national banks and an opera house. Three weekly newspapers are published, and 1 monthly.

Arkansas City, a city of Kansas, in Cowley County, near the Oklahoma border line, on Arkansas river at the mouth of the Walnut, 250 miles southwest of Kansas City, the same distance north of Fort Worth, 200 from Fort Scott, and 14 from Winfield, the county seat. It is in the center of a rich agricultural and stock-raising district, and with its 3 great systems of railroads—the Atchison, Topeka and Santa Fé, the Missouri Pacific, and the St. Louis and San Francisco—controls almost the entire trade of the Indian agencies, reservations, and military posts in Indian Territory. It is the end of a division of the Santa Fé system, and has a round-house and machine shops of that road, employing 200 men, in addition to 100 train-men and other employes. In 1880 the population was 1,012, and in 1890 (in four wards) 8,347. Water power is afforded by a canal $5\frac{1}{2}$ miles long, tapping Arkansas river 4 miles above the city and flowing into the Walnut $1\frac{1}{2}$ mile below, with fall of 22 feet. The cost of the canal was \$200,000. The manufacturing establishments in 1890 were 3 large flouring mills, 1 planing mill, 1 windmill manufactory, a mattress factory, and a chair and car-seat factory. The gas works have a capital of \$100,000, and there is an electric-light plant. There are 17 miles of water mains, 3 banks (2 national) with aggregate capital of \$425,000 and surplus of \$160,000, a hotel costing \$125,000, an opera house worth \$75,000, and 5 school-houses. Two daily and 4 weekly newspapers are published.

Astoria, a city of Oregon, the county seat of Clatsop County, on the south shore of Columbia river, 12 miles from its mouth, and about 100 miles from Portland. It is said to be the largest city in the United States without a railroad, but one is now under construction, to connect with the transcontinental lines at Portland. It was founded in 1811, and named in honor of John Jacob Astor, chief manager of the American Fur Company. After the war of 1812 it was held by the Hudson Bay Fur Company until early in the forties, when the tide of emigration set in from the Eastern States. The population in 1870 was

639; in 1880, 2,803; and in 1890, 6,184. The population of the county is 10,016. By the construction of the Government jetties at the mouth of the Columbia, a channel has been created of ample depth for the largest ships to pass in safety, and, accordingly, ocean steamers call at the port. Five or six lines of steamers owned in Astoria ply daily to and from ports on the rivers and bays in the vicinity, three lines of bar tugs have headquarters here, and lines of steamers also run to San Francisco and Puget Sound. One line, owned by the Union Pacific Railroad, runs between the city and Portland. Astoria is the headquarters of the salmon fisheries of the Columbia. The sum of \$1,300,000 is invested in the industry, the product of which in 1889 was \$1,416,177. More than 3,000 fishermen are employed, having 1,500 boats and nets; while the canneries give occupation to 2,000 persons, the majority of whom are Chinese. The water front of the city measures 6 miles. To reach deep water, docks and warehouses have been constructed several hundred feet out from the shore, and the business streets are crowded down as close to these as possible. Several streets are built on piles, and blocks of stores, residences, hotels, and street railroads are constructed over the water. The buildings are mostly of wood, and where brick is used the foundations are of stone and cement, placed on piles driven to a great depth and cut off below the water line. In this part of the city no sewers are required, the tide carrying away all refuse. Residences, churches, and other buildings are extending back on the hills, and streets are being graded up steep inclines. Clatsop County is about 30 miles square, and contains but one township of open land, the rest being heavily timbered with Oregon pine, spruce, cedar, larch, hemlock, maple, and cottonwood. Only along the streams are the forests largely cut. Three saw mills have a daily aggregate capacity of 150,000 feet, and manufactured lumber is shipped east. By sea it is sent to California, Mexico, South America, and China. On Young's river is a pulp mill, with a capacity of 1,380 tons annually. A capital of \$85,000 is invested in ship-building; \$575,000 in manufacture of lumber, with output of \$700,000 yearly; and \$39,000 in sash and door factories, the annual output of which is \$33,000. The capital in foundries and machine shops is \$90,000, with a product of \$125,000; in manufacture of beer and ice, \$25,000, yearly product, \$75,000. In addition to an electric-light plant, there are gas works. Exclusive of the two last and the pulp mill, the annual product on the total amount of capital invested (\$844,000) is \$1,018,000. Coal exists in the county, but no mines have been opened. Potter's clay, iron ore, and jet are its other mineral resources. Of 10 church buildings in the county, 8 are in Astoria—viz., Methodist, Congregational, Presbyterian, Baptist, Episcopal, Roman Catholic, and 2 Lutheran. The city has also 3 large public schools and 1 Episcopal parish school. There are 2 daily newspapers, and 4 banks—2 national, with a capital of \$300,000. The possession of Astoria was the principal point in the claim of the United States to Oregon.

Aurora, a city of Illinois, in Kane County, in the northeastern part of the State, 37 miles from Chicago, on Fox river, which flows with a rapid

current through the heart of the city, and furnishes an ample water power. Aurora was founded in 1834, and in 1850 had a population of 2,000. In 1857 it was incorporated; in 1860 it had a population of 6,000; in 1880 of 11,873; and in 1890 of 19,688, showing an increase in the decade of 65.82 per cent. Six lines of the Chicago, Burlington and Quincy Railroad center here; also the Chicago and Northwestern, and the Belt Line, or Elgin, Joliet and Eastern. The city was the first in the West to adopt electric lighting, and owns its plant. Gas works were established in 1868, which in 1890 owned 33 miles of mains, and made arrangements for erecting a fuel gas plant to furnish gas at 40 cents a thousand. The water works, erected in 1885-'86, are valued at \$204,446, and in 1890 had 25 miles and 90 feet of mains. Five steel bridges, 2 belonging to the railroads, cross the river, the longest having a total length of 720 feet. In addition to the high school there are 10 public-school buildings. The school enrollment is 3,358; 73 teachers are employed. Jennings Seminary has as adjuncts a normal school and a business college. There are also a parochial school, a Catholic academy, and 2 German Evangelical Lutheran schools. Five national banks have a capital of \$600,000, and a surplus of \$68,000; and there are 2 building and loan associations. Five daily newspapers are published, and 4 weeklies, 1 in German. The total valuation of property of 22 churches is \$492,600, and the Young Men's Christian Association owns its buildings. The sloping banks of the river furnish excellent drainage. A Driving-park Association was organized in 1889, and has a fine tract of 26 acres within the city limits. The city horse railway was purchased in 1890 by an electric company, which adopted the Sprague overhead system. The total value of city property is \$574,205.73. The City Hall is a fine building, and Memorial Hall, erected by the Soldiers' Monument Association, contains the public library. The City Hospital has a new brick building costing \$9,000, and there is an orphanage founded by private benevolence. The sum of \$75,000 has been appropriated by Congress for a Government building. The shops of the Chicago, Burlington and Quincy Railroad, erected in 1855-'56, at a cost of \$120,000, exclusive of machinery, embrace locomotive works, car shops, and a chemical and physical laboratory; 1,500 men are employed, with a monthly pay-roll of \$60,000. The other industries include iron works, one of the largest factories of wood-working machinery in the United States, a silver-plate company, a sash, door, and blind factory, stove works, cotton mills, a corset factory employing 600 hands, agricultural-implement works, a factory for well-sinking machinery, a foundry and machine shop, a watch factory, a smelting and refining company, 2 factories of door-hangers, carpet-sweepers, patent oil-cans, etc., a carriage factory, road-cart works, and a large-wheeled scraper company.

Bay City, a city of Michigan, the county seat of Bay County, on Saginaw river near its mouth, in Saginaw Bay, 143 miles from Toledo, Ohio, and 121 from Jackson by rail. The population by the census of 1890 was 27,839 (in 11 wards), showing an increase of 7,146 over 20,693 in 1880. In 1887

an act was passed by the Legislature of Michigan enabling the consolidation in 1891 of Bay City proper, West Bay City, and Essexville village. The last two, in 1890, had populations respectively of 12,981 and 1,545. The total population of Bay County in 1890 was 56,412, and in 1891 the assessed valuation of property, real and personal, was \$27,000,000. The first settlement of Bay City was made in 1838, and in 1858 the county was organized and it became the county seat. In 1867 the first railroad was built. Transportation is now afforded by 3 lines, and in 1887 the city owned 119 craft, aggregating over 28,732 tons, and valued at \$1,500,000. The same year the total value of city property was \$780,586.96, and its bonded debt was \$367,000. The tax rate was \$1.84. In 1891 there were 30 miles of well-paved streets and 50 miles of county (macadamized) roads. Water works of the Holly system were erected in 1872, and in 1886 a Gaskell compound engine was added, making the total quantity pumped during the year 779,761,852 gallons. The value of the water works in 1887 was \$426,773, and there were more than 24 miles of sewers. Two free bridges span Saginaw river. The fire department property is valued at \$57,076, and the electric-light plant at \$31,583. The gas company was organized in 1868. The sum of \$63,600 has been invested in public parks. The school property in 1887 was valued at \$177,500; 3,836 children were enrolled, and 76 teachers employed in 10 public-school buildings. There was an enrollment of 230 also in the high school. There is also a commercial college. In Bay City proper there are 21 churches, and in West Bay City 8. Five banks, 2 of which are national, have an aggregate capital of \$750,000, and a surplus of \$240,000. Three daily and 4 weekly newspapers are published. A handsome opera house was erected in 1886. The depot of the Michigan Central Railroad includes two buildings, and is 286 by 50 feet, and three stories high, with a tower 104 feet. The Masonic Temple, Crapo Block, and Trinity Church, the last costing \$60,000, are notable. There is a court house and a public library. The leading industries are ship-building, lumber, salt, and fish. The first ship-building on Saginaw river began in 1848; and to 1887, 57 propellers had been built, 6 side-wheel steamers, and 45 tugs, as well as schooners, scows, and barges. Since 1886, by report of the United States Census on transportation, a revolution has taken place in the material and structure of floating equipment on the Great Lakes, probably more rapid and complete than any other in the history of marine architecture. The total tonnage of Bay City in 1889 was 553,219 tons, of which 486,973 were shipments and 66,246 receipts. The first saw mill was erected in 1832, and in 1886 the shipment from Bay City and mills south reached 587,855,000 feet of lumber and 118,394,000 shingles. In 1887, \$4,085,000 were invested in the lumber industry. In 1860, 2 salt companies were organized, and prior to 1869, when the inspection law was passed, 3,282,117 barrels were manufactured. The total, from 1869 to 1886, was 34,100,468 barrels. Bay County in that year had 31 salt companies, with capacity of 1,300,000 barrels. About 500 men are engaged in fishing on Saginaw Bay, with over 100 sail-boats. In winter, spearing

fish through the ice is largely carried on, and at one time over 2,000 persons have camped out on the ice in small shanties. The other industries in 1887 included 2 flouring mills in Bay City and 2 in West Bay City, 1 brewery, 10 furniture manufactories, 7 planing mills (6 in West Bay City also), 4 boiler shops, 6 factories of mill machinery, 6 foundries, 4 pump factories, 5 brick works, 3 broom factories, 14 carriage factories, 5 cigar and 4 lime factories, wood-pipe works, etc., in addition to one of the chief railroad machinery manufactories in the United States. There are 12 miles of street railway.

Beatrice, a city of Nebraska, the county seat of Gage County, in the southeastern part of the State, on Big Blue river, in the center of a rich agricultural region. Seven railroads center in the city, 3 from Chicago and 4 from St. Louis and Kansas City. The streets are paved with brick from factories in the city, the cost of grading, paving, etc., to April 11, 1890, being \$159,096.60. The cost of sewerage to same date was \$40,832. The water works, of the Holly system are valued at \$85,000, and the fire department at \$3,500. The assessed valuation is \$1,100,000, and the tax levy in 1889 was 18½ mills. The total debt, bonded and floating, is \$256,160.96. There are gas and electric lights, horse and motor lines of street railway, 6 banks (4 national), with aggregate capital of \$465,000 and surplus of \$101,700, a building and loan association with a capital of \$250,000, and 3 daily, 6 weekly, and 1 monthly papers. The population in 1880 was 2,447; in 1890 it was 13,836, showing an increase of 465.43 per cent. A million and a half dollars are invested in manufactures. During 1890 real-estate transfers numbered 1,774, representing a value of \$2,500,000. The churches number 19, and there are 9 city schools, 7 of which have brick buildings, a private academy, a Roman Catholic school, a business college, and a State institute for feeble-minded youth. The Chautauqua Association has a tabernacle, at its grounds on the river just beyond the city limits, capable of seating 10,000 persons. The city has a public library and 2 opera houses.

Benton Harbor, a city of Michigan, in Berrien County, in the extreme southwestern portion of the State, at the confluence of the St. Joseph's and Paw Paw rivers, one mile from Lake Michigan, with which it has direct connection by a ship canal of ample capacity for the largest lake vessels and steamers, 60 miles from Chicago by water, and 98 by rail. A steamship line has recently been established with daily service to Milwaukee, and there are 2 lines of steamers to Chicago. The Chicago and West Michigan, the Cincinnati, Wabash and Michigan, and the Vandalia Railroads, the last with through train to St. Louis, afford additional transportation advantages, and 3 other lines are under construction to Kalamazoo, Columbus, Ohio, and South Bend, Ind. Twenty-three trains arrive daily, and there is a street railway to the contiguous city of St. Joseph. Benton Harbor is the chief port in Michigan shipping domestic fruits, which grow in the surrounding country, to great perfection. The annual income of the berry shippers is upward of \$600,000, and as many as 16,000 half-bushel crates of strawberries have been loaded at one time on a single steamer; 5,000,000

quarts of berries and 300,000 barrels of apples were produced by Berrien County in one season, in addition to other fruits. Two canning, evaporating, and cider factories employ 250 persons during the season, and by one firm 400,000 cans of tomatoes are put up yearly. There are also a cider and vinegar factory and pickle and vinegar works, manufacturing yearly 500,000 gallons of cider vinegar and 10,000 barrels of pickles. Another large plant is under construction, with warehouse and office in Chicago. Fruit-packages are manufactured by several firms, 2,000,000 packages having been produced in 1890, exclusive of a great quantity sawed and shipped in bundles, to be made up on arrival at destination. There are also 3 barrel factories, 2 brick and tile works, 2 ship-yards, 3 planing mills, 1 flouring mill with a grain elevator, 2 furniture companies with capital of \$120,000, a chilled-plow factory, 2 shoe factories, a wagon and carriage factory, and marble works. The Standard Oil Company has invested \$5,000 in a distributing plant, and a cold-storage plant has been erected at a cost of \$15,000. Lumber, received by boat from the great lumber centers north, is manufactured and shipped inland. One saw mill turned out 1,000,000 feet of lumber, mainly hard-wood, in 1890. The highest grade of wood-working machinery will be produced by machine works erected in 1891, removing from Grand Rapids, and patent steel hand-car, with steam pumping and engine works, have also removed to Benton Harbor from Detroit. The assessed valuation of Benton Harbor is \$1,200,000. In 1888, \$175,000 were invested in new buildings; in 1889, \$266,960; and in 1890, \$268,600. Two banks (one national) have a capital of \$50,000 each. There is also a building and loan association. Electric lights have been in use for more than two years, and the gas works have been enlarged to a capacity of 240,000 feet daily. Water works were under construction in 1891, with a capacity of 3,000,000 gallons daily, the source of supply being a series of wells 40 feet deep. The population in 1890 was 3,692. Baptists, Episcopalians, Methodists, Congregationalists, and African Methodists have churches, and the Catholics are building. Three public schools and a normal and collegiate institute afford educational advantages. One daily and 2 weekly newspapers are issued. The City Hall, a brick building, contains also the fire department and jail. A company has been organized to develop the water power of Paw Paw river, by a dam 1,100 long. The city has no debt.

Boisé City, a city and the capital of Idaho, county seat of Ada County, in the southwestern part of the State, on the north side of Boisé river, 50 miles above its confluence with the Snake, in a commanding position both as regards the large and fertile valley in which it lies and the rich mineral region in the mountains beyond. It had its origin in the establishment of a United States military post in 1863, though the name belonged to a fort of the Hudson Bay Company, 50 miles below the present site, in 1835. It was incorporated Jan. 11, 1866. The population in 1880 was 1,899, and in 1890, 3,391. Irrigation is carried on in the uplands, and the city is supplied by two canals which send little rivulets through every street. Shade-trees are

an attractive feature. Ada County ranks first in the State in the yield of fruit and vegetables, second in hay, and third in grain. The city enjoys terminal advantages of the Oregon Short Line Railroad, by means of a branch line from Nampa, 18½ miles long, operated by the Union Pacific. The business part of the city is of brick and stone, and fire limits have been established. There is an organized fire department, and mountain water is carried through a complete system of water works. There are electric lights, a telephone exchange, a bank, with capital of \$100,000, flour, grist, saw, and planing mills, 2 breweries, a distillery, brick and marble works, and a board of trade. Idaho was the first of the Territories to provide itself with a permanent Capitol building, which cost \$85,000. It is in the center of Capitol Square, and flanked on one side by the court house, erected at a cost of \$68,000, and the school-house, which cost \$50,000. The United States Assay Office is of stone, and cost \$81,000. During 1890 gold and silver to the amount of \$537,397 were deposited. Boise City has an altitude of 2,800 feet. In summer the heat is tempered by mountain breezes, while the "chinook," or warm winds from the coast, in winter carry off a snow-fall of from five to eight inches in the valley in one day.

Butte City, a city of Montana, county seat of Silver Bow County, the largest mining city in the world, on a cluster of hills 200 feet high, in an amphitheatre surrounded by the Rocky mountains, in the western part of the State. It is named for a towering solitary peak (Big Butte) half a mile west of the present limits. It is the railroad center of the State, having the Union Pacific, the Montana Central (connecting with the Manitoba), and the Montana Union, which last, at Garrison, 52 miles distant, connects with the Northern Pacific. The Montana Union ships about 1,500 tons of ore a day from Butte to the smelters of Anaconda. By a cut-off line from Gallatin, Butte City is placed on the main line of the Northern Pacific, which road has also a line from Laurel to the Rocky Fork coal mines. Quartz mines were discovered near Butte in May, 1864, and placer gold was found on Silver Bow Creek in October of the same year. Placer mining was carried on until 1869 (the greatest excitement being reached in 1867), and the total amount of placer gold mined to that date was \$8,540,000. In 1874-'75 a revival of the district took place, and the total product to 1880 is estimated at \$3,000,000. The product of that year was \$1,000,000; of 1882, \$2,000,000; of 1884, \$6,720,000; of 1886, \$13,246,500; of 1888, \$19,500,000; of 1889, \$22,005,689; and in 1890, by report of the United States Director of the Mint, the total product of Silver Bow County was \$26,084,504, or more than half of the total product of the State—\$40,695,723.77. Of the whole, 25,704 ounces were fine gold, valued at \$531,316; 7,500,000 ounces silver, valued at \$9,696,750; and 112,700,000 pounds of copper, worth \$16,623,250. Ten companies at Butte City are the great producers, operating about 40 mines, besides buying and reducing the product of many more; six produce copper matte carrying gold and silver (one producing bar silver also), and 4 turn out bar

silver only; 75 mines employ 6,202 men, with an aggregate monthly pay-roll of \$651,210. The present depth ranges from 80 to 1,500 feet, and the capacity of hoist from 150 to 3,000 feet. In November, 1889, a fire broke out in the depths of two of the largest mines, and raged for months among the wilderness of timbers in drifts, slopes, and levels. The formation is granite, with occasional porphyry, and the trend of the veins due east and west. Their dip is generally south, and the pitch of the ore-shoots almost invariably west. The larger veins are from 10 to 100 feet, and seem to extend through the granite like channels, filled with argentiferous or cupriferous ores. The ore-shoots (differing in their permanence from the ordinary "pocket") vary in length from 100 to 1,000 feet, and three compartment shafts are often sunk 500 feet without cross-cutting to the vein. No shaft sunk to the 300-foot station has ever been abandoned, nor has a mine worked to that depth ever been worked out. The ore in sight is enough to last for fifty years. The first smelter, a crude affair, was erected at Butte in 1866, and the first quartz mill in 1868. Prior to 1878 the only stamps used were wet crushers. The difference in the method of treating free and base silver ores is, that the former are crushed in water and the pulp placed in the amalgamating pans for treatment directly, and the latter are crushed dry and then roasted with salt to cause ready union with the quicksilver in the pans. A stamp is a bar of iron weighing from 750 to 900 pounds, set vertically, lifted by a revolving cam, and allowed to drop upon the ore as it falls beneath. Five stamps compose a battery. Five stamp mills in Butte City operate 300 stamps and crush more than 500 tons of ore daily; during 1890 they pounded out \$4,000,000; 9,175 tons of Butte ore are smelted daily. The population of Butte City (in 7 wards) in 1890 was 10,723, against 3,363 in 1880. In 1875 the city site was removed from Dublin Gulch to its present location. During 1890 the post-office business of Butte consisted of 2,198,697 letters received and 1,136,784 sent out; five carriers are employed. The city has 2 electric-light plants valued at \$40,000, and 1 gas company with works worth \$30,000, a perfect sewer system, 3 lines of street railway (motor, cable, and electric) with capital of \$100,000 each, 2 daily and 1 semi-weekly newspapers, a telephone system, 2 messenger service companies, 6 banks (2 national) with capital of \$100,000 each, 2 fire companies with electric alarm system, and a good system of water works. In addition to the public schools, there is a high-school building and also a parochial school. The churches number 12. The Catholics have a hospital, and there is a free public library. Exclusive of mines and mining, 4,408 persons are employed in industries which include 2 foundries, valued at \$150,000, and 3 machine shops, \$60,000; 4 lumber companies, aggregating \$1,500,000, and 3 planing mills, \$300,000; 3 breweries, \$150,000; 6 brick yards, \$150,000; 28 carpenter and 12 blacksmith shops, 1 lime kiln, 1 cigar factory, and 1 stone works, 2 bottling works, etc. Three railroad shops are valued at \$300,000. The court house cost \$140,000. The altitude of Butte City is 5,758 feet.

Carson City, the capital of Nevada and county seat of Ormsby County, in the western part of the State, in Eagle valley, a fertile and picturesque region near the foot of the Sierra Nevada mountains, on Carson river, 10 miles from Lake Tahoe, 21 from Virginia City, 31 from Reno, and 178 northeast of San Francisco. It has an altitude of 4,660 feet, is regularly laid out, with abundance of shade-trees, and has a fine water supply. It is the oldest town in the State, the first permanent settlements in Nevada having been made in Eagle and Washoe valleys in 1850, and was named for the famous Kit Carson. In 1859 a telegraph line was built from Genoa, and in 1869 connection by rail was established with Virginia City by means of the Virginia and Truckee Railroad. The shops of this road are at Carson City, and consist of a foundry, machine shop, and round house in one building, 427 by 170 feet, of stone and iron, at a cost of \$150,000. The principal mining and mill machinery of the State is manufactured and repaired here. The railroad owns also the large V-shaped flume from the Sierras to the city *via* Clear Creek Cañon, through which thousands of cords of wood and millions of feet of lumber are landed yearly. The population in 1890 was 3,950, showing a decrease from 4,229 in 1880. In the United States Mint here 162,509 gold pieces were coined during the calendar year 1890, valued at \$2,268,180, and 2,309,041 silver dollars. In 1889 stock yards were established. The Capitol building occupies four blocks in the center of the city, and is surrounded by handsome grounds. It was erected in 1870 at a cost of \$208,000. The Orphans' Home, erected the same year, cost \$26,000, and occupies 14 acres. The State Prison, built in 1864, cost \$127,000. There is a State printing establishment and a United States building. Near the prison are Carson Warm Springs. The average attendance at the public schools is 560, and 11 teachers are employed. For support of the Indian school in Ormsby County \$10,000 were appropriated by Congress in 1890. There are 2 daily newspapers, and 1 bank with a capital of \$100,000.

Chippewa Falls, the county seat of Chippewa County, Wis., on Chippewa river, about 100 miles east of St. Paul and Minneapolis. It is on the main line of the Wisconsin Central Railroad running between Milwaukee and St. Paul, and thus has connection with the Northern Pacific Railroad. Its other railway connections are the Chicago, St. Paul, Minneapolis and Omaha, a branch of the Chicago and Northwestern, and the Chicago, Milwaukee and St. Paul Railroad. By the former it has connections with the "Soo" line at Cameron Junction, and this line also brings it within easy distance of Ashland and Superior. The city is beautifully situated on both banks of the river. The falls of the Chippewa, from which the city took its name, were originally a series of cascades over hard granitic trap rock, having a total height of about 25 feet. This great water power has been utilized for commercial purposes. The lumber interests are the most important, and they have been the foundation of the city's prosperity. Chippewa Falls has one of the largest saw mills in the world. Its capacity during an ordinary season is about 70,000,000 feet of lumber, not to

enumerate the millions of shingles and laths which are made as by-products. The saw mill is connected by a steam-motor line with the large planing mill and yards, wherein one may see between \$4,000,000 and \$5,000,000 worth of lumber ready for shipping. The Chippewa Lumber and Boom Company, the Mississippi River Logging Company, the Chippewa River Logging Company, and several other large firms, have their headquarters in the city. The first company above named is controlled by the Weyerhaeuser syndicate, which has several mills in the lumber region of Minnesota, and has recently purchased several hundred thousand acres of timber in Washington. The Stanley Manufacturing Company, Leinenkugel's Brewery, the Flour and Milling Company, with 3 large mills and an elevator, a woolen factory, a chair factory, and an overall factory, are among the other industries of the place. The city is lighted with electricity, and has a complete system of water works and sewerage. Chippewa Falls is one of the most healthful places in the United States, largely owing to the pure water. The supply of water for the city is taken from a spring which bubbles up out of the granite rock. Upon analysis it was found to be nearly pure, there being but a very small fraction of 1 per cent. of foreign matter in it. Ex-Lieut.-Gov. T. C. Pound has perfected arrangements by which he ships this water to Chicago. Several tank cars holding 5,000 gallons have been built, and regular shipments are made. Silver Springs Park, on the east side of the river, is a beautiful little suburban resort, which has been laid out for use during the summer months. There are 8 fine school buildings, a new one having been completed recently, which is claimed to be as fine as any in the State. There are 175 pupils in the high school and 1,500 in the public schools. There are several parochial schools, and a business college. Eight churches and a Catholic cathedral provide for the religious wants of the inhabitants. Two daily and 5 weekly newspapers are published in the city. By the census of 1890, Chippewa Falls had 11,222 inhabitants. There are many fine business blocks, hotels, and private residences, an electric fire-alarm system, and a good fire department. The prosperity of the city has depended upon its lumber interests, and it has long stood at the head of the lumber towns of the State.

Colfax, a town of Washington, county seat of Whitman County, in the eastern part of the State, at the forks of Palouse river, on the Union Pacific Railroad, at the junction of two divisions. It is the commercial center of the extensive and fertile Palouse country, and has fine water power. The heaviest trade is in agricultural implements, sales being made to farmers throughout the whole wheat belt north of Snake river. The volume of business for the year ending Dec. 30, 1890, was upward of \$2,500,000. The population in 1880 was 444; in 1890, 1,649. Electric lights are in use. Three banks (2 national) have an aggregate capital of \$300,000, 2 with branches in adjoining villages. Two weekly newspapers are published. There are 2 saw mills, with daily capacity of 75,000 feet, 2 foundries, 2 planing mills, 1 machine shop, and a cigar factory. The Baptist College is a four-story building, with 100

pupils enrolled. There are also 2 large district-school buildings. Six denominations own buildings. The court house cost \$90,000.

Concord, the capital of New Hampshire, situated on Merrimack river, 76 miles north-north-west of Boston by rail; population in 1890, 17,004. Its growth has been steady for many years, the largest increase being in the last decade. The Merrimack river divides the city north and south. The main part of the city is on the west side of the river, and comprises the compact part of Concord, the village of West Concord, and part of Penacook (formerly called Fisherville), on Contoocook river, 6 miles north of the State House. An electric railway, 7 miles long, connects all these sections of the city, in addition to steam railway service on two roads. The village of East Concord and nearly all of

ried. The Abbot-Downing carriage manufactory is one of the largest and longest established in the country, and its products are found in every quarter of the globe. The Page Belting Company has a capital of \$500,000, and sends its products all over the world. Some of the other larger industries are axle works, furniture, flannels and worsteds, flouring by roller process, harness, boots and shoes, and silverware. The granite industry is conducted by many companies, the largest of which is the New England Granite Company, which is furnishing the stone for the new Congressional Library building at Washington, D. C. The quarries from which all the stone is taken are on Rattlesnake Hill, near West Concord, and are accessible for railroad transportation. The wholesale and retail trade is large, and the city has a great many fine

UNITED STATES GOVERNMENT BUILDING, CONCORD, NEW HAMPSHIRE.

the territory east of Merrimack river are comprised in one ward. Concord is the railway center of the State, and has one of the largest and most conveniently arranged passenger stations in New England. It possesses a good gravity system of water works, the source of supply being Penacook lake, which contains 265 acres, $3\frac{1}{2}$ miles from the State House. An additional high service is now in process of construction from the same source. There are 43.89 miles of main and distributing pipes, 10.71 miles of service pipe, 183 hydrants for fire purposes, and 24 private hydrants. There are several miles of sewer in the streets of the central part of the city connected with the river. There is a gas and electric-light company, which has recently erected a commodious station for arc and incandescent lighting. The manufacturing interests are va-

stores and business blocks. The new Government building, which cost \$200,000, is of Concord granite, and is one of the most beautiful and best-arranged structures of its size to be found in the country. It contains the post-office, United States Pension Office for New Hampshire and Vermont, and United States Court room, with all necessary apartments for officers of the court and jurors. A new State Library building is in process of erection near the State House and Government building. The public-school buildings are unsurpassed by those of any city of its size, the high-school building, completed last year, being a model in architecture and interior arrangement. There is a Roman Catholic parochial school, with 300 pupils, and an Episcopal school for girls. St. Paul's School, a noted institution of learning for boys,

2 miles west of the railway station, has more than 300 pupils and a numerous corps of instructors. A large building has just been erected, which makes a valuable addition to the hamlet that has grown up around the school. The new chapel, recently completed, is unequalled by the chapel of any like institution of learning. The churches of Concord are: 1 Advent, 3 Baptist, 1 Free Baptist, 2 Roman Catholic, 4 Congregational, 3 Episcopal (including the one at St. Paul's School), 3 Methodist, 1 Unitarian, 1 Universalist, and an Episcopal mission at East Concord. The charitable institutions are an Orphans' Home, near St. Paul's School; an Odd-Fellows' Home, open to members of the fraternity in the State; a Home for the Aged; and the Margaret Pillsbury General Hospital, just completed at an expense of \$70,000, and given to the city by Hon. George A. Pillsbury, of Minneapolis, Minn., to commemorate his golden wedding. It has accommodations for 50 patients. There are 2 Masonic lodges, 1 chapter, and 1 commandery of Knights Templars; 3 Odd-Fellows' lodges, 2 encampments, and 1 canton of Patriarchs Militant; 1 Knights of Pythias lodge; 3 Grand Army posts; a Foresters' Court; St. Patrick's Benevolent Society; French Canadian Society; and other benevolent and fraternal organizations. The Odd Fellows have a fine building, recently completed. The Fowler Library building, containing the free public library of 16,000 volumes, is a recent gift to the city from a son and a daughter of the late Hon. Asa Fowler. It contains a room for the meetings of several Shakespeare clubs. The New Hampshire Historical Society's building contains a valuable collection of books, documents, and papers, and is open to the public. The State Library has outgrown its accommodations in the State House, but in due time will be removed to the new library building, which will also contain rooms for the accommodation of the Supreme Court when holding its law terms and special sessions. The State House Park has bronze statues of Daniel Webster and Gen. John Stark, and one of the late Senator John P. Hale will be placed there in 1892. A soldiers' memorial arch is soon to be erected at the entrance. Concord has 3 national banks and 4 savings banks, the latter having over \$8,000,000 of deposits and 18,284 depositors in 1890. The largest and oldest of the savings banks is the New Hampshire, with \$3,786,000 deposits, which occupies a fine block of its own. All the banks have convenient and elegant rooms for the transaction of business, built or remodeled within the past few years. The First National Bank has the best banking rooms in the State, just completed. There are 2 daily and 3 weekly newspapers. The building recently erected by the Republican Press Association as a home for the Concord "Evening Monitor" and "Independent Statesman" is one of the best arranged and most complete printing establishments in New England. It is lighted by its own electric plant. This association first introduced incandescent lighting in the city six years ago. Electric power is now supplied to run small machinery and printing presses by the Street Railway Electric Car Company. The electrical railway has been extended about a mile through the west end of the city, and is

largely increasing its business. The water power on Contoocook river has been utilized recently by the erection of a new woolen mill, about a mile west of Penacook, by the Concord Manufacturing Company of West Concord, and there is still large water power unused on the Merrimack river. There are 2 parks in the central part of the city, and another at the outlet of Penacook lake. The fire department comprises 173 men, 60 of whom belong to 2 hand-engine companies in East and West Concord, and the others to steamer, hose, and hook and ladder companies in the central part of the city and in Penacook. The New Hampshire Asylum for the Insane accommodates 350 patients. The State Prison is a model penal institution, and, to the credit of the State, is only about half filled.

Corsicana, a city of Texas, county seat of Navarro County, near the center of the State, 60 miles from Dallas and Waco, at the intersection of the Houston and Texas Central and the St. Louis Southwestern Railroad. The first railroad reached the city in 1880, from Tyler. Water is reached in wells at a depth of from 10 to 40 feet, and there are numerous tanks or artificial lakes, 5 of which around Corsicana have a water surface of 160 acres, are stocked with fish and visited as resorts. Corsicana has a population, by the census of 1890, of 6,285, an increase of 2,912 over 1880. Good county roads enter the city. Drainage is natural from north to south, and there is a good sewerage system, with several miles of mains. Water works have been erected at a cost of \$100,000, and there are gas and electric-light plants valued at \$50,000. The public schools had 1,500 pupils, with 23 teachers, in 1890-'91, the Catholics having also a convent school. The churches number 11. There are 3 national banks, one with a capital of \$100,000, and 2 loan agencies, the capital of one of which is \$400,000. A fire department was organized in 1883. One daily and 6 weekly newspapers are published. There are 5 miles of street railway. The industries include a wheat elevator and flouring mill, with capacity of 300 barrels daily, a gin factory, iron foundry, bottling works, an ice factory, a soap factory, carriage and wagon works, a cotton-seed-oil mill, machine shops, and a cotton compress with capacity of 1,000 bales daily. The County Court House, of brick and stone, cost nearly \$85,000, and the City Hall \$20,000. The State Orphans' Home consists of two large buildings, contains 100 children, and cost \$50,000, to which the city contributed 200 acres of land. There is also a State Odd-Fellows' Home worth \$30,000.

Danbury, a city of Connecticut, one of the capitals of Fairfield County, in the southwestern part of the State, 20 miles from Bridgeport, 28 from New Haven, and 65 from New York, to which last city there are 14 passenger trains daily. Direct communication east and west is afforded by the New York and New England and the Housatonic Railroads. The city is the northern terminus of the Danbury and Norwalk Railroad, and has also the New York City and Northern. The first settlement was made at Danbury in 1684, and the first church erected in 1696, the Indian name for the section being Pah-quioque. During the Revolution it was made a depot of supplies, and Gen. Tryon, marching

from New York, April 25, 1777, with 2,000 men, destroyed, on the following day, a large amount of public stores and private property. Gens. Silliman, Arnold, and Wooster hurried to the relief, and the last named received a mortal wound at Ridgefield, and expired at Danbury, where he was buried. In 1854 his remains were removed to their present resting-place (Wooster Cemetery), and a fine monument was set up at the expense of the State and his brother Masons. Danbury was continued as a Government depot, with a garrison, and in 1778 an army hospital was established. For several weeks Gen. Gates camped here with an army of four brigades. In 1784 it became a shire town, and in 1822 was chartered as a borough. In March, 1851, the first railroad was completed. During the civil war 1,360 citizens, or about one sixth of the population, entered the service of the United States, and \$154,566 were contributed to the war fund. The city was incorporated in 1889. The population in 1870 was 8,753; in 1880, 11,619; and in 1890, 19,473. Danbury is the chief city in the manufacture of hats in the United States. The first factory in the country was established here in 1780, by Zadoc Benedict, who, with 1 journeyman and 2 apprentices, produced 3 hats daily. In 1801, 20,000 hats (mostly of fur) were produced yearly for exportation. In 1891 there were 30 large factories, employing over 3,000 persons, and turning out 6,000,000 hats a year; also 2 mills for the preparation of fur, 3 factories for wooden hat-cases, and 7 for paper boxes. The other industries include 5 large iron mills and a silver-plating establishment. Water is supplied from 4 reservoirs, and there are 2 natural lakes in the city. There is a paid fire department with electric alarm, and a line of street railway connecting with the borough of Bethel on the south, and traversing the principal thoroughfares from east to west. Electric lighting is in use. One daily, 1 weekly, and 1 monthly papers are published. Two national banks (one of which has a stone building erected at a cost of \$35,000) have an aggregate capital of \$577,000, and surplus of \$123,000. There are also 2 savings banks. Ten religious denominations are represented, with buildings of their own. Robert Sandeman, a native of Scotland, the founder of a sect with 400 followers in the world, 40 of whom are in the United States, died in Danbury in 1771, and is buried here. The Sandemanian church at Danbury was founded in 1875, but has been sold. There are 6 public-school buildings, costing \$100,000. The attendance is 2,100. In addition to private institutions, there are also Roman Catholic and German Lutheran parochial schools. The library, a gift to the city from the family of E. Moss White, occupies a fine building. Prominent charitable institutions are the hospital, which cost \$15,000, and the Children's Home and Relief Society, the latter incorporated in 1884. The City Hall cost \$45,000, and an appropriation has been made by Congress for a Federal building. There is a finely equipped club-house, and the city has two boards of trade. The business streets are paved, and there are miles of good sidewalks, shaded by elms, some of which are more than a century old. The Danbury Agricultural Society has a membership of 20,000.

Decatur, a city of Illinois, county seat of Macon County, in the center of the State, on Sangamon river, 39 miles east of Springfield, 174 miles from Chicago, and 108 from St. Louis. It is an important railroad center, 7 roads reaching out in 13 directions, penetrating 62 counties of the State. Two hundred trains enter and leave the city every day, and \$700,000 are received yearly for freight. Decatur is the principal city on the main line of the Illinois Central Railroad, and the offices, shops, round houses, and tracks of the Wabash Railroad here are valued at \$1,778,905. Three of the general offices of the entire system are in Decatur, as are also the general offices of the Terre Haute and Peoria. The city is sixty years old, and in 1880 had a population of 9,547; in 1890 it was 16,841, showing an increase of 76.40 per cent. On Nov. 6, 1891, it was shown that permanent improvements during the year reached the sum of \$1,166,088, of which \$508,000 were for public and business buildings, \$527,300 for private residences, \$66,288 for sewers, and \$29,500 for paving. For the last item \$300,000 had been expended to June, 1890. The water works have been doubled, and there is a superior fire department. In addition to the electric-light plant owned by the city, there is an electric company, with an investment of \$70,000, under the same management as the gas company, the works of which were established in 1868. Two electric street railways have 12 miles of road. The city property, exclusive of parks, amounts to \$486,999, and the debt is \$60,490, the interest on which is paid, with an excess of \$800, by the income from the water works. Four banks have an available capital of more than \$1,000,000, and there are 3 building, loan, and savings associations. The school property is valued at \$150,000, and the school debt is \$22,317. In addition to the high school, there are 8 school buildings, in which 50 teachers were employed in 1890, with an attendance of 2,936 pupils. In addition there are 3 private schools, a college of music, and a business college. The churches number 23. There is a city library, of nearly 10,000 volumes. Four daily and 5 weekly newspapers are published. The wholesale and jobbing trade of the city is about \$6,000,000 yearly. There is a board of trade. Decatur is in the center of the great coal fields of Illinois; two shafts are worked within the city. Over \$500,000 are invested in manufactures, employing 2,500 persons. The products include brass and iron work, agricultural implements, special machinery, electric dynamos, motors, etc., artificial stone, vitrified paving stone, brick, automatic grain scales, elevator supplies, gas machines, galvanized-iron cornice, carriages, road carts, etc., wire clothes-lines, furniture, windmills, sash, doors, and blinds, incubators and brooders, trunks, tents, cigars, pumps, hose supporters, metallic mats, oil barrels, and artificial ice. There are linseed-oil mills, a brewery, bottling works, lumber companies, a yarn factory, and knitting works. A new court house was constructing during 1891, to cost \$100,000, and an opera house has been completed, with seating capacity of 1,600, costing a similar amount. The Woman's Club is erecting a building. There are several public parks. A trotting association was formed in

1880-'90, which owns a race track and driving park. There are several pleasure resorts on the river, which forms nearly a semicircle around the city, and on which a small excursion steamer plies in summer. In consideration that Decatur was the birthplace of the Grand Army of the Republic, the first encampment having been organized there April 6, 1866, the twenty-fifth State anniversary encampment was held there April, 1891. A large memorial hall is also to be erected. The city is named for Commodore Stephen Decatur, U. S. N.

Fairhaven, a city of Washington, in Whatcom County, on Bellingham Bay, an arm of Puget Sound, founded in 1889. By the census of 1890 it had a population of 4,076, and the assessed valuation was \$7,438,300. It is the Pacific coast terminus of the Great Northern Railroad, and, by the Fairhaven and Southern and the Fairhaven and New Westminster Southern, connects with the Northern Pacific and Canadian Pacific systems. The Great Northern Railroad has constructed ocean wharves on the fine harbor at a cost of \$100,000. Steamers ply between it and adjacent cities, and the port is visited by Pacific steamships. A large hotel of stone and brick was opened September, 1890, which cost \$150,000, and a large brick block was constructed during the year valued at \$50,000. Two schools represent a value of \$70,000, and in addition to more than 200 buildings completed, 100 were in course of construction Jan. 1, 1891. Four banks (2 national) had a combined capital of \$300,000. There are telegraph, telephone, and express facilities; street improvements completed and under contract Jan. 1, 1891, were placed at \$391,000; and a sewerage system was under way, to cost \$100,000. There is a paid fire department, while gravity pressure of the water in the hydrants is sufficient protection in the lower portion of the city. Water is conducted from Lake Padden, 2 miles from the city, with a fall of 418 feet, and is conducted through a 12-inch steel pipe. Gas and electric lights are in use, and an electric street railway is in process of construction. Five churches have been completed, and there is a hospital erected by the Sisters of Peace, costing \$50,000. Eighteen teachers are employed in the public schools. A daily and a tri-weekly newspaper are published. An opera house is under construction, to cost \$100,000, and there are several public halls. The city has no debt, and the receipts of the treasurer for 1890 were \$168,726.65; disbursements, \$144,201.92. In addition to the immense timber resources, the county contains deposits of coal and iron yet undeveloped, gold and silver, and building stone of fine quality, which last is being quarried south and east of the city. Seattle was almost entirely rebuilt of the blue sandstone from the southern extremity of Fairhaven town site, and the Portland post-office and other buildings of Portland and San Francisco have been constructed from it. Graphite and asbestos deposits lie in sight of the city, and are being developed. For 2 miles along the water front stretch 8 saw mills, with total capacity of 700,000 feet a day. A \$2,000,000 steel company was formed in 1890 to erect smelting works at the city, being engaged in developing the iron resources on the Skagit river, and coal bunkers are being erected to load directly from

railway cars to vessels, with capacity of 1,000 tons daily. A foundry and machine shop are in operation, costing \$75,000, and there are 2 shingle mills, 2 sash, door, and blind factories, 3 pressed-brick works with capacity of 15,000,000 per annum, 3 stone quarrying and cutting plants, a furniture factory, a galvanized-iron cornice works, a tent and awning factory, carriage works, potteries, and car and steamship repair shops, with minor industries. The scenery of the surrounding country is picturesque, and there is abundance of game and fish.

Fairbault, a city of Minnesota, county seat of Rice County, on Cannon river at its junction with the Straight, 53 miles south of St. Paul. It is built in a valley, and the 6 large school edifices on limestone bluffs overlook the landscape. The Iowa and Minnesota division of the Chicago, Milwaukee and St. Paul Railroad and the Cannon Valley division of the Minneapolis and St. Louis enter the town, and seven good water powers afford facilities for manufacturing. The population in 1870 was 3,045; in 1880, 5,415; and in 1890, 6,520. The streets are shaded with maples and elms, and the lawns and gardens are tastefully kept. It is the business center of one of the most fertile agricultural districts of the State, in which a change from wheat-growing to dairying during the past decade has brought renewed prosperity. There are 8 flouring mills, 2 grain elevators, a woolen mill, a furniture factory, and a manufactory of windmills. Quarries of limestone afforded the material from which the institutions of learning were erected. These are the State institutions for the blind, the deaf and dumb, and for feeble-minded children, and three Protestant Episcopal schools. Shattuck School for boys was founded in 1861, to which have been added Shumway Memorial Chapel in 1872, which cost \$30,000, and Shumway Hall, built in 1886-'87 with a portion of a legacy of \$200,000 left to the school by Mrs. Shumway, of Chicago; Morgan Hall (1888-'89), the gift of J. S. Morgan, of London, England; and the Smyser Memorial (1889): an armory and gymnasium; Whipple Hall; the Lodge; and several cottages occupied by professors. Two hundred pupils are trained under military discipline and wear uniform. This school is controlled by the Bishop Seabury Mission, as is the Divinity School, founded in 1859, with 10 professors and instructors and 30 students in 1887-'88. St. Mary's Hall, for girls, founded by Bishop Whipple in 1866, is a handsome stone edifice, with about 100 pupils. There is also a Roman Catholic academy and convent. Two national banks have a capital of \$130,000. Four weekly newspapers are published.

Gainesville, a city of Texas, county seat of Cooke County, in the northern part of the State, 6 miles south of Red river, the boundary between the State and Indian Territory, in a rich agricultural country. The county has an area of 933 square miles, or 597,120 acres. Of these, 36,091 acres were in cotton in 1890, 40,686 in corn, 21,308 in wheat; oats, barley, millet, and other grasses are raised also, and, in addition to stock-raising, the fruit crop is large and increasing yearly. About half of the county is timber. In 1890, 1,857 farms owned 13,586 horses, 39,240 cattle, and 14,699 hogs. The population of Gainesville in 1880 was 2,667, and in 1890 6,594, show-

ing an increase of 147.24 per cent. In 1879 the first railroad reached the city from Denison, and in 1886 the Santa Fé system built through from Galveston. This is intersected by the Missouri, Kansas and Texas, absorbing previous corporations, and giving outlets in all directions. The division headquarters, round house, and machine shops of the Santa Fé Railroad are here. The assessed valuation of property in the city in 1891 was \$3,561,435. Three national banks have an aggregate capital of \$375,000. There are 4 public schools, costing nearly \$100,000, in which are about 1,200 children. The Presbyterian Synodical College for women was erected in 1890, and the Gainesville College was already in existence. There are 11 churches for whites and 3 for colored persons. The industries embrace 2 flouring mills, an iron foundry, a planing mill and machine shops, an ice, a broom, a cigar, and a soap factory, bottling works, a cotton compress, and steam brick and marble works. Water works of the Holly system represent a capital of \$215,000, the supply being drawn from the Elm Fork of Trinity river; and there are 5 miles of street railway, a telephone exchange, gas and electric lights, 3 halls, and several fine club-rooms, also a public library. The city was founded in 1849. The assessed valuation in 1890 was \$4,000,000. Gainesville has an altitude of 900 feet, and a mean annual temperature of 66°.

Great Falls, a city of Montana, the county seat of Cascade County, near the center of the State, on Missouri river, at the confluence of Sun river, where begin the only series of falls in the Missouri in its total length of 4,000 miles. It is on a level prairie, stretching 2 miles along the river, which has an average width of 1,200 feet, and within a distance of 10 miles has a fall of over 500 feet, including Black Eagle Falls, within the city limits, across which a dam has been built, costing more than \$200,000, giving a water power estimated at 1,000,000 horse power. The site was purchased in 1884-'85 from public lands of the Government, and the population in 1890 was 4,750. In 1888 the assessed valuation was \$2,400,000; in 1889, \$4,311,000; and in 1890, \$8,646,548, with a tax levy of 12 mills. The city is the western terminus of the Great Northern Railway, and the eastern of the Montana Central, by which it is connected with the Northern Pacific. By the Great Falls and Canada Railroad it is joined to the Canadian Pacific, and over the Great Falls, Sand Coulee, and Neihart Railroad, coal is shipped from the Sand Coulee mines, and ores from the Belt mountains, 60 miles away. The railway tonnage of the city is already greater than that of any other city in the State, excepting Butte. The Great Falls and Canada Railroad has its shops at Great Falls, and plans have been drawn for extensive establishments of the Great Northern. Adjacent coal fields, covering an area of 400 square miles, have an average thickness of 10 feet. The estimate was made of 5,000 tons daily output before the close of 1891. The mineral zone of the Little Belt mountains, extending 25 miles along the range, in which are various mining camps, contains large deposits of lead, carbonate, and galena ore, carrying 20 to 30 ounces of silver per ton; and there are also large veins of hematite iron ore, 20 to 30 feet in width,

traceable upon the surface for several miles. Smelters built and building in Great Falls in 1891 will cost \$5,000,000, and an iron and brass foundry and machine shops have been constructed. The employment of electricity in treating copper matte will be facilitated by the great water power available, and an electric-light company is already in existence. Water works built in 1889 cost \$150,000, and there is a perfect system of sewerage. Five miles of electric street railway were in operation March, 1891, soon to be increased to 12. The churches number 6, and there are as many banks, 3 building and loan associations, a public library building, 2 daily newspapers, and steel wagon bridges across the Missouri and Sun rivers; \$5,000 were expended during 1890 on parks, and 20,000 shade-trees have been planted. The city has a board of trade and a Young Men's Christian Association. In addition to old-established mills, a saw-mill plant, with capacity of 120,000 feet in ten hours, is erecting, having a machine shop in connection already built, the capital of which is \$1,000,000. One of the smelters, already established, will have an output of 5,000 tons of sheet copper and electric wire in twenty-four hours. Large stock ranges are tributary to the city, and 3,400,000 pounds of wool were marketed in 1890. Irrigating ditches are under construction; one, 75 miles in length, 30 feet wide at top and 15 at bottom, 4 feet in depth, to irrigate 300,000 acres in Choteau and Cascade Counties, and costing \$500,000, will end on high prairie a little west of the city. The altitude of Great Falls is 3,312 feet, and the severity of the winter season is tempered by the rarity and dryness of the atmosphere.

Harriman, a new city, in Roane County, Tenn., 255 miles south of Cincinnati, 80 miles north of Chattanooga, 50 miles west of Knoxville, and 125 miles east of Nashville. It is at Emery Gap, the natural gateway on the east of the great Cumberland plateau, and was founded Feb. 26, 1890, by Gen. Clinton B. Fisk and associates. One farm-house and a few cabins and shanties then marked the site. As it was not a corporation, but merely part of a large district, when the census of 1890 was taken, its population then can not be given. On Oct. 24, 1891, a committee of visitors made a public report, saying: "The activity in building lines will be best understood by a statement of the fact, based upon an actual count by two of our number who drove about for the purpose, that in the eighteen months since the beginning of building operations 439 houses have been built, not including 51 in different stages of construction, also 34 brick stores, 28 frame stores (besides 8 just burned), 4 churches, 2 others in course of construction, 1 exposition building, 1 public hall, a very handsome office building for the Town Company, 2 hotels, and 3 schools. The number of stores seems out of proportion to the houses; but it should be remembered that many families are occupying rooms in the store buildings. We believe that these houses to-day must contain over 3,000 people." The compiler of a city directory, in December following, reported the population in excess of 4,000. The city is at the junction of the Walden's Ridge Division of the East Tennessee, Virginia and Georgia Railroad with the Cincinnati Southern Railroad. It has its own belt-line railway, which

is part of the Harriman Coal and Iron Railroad system, and several other railroads have been surveyed to and through it, including the Tennessee Midland, now building west of Nashville. It is a natural railroad center, and is at the head of navigation on Emery river, which flows into the Clinch 3 miles above the confluence of that stream with the Tennessee. Rich and inexhaustible deposits of bituminous and coking coal begin on the city site, and extend many miles west, north, and northeast, with fine beds of canal coal 15 to 20 miles northeast in the Brushy Mountain field, to which the Harriman Coal and Iron Railroad is building. Coal for factory and domestic use is mined at the city's edge, and iron ore is taken out inside the limits of the town. Veins of rich ore extend several miles eastward, and 10 miles to the south, across Tennessee river, are iron-ore beds, tributary to Harriman, estimated to contain over 50,000,000 tons. The best building stone is obtained from quarries inside the city; and pressed brick, fire brick, etc., are made from clay, also inside the city boundaries. An abundance of timber of all kinds is accessible. All real estate in the city is sold with prohibition of the liquor traffic stipulated in title deeds. There are 2 weekly papers and 1 daily, electric lights, temporary water works (with a permanent system to be put in at cost of \$100,000, supplying the purest of mountain water from Emery river) 12 miles of graded streets, part of them macadamized, a central graded school of the highest class, the Lookout rolling mills, considered the finest in the South, a hoe and tool factory, a tack factory, 2 planing mills, 1 saw mill, 1 brick yard, lime kilns, bit and auger works, agricultural works, foundry and machine shops, an oil depot, a furniture factory, and large wooden-ware works, 3 hotels, 3 banks, 10 church organizations with 7 churches, a Young Men's Christian Association with rooms and library, and a Women's Christian Temperance Union temple costing \$8,000. The business organizations, exclusive of the banks, have a capital of \$7,865,000. Harriman is the natural outlet and source of supply for at least 1,000 square miles of territory rich in mineral resources, well timbered, and comprising a large agricultural area, with beautiful scenery and a healthful climate.

Joplin, a city of Missouri, in Jasper County, in the southwestern part of the State, in the great zinc and lead mining district, the zinc ore produced within a radius of 15 miles of the city being 75 per cent. of the total product of the United States, and one seventh of that of the world. The production of lead and zinc in the Joplin district in 1889 was worth \$4,000,000, and in 1890, \$6,000,000. The ores are distributed over an area 30 miles square, occurring in blanket formations, or deposits, mingled for the most part with broken flint, reached at a depth of 50 to 100 feet, and extending from 175 to 600 feet, the greatest depth yet reached by steam drills. No profitable zinc mining was done in Missouri until after 1864, and no zinc blende was profitably mined and smelted until 1873. By report of the United States Census for 1870, the product of lead mining in the State was \$201,885, it being the second lead-producing State at the time. In 1873 Joplin alone produced \$500,000 worth of lead. Webb City, Cartersville, Lehigh, Belleville, and

Galena are the largest mining camps, at equal distances from the city, and one mining company alone has produced upward of \$3,000,000 in ore. A large percentage of the ores are smelted in Kansas, at Joliet, Ill., Rich Hill, and St. Louis, but Joplin has now a large zinc smelter, and two others are projected. The only company in the United States manufacturing white lead by the Lewis-Bartlett patent is at Joplin, turning out 10,000,000 pounds of pig lead yearly and 2,000,000 pounds of white lead, by utilizing the fumes, in long flannel sacks. The value of the plant is \$300,000. Railway facilities are afforded by the Missouri Pacific, the Atchison, Topeka and Santa Fé, the Kansas City, Fort Scott, and Memphis, and the Kansas City, Fort Smith and Southern Railroads. The population in 1880 was 7,038; in 1890, 9,943, an increase of 41.28 per cent. The population of Jasper county was in 1880, 32,019; in 1890, 50,500. The assessed valuation of real and personal property for the county in 1889 was \$8,142,878. Joplin has several large foundries and machine shops. Four banks disburse \$50,000 weekly for mining purposes. From 800 to 1,000 buildings were erected in 1890, including a new opera house and a new high-school building. The wholesale trade is \$1,500,000 annually. Two electric-light plants are in use, and 4 miles distant, at Grand Falls, an electric light and power plant is constructing at a cost of \$250,000, claimed to be the largest plant in the world. This will furnish light and power to the city and the mines. The assessed valuation shows a taxable wealth of \$1,500,000, on a one third basis, and the tax rate is 60 cents on \$100. A double-track electric street railway is in operation, also 6 miles of horse-car line. Three daily papers are published, and there is a telephone exchange, good water, and an efficient fire department.

Kokomo, the county seat of Howard County, Indiana, a city of 12,000 inhabitants, on both sides of Wildcat river, 54 miles north of Indianapolis and 142 southeast of Chicago. Three lines of railway pass through the city—the Pan Handle (C., St. L. and P.), the Natural Gas Route (L., E. and W.), and the Clover Leaf (T., St. L. and K. C.). An electric street railway is in process of construction. Kokomo is in the most productive territory of the Indiana natural-gas belt, and since the discovery of gas in October, 1886, has grown with remarkable rapidity. At that time it was an ordinary county-seat town of 3,500 inhabitants, with no manufacturing interests worth mention, and its commercial condition insignificant. Natural gas for fuel was offered free to manufacturers. Kokomo has had industrial accessions amounting to over \$3,000,000. The chief industries are furniture, plate glass, cutlery, window glass, steam boilers, wood pulp, paper, pulp board, strawboard, opalescent glass, glass bottles, steel safes, steel ranges, brick, tile, staves, wagons and carriages, canned fruits and vegetables, and grain registers. A fine water-works system has been put in, and also an electric-light plant and a \$200,000 natural-gas plant. The city has 9 churches, 5 public-school buildings, 2 national banks, a new post-office building, and free delivery. The public buildings are a \$100,000 court house, a \$50,000 jail, a \$50,000 county infirmary, and an orphans' home.

La Crosse, a city and the county seat of La Crosse County, Wis., at the confluence of the Black and La Crosse rivers with the Mississippi. It is a terminal of the Chicago and Northwestern Railway, the Chicago, Burlington and Northern, and Green Bay, Winona and St. Paul Railroads, and of four divisions of the Chicago, Milwaukee and St. Paul Railway. Its population in 1880 was 14,505; in 1890, 25,121. The growth of its business is exhibited in the following table:

ITEMS.	1881.	1890.	Increase per cent.
Population (official).....	14,505	25,121	73-18
Value of goods manufactured.....	\$6,867,588	\$15,987,825	\$151 00
Value of merchandise handled.....	\$1,619,975	\$20,127,440	\$835 66
Aggregate deposits in banks.....	\$18,248,000	\$30,667,111	\$181 57
Money orders issued and paid.....	\$35,000	\$284,817	\$570 90
Assessed valuation of property.....	\$3,287,586	\$10,750,130	\$227 00
Railroad tonnage.....	176,640 tons	520,870 tons	194-07
Macadamized streets.....	9 miles	15 miles	66-66
Sidewalks.....	30 miles	55 miles	83-88
Water mains.....	9½ miles	21 miles	121-00
Fire hydrants.....	98	194	93-00
Revenue of water department.....	\$5,000	\$18,440	\$268 90
Building operations for ten years, \$7,829,125.			

It is connected with the Minnesota shore—from which it draws an extensive business—by a drawbridge opened for traffic in the autumn of 1890. The bridge has the longest span, save one, on the Mississippi, and cost \$200,000. In the common and high schools not only the tuition but books and all the accessories of education are furnished free, and the city has a free library, in a handsome building containing over 10,000 volumes. There are 45 churches, 6 public halls, and a convenient and tastefully embellished opera house. There is an excellent system of water works, with an efficient fire department. The city is lighted by gas and electric lights. The good natural drainage is supplemented by a complete system of sewers. The town is traversed in all directions by street cars. There is a board of trade. The streets in the residence portion are all lined with shade-trees, and the effect is further enhanced by the general attention paid to the floral and horticultural surroundings. The dwellings are mostly owned by the occupants, even the laboring classes being, as a rule, freeholders.

Lafayette, a city of Indiana, county seat of Tippecanoe County, on both sides of Wabash river, at the head of navigation in the western part of the State, 64 miles from Indianapolis, 120 from Chicago, and 180 from Cincinnati. Of 5 railroads traversing the county, 4 pass through the city, viz., the Louisville, New Albany and Chicago, the Wabash, the Cleveland, Cincinnati, Chicago and St. Louis (Big Four), and the Lake Erie and Western. A belt railway connecting all the factories with the main roads is owned by a company organized in 1889 with a capital of \$250,000. The population in 1880 was 14,860, and in 1890, 16,243, an increase of 9-31 per cent. The assessed valuation of the city is \$10,000,000. There are about 70 miles of improved streets, with an area of 3½ miles, being rapidly laid with

improved brick, and 22 miles of free gravel roads connect with the surrounding country. Four national, 1 private, and 1 savings bank have an aggregate capital of \$525,000, and deposits of \$3,000,000. There are 20 churches. Three daily and 6 weekly newspapers are published, electric lights are in use, and there are 4½ miles of electric street railway; also a competent fire department with electric alarm. The water works were completed in 1876 at a cost of \$350,000. The 9 public schools have an average attendance of 2,000 pupils, and there are in addition private and sectarian institutions. The city is also the site of Purdue University (named for John Purdue, who gave to it \$150,000), which comprises 8 buildings, and has a United States agricultural experimental station. During 1890 the attendance of students was 550. A new union depot has been completed, and a public library erected at a cost of \$50,000, containing 12,000 volumes. Congress appropriated \$80,000 for a Federal building in March, 1890, and the County Court House, one of the finest and most elaborate in the State, cost \$500,000. North of the city is the famous battle-ground where the Indians under Tecumseh were defeated by Gen. William Henry Harrison in 1811. Natural gas is supplied in from 23 wells in Tipton County, with a registered pressure of 300 pounds at the wells. The industries include car works employing 800 men, 5 large boot and shoe factories, 4 large cooperage establishments, iron works, foundries, 1 paper and 1 horning mill, 4 breweries, pork-houses, and 1 distillery. In the public square is an artesian well of sulphur water. The city is the largest of the 24 places in the United States named in honor of the French general. The surrounding country is rich, and there are many beautiful suburban homes.

Lewiston, a city of Idaho, county seat of Nez Percés County, on the western line of the State, at the junction of Snake and Clearwater rivers. The business part of the city is on a level tract extending from Snake river on the west about two and a half miles easterly to a picturesque and lofty bluff, varying in width from 300 yards to a quarter of a mile. The difficulty and expense of getting water on the plateau to the south, which has an average elevation of 80 feet above the business quarter, has confined building largely to this area; but water works of the Holly system, costing \$100,000, under construction in 1890-'91, will obviate this difficulty. A compound duplex pump, operated by a 90-horse-power steam engine, conveys water from Clearwater river to a reservoir of 1,500,000 gallons' capacity, at an elevation of 225 feet, from which it is distributed in two mains, 8×10 inches, connecting at the farther end of the city and forming a complete circuit, which can be operated by direct pressure or gravitation, the pressure in the business portion being 97 pounds to the square inch, and on the plateau to the south 65 pounds. A canal 17 miles long, carrying water from Sweetwater river through a cañon to a strip of table-land a few miles in rear of the city, covering 25 square miles, is another undertaking of great importance. Fruit-growing and grain and stock raising are the principal industries of the county, which contains 90,477 acres of improved land. The larger part, however, is

included within the Nez Percés Indian Reservation, the lands of which are being allotted in severalty, and 500,000 acres of fine agricultural and grazing land will soon be opened to settlement. Vast amounts of timber will also be available. Although 400 miles from the sea, the altitude is only 600 feet, and two crops of fruit are frequently raised the same summer. Orchards surround many of the dwellings in Lewiston. The town was settled in 1861 by a party of miners, and on the discovery of the Salmon river mines there was an influx of between 12,000 and 15,000 persons; but in June, 1863, they removed to the Boise basin. The recent growth has been since the Union Pacific Railroad was completed to Riparia, to which place there are now two steamers a week. There are also daily stage lines to the Oregon Short Line and Spokane and Palouse Railroads, at Pomeroy and Uniontown, as well as to Washington and Idaho towns. The population of Lewiston in 1890 was 849. There are 5 churches, 3 banks, 2 newspapers, a graded school with high-school department, and a convent school for girls. A complete system of electric lighting is being put in in connection with the water works. The new Court House cost \$30,000, and is one of the finest in the State. The industries consist of a brewery, a flouring mill with capacity of 40 barrels a day, a saw mill, and a planing mill. Twelve miles from the town there is a fine quarry of limestone. The real-estate transfers during 1890 aggregated \$500,000. Lewiston is the seat of a United States land office.

Lima, a city of Ohio, county seat of Allen County, in the great oil and gas belt of the northwestern part of the State, on the Ottawa river, 70 miles from Toledo. It had a population in 1890 of 15,981, against 7,567 in 1880, showing an increase of 111.19 per cent. During the past six years the growth has been rapid. The railroads are the Pittsburgh, Fort Wayne and Chicago, the Cincinnati, Hamilton & Dayton, the Lake Erie and Western, and the Chicago and Erie; and another was under contract in 1891, 400 miles in length, from the coal fields in the southeastern part of the State to northwestern Michigan. The oil development has reached 50,000 barrels daily, and there are large refineries, with pipe lines to Chicago, Toledo, Cleveland, and Pittsburgh, in addition to the immense quantity transported in cars. A natural-gas company has been in operation since 1887. The cost of the water-works plant of the city was \$400,000. The drainage and sewerage are excellent. An electric street railway has five miles of track, and \$40,000 have been expended yearly for twenty years on county roads, which are stoned or graveled. The court house, with stone jail and sheriff's residence on the same block, cost \$350,000, and was erected in 1884, of Ohio sandstone with red granite trimmings. The city building, erected in 1883, cost \$50,000, and is of brick, 3 stories high. The assessed valuation of the city in 1889 was \$4,141,512, while the tax rate was 32.6. Six banks (3 of them national) have a capital, in all, of \$600,000. One monthly, 3 daily, and 6 weekly papers are published. The industries include car shops of 2 railroads employing over 400 men, factories of oil-mill machinery and supplies, light locomotives, machinery, doors, sash, and blinds, carriage

materials, engines, carriages, paper mills, harness, leather, etc. Limestone is quarried for building stone and for the manufacture of lime, which is shipped in large quantities. In 1880 the county had 168 manufacturing establishments, with capital invested to the amount of \$3,243,700; 2,169 hands were employed, with wages of \$670,000, and a product of \$4,463,160. The materials used were valued at \$3,173,350.

Madison, a city and the capital of Wisconsin, county seat of Dane County, in the southern part of the State, 75 miles west of Milwaukee, and nearly the same distance from the western boundary line, on a narrow neck of land between Lakes Mendota and Monona, in what is known as the Four-lake Region. It is called the "Lake City." It is especially noted as an educational center, although as a trading and distributing point it ranks second to Milwaukee, lying in a rich farming country, well supplied with local manufactories. The railroads are the Chicago and Northwestern, the Chicago, Milwaukee and St. Paul, the Madison, Sun Prairie and Watertown, and the Madison and Portage. The population in 1850 was 1,525; in 1860, 6,611; in 1870, 9,176; in 1880, 10,324; in 1890, 13,426; showing an increase of 30.05 per cent. In 1836, when the site was selected for the capital, it was entirely unoccupied. The city has an altitude of 788 feet above sea level and 210 above Lake Michigan, and is a health resort for consumptives. The Capitol was built in 1860, at a cost of \$400,000, and has since been enlarged. It is an imposing edifice of white limestone, with a dome 200 feet above the basement. The park around contains 13 acres, finely wooded. The University of Wisconsin, on College Hill, was erected in 1850, and reorganized with an agricultural department and experimental farm in 1866, and in 1870 a college for women was added at a cost of \$50,000. In 1875 a hall of science was granted \$80,000 by the State, and from 1872 to 1876 annual grants were made of \$10,000 each. The total amount voted by the State for higher education (in addition to the grant by Congress of 72 sections of public land, in 1838) has been \$1,203,377.84. The total value of grounds, buildings, apparatus, etc., is \$925,000, and the total income \$189,870. Sixty-three instructors are employed, and there are 800 students. The celebrated Washburn Observatory is also connected with the institution. In addition to an excellent high school there are 6 ward schools, with fine buildings and all modern improvements. Fifty-four teachers are employed, and the total enrollment is about 1,800. The State and city have each free libraries, in addition to those of the university and of the State Historical Society, the latter numbering 58,000 volumes. There are 12 fine church buildings. The city owns the water works. Gas and electric lighting are in use, and there are 5½ miles of street railway. Madison is also the site of the State Lunatic Asylum and Soldiers' Orphans' Home. One large manufacturing plant has a capital of \$500,000, and there are about a dozen smaller ones. Plows, agricultural implements, wagons, and woolen goods are turned out, and there are 2 large flouring mills. Fine summer-hotels on the banks of the lakes are well patronized. Two daily, 9 weekly, and 1 tri-weekly newspapers, 6 monthlies, and 1 quarterly

are published. Four banks (1 national) had a capital of \$275,000 in 1891.

Manchester, a city of Virginia, in Chesterfield County, on James river, opposite Richmond, has a population of 9,246, showing an increase of 61.39 per cent. over 5,729 in 1880. By the United States census, the population of Manchester magisterial district, including the city, is 13,632. Prior to the civil war Manchester was the seat of many tobacco industries; since then its progress has kept pace with that of Richmond. The building improvements were valued at \$147,450 during 1890, 155 new houses having been completed. During 1891 the industrial plants erected and under way were valued at \$220,000. The shops of the Richmond and Danville and Atlantic Coast Line Railroads are at Manchester, and the city has telephone connection with Richmond, and also with Petersburg. Electric lighting is in use; river water is pumped to a tower and distributed in abundant supply; a perfect sewage system has been planned. The streets are paved and graded, \$100,000 having been expended for the purpose in 1890. One daily paper is published. The churches for whites number 7, and for colored people 4. The 2 public schools, 1 for whites and 1 for colored children, cost \$12,000 each, and there are private schools of high grade. The manufactures employ 4,500 hands, and include 2 large cotton mills, a paper mill, flouring mills, large iron and nail works on Belle Isle, in the rapids of the river, spike mills, 2 large tanneries, 2 sumac and bark mills, large oil works, 5 brick yards, 2 planing mills, a mattress factory, 2 sash and blind factories, a very large tobacco factory, fertilizing works, a furniture factory, granite and marble yards, an ice factory and ice-machine manufacturing plant, iron works, a canning and pickling factory, and a large job-printing office. Between the city and Richmond there are 3½ miles of horse and 3 miles of electric railway.

Meadville, a city, and the capital of Crawford County, Pa., on the eastern bank of French creek, and on the New York, Pittsburg and Ohio Railroad, at the junction of the Franklin and Oil City branch and the Meadville and Linesville Railway, 82 miles north by west of Pittsburg, and 34 miles south of Erie. The population in 1850 was 2,578; in 1860, 3,703; in 1870, 7,103; in 1880, 8,860; and in 1890, 9,502. On the western bank of French creek, opposite Meadville, are the villages of Kerrtown, Stringtown, and Vallonia borough; and adjacent on the north, south, and east are villages swelling the population of Meadville proper to about 12,000. It is in a fertile valley, surrounded by beautiful scenery. The extensive shops of the New York, Pittsburg and Ohio Railroad are here, and other important manufacturing interests, among which are boiler and engine works, machine shops, oil supplies, and foundries; while in the suburbs are glass works, a tannery, 3 breweries, and a large whisky distillery. It has 5 banks, and 1 daily and 5 weekly newspapers. The large publishing house of the "Chautauquan Magazine" is here, which is third in point of circulation in the United States. The Century Press, in connection with it, was established here in 1890, and publishes all the Chautauqua books, having also photo-engraving and

electrotyping departments, and employing 200 persons. Meadville has the best of graded public schools, a high school, a business college, a conservatory of music, and a public library of 5,000 volumes. Allegheny College, established here in 1816, has 250 students and a library of 12,500 volumes. The Meadville Theological School (Unitarian), established in 1844, has 4 resident and 4 non-resident professors, 30 students, and a library of 20,000 volumes. Meadville has 15 churches, 2 public hospitals, a system of water works, natural gas for fuel, and 2 electric-light plants. It was founded in 1788, and celebrated its hundredth anniversary in 1888, at which time it erected a pioneer monument on the public square; and in 1890 it erected on the same square a soldiers' monument at a cost of \$10,000.

Michigan City, a city of Indiana, the only lake port in the State, in La Porte County, near the southern extremity of Lake Michigan, 56 miles east of Chicago, 161 north of Indianapolis, and 12 from Laporte, the county seat. The population in 1880 was 7,366; in 1890, 10,776, showing an increase of 46.29 per cent. Four railroads run through the city, the Michigan Central, the Louisville, New Albany and Chicago, and the Lake Erie and Western, while the Elgin, Joliet and Eastern crosses every road running into Chicago. The site of Michigan City was purchased in 1832 by Major Isaac Elston, who subsequently realized a fortune by selling to a land company. In 1834 the first cargo of wheat was shipped from the harbor, the improvement of which was undertaken in 1864 by private enterprise. After the expenditure of \$100,526, the work was taken in hand by the United States Government in 1868. In 1872 the outer or harbor of refuge was begun, and in 1874 17,000,000 feet of lumber were received by the lake. At present not less than 150,000,000 feet are received, in addition to which amount, in 1889, 50,000 cedar posts, 350 cords of wood, 3,000 tons of pig iron, 120,000 barrels of salt, and 800 tons of coal were entered as receipts; while the shipments were 3,000 tons of general merchandise, in addition to hay, oats, sand, soft coal, and cattle. A regular line of steamers carries passengers and freight daily to and from Chicago, and during the summer there are three excursion boats a day. The lumber interest has been the most effective in promoting manufacturing industries, the work done in the planing department of one lumber company amounting to upward of \$30,000 in 1889. The city is also a great salt market, distributing between 150,000 and 200,000 barrels yearly. The plant owned by the Michigan Salt Association, of East Saginaw, Mich., possesses storage capacity for 50,000 barrels, and shipments are made throughout the State, and into Kentucky, Tennessee, Missouri, Louisiana, and Texas. The assessed valuations of real and personal property aggregate \$2,125,265, and there is a bonded debt of \$35,000. Two banks have a capital of \$375,000. There are water works and an excellent system of sewage. The streets are paved, and there are both gas and electric lights, as well as the Gamewell system of fire alarm, 2 telegraph and 2 express companies, a street railway, 2 weekly, and 2 monthly newspapers. The churches number 10, and there are 1 high and 3 public schools, having a total value of \$55,500, for which

the total expenditure is \$15,617. In 1889, 1,186 pupils were enrolled and 25 teachers employed, while 3 large school-houses were under construction. Four private schools, an academy, and a convent afford additional educational facilities. An iron bridge across the harbor, on the principal street, cost \$15,000. The city is the site of the State Prison north. Important manufacturing industries are 4 planing mills and lumber yards, a flour mill, 4 chair factories, refrigerator works, large car works (established in 1853), 2 hosiery mills, a brewery, cooper shops, a carriage wood-work factory, and a tannery. The Business Men's Association numbers 100 members. A United States life-saving station is located at the city, and "Hoosier Slide" is the most famous of the sand hills that surround it. There are many fine buildings and beautiful residences.

Moscow, a city of Idaho, the county seat of Latah County, in the western part of the State, in the midst of a thickly settled farming country. Timber in inexhaustible quantity exists on the mountains a few miles distant, and there are 8 saw mills in the county, which in 1890 sawed 15,000,000 feet of lumber. At the date of the erection of the county, May 14, 1888, the population of Moscow was 800; by the census of 1890 it was 2,861, and the place is rapidly assuming the proportions of a substantial city. Two railroads connect with the town, and its local trade extends over a large district. Latah County contains 1,100 square miles, three fourths of which can be easily cultivated, springs abounding and irrigation being unnecessary. The assessed valuation is \$2,755,295, and the debt in 1890 was \$45,813. An annual yield of grain and seeds aggregating three and a third million bushels has been attained. The receipts at Moscow for the year ending Dec. 31, 1890, included 450,000 bushels of wheat, 90,000 of oats, 60,000 of barley, and 200,000 of flaxseed. Two flouring mills at Moscow have an aggregate capacity of 160 barrels a day. There is also a planing mill, a sash and door factory, and steam brick works, the last employing from 50 to 75 men. The streets are graded and side-walked. There are 2 volunteer fire companies. The drainage is good, and water is supplied from artesian wells and pumped by 2 pumps of 65,000 gallons capacity an hour. There are 28 fire hydrants. Electric lights are in use. There are 2 weekly newspapers, and 2 banks and 8 churches. Major Anderson Post No. 5, G. A. R., is the strongest in the State, having a membership of over 100, and owns its hall, costing \$8,000, the work on which was performed entirely by Grand Army of the Republic men. The Northern Pacific Railroad is erecting a handsome passenger and freight depot and section house. There are 1 cigar and 1 candy factory, 4 blacksmith and wagon shops, and 40 business concerns. The new Court House cost \$25,000. By act of Jan. 30, 1889, the Legislature of Idaho established the State University at Moscow, appropriating \$15,000 to begin operations. The Seventh-day Adventists also were considering the building and endowment of a college in 1890. The American Trotting Association has a fine race track.

Nashua, a city of New Hampshire, in Hillsborough County, at the confluence of Merrimac and Nashua rivers, the water power of which

was rendered available by a canal 3 miles in length and 8 feet deep, constructed in 1825-'26. In 1823 the growth of the city began in consequence of the establishment of the Nashua Manufacturing Company (at present capitalized for \$1,000,000). Other cotton mills are valued at \$600,000. There is an embroidery company, a shearer manufacturing company, an iron foundry, an iron and steel company with capital of \$400,000, a card and glazed-paper company with capital of \$150,000, a lock company employing 200 persons, a furniture company an invalid furniture company, edge-tool works with capital of \$80,000, sheeting mills (employing 80 persons) with capital of \$300,000, a leather, a spool, bobbin, and shuttle company, and a freezer company with capital of \$100,000. The water-works were incorporated in 1853, and have a capital of \$250,000. Water is obtained from Pennechuck creek, and is forced two miles to a reservoir on a hill north of the city. The hydrants number 93. In 1889, \$26,460.18 were expended on highways and bridges, \$31,866 on sewers and drainage, and \$12,099 on electric street lighting. The assessed valuation of the city in 1888 was \$9,942,573, and in 1889 the debt was \$250,000, of which \$12,574 were for the Soldiers' and Sailors' Monument (of granite and brass, to soldiers and sailors of Nashua in the civil war), and \$17,529 for a new school building. There are 18 schools, in addition to a high school, in which 46 teachers were employed in 1887-'88, the enrollment being 1,841, and in private and parochial schools, 1,176. Of the last class 3 are Catholic. There are 10 churches. A legacy of \$15,000 was left to the city by Moses Hunt, of Cambridge, Mass., for a yearly course of free and instructive lectures. The city contains a home for aged women, a Young Men's Christian Association building, and several halls. Two daily, 2 weekly, and 2 monthly papers are published. The 7 banks (3 national) have a total capital of \$495,000. The railroads are the Boston and Maine, the Concord, the Nashua, Acton and Boston, the Nashua and Lowell, the Peterborough, and the Wilton. There are several miles of street railway. The population in 1880 was 13,397; in 1890, 19,311; showing an increase of 44.14 per cent.

Newburyport, a city of Essex County, Massachusetts, in the extreme northeastern part of the State, on the west bank of the Merrimac river, extending from its mouth 5 miles to the town of West Newbury; on the south and west it is bounded by old Newbury, from which it was set off in 1764. As a settlement it is two hundred and fifty-six years old, and it was chartered as a city in 1851. The river bank rises gradually in about one third of a mile to a height of from 70 to 100 feet, and then slopes to the long, low pastures back of the city. For two hundred years commerce was the leading industry, and during the eighteenth century this was one of the most important ports of the Atlantic seaboard, with one of the largest merchant fleets. On the breaking out of the Revolutionary War, and later, when the American navy was formed, it became a great central recruiting station, and large numbers of privateers were fitted out, several frigates being built on the Merrimac: \$2,500,000 were furnished by the town toward the

expenses of the war, and during the complications with France its losses amounted to nearly \$750,000. In a single month of 1805 importations were made to the amount of \$800,000; but the fire of 1811, followed by the War of 1812 and the restrictive acts of Government, gave a finishing blow to the foreign commerce. Since 1883 no ship has floated on the Merrimac, but prior to that date 2,000 vessels in all were built, with an aggregate tonnage of 403,000. Ship-building was especially active during the period of "clippers," from 1840 to 1860, 6 large yards being in operation employing hundreds of men. Among the vessels built here were the "Racer" and the "Dreadnought." Fishing was carried on for fifty years, 5,000 to 35,000 barrels of mackerel being inspected annually at the port, and over 1,000 men employed. Fishing vessels were constructed, and the manufacture of cordage was extensively carried on, there being 8 or 10 rope-walks in the town, with a product of nearly \$100,000 yearly. Printing and publishing, cigar-making, wool-pulling, tanning, and morocco-dressing, and the manufacture of combs, hats, chairs, and other industries, in small establishments, were largely carried on, and rum was made in 10 distilleries. At present the city has one of the 10 rum-factories of the United States, 8 of which are in New England, which manufacture 2,500 barrels yearly, valued at \$150,000. The manufacture of cotton goods was begun in 1834, and in 1887 3 large factories were in existence, employing over 1,000 persons, and operating 82,872 spindles and 1,789 looms. The yearly product of the shoe industry was nearly \$2,000,000, more than 2,000 persons being employed, with annual pay-roll of about \$750,000. Two silver factories, a foundry and machine works, a hat factory, a patent-leather company, 2 comb factories, a brick yard, and street car shops, are in operation; and other industries include the manufacture of steam ditching machines and paper boxes. The city has 4 national and 2 savings banks, is lighted by gas and electricity, and has an electric street railway connecting with Amesbury, Merrimac, and Plumb Island (a summer resort), also 21 miles of horse-car line. Water is pumped to a standpipe 35 feet high, at an elevation of 150 feet. Two pairs of duplex compound condensing pumping engines have a capacity of 4,000,000 gallons in twenty-four hours. The assessed valuation of the city in 1888 was \$8,074,737. The 13 public-school buildings, sites, etc., were valued at \$99,700, and 44 teachers were employed, while 1,600 children were enrolled in the public and 800 in private and parochial schools. The population of Newburyport in 1880 was 13,538, and in 1890, 13,947. Jetties are under construction by the United States Government to deepen the channel of the Merrimac on the bar.

New London, a city of Connecticut, county seat of New London County, on the western side of Thames river and 3 miles above its mouth, in Long Island Sound, half-way between New York city and Boston, and 6 miles from Providence, R. I. The harbor is the best on the sound, and one of the best in the United States, 3 miles long, 5 fathoms deep, thoroughly protected against storms, and against floating ice also, so that it is an especially fine wintering port. Fort

Trumbull, with 80 guns, guards the mouth, and a United States naval station is on the eastern bank of the river, above the city. Its marine activity is now confined principally to coasting trade. The first line of steamers to New York and New Haven was established in 1816, and the first railroad (there are now 3) was opened in 1850. The first telegraph, to Norwich, was operated in 1847. New London was founded by Gov. John Winthrop, Jr., in 1646, on lands of the Mohegan Indians, a branch of the Pequot tribe exterminated at Groton in 1637. In 1645, having obtained a grant including Fisher's Island and the year previous, he began erecting a house and arranged for the mining and smelting of iron ore. In 1658 the name was changed from Naumeg in honor of London, England, and a custom officer was appointed, probably the first in the colony. In 1710 it was made the chief postal station in Connecticut. Ship-building was begun in 1660, and a Society of Trade and Commerce was organized in 1730. In 1751 a fleet of 37 incoming and 62 outgoing vessels represented the commerce of the city, which suffered during the French and Indian War, and in 1776 (the military companies of the town having taken part in the battle of Bunker Hill) the first naval expedition of the colonial government fitted out at the port, which also furnished some of the most famous privateers. On Sept. 6, 1781, Forts Trumbull and Griswold having been taken, the city was plundered and burned by British troops under Benedict Arnold. In 1784 it received its city charter, among the first in the State, and commerce with the West Indies and other foreign ports revived, the first whaler also sailing in that year. In 1800, when the population was reduced to 4,995 whites and 195 colored by yellow fever, and during the War of 1812, the shipping interests were deeply involved. Since the civil war and the discovery of petroleum there has been a continual depression in whale fishing and in the foreign trade. New London is deeply interested in the seal fisheries of Alaska. The population in 1880 was 10,537; in 1890, 13,757; showing an increase of 30.56 per cent. A new steel bridge across the Thames is claimed to be the longest double-track draw-bridge in the world, having a draw of 503 feet, with 2 clear passageways of 225 feet each for vessels. The total length is 1,423 feet. The granite wharf of the Central Vermont Railroad has a length of 1,125 feet, with a width of 220 feet at the river and 150 feet at the shore end. Silk mills established in 1865 have a capital of \$320,000, and produce \$1,500,000 yearly; and a cotton-gin company, with works covering 87,000 square feet of flooring, employs 200 men and disburses between \$6,000 and \$9,000 monthly in wages. A steam woolen mill turns out 23,000 yards a month, and there are a steam saw mill, a printing-press, a paper-box, and a steam-heating apparatus factory, and brick yards with capacity of 18,000,000 bricks a year. Fertilizers, gear-cutting machinery, boilers, carriages and harness, and bed comfortables are manufactured, and there is also a ship-building and sail-making establishment and bottling works. The city is on the slopes of hills, affording fine sewerage and perfect drainage. Water is supplied from Lake Konomoc, 6 miles distant, water works estab-

lished in 1871 costing in all \$260,000. The annual supply is 530,286,000 gallons, and the height and force of the water give a head of from 80 to 170 feet, dispensing with steam-power fire engines. The fire department numbers 260 officers and men, and there is an electric fire alarm. There are 12 churches. In 1888-'89, \$40,000 were appropriated for school buildings, which number 7, with an enrollment of 2,040 pupils and 44 teachers. The Bulkeley High School for boys, costing \$40,000, was founded and is maintained by the bequest of a private citizen. It was opened in 1873. There are 3 national, 2 savings, and 1 union bank, with total capital of \$850,000. A beautiful new public library building was completed in 1890, with a capacity for 50,000 volumes. It contains also the New London County Historical Society. The Williams Memorial Institute contains also a fine library. There are a theatre, a new armory, a Masonic hall, an Odd-Fellows' hall, and other public halls, a customs house, erected in 1830, a fine new depot, and a court house. Gas and electric lights are in use, and 2 daily papers are published. New London is especially noted for the races which take place yearly on the Thames between the college clubs. Between New London and the Pequot House, a summer resort two and a half miles distant, to which there is a fine drive, lies Fort Trumbull, erected in 1849 at a cost of \$250,000. Fort Griswold, the scene of the bloody massacre of Sept. 6, 1781, which is commemorated by a shaft 127 feet high, is now but an earthwork, with a small battery.

Newport, a city and one of the capitals of Rhode Island, a United States port of entry at the head of Narragansett Bay, on the west shore of the island from which the State is named, 5 miles from the Atlantic Ocean, 19 from Fall River, Mass., 30 from Providence, and 162 (by steamer) from New York. The harbor is excellent, anchorage being 30 feet between Fort Adams (one of the largest fortifications in the country), on Brenton Point, and Goat Island, where are the headquarters of the torpedo division of the United States navy. On Coaster's Harbor Island is the Naval War College, established in 1884, and consolidated with the torpedo station by act of March 2, 1889. Nearly a quarter of a million dollars are disbursed yearly by the Government at these points. Newport was first settled in 1638-'39, and in 1640 the first public school in America was established (possibly the first in the world), accessible to all, supported by public charge. The city also claims the first Baptist church in America. In 1643 it was chartered with Providence and Portsmouth under the name of Providence Plantations, and in 1730 the population was 4,640. In 1738 more than 100 vessels were owned at the port, and in the French War, 1756-'63, 50 vessels were engaged in privateering, and more than 100 were lost by capture. In 1763-'64, 182 vessels were engaged in foreign and 352 in coastwise trade, the seamen numbering, including those in fishing vessels, 2,200. Until 1769 the commerce of Newport exceeded that of New York. In 1774, 30 distilleries were in operation; the population was 9,209, and there were 300 families of Jews. The oldest synagogue in the United States (erected in 1762) is found here, still in use, though but

few Jews now remain in the city. During the Revolution more than 1,000 men were furnished by the city alone to the war on the sea. Newport was taken by the British on Dec. 6, 1776, and held until Oct. 25, 1779, during which time the sufferings of the citizens were extreme; 480 buildings (300 dwellings) were destroyed, and on the withdrawal of the British all the public buildings were left untenable, with the exception of Trinity Church, the town records being carried away also and sunk in Hell Gate. In 1780 the city was the headquarters of Rochambeau and the French fleet. Touro Park, purchased by legacy of \$10,000 from Judah Touro, contains the famous old stone mill and a bronze statue of Commodore O. H. Perry. Among other notable antiquities are the State House, dating from 1739; the City Hall, built in 1763; the armory of the Artillery Company, organized in 1741; and the Central Baptist Church, 1735. Bishop George Berkeley, who resided at Newport from 1729 to 1731, writing his "Minute Philosopher" at the Hanging Rocks, presented an organ to Trinity Church, which was erected in 1725. Redwood Library, originated in 1730 and incorporated in 1747, contains 33,000 volumes, and there is also a public library with 26,000. The opera house, erected in 1867, has a seating capacity of 1,000. There is also a music hall, a Masonic temple, a Grand Army of the Republic, and several other halls, a Young Men's Christian Association, an Odd-Fellows' building, two asylums, a hospital, and a Business Men's Association. The city has 26 wharves, with daily boats to Providence in summer, and the Old Colony line to New York; also the Old Colony Railroad and the Newport and Wickford Railroad and Steamboat Company, as well as boats to Block Island and other points. The city property in 1889 was valued at \$700,375.25, and the total debt was \$243,000. The assessed valuation in 1888 was \$28,804,800. The street improvements in 1889 reached \$54,708.36, and \$19,908 were expended on sewers. The fire department had property valued at \$64,985. Gas works were established in 1853, and electric lights introduced in 1885. There are 14 public fountains, 18 churches and 2 chapels, and 10 public-school buildings valued at \$157,828, in which 42 teachers are employed, with over 2,500 pupils. In addition there is an industrial school for girls, and a parish school. In 1886 land for a public park was presented to the city by Hon. Levi P. Morton. In 1643 the first Quakers settled in the city, which for more than two hundred and fifty years has been the seat of the annual meetings of the Society of Friends. The Historical Society of Newport was founded in 1853, and the Natural History Society in 1883. Newport has also the oldest newspaper in the United States, founded in 1758 by a nephew of Benjamin Franklin. Two daily and 3 weekly newspapers are published, and also 1 monthly. There are 11 banks, 6 of which are national, with an aggregate capital of \$970,000. A system of electric street railway was opened in 1889. As a summer resort, Newport has 5 large hotels. There are 4 beaches for surf bathing, and the Hanging Rocks, Spouting Rock, and "Purgatory," a chasm 160 feet long, 50 feet deep, and with width at bottom of from 2 to 24 feet, at top of from 8 to 14 feet,

are famous. There are two grand drives, Bellevue avenue being 2 miles long. The principal industries are a brass foundry and several cotton mills. The population in 1880 was 15,693; in 1890, 19,457, an increase of 23.99 per cent.

New Westminster, a city of British Columbia, on Fraser river, 16 miles from its mouth and 12 miles from Vancouver, in the center of Westminster district, the finest agricultural region of the province. It is the fresh-water terminus of the Canadian Pacific Railroad, and the western terminus of the Westminster Southern (a continuation of the American Great Northern), being thus directly connected with all American and Canadian railway systems by the two great competing transcontinental lines. It is also the terminus of seven steamboat lines, and has direct and regular connection with Victoria, Nanaimo, Vancouver, Portland, and all settlements on the river. For several years the National Government has been carrying on extensive works for the improvement of the Fraser, which is navigable as far as the city by vessels drawing 22 feet of water, and will be open to those of the largest draught when these works are completed. Several cargoes of lumber and salmon, the principal exports, have been shipped direct to foreign ports. Three fourths of the fish-canning establishments of the province lie between the city and the mouth of the river, and during the year 1890 produced 246,000 cases of salmon, paying out in wages \$500,000. Four large saw mills lie within or adjacent to the city, with capacity of 500,000 feet in twenty-four hours, and a fifth has its foundations laid within the city limits. The only woolen mill of the province is also here; and there are several foundries and machine shops, sash and door and furniture factories, and a tannery. The assessed valuation in 1888 was \$862,511; in 1889, \$2,540,245; in 1890, \$3,577,815; and in 1891, \$5,287,520. The tax rate in 1891 was 15 mills on the dollar. During the first half of the year, \$700,000 were expended on new buildings, and the value of all erected during the past three years is placed at \$2,000,000. Water works are being constructed, at a cost of \$380,000, to supply water from a pure mountain lake. The electric-light works, for both public and private lighting, are owned by the city, which has expended \$60,000 upon them, and a similar amount upon a bridge to Lulu Island, famous for its farming lands. It also owns the steam ferry across Fraser river, costing \$27,000. During the past three years \$200,000 have been expended upon streets. There is a gas company, telephone service extending to Vancouver, and an electric street railway. A similar means of communication will shortly connect both Vancouver and Lulu Island with the city. There are free high and public schools, 15 churches, 2 banks, 2 hospitals, a Mechanics' Institute, and a Young Men's Christian Association building. The public library cost \$24,000, and parks and agricultural-exhibition buildings have cost the corporation \$60,000. The provincial penitentiary and lunatic asylum, the central prison for the mainland, and the Dominion and provincial land offices, are at New Westminster, and there is also a court house and a land-registry office. The city was founded in 1859. The population is upward of 4,000.

North Bay, a town of Ontario, Canada, incorporated in 1890 by act of Parliament, with a population of 2,500, is on Lake Nipissing, in Nipissing district, and is a divisional point on the main line of the Canadian Pacific Railroad, where the Northern and Northwestern divisions of the Grand Trunk join it. The workshops of the corporation established here pay out in wages \$20,000 a month. The Nipissing and James Bay Railroad has been surveyed to Lake Temiscamingue, 80 miles to the north, where are silver mines now in operation, but which have not been extensively worked hitherto, owing to the heavy cost of transportation. Vast forests lie along the line of the road, and large numbers of fur-bearing animals are reported to exist. The Ottawa ship canal, up Ottawa and Mattawa rivers to Lake Nipissing, and down French river to Georgian Bay, has also been surveyed, giving a short route to the seaboard from the Great Lakes. During 1890, 125 new structures were erected, in addition to a Masonic hall and opera house; and a system of water works is being put in, which will afford ample fire protection. A contract has been let for a public school to cost \$6,000. There are Presbyterian, Anglican, Roman Catholic, and Methodist churches, a weekly newspaper, a Mechanics' Institute belonging to the Canadian Pacific Railroad, and a court house and jail, the latter erected at a cost of \$12,000. The lumbering industry is promising, and Lake Nipissing, 60 miles long and 20 wide, affords the attractions of a summer resort.

Olympia, a city and the capital of Washington, county seat of Thurston County. It is one of the oldest settlements in the State, on Puget Sound, where Des Chutes river flows into Budd's inlet. The city is on the east side of the river, on a hillside sloping to the water's edge, in a framing of dense green. West of the center there is a depression, and the eastern side lies on the gentle slope facing the water and the higher portion. Olympia was platted in 1851, selected as the capital in 1853, and incorporated in 1859. The population in 1880 was 1,232; in 1890 the three wards contained 4,698 inhabitants. At Tumwater, one mile distant, is one of the best water powers of the State, Des Chutes river having a fall of 85 feet in a horizontal distance of 1,500 feet, in three distinct waterfalls, with rapids between. It has been utilized for many years, and in 1890 a dam was constructing across the river. Capital to the amount of \$209,100 was invested in manufactures in 1890, the output for 1889 being \$211,000, and that estimated for 1890, \$389,000; 226 persons were employed, with annual wages of \$80,500; 3 saw mills were in operation, with a daily capacity of 60,000 feet, and there were also a planing mill, a brewery, and a wooden-water-pipe factory, the only one of its kind in the United States, manufacturing pipe from yellow fir, the shell being only an inch thick, but, when wound with iron or steel, withstanding a greater pressure than the heaviest cast iron. Over 200 miles of pipe were made in one year and found a ready market throughout the West. The undeveloped resources of the county include valuable coal mines, only one of which has been opened, that at Bucoda, the output of which in 1889 was 42,675 tons. The present facilities are sufficient for 16,000 tons a

month. A belt of timber, from Olympia to the Pacific Ocean, extends from the Satsop west, and consists of 20 townships, having over 60,000 feet to the acre of fir and cedar. There are 10 mills in the county. Within three miles of the city good iron ore is found in large quantities and very accessible, and bog iron from five to eight miles distant. A quarry of light-blue sandstone has been opened seven or eight miles away, and native copper is found within eighteen miles. Boats can not reach the wharves of the city except at high tide, and a long wharf has been built out to deep water—4,000 feet. A narrow-gauge railroad meets the Northern Pacific at Tenino, and the Port Townsend Southern, constructing in 1891, will pass through the city to Portland, Ore. The Tacoma, Olympia and Gray's Harbor Railroad was building the same year to Aberdeen. There are several miles of logging branches also. Two or three steamers ply daily to and from the cities on the sound. During 1889 \$1,000,000 were spent by the city on public improvements, and since Jan. 1, 1890, over 500 houses have been put up. The Capitol is a frame building, two stories high, with a dome. There are also a court house, a county jail, 4 public parks, fair grounds with race track, 2 academies (1 Methodist and 1 Roman Catholic), 3 public schools with an attendance of 800, a Roman Catholic hospital, 7 churches, and a fine hotel. A street railway was incorporated in 1889, and there is a motor line to Tumwater. Two national banks have a capital of \$210,000. Two daily and 3 weekly newspapers are published. The State library has 6,000 volumes, and that of the Good Templars 2,000. The Masons, Odd Fellows, and Good Templars have fine halls.

Palouse City, a town of Washington, in Whitman County, in the eastern part of the State, 18 miles east of Colfax and 65 south of Spokane Falls, on the Spokane and Palouse Railroad (a branch of the Northern Pacific), where it crosses Palouse river. The population in 1888, when the railroad arrived, was 300. In the same year it was destroyed by fire, but it has been rebuilt, fire limits established, and by the census of 1890 had 1,119 inhabitants. It is an important grain and stock shipping point, but the leading industry is the manufacture of lumber, there being 3 large saw mills with cut of 20,000,000 feet yearly, and 2 planing mills, manufacturing sash, doors, etc.; 200 men are employed in the wood-working establishments. Two large flouring mills also are kept active. Four grain warehouses have a combined capacity of 350,000 bushels. Water works have been erected at a cost of \$8,000, a Holly pump raising water from a well to a 100,000-gallon reservoir 204 feet above the town. The sum of \$5,000 was expended in street grading during 1890, and there is an electric-light plant. The Christians, Methodists, Baptists, and Roman Catholics have church edifices. In addition to the public schools, in which 7 teachers are employed, and which are attended by nearly 400 children, there is a Catholic school of 50 pupils. The Catholics are also building a hospital. Two banks, 1 of which is national, have an aggregate capital of \$110,000. A weekly newspaper is published.

Parkersburg, a city of West Virginia, the county seat of Wood County, on the left bank of Ohio river, at the confluence of the Little Kanawha, 95 miles from Wheeling, and 12 miles below Marietta, 384 miles by rail from Baltimore and 195 from Cincinnati. It is the western terminus of the Baltimore and Ohio Railroad, and has also the main offices and shops of the Ohio River Railroad, the wealthiest in proportion to its mileage in the United States. The railroad bridge erected in 1869-'71, one mile and a third in length, cost more than \$1,000,000, and has six spans over the river in addition to approaches. Little Kanawha river is navigable for 38 miles, and with its tributaries flows through the best lumber districts in the State. Large quantities of poplar, walnut, oak, cherry, and other woods are brought to the city, where they are manufactured. The output of one mill goes altogether to Europe. A furniture company, established in 1880, employs 100 persons, and there is also a veneer and panel company, manufacturing sheets thin as tissue paper out of the heaviest logs, also all kinds of veneer, panels, bed rails, etc. Other industries are 3 iron foundries, 5 machine shops, 2 boiler shops, chemical works, 2 barrel factories, an oil and soap plant, a coffee company with capital of \$100,000, and bottling works. Within 25 miles lie the richest oil fields of the State, the Volcano yielding in 1889 71,500 barrels of crude petroleum. There are 5 oil refineries. Natural gas has been found in large quantities within a convenient distance, and a company was organized early in 1891 to bring it to the city for manufacturing. The population of the city proper was 6,582 in 1880 and 8,408 in 1890. The city limits have never been extended since the earliest days, and outside growth is therefore larger than that reported. The streets are well paved and shaded, and lighted with electricity and gas. The water supply is excellent, and the pressure in the hydrants is sufficient for fire protection without engines. Four banks, all national, have an aggregate capital of \$656,000. Two daily, 2 weekly, and 1 monthly newspapers are published. There are 6 public-school buildings and a high school. There are 12 churches, a court house, and a fine new Federal building.

Petersburg, a city of Virginia, formerly in Chesterfield, Dinwiddie, and Prince George's Counties, but now independent, 22 miles south of Richmond, at the head of tide-water on Appomattox river, 12 miles west of its confluence with the James. By the census of 1890 it has a population of 22,680, an increase of 1,024 since 1880. The Appomattox is navigable for large vessels to the wharves of the city, which is the natural market of a broad expanse of fertile country, and has the largest export trade for manufactured tobacco of any city in the United States. In 1885 the exports reached 4,840,118 pounds, an excess of 1,071,519 pounds over the year previous, and the home consumption amounted to 4,307,810 pounds. The sales and inspections at the five warehouses aggregated 15,365,856 pounds. Between \$300,000 and \$400,000 are invested in the industry, and 9 factories employ 2,097 persons, to whom \$332,147 were paid in wages in 1885. The tax paid to the United States was \$345,424.80. A large portion of the

pea-nut crop of Virginia and North Carolina is also handled in Petersburg; 6 factories for assorting, cleaning, and preparing the nuts for market being in operation in 1885, with output valued at \$900,000. During the season of 1890-'91, 1,750,000 bushels were sold, realizing \$1,250,000. The Atlantic and Coast Line Railroad and the Norfolk and Western pass through the city; while the Upper Appomattox Canal, for half a century one of the great feeders of the city, controls 100 miles of water-way with ample facilities for manufacturing enterprises, and is exempt forever from taxation by city, county, or State. Daily transportation is afforded by two lines of steamers. In 1889 the receipts of the city treasury were \$329,248, and the disbursements \$320,667; of which \$7,308 were for the fire department, \$15,511 for police, and \$24,500 for public schools. The assessed valuation of real and personal property in 1890 was \$9,706,445, and the rate of taxation \$1.60 per \$100. The total bonded debt of the city was \$1,223,200. Of this amount \$100,000 were incurred in building water works. Two high schools and 9 grammar schools employ 53 teachers; and 3,288 children are enrolled. There are also 2 female colleges. The churches number 16. The streets are well paved, with fine shade-trees, and there are many elegant residences and spacious parks, adorned with lakes of pure spring water, stocked with fish, and beautified with flowers and shrubbery. The manufacture of cotton in 5 factories is second only to that of tobacco. Fertilizers also are made, and the granite quarries furnish superior stone, which was used in building the Rip Raps, the United States Custom House in the city, and the State Central Lunatic Asylum in the suburbs. Much is also shipped for monuments. Three flour and 5 corn mills are in operation, the former run by water and the latter by water and steam power; and 3 bark and sumac factories have \$100,000 invested as capital and employ 150 persons, while 5,000 are occupied during several months in gathering and curing the leaves of sumac. Three foundries manufacture tobacco and cotton presses, locomotive and stationary engines, boilers, saw, grist, and sumac mills, elevators, steamboat works, dredges, castings, forgings, and all varieties of steam and hydraulic machinery, as well as agricultural implements, finding their markets throughout the Southern States. There are also silk mills, factories of bags, shirts, shucks, butter boxes, berry baskets and crates, hats, brooms, and candies, and bottling works. Gas and electricity are employed in lighting, and street railways run from the center to the suburbs of the city. There are 1 national, 1 savings, and 1 private bank, 2 public libraries, and 2 daily, 5 weekly, 1 bi-monthly, and 1 monthly paper. Petersburg was settled in 1733, and built on the site of an Indian village destroyed during Bacon's rebellion. It was incorporated in 1748, and a second time in 1781. During the civil war it was a strategic point of great importance.

Port Huron, a city of Michigan, the county seat of St. Clair County, on the most easterly point of territory in the State, at the head of St. Clair river and on both sides of Black river, three miles from Lake Huron. The first white settlement was made in 1686 (a French military

post) and maintained for two years. In 1790 7 French families settled on a favorite camping ground of the Indians. The place was originally known as Desmond, but the name was changed to Port Huron in 1837, and in 1857 the city was incorporated. In 1859 the Grand Trunk Railway was completed from Detroit, and the construction of the Port Huron and Lake Michigan Railroad was begun ten years later. In 1879 the first section of the Port Huron and Northwestern was opened to Crosswell, which in 1889 was purchased by the Flint and Père Marquette. The Erie and Huron Railway terminates at Sarnia, Canada, opposite the city, and in 1891 the great submarine tunnel was opened between the two cities, connecting the Grand Trunk Railway of Canada with lines under Grand Trunk management in the United States (see "Annual Cyclopædia," for 1890, page 283). More than 75,000 cars pass through Canada yearly, requiring manifesting and inspection at Port Huron, and over 1,200 cars arrive laden with foreign merchandise under consular seal for transportation to the interior, valued at \$1,000,000. The city is the headquarters of the customs district of Huron, and the amount of duties collected in 1890 was \$54,545.53. For the year ending June 30, 1891, the amount was \$180,815.32, an increase of \$126,269.79, attributed to the building of the international tunnel. The exports to foreign countries in 1890 were \$10,447,553, and for 1891, \$9,026,239. The imports for 1890 were \$2,082,124, and for 1891, \$2,809,932. Thousands of immigrants enter the port yearly. For the year ending June 30, 1891, the arrivals of vessels at the port were 1,006, with a tonnage of 264,481 tons, and the departures were 1,032, tonnage 283,751. The total number of vessels owned in the district is 443; by the city proper, 58. Nearly 800,000 people are carried annually by the ferry companies. The territory covered by the city is about 5 square miles. The assessed valuation is \$4,738,750, of which \$255,900 is personal and \$3,914,850 real estate, on a valuation of 50 per cent. The population in 1880 was 8,884, and in 1890, 13,543. There are nearly 12 miles of streets, mostly paved with cedar blocks, but a few graveled, and the sewerage mileage is the same. Water works, costing \$300,000, were erected in 1873, and consists of two sets of pumping machinery, with 34 miles of mains and 174 fire hydrants. Two paid companies constitute the fire department. There are 3 handsome parks within the city limits—1 presented by the United States Government, of 21 acres, and another containing a hospital and home. Another park, 2 miles north, is reached by an electric railway. Another electric line of street railway is projected. There are 13 churches and 8 public-school buildings, with 42 teachers and an enrollment of 2,500 in 1890. There is also a business college, an academy (Catholic), and several parochial schools, also 1 private, the total enrollment being 700. The residences number 3,500, and there are 531 other buildings. There are several public halls and an opera house. Four banks (1 national and 2 savings) have aggregate capital of \$385,000. One daily and 5 weekly newspapers are published, also a monthly, the organ of the Michigan Maccabees. The United States Signal Office is in the Federal

Building, which was completed in 1875 at a cost of \$250,000. There is also a handsome city hall. The locomotive shops of the Grand Trunk Railway are in the city, and car construction and repair shops at Fort Gratiot, adjoining. Port Huron has 7 grain elevators, with a combined storage capacity of 1,450,000 bushels; 3 flouring mills, 3 dry docks (employing 190 men, with an output in 1890 of \$200,000), 2 planing mills, lumber yards, a sulphite fiber company (with capital of \$250,000, manufacturing paper from spruce wood), a paper-clothing company, 3 boiler shops, 2 engine works, 4 foundries and machine shops, 6 carriage and wagon shops, 2 broom factories, 4 marble works, 5 cigar and 2 candy factories, 2 breweries, 2 lime kilns, harness factories, a cold-storage plant valued at \$30,000, 4 bottling works, and other industries.

Portsmouth, a city and the only seaport of New Hampshire, a United States port of entry, and one of the two county towns of Rockingham County, on a peninsula 3 miles from the mouth of Piscataqua river, 57 miles from Boston by rail. The harbor, which is free from ice and has a depth of from 35 to 75 feet, is capable of containing 2,000 vessels. The Kittery Navy Yard, on Continental Island, half a mile distant, to which there is a ferry, is in Maine, but is regarded as belonging to Portsmouth. It is provided with a fine balance dry dock, 350 by 105 feet. It is one of the 4 United States naval stations now in use as construction yards, but is for wooden vessels only. It contains 170 acres. The first settlement at Portsmouth was in 1623, and thirty years later the township received its name. In 1849 the city was incorporated. The population in 1850 was 9,738, in 1870 it was 9,211, in 1880 it was 9,690, and in 1890 it was 9,827. Ship-building has always been the principal industry. Among the famous vessels built at the port were the "Falkland," in 1690, carrying 54 guns; the "America," of 50 guns, in 1749; and in 1777 the "Ranger," which, under the command of John Paul Jones, received the first salute to the American flag by a foreign nation. The railroads entering are the Boston and Maine, the Concord and Portsmouth, the Portland, Saco and Portsmouth, the Portsmouth, Great Falls and Conway, and the Portsmouth and Dover. The assessed valuation in 1888 was \$6,353,925. The debt of the city in 1890 was \$192,500, and receipts and expenditures were \$304,789.77 and \$204,424.97. The fire department has a membership of 126, and a fire-alarm telegraph. Water is supplied by private corporations. A gas company established in 1850 has a capital of \$77,000. Six banks, 3 of which are national, have a total capital of \$800,000, and there are 2 loan companies. Three daily and 3 weekly newspapers are published. The total value of the 12 public-school buildings in 1890 was \$178,100, and the expenditures for schools during the year were \$24,909. The sum of \$75,606.84 has been appropriated for new buildings, of which \$30,144.82 were expended in 1890; 45 teachers are employed, and the enrollment is 1,152. There are 6 private institutions, including a commercial college. There are 11 churches, 1 theatre, and numerous halls. The Athenæum has a library of 16,000 volumes, and there is a public library also of 9,381 volumes. The charities in-

clude a hospital, a home for indigent women, a female asylum, and a home for children. There is a board of trade. The manufactures embrace 2 breweries, 2 planing mills, a copper and brass foundry, a factory of hosiery and gloves, a machine and a shoe company, a soap factory, and the oldest marble works in New England. Many of the residences are old and surrounded by large gardens, while the streets are shaded with handsome trees. Among the notable antiquities are Gov. Wentworth's House (2 miles distant) which was erected in 1750, and St. John's Church. Portsmouth is the headquarters of the first United States lighthouse district, and has a life-saving station and a signal-service station; the custom house is in the post-office building. The United States courts are held here, alternately with Concord.

Port Townsend, a city of Washington, the county seat of Jefferson County, on Puget Sound, where that body of water joins the strait of Juan de Fuca, 90 miles from the Pacific Ocean, 40 from Seattle, 66 from Tacoma, and 35 from Victoria, British Columbia. It is on Quimper peninsula, which is 7 miles long and from 3 to 5 miles wide, washed by Port Discovery and Port Townsend bays on either side and has an available shore line of 25 miles. It is the port of entry for the Puget Sound district, and in the fiscal year ending July 1, 1890, 1,029 American vessels cleared for foreign and 181 for coastwise ports, the total tonnage, including foreign vessels, being 957,847 tons; while the entrances were, in all, 1,362 with total tonnage of 1,066,174 tons. Imports in bond were made during 1889 to the amount of \$792,341, the principal article being tea to the amount of \$656,789. The goods in bond in transit through the United States between foreign countries were valued at \$203,372. The exports reached \$2,643,344, of which the largest item was lumber, 107,326,280 feet, valued at \$1,209,717; 893,137 bushels of wheat, and 13,566 barrels of flour, aggregating \$797,626. The city is the center of the Alaska traffic. Daily steamboat connections are made with the Northern Railroad at Tacoma, the Union Pacific at Portland, and the Canadian Pacific at Vancouver. The Port Townsend Southern Railroad was constructing during 1891 to Portland, through Olympia, being completed to Quilcene in June. Its terminal grounds, wharves, and warehouses at Port Townsend are extensive and substantial. Two other roads are projected to the city from the east. A site has been recommended for a naval station and Government dry dock at the head of Port Townsend Bay, and the Government has reserved as sites for fortification Point Hudson, Admiralty Head, Point Partridge, and Marrowstone Point. A canal will also be opened between the city and Oak Bay, affording a more direct route to Hood's Canal, Seattle, and Tacoma. Port Townsend was first laid out in 1852. The principal growth took place between 1888 and 1890. The real-estate transfers for the year ending Sept. 1, 1890, were \$6,000,000. The building improvements projected and completed in the same period aggregated \$3,000,000. The population in 1880 was 917; in 1890 it was 4,558, the figures for Jefferson County being at the same dates respectively 1,712 and 8,368. The city has 3 lines of street railway—2 operated by electricity and

1 by steam motor—aggregating 14 miles in 1890. Gas and electricity are employed in lighting, and water works are constructing to cost \$500,000, bringing water by gravitation from Little Quilcene river. Preliminary steps have also been taken toward a perfect system of sewerage. There are churches of 7 denominations. There are graded public schools, and a normal and a business college. There are 6 banks (2 national) and a chamber of commerce. A rich country is tributary, in agricultural products, minerals, and especially timber. One company has \$50,000 invested in salting and smoking cod, halibut, herring, and salmon, for eastern markets. The only works in the State for the manufacture of pig iron are at Port Townsend, and furnish employment for 700 men. The production in 1889 was \$350,000. In 1889 engineering works were erected for marine engineering, steamboat construction, and repairs. A foundry, in operation for six years, has doubled its capacity, and employs 100 men. The cut of 2 saw mills in 1889 was 45,000,000 feet of lumber, 7,500,000 laths, and 307,855 pickets, and there are also sash, door, and blind manufactories, brick, terra-cotta, and cornice works, cigar factories, a brewery, and an ice factory. The United States Custom House and Post-office is estimated to cost \$250,000, the Court House \$100,000, a new public-school building \$60,000, and a large hotel \$100,000. The mean temperature in 1889 was 52.5°.

Pueblo, a city of Colorado, the county seat of Pueblo County, on both sides of Arkansas river, at the confluence of the Fountain qui Bouille, 40 miles east of the Royal Gorge, 120 from Denver, 170 from Leadville, and 635 from Kansas City, Mo. It is the metropolis of southern Colorado, and the largest manufacturing point in the State, save one. The Atchison, Topeka and Santa Fé Railroad was the first to reach the city in 1876, followed by the Missouri Pacific in 1887. It is now the center of five trunk lines, with outlets in all directions, and is the second distributing or supply point in the State. The population in 1870 was 666; in 1880, 3,217; in 1890 it was 24,558, an increase of 603.33 per cent. The assessed valuation of property in 1887 was \$4,641,695; in 1888, \$6,264,350; in 1889, \$9,444,630, and in 1890, \$11,381,947. In 1889, 28,237 car-loads of freight, representing 564,700,000 pounds, were received. The largest iron and steel works between Missouri river and the Pacific Slope are at Pueblo, capitalized at \$10,000,000. All the raw material used is produced within the State, from mines owned by the company. In 1890 two large blast furnaces, with a daily capacity of 240 tons of pig iron, were in operation, and another was constructing; the steel works were under improvement, and the plant consisted, in addition, of two 5-ton converters, a blooming mill, rail, merchant-bar, and nail mills, a pipe foundry, and machine shops. The output in 1890 was 23,436 tons of pig iron, 23,564 tons of steel blooms, 25,439 of steel rails, 31,500 of steel ingots, 8,390 of merchant iron, and 3,333 kegs of spikes. From 1,200 to 1,500 men were employed. During the year 800,000 tons of coal and 125,000 tons of coke were shipped from the company's coal mines. Three large smelters have an annual output of 200,000 tons, valued at \$9,500,000, and

employ 900 men, with a monthly pay roll of \$54,000. There are also large iron and brass foundries and shops, one devoted mostly to railroad castings, another to mining tools and machinery, another to brass and copper articles, one to wrought and cast iron fencing, and one to barb wire. Fire-brick works have been established, and there are nearly a dozen brick yards. In 1890 an artificial-ice factory was established, and 300,000 head of cattle were handled at the Union Stock Yards. The real-estate transactions for 1890 were \$10,491,541, and the expenditures for improvements were \$1,011,000, of which \$87,500 were for grading of streets, \$45,000 for water mains, \$60,000 for city water reservoirs and mains, \$25,000 for private water works, \$34,000 for bridges, and \$74,000 for street-car lines. In 1891 25 miles of electric street railway were in use. Electric lighting is supplied by three plants. The monthly cost of the fire department is \$3,000. The churches number 26, and there are 12 school buildings, the Centennial School building being one of the handsomest in the State. During 1890 \$45,000 were expended on school-houses. A fine opera house was also completed and a Board of Trade building. A public library was incorporated, and there is a flourishing Young Men's Christian Association. The city has 6 national, 1 savings, and 3 private banks, and 3 daily and 9 weekly and 1 monthly newspapers are published. The water power of Arkansas river, which has a fall of 17 feet per mile, is unimproved. The city is the geographical center of the famous coal fields of Las Animas, Huerfano, and Fremont Counties, the product of which, with El Paso County, in 1890, was 1,519,934 tons, or two thirds of the total product of the State. Within 30 miles of the city are 30 oil wells, and a pipe line is being laid to the city from Florence to convey 12,000 barrels a day. Iron ore, zinc, and valuable clays constitute the mineral resources. The Colorado Mineral Palace is a unique and magnificent building, of Egyptian design, in which a permanent exhibition of the minerals of the State is held. The State Insane Asylum is west of the city. The altitude of Pueblo is 4,660 feet.

Reno, a city of Nevada, the county seat of Washoe County, on Truckee river, in the western part of the State, 52 miles from Virginia City and 154 from Sacramento, Cal. On the line of the Central Pacific Railroad it ranks first both as a distributing and as a shipping point; it is also the terminus of the Virginia and Truckee and the Nevada and California Railroads. The population of the county in 1890 was 6,437, it being one of the two counties in the State that showed an increase in the decade. The population of Reno was 5,000. In 1889 Reno had 520 residences, fine business blocks, and county buildings. It is lighted by gas and electricity, and water is supplied from mountain streams to a reservoir with capacity of 26,000,000 gallons, with a fall of 182 feet, and pressure of 73 pounds to the square inch. There are 2 steam fire-engines. The University of Nevada at Reno was erected in 1885-'90, at a cost of \$58,000 for building and site. Bishop Whittaker's school for girls, Mount St. Mary's Academy (Catholic), 3 public schools, and a high-school building, costing \$25,000, afford additional educational

advantages. Six denominations have church buildings, and the Masons and Odd Fellows have fine halls. Two banks have a cash capital of \$350,000. There are 2 daily and 2 weekly newspapers. The State Insane Asylum, erected at Reno in 1881-'82, cost \$98,000; the State Prison, a stone building, begun in 1874, \$96,500; and the State Agricultural Society buildings, \$36,000. Annual fairs are held here, and there is a fine race track. The opera house cost \$30,000. Smelting and reduction works handle ores from all parts of the country, and there are 2 flouring mills, a soap factory, sash, door, and blind, powder, and broom factories, operated by steam as well as the water power of Truckee river. Two breweries and a planing mill complete the industries. The altitude of Reno is 4,480 feet, and the climate is dry and healthful. Various stage lines connect with agricultural and mining towns. The city is named in honor of Gen. Jesse L. Reno, who was killed at South Mountain, Md., Sept. 15, 1862.

Salem, a city of Oregon, the capital of the State, and county seat of Marion County, on the right bank of Willamette river, in a beautiful prairie, 52 miles from Portland, on the Southern Pacific or Oregon and California Railroad. Boats connect also with the Oregon Pacific and Oregon Railway and Navigation Companies at Albany and Portland. A Methodist mission, one of the first settlements in the county, was established by Jason Lee, 9 miles below the present site of Salem, in 1834, and the city is one of the oldest in the Northwest. It was incorporated in 1853, and became the State capital in 1860. It is handsomely laid out on an undulating tract of land, the streets being 100 feet wide and the blocks 330 feet square, exclusive of 16-foot alleys. Numerous beautiful residences, with fine gardens, city parks, and abundant shade-trees, render it exceptionally picturesque. A free bridge across the Willamette, 2,240 feet long, in three spans, and 86 feet above the water, connects Marion and Polk Counties. The population of East, North, and South Salem precincts in 1890 was 10,585. Fine water power is afforded by Willamette and Santiam rivers, conveyed in an 18-mile canal; and over \$1,000,000 were invested in manufacturing industries in 1890, viz., \$75,000 in a woolen mill, \$450,000 in two of the largest flouring mills on the coast, a stove foundry employing 250 men, a mill and lumber company, 2 planing mills, 2 sash and door factories, a fruit-canning establishment, a large evaporator and fruit-drying plant, a \$75,000 brewery, a large fence manufactory, 1 foundry and machine shop, 1 tannery, 2 wagon and carriage shops, a vinegar, fruit-preserving and pickle factory, 3 large cigar and tobacco factories, agricultural-implement works, tile works, and 2 brick kilns, in addition to a kiln at the Penitentiary. Patent fruit evaporators are also manufactured. The soil of Marion County is remarkably productive, wheat being the staple product, but of late years fruit-growing has increased extensively, all varieties of fruit that grow in the temperate zone reaching perfection. Stock-raising is also followed with profit. The winter weather lasts two to six weeks in December and January, and in summer the heat, tempered by sea breezes, is never excessive. The total tax for all purposes

is two cents on the dollar. In 1888 the assessed valuation of Salem was \$1,613,000. In 1889 there were 12 miles of graded streets and 16 of sidewalks. Water is obtained from the river by two distinct pumping plants, with capacity of 2,000,000 gallons each daily, and there are 36 street hydrants and 5 cisterns for fire protection. The fire department consists of 3 engine and hose companies and 1 hook and ladder. Electric and gas lights are in use. A street railway was incorporated in 1888. The city has 14 fine church buildings. The public-school property is valued at \$52,120; 17 teachers are employed, and 1,000 children enrolled. There are 4 public-school buildings, and also private and parochial schools. Willamette University was founded in 1853 by the Methodist Episcopal Church. Its faculty embraces 30 professors and instructors, and there are nearly 400 students. There is also a Catholic academy for girls and a business college. The State Institute for the Deaf and Dumb and the Oregon School for the Blind are at Salem, as is the Asylum for the Insane, occupying a tract of 290 acres, and accommodating in 1888 586 patients. The Orphans' Home is a fine building, and the Oregon Penitentiary has, within a wall inclosure 1,753 feet long and 16 feet high, 6 large brick structures for workshops, in addition to the main building, 260 feet long and 36 feet high, with a wing 85 feet in length. The Court House cost \$110,000. The State House, of iron, brick, and stone, was begun in 1873; it has a tower 180 feet in height, and is surrounded by a handsome park, covering 3 blocks. The Masons and Odd Fellows have libraries; there is a large opera house, 2 daily papers are published with weekly editions, and a monthly periodical is issued by the deaf-mute school. There are 4 banks (2 national), with capital of \$485,000. Five miles north of the city, at Chewama, is the Government Indian Industrial School. The mineral resources of Marion County consist of gold and silver in quartz, coal, limestone, and bog-iron ore. The lumbering industry is supplied from the forests of the Cascade slopes. The average annual rainfall is 42 inches.

Sherman, a city of Texas, the county seat of Grayson County, in the northern part of the State. It is the northern terminus of the Houston and Texas Central Railroad, and the northwestern of the St. Louis, Arkansas and Texas, The Texas and Pacific, in 1890, was constructing to the northeast through the coal fields of Indian Territory, and, in addition, the Denison, Bonham and New Orleans and the Wichita Railroads pass through the county, which contained 168 miles of track in 1888. In 1889, 195,000,000 pounds of freight were received and 120,000,000 forwarded. Fifty miles distant lie the great Ardmore coal fields, and the surrounding country is one of the richest agricultural districts in Texas. More than 600,000 acres are under cultivation, of which 80,000 were in cotton in 1889-'90, and 85,000 in corn, which produced 3,400,000 bushels. The business transactions of Sherman in 1889 amounted to \$8,500,000; and manufactures include one of the largest cotton-seed oil mills in the South, a large cotton gin costing nearly \$250,000, claimed to be the largest in the world, 3 flouring mills with daily capacity of 600 barrels, 2 iron foundries and machine shops,

marble works, steam saw mills, brick yards, planing mills, cigar, chair, furniture, soap, ice, broom, mattress, candy, and carriage factories. A fine public-school system is in operation, and the North Texas Female College and Conservatory of Music is here. There are also the Sherman Institute, St. Joseph's Academy (Catholic), Austin College (Presbyterian) for boys, and a commercial college. Two banks (1 national), have an aggregate capital of \$900,000, and 2 daily and 3 weekly newspapers are published. The water works have 15 miles of mains, and there are 2 lines of street railway, 1 horse and 1 electric. There are 7 churches, a \$40,000 opera house, a \$65,000 court house, and a \$95,000 jail. Electric lights are in use, and there is an adequate fire department. The population in 1870 was 1,439; in 1880, 6,093; and in 1890, 7,335. Within a very recent period the city has advanced in a remarkable degree from a small inland point to a commercial and shipping center. It is 67 miles from Dallas, 150 from Marshall, and 270 from Austin. The altitude is about 1,000 feet.

Snohomish, a city of Washington, the county seat of Snohomish County, in the northwestern part of the State, on Snohomish river, at the head of low-water navigation, 15 miles from Puget Sound, on the line of the Seattle, Lake Shore and Eastern Railroad, 28 miles north of Seattle, with which place there is a daily communication by steamer also. The city was founded in 1871 by E. C. Ferguson and W. B. Sinclair, and in 1880 had only 149 inhabitants. In 1887 it had 800, and it was incorporated in July, 1890, with a population for the precinct of 2,469. Snohomish County had a population of 8,514, against 1,387 in 1880. It has an area of 20,000 square miles, of which 800 have been surveyed. In 1880 the real estate was valued at \$218,715, and personal property at \$116,583. In 1890 the total assessed valuation was \$4,008,211, of which \$3,027,184 were real and \$671,431 personal property. The total tax of all kinds was less than 15 mills on the dollar. During 1890 incorporations were made in the county to the amount of \$985,000. Gold, silver, high-grade galena ore, coal, iron, the finest marble, sandstone, and granite exist, and placer mining has been carried on for twenty-five years on Sultan river, a branch of the Snohomish. The Seattle and Montana Railroad, a branch of the Great Northern, was built along the Sound on the western line of the county during the last six months of 1890, and the county has been bonded for \$80,000 to improve and extend public roads. In Snohomish, street improvements are under way to cost \$40,000, and an electric motor line of street railway is projected. Its electric-light plant cost \$30,000, and its water works \$15,000, while a pumping system, worth \$50,000, was constructing in 1891. It has a steam fire engine, a telephone system, 2 banks (1 national, with capital of \$50,000), 1 daily and 2 weekly newspapers. The buildings erected in 1890 include a brick court house, costing \$30,000; a public-school building \$14,000; a county jail with steel cells, \$3,000; two business blocks, \$10,000 and \$7,000; and a Catholic school and boys' home, \$4,000. In 1880 less than \$10,000 were invested in manufactures in the entire county. In 1891 the city had 8 saw and 8 shingle mills (one of the last being

the largest in the State) and 2 sash and door factories, most of them established since 1888, valued at \$475,000, and employing 400 persons. The output for 1890 was 40,000,000 feet of lumber, and 45,000,000 shingles, valued at \$600,000. The value of other manufactured articles was \$100,000. Five denominations have churches, and the Masons and Odd Fellows have large and convenient buildings.

South Omaha, a city of Nebraska, in Douglas County, 3 miles from Omaha, with which city and with Council Bluffs, Iowa, it is connected by an electric street railway. In 1885 the population was 150, and in 1890 it was 8,062. The railroads are the Missouri Pacific, the Chicago, Milwaukee and St. Paul, the Union Pacific, the Rock Island and Pacific, and the Elkhorn and Missouri Valley. In 1888 150,879 tons of freight was received and 88,607 forwarded. The building permits in 1890 reached \$648,400. Six miles of streets have been paved, and 20 curbed; and there are 10 miles of sewers, 2 viaducts costing \$75,000, and a complete system of water works. The assessed valuation of property in 1889 was \$9,068,973. Electric lighting is in use, and there are a telephone, 3 telegraph, and 5 express companies. Five banks (3 national) have a total capital of \$412,000. Five daily newspapers are published. The churches number 16, and there are 12 school buildings, attended by about 2,000 children. South Omaha claims to be the third largest packing center in the world. The aggregate business of 4 packing houses in 1890 was \$28,692,000, and it has also the third largest stock yards in the country. The receipts at these in 1890 were 606,699 cattle, 1,673,314 hogs, 156,186 sheep, and 5,318 horses. There are 40 stock commission firms. Additional industries are carbon works, 6 large brick manufacturing, 2 breweries, and large cooper shops. One of the 2 public parks contains 70 acres. There is a paid fire department.

Sprague, a town of Washington, the county seat of Lincoln County, in the eastern part of the State, on the main line of the Northern Pacific Railroad, 41 miles west of Spokane Falls. It is the headquarters of the Idaho division of the Northern Pacific, and has large repair shops and round houses, the former employing 250 men and turning out new rolling stock, in addition to cars rebuilt. There are a handsome headquarters building, coal bunkers, ice houses, stock yards, and other accessories. The town is built in a narrow valley, and about a mile away begins the great plateau of the Big Bend country, the largest continuous body of wheat land in the Pacific Northwest, extending in an unbroken line to Columbia river. The receipts and shipments of three large grain elevators to Jan. 1, 1891, were in all 480,000 bushels, with a reserve of 250,000. The place is one of the most important shipping points for stock in eastern Washington. At one point near the city more than 100,000 sheep were sheared in 1889. The population of Lincoln County in 1890 was 9,312; of Sprague, 1,689. Brick buildings have been completed costing over \$50,000, and fire limits have been established. The streets are broad and well graded, with plank sidewalks. There is an electric-light company, with a plant valued at \$20,000. The water works consist of a Holley pump

raising water from a well to a reservoir of 100,000 gallons capacity 150 feet above the city, and there are 26 hydrants. The fire department is voluntary. The graded public school has a two-story brick building, to which an addition was built in the summer of 1890 at a cost of \$6,000. It has a high-school department and an attendance of about 400. There are 2 Catholic schools also. Five denominations have church buildings. One daily, one semi-weekly, and one weekly newspaper are published. There is one national bank and a building and loan association with capital of \$100,000. The Court House is a two-story brick structure, costing \$10,000. A public park of 25 acres has been laid out, adjoining Colville lake. The industries include a flour mill, 1 planing and 2 chopping mills, 2 brick yards, and a creamery and cold-storage company.

Springfield, a city and the capital of Illinois, county seat of Sangamon County, in the center of the State, 5 miles from Sangamon river, on the main line of the Chicago and Alton Railroad, 185 miles from Chicago. Seven other railroads branch out in 13 different directions, with 38 passenger trains daily. The capital was removed to Springfield from Vandalia in 1837, and the city was incorporated in 1840. It has an area of 4 square miles. The population in 1850 was 4,600; in 1860, 9,800; in 1870, 17,000; in 1880, 19,743; and in 1890, 24,963, showing an increase in the last decade of 26.44 per cent. In addition to its being a political center, it is important from an industrial point of view, as it is in a rich agricultural and coal-mining region. Thirteen large coal shafts are in constant operation in the vicinity. The water works owned by the city cost \$300,000, and have an average daily consumption of 2,500,000 gallons. There are 35 miles of mains and 148 fire hydrants. There are also 33 miles of sewers, an electric-light plant valued at \$75,000, 21 miles of paved streets, electric police and fire alarms, a telephone system, 2 lines of street railway, a paid fire department, and a public library of 13,700 volumes, in addition to the State Library of 36,000 volumes. Four daily, 7 weekly, and 3 monthly papers are published. The streets are broad and well shaded by maples. In 1889 the expenditure for the fire department was \$26,827. The taxable property is placed at \$20,000,000. There are 25 churches, many of them handsome edifices, an opera house, 2 female seminaries, in addition to a fine high-school building, a business college, and 11 public schools, in which 77 teachers are employed. The enrollment is 3,261, and the value of school property \$240,302. Two thousand children were also enrolled in private and parochial schools. A watch company, established in 1870, is the leading industry. It covers 16 acres of ground and employs 800 persons, turning out 400 watch movements daily. There is also a furniture factory, a foundry and machine shop, woolen, paper, and planing mills, engine and boiler works, and factories of trunks, carriages, fence, brooms, cigars, and tiles. The machine shops of the Wabash Railroad are here. The Capitol, completed in 1886 at a cost of \$5,000,000, is of Joliet stone, and is in the form of a Greek cross, 399 by 286 feet. From the ground to the top of the dome is 365 feet. The

interior is handsome, with marble finishings, frescoes, etc., and contains a memorial hall, on the ground floor, in which are the battle flags of Illinois regiments during the civil war and other relics. There are also museums of agriculture and natural history accommodated within, as well as the Supreme Court and State Board of Health. The Court House, formerly the State Capitol, is a three-story building, which cost \$320,000, and there is a Federal building and an exceptionally handsome executive mansion. The home of Lincoln, owned by the State, contains a collection of memorials of him. The Lincoln monument, of granite from the quarries of Biddeford, Me., cost \$240,000. It was completed in 1871. The statue, of bronze, as are the four groups at the corners, was the design of Larkin G. Mead. It was unveiled Oct. 15, 1874, in the presence of the Army of the Tennessee. The artillery and cavalry groups were placed in position in 1882 and 1883, the infantry and naval in 1887. Sangamon Fair Association has grounds outside the city. Five national banks have a capital of \$1,135,500, and there is a loan and trust company with a capital of \$60,000.

Stamford, a town and borough of Connecticut, in Fairfield County, on Long Island Sound, at the mouth of Mill or Rippowam river, 78 miles distant from Hartford and 34 from New York city. The railroad connecting those two cities passes through the place, and there is also a daily steamer to New York. In population it is the eleventh and in wealth the seventh city of Connecticut. Originally a Puritan settlement, it had its origin in a dispute among the colonists at Wethersfield, which led to the removal of the dissatisfied minority to lands of the Rippowam Indians and the purchase of the site of the present town (named for Stamford, Lincolnshire, England). On Dec. 22, 1841, the second centennial of the town was celebrated. In 1830 its borough charter was obtained, amended in 1882, the present limits extending 10 miles north and south and from 5 to 6 miles east and west. In 1848 the railroad was opened, from which time the growth of population has been steady. In 1820 it was 3,284; in 1850, 5,000; in 1880, 11,298; and in 1890, 15,700, an increase of 39 per cent. The taxable property is placed at \$8,863,486, and in 1890 the rate of tax was 12 mills. A system of sewerage has been completed at a cost of \$125,000, and during 1890 \$20,000 were expended in macadamizing the principal thoroughfares. The cost of local improvements for the year was \$382,000, of which \$29,000 were for extensions of the water works and \$40,000 in additions to the electric-light plant. In 1889 \$150,000 were expended by the gas company for a new tank, of 200,000 feet capacity, and mains. In 1886 an appropriation was secured from Congress for improvements of the harbor of Stamford, which were carried on until April, 1891; a new survey has also been provided for. In 1886 a street railway company was incorporated, with capital of \$100,000. There are 4 banks, 2 national, with aggregate capital of \$400,000, and 2 savings, with aggregate assets of \$4,000,000; 1 trust company, with paid capital of \$100,000; and 1 safe-deposit company. Seventy-five teachers are employed in the public schools; there is a

high school, and, in addition to numerous small primary institutions, there are 2 private seminaries for young ladies and 1 for boys. There is also a business college, and a Roman Catholic school, free. The churches number 14. A board of trade was organized in 1890. The manufactures include Yale locks, differential pulley blocks, crabs, winches, cranes, etc., post-office equipments, carriages and wagons, curled hair, piano castings, billiard tables, phosphor bronzes, hats, and shoes. There are wood-working companies, 2 stone and marble works, 1 foundry, which, in addition to castings for agricultural implements and machinery, turns out stoves and grates, a pottery for manufacture of stove fittings, fire bricks, drain pipe, and other pottery goods, and 1 camphor and wax factory. One of the 32 profit-sharing manufacturing establishments in the United States is at Stamford. The oyster industry is prominent, and of recent years oysters have been exported to Europe. Special pains have been taken of late to improve and beautify the streets and parks, and the town is one of the most charming in New England. The Town Hall cost \$150,000, and, in addition to an auditorium seating 1,000 persons, contains the post-office and the courts. Four weekly papers are published.

Texarkana, a city of Arkansas and Texas jointly, the county seat of Miller County, Ark., and Bowie County, Tex., on the State line, 25 miles from the northeast corner of Louisiana and the same distance from the southeast corner of Indian Territory. The site is at the eastern apex and highest point of a plateau formed by Red and Sulphur rivers, 10 to 25 miles wide, and 600 to 700 feet above sea level. Rich bottom lands, from 5 to 10 miles wide on either side, produce 2,000 pounds of seed cotton to the acre, while many kinds of hard and soft timber are found on the uncleared portions. The output of yellow pine from mills in the immediate vicinity in 1889 was 250,000,000 feet, and the hard wood is still untouched. The city is one of the largest lumber centers of the South, and also an important railroad center, having eight roads, and is moreover the terminus of the St. Louis, Iron Mountain and Southern Railroad; 28 passenger trains arrive and depart daily, and over 1,000 men are employed. The population (in both States) in 1890 was 6,380, against 3,223 in 1880. There are 20 miles of graded streets, and 2 systems of water works, with capacity of 6,000,000 gallons daily, gas and 2 electric-light systems, 4 miles of street railway in operation and 4 more in process of construction, and churches of many denominations, with property valued at \$80,000. Three banks, all national, have an aggregate capital of \$325,000. One daily, 3 weekly, and 2 semi-monthly newspapers are published. The tax rate is from $1\frac{1}{4}$ to 2 per cent. in the city. The Union depot cost \$75,000, and \$100,000 have been appropriated by Congress for a Federal building. There are a court house and an opera house. In addition to the public schools, there are 2 colleges.

The Dalles, a city of Oregon, the county seat of Wasco County, on the south bank of Columbia river, 206 miles from its mouth. The main line of the Oregon Railway and Navigation Company (now a branch of the Union Pacific Railroad)

runs through the first street of the city, near the high-water line, and the passenger and freight depots are in the eastern portion. The principal business center is a mile and a half west of the foot of Tumwater Rapids (11 miles in length), where begin the great salmon-fishing industries of the county. The first salmon cannery was established in Oregon on the Columbia, twenty-two years ago, by William Hume, the pack being 4,000 cases. The catch of Wasco County during 1890 was 115,000 cases, amounting to 8,050,000 pounds, to which are to be added 750,000 pounds of fresh fish shipped in ice to Eastern markets. The method of catching is by wheels, all superfluous fish being released by a tank into the open current, and allowed to ascend the river to the spawning grounds. On the Wasco side of the river there are 19 such wheels, and 4 in Washington also find their market here. The entire process of fishing and canning is completed in two hours. Wasco County, which since its organization in 1854 has been subdivided into 13 counties, comprises 3,200 square miles, of which 954 are at present withheld from filing or settlement; 30 to 50 per cent. is excellent farming and grazing land; the rest is covered with valuable timber. The total assessed valuation is \$3,753,066, and the indebtedness \$927,900. The imports of The Dalles for 1889 were 22,800 tons of general merchandise, 6,000 tons of wood and lumber, and 3,000 tons of coal. The exports were 5,864,400 pounds of wool, 2,000,000 bushels of wheat and 445,625 of other grains, 500 car-loads of live stock, 300 of lumber and wood, and 1,000 tons of fruit and mill produce. On the western boundary of the city flows a creek supplied from the snows of Mount Hood. On it a milling company, with capital of \$125,000, operates 15 miles in the timber, floating wood and sawed lumber into the city by means of a large V-shaped trough, made of timber, 16 miles long. Fifty men are employed in mills which by the same water power plane and recut the timber. The city is the site of a United States land office and a signal station. There is a board of trade, and water and electric-light works are in use. The railroad shops employ 250 men, and there are large flouring mills. Daily steamers ply between the city and Cascade Rapids, 43 miles, and make connection, after a portage of five and a half miles by rail, with other steamers, to Portland. There are 6 churches, 3 large public schools, an independent academy, and a Catholic college. Two national banks have an aggregate capital of \$100,000, and there is a private bank with capital of \$150,000. The elevation of the city is 350 feet; the average annual rainfall is 21.06 inches.

Tiffin, a city of Ohio, the county seat of Seneca County, in the northeastern part of the State, 42 miles from Toledo, on both banks of Sandusky river, 50 miles from its mouth, in a rich agricultural region. It has 3 railroads—the Baltimore and Ohio, the Indiana, Bloomington and Western, and the Northern Ohio. The population was 7,879 in 1880 and 10,801 in 1890, showing an increase of 37.09 per cent. The assessed valuation in 1889 was \$3,379,690, with a tax rate of 29.1. Two daily and 5 weekly newspapers are published, also 3 monthlies. Three banks (1 national) have a total capital of

\$375,000. Five and a half miles of street railway were opened in 1888. In addition to 5 public-school buildings, valued at \$125,000, in which the enrollment is over 1,300 and 30 teachers are employed, there is a high school and a college of Ursuline Sisters. The city is the site of Heidelberg College, opened in 1850, which has 5 professors and instructors; also of Heidelberg Theological Seminary, belonging to the Reformed Church, established in 1851. The manufactures include bolt and nail machinery, iron and tool works, churns, washboards, woolen goods, buggy and carriage-building materials, bent wood, agricultural implements, well-boring machinery, stoves, furniture, sash, blinds, and doors. There are foundries and machine shops, stone and tile works, a box factory, all kinds of light cooperage factories, and 2 breweries.

Tyler, a city of Texas, the county seat of Smith County, in the northeastern part of the State, at the intersection of the main line of the St. Louis, Arkansas and Texas Railroad and the Troupe and Mineola branch of the International and Great Northern. It is also the beginning point of the Kansas and Gulf Short Line, which, running southeast, passes through a fine iron-ore region and the long-leaf yellow-pine forests of the Sabine valley. A road has also been projected from the coal fields of Indian Territory to Alexandria, La., passing through Tyler. The division roundhouses and machine shops of the St. Louis, Arkansas and Texas Railroad, employing 500 men, are here, as are also the general offices, roundhouses and machine shops of the Kansas and Gulf Railroad. The city is a shipping point for cotton and fruit, and is beginning to assume importance as a manufacturing point. The commercial transactions, exclusive of cotton, during 1890 were \$3,000,000. The assessed valuation of property, real and personal, in Smith County in 1888 was \$5,617,042. There are 3 banks (2 national and 1 private) with aggregate capital of \$400,000. Three large public-school buildings—2 for white and 1 for colored children—are valued at \$50,000, the attendance being on an average 1,000 out of a total enumeration of 1,395. The public buildings consist of a United States court and post-office building costing \$35,000; a city hall which cost \$20,000; an appellate court building, \$10,000, county-court buildings valued at \$50,000; and an opera house which cost \$50,000. During the fruit season over 50,000 cases are shipped yearly from the canning establishments at Tyler, and there are also a car and lumber company, employing 150 men, with a yearly product valued at \$1,500,000; a leather company with capital stock of \$60,000 and output from the tannery of 50,000 ricks of leather yearly; a chair factory; a foundry and machine shop; a harness and saddle and a horse-collar factory. The city has a board of trade. The population was 2,423 in 1880, and 6,908 in 1890, showing an increase of 185-10 per cent. Eight miles of street railway are in operation, with capital of \$100,000. One daily and 2 weekly newspapers are published.

Waco, a city of Texas, county seat of McLennan County, near the center of the State, in a rich agricultural country on either bank of Brazos river, at the mouth of the Bisque, 95 miles from Austin and 250 from Galveston. The

river, which is navigable most of the year, is spanned by a suspension bridge erected at a cost of \$140,000 in 1871. The railroads are the Houston and Texas Central, the St. Louis, Arkansas and Texas, and the Missouri, Kansas and Texas, and in 1890 Waco was the terminus of a division of the San Antonio and Arkansas Pass Railroad. Each of the three great trunk lines has its own depot, and the city is a shipping point for cotton, wool, grain, and live stock. In 1888 the assessed valuation of real and personal property in the county was \$15,197,522, and the total debt was \$27,391, the rate of taxation being 25 cents on \$100. In 1885 the assessed valuation of Waco was \$4,300,000 and in 1890 over \$8,000,000. Fifty thousand acres in the county produced 20,725 bales of cotton, valued at \$963,712 in 1888. The city is regularly laid out and presents an appearance of uniformity. The streets are wide, well paved and shaded, lighted with gas and electricity, and there are 14 miles of electric street railway. A rapid-transit line was under construction the same year to encircle the city. There are two systems of water works, one with reservoir capacity of 6,000,000 gallons, and another, an artesian, which by initial pressure lifts the water from 5 wells, with aggregate capacity of 5,000,000 gallons, into stand-pipes 90 feet high on a hill 85 feet high. The temperature of the water is 103° F. The population was 7,295 in 1880 and 14,445 in 1890, showing an increase of 98-01 per cent. Two daily and 3 weekly newspapers are published, also 3 monthlies. Seven banks (4 national, 1 savings, and 2 private), have an aggregate capital of \$1,245,000. There are an opera house and a public hall. The 8 public schools have an enrollment of over 2,300 pupils and 36 teachers. Waco Female College (Methodist), founded in 1857, has 160 pupils and 11 teachers. Baylor University, one of the largest coeducational institutions in the United States, established in 1846, has over 400 students and 22 professors and instructors. There is also a commercial college and a convent. The churches number 14. In 1888 58 manufacturing establishments had a capital invested of \$1,272,500, employing 911 hands, with wages of \$337,660, and yearly output of \$2,031,000. Woolen mills, with a capital of \$400,000, were twice enlarged in the six years prior to 1891, and a cotton factory, with a capital of \$100,000, manufactures heavy goods, tents, wagon sheets, collar pads, etc. There are 2 flouring mills, 2 cotton-seed-oil mills, 2 cotton compresses, 2 foundries, 4 carriage and wagon works, 4 brick and tile and 1 lime manufactories, 4 factories of saddlery and harness representing a capital of \$200,000, 2 planing mills, 2 ice factories, 2 canning establishments, marble works, and minor industries. In 1889 \$20,000 were expended on the streets, which are paved with cedar blocks, and the cost of public and private buildings erected that year was \$750,000.

Waltham, a city of Massachusetts, in Middlesex County, 9 miles from Boston, on both sides of Charles river. It had a population of 18,707 in 1890, against 11,712 in 1880, showing an increase of 59.73 per cent. It is especially noted for the manufacture of watches, having the oldest and largest factory of the kind in the United States, upon which the growth of the

city has been dependent since its establishment in 1853. The large building extends over 800 feet, with wings, towers, courts, and offices, and is bordered with lawns, shrubbery, and flowers. No strike has ever occurred among the operatives, of whom more than 2,700 are employed, of whom 1,100 are women, the majority being about twenty years of age and unmarried. No children are employed under sixteen years of age. Only 120 are of foreign birth. Boarding houses are maintained by the establishment, and more than one fourth of the operatives own their own homes. The sanitation is excellent, and the death rate less than one half of 1 per cent. per annum. There is a mutual relief association belonging to the factory for visiting the sick, and numerous clubs are maintained for entertainment and instruction. During midsummer a fortnight's vacation is granted to all employees. The wages average \$15 a week for men and half that amount for women. The highest price paid to women is \$2.50 a day and to men \$5. The capacity of the works is 2,000 watches a day, and to 1889 4,000,000 had been manufactured. More than 150 separate pieces are required for an ordinary watch, and more than 3,700 operations to make a stem-winder. The mayor in 1889 was a foreman in one of the departments of the watch factory. Four of the aldermen were also employed there, and also two directors of the public library and the chief of the fire department. Many workmen and some workwomen are stockholders in the company, and the factory owns a band which gives performances in the park. The assessed valuation of Waltham in 1888 was \$12,298,745, and in 1889 \$13,958,330, of which \$10,700,200 was real estate. It has 3 banks, 1 of which is national and has a capital of \$150,000. Two daily and 3 weekly newspapers are published. The expenditure for police in 1889 was \$10,850. The railroads are the Fitchburg and the Boston and Maine. The churches number 10. There is a hospital, incorporated and organized in 1885. The library contains 16,810 volumes. The streets are lighted with gas and electricity, and there are 38 miles of water mains. The 14 public-school buildings are valued at \$245,202; 64 teachers are employed and the enrollment is over 3,000. A street railway connects the city with Newton. The first large cotton mill in the United States was established at Waltham in 1814, and is still in operation, with a bleaching and hosiery department. The other industries include 2 iron and brass foundries, 3 planing mills, 2 wagon works, 1 brick, 1 box, 1 blind-fastener, 2 chalk, 1 chemical, and 2 cigar factories, also an incubator company.

Waterbury, a city of Connecticut, in New Haven County, near the center of the State, two and a half hours distant by rail from New York city and five hours from Boston. It is on Naugatuck river, and is built upon hills having an altitude of 700 feet. The population in 1880 was 20,270, and in 1890 had increased to 33,202. The city was incorporated in 1853, when it had a population of 5,137. In 1860 the manufacturing capital was \$3,750,000, and in 1890 it was \$8,500,000, employing 6,000 persons and disbursing annually \$3,000,000 in wages. The general valuation was \$31,000,000, property being listed on an average

of not over 35 per cent., and taxation is at the rate of 10 mills. The growth by houses is 400 a year. The city appropriations for 1890 were \$226,000, of which \$43,000 were for streets, \$15,000 for sewers, \$12,000 for the fire department, and \$22,000 for police. The city property is placed at \$1,432,000—including schools, \$760,000; water works, \$300,000, the rents from which reach yearly \$42,000; and sewers, \$150,000. The bonded debt is \$499,000 (with \$120,000 due the city), and the floating indebtedness \$98,000. Four railroads enter the city, and there are 10 trains daily to and from New York, 8 to and from Boston, and 12 to Hartford. Tide water is reached at Wilson's Point, Long Island Sound, 40 miles distant, at Cromwell, on the Connecticut, and at New Haven and Bridgeport, each 30 miles away. There is a large union depot, and 350,000 tons of freight are handled yearly. Reservoirs on high hills at some distance from the city supply 1,500,000 gallons of water daily, having a combined capacity of 200,000,000 gallons. In the lower portion of the city the pressure is very great. Electric lights are in use, and there are 3 telegraph lines. A horse street railway is in operation, and 2 lines of electric roads have been chartered. Four national banks have a combined capital of \$1,000,000. There are 1 State and 3 savings banks, the deposits in the latter amounting to \$3,000,000. A board of trade was organized in 1889. In the center district alone are 16 public-school buildings, and 78 teachers are employed. The school enumeration for 1889 was 6,998. In addition to the high school are 6 public evening schools. There is a Catholic diocesan school for girls, a convent with a large school in connection, a parochial school, 2 others, and an industrial school for girls under the management of Protestant women. There are 14 churches, many of them supporting missions and chapels in the suburbs. The Bronson Free Library is claimed to be the largest and wealthiest in the State, numbering 44,000 volumes. A city hospital has been erected, largely by popular subscription. Three daily and 4 weekly papers are published. The city is practically a county seat, the district court covering several townships, and the Superior Court holding both criminal and civil terms. It is the headquarters of the Second Regiment, Connecticut National Guard, and has 2 of the largest companies. There are 3 large hotels, an armory, a rink, 3 halls, an opera house, and a handsome Masonic temple. A driving-park association has been lately incorporated. A steam-boiler inspection company and an indemnity association have headquarters at the city. Waterbury is known as the "Brass City," from its large brass-working establishments, several of which cover from four to five acres each. There are large rolling mills, and machine shops for fine and special machinery for automatic operations. Pins, needles, hosiery, webbing, lamps, malleable iron, silverware, electric goods, aluminum, carriages, beer, paper boxes, and blank books are produced, while watches are a specialty, and a large percentage of all the buttons used in the world, of whatever material, are made here. The manufacture of buttons and clocks at an early period led to the development of the brass industries. The city park is shaded

with fine elms and contains a costly drinking fountain and a monument to the 900 soldiers furnished by Waterbury during the civil war.

Wheeling, the largest city in West Virginia, the county seat of Ohio County, in what is known as the "Pan Handle," on Ohio river, and on an island in that stream connected with the mainland by a suspension bridge 1,010 feet long. It is known as the "Nail City" from its leading industry, and is surrounded by a rich and well-cultivated agricultural region. For the most part the site is on bottom lands 40 to 50 feet above low water in the river, and the altitude is about 650 feet above sea level. Bluffs on the east rise 400 feet above the river, which is navigable to Pittsburg. The city was first settled in 1760 by three brothers named Zane, thence called Zanesburg, and in 1774, in consequence of apprehended Indian hostilities, Fort Fincastle was erected, the name of which was changed two years later to Fort Henry, in honor of Patrick Henry, the first patriot Governor of Virginia. The structure, which was near the present intersection of Main and Eleventh Streets, was a parallelogram, 150 by 75 feet, surrounded by palisades 15 feet high, the strongest defense on the Western frontier next to Fort Pitt. It was never regularly garrisoned, but the defense was intrusted to settlers. In 1777 it was besieged and in 1781 was attacked, the savages and their allies being repelled. In 1782 it was again besieged by 300 Indians and 40 British soldiers, 42 men withstanding a siege of thirty-six hours. Here the last blood was shed (of one man wounded) and the last gun fired in the War of the Revolution. Soon afterward the name was changed to Wheeling. In 1796 it contained 40 houses. It was incorporated as a town in 1806, and as a city in 1836. In 1863 it was made the capital of the State on its admission to the Union. The seat of Government was changed to Charleston in 1870, restored in 1875, and again transferred in 1885. The population was 500 in 1800, 1,567 in 1820, 8,793 in 1840, 20,000 in 1860, 23,000 in 1870, 30,737 in 1880, and 35,013 in 1890. In addition to the river, transportation is afforded by the Baltimore and Ohio Railroad, two divisions of the Pennsylvania system, the Cleveland, Lorain and Wheeling, connecting with the Lake Shore and the Ohio River Railroad. Two million dollars have been expended by the Wheeling Bridge and Terminal Company on a bridge across the Ohio (one of the arches of which is the largest span save one in America) and three double-track terminals. Another bridge was constructing in 1891, costing \$150,000. The superior quality and abundance of coal near Wheeling place her beyond competition in the manufacture of nails, and the product of 8 nail factories is used throughout the country. The first iron mill was established in 1834, and the first exclusive nail mill in 1847 with 40 machines. Seven nail mills in 1890, with 1,140 machines, had an aggregate capital of \$4,100,000, and an annual capacity of 2,830,000 kegs of steel nails. Three Bessemer steel plants represent a capital of \$1,300,000, producing 210,000 tons of soft steel yearly. There are also 3 sheet and 2 bar mills, 7 blast furnaces, and numerous foundries, forges, and machine shops, which present a striking view from the

river by night. Next to the iron and steel industries come the glass factories, the first of which was built and operated in 1821, making window glass a specialty. In 1829 a cut-glass, and in 1835 a flint-glass factory was set up, and the product of half a dozen plants in 1891 is shipped to Europe (largely to Germany), as well as throughout the United States. Numerous factories are also maintained by Wheeling capital in the neighborhood and across the river in Ohio. Three potteries have a capital of \$700,000 and employ 900 persons when in full operation, the progress in pottery having been remarkable during the past fifty years. Steel, gas, and steam pipe, tacks, sheet steel, tin roofing, metal coiling, leather and harness, paper and cigar boxes of all kinds, are also manufactured. There are a hinge company, employing 150 men; a lantern company, employing 250; a brewery, turning out 40,000 barrels yearly; an axle company, with output of from 20,000 to 30,000 sets of axles yearly; brick works; and woolen mills; and another important manufacturing interest is that of cigars and tobacco, 2,267,270 pounds of smoking and nearly 6,000 pounds of plug tobacco having been manufactured in 1889, as well as millions of cigars, mostly "stogies." Natural gas is supplied by 2 companies. Canning and preserving of fruits have assumed large proportions of late years, one establishment, dating from 1875, employing 100 persons. The city has a large wholesale and jobbing trade, and large quantities of wool are shipped yearly. Ginseng is exported almost exclusively to China. Wheeling has 11 public-school buildings, valued at \$258,828; the enrollment is nearly 5,000, and 112 teachers are employed. The streets are well paved and broad. Eleven banks (1 national) have an aggregate capital of \$1,210,000. Four daily and 7 weekly newspapers are published, 1 semi-weekly, and 2 monthlies. There are more than 5 miles of horse, 8 of steam motor, and 5 of electric street railway. The City Hall and Post-office are fine buildings, and the Young Men's Christian Association have a building of their own. There is a home for aged women at Mount Bellevue. Wheeling Park is reached by the Wheeling and Elm Grove Railway. The ordinary expenditures of the city yearly are placed at \$332,367, or \$9.49 per capita.

COLOMBIA, a republic in South America. It was formerly a confederation consisting of the nine States of Antioquia, Bolivar, Boyacá, Cauca, Cundinamarca, Magdalena, Panama, Santander, and Tolima. The Constitution of Aug. 4, 1886, reduced the States to departments, administered by governors appointed by the President of the republic, whose term of office was lengthened from two to six years. Each department elects a member of the House of Representatives for each 50,000 inhabitants, and sends 3 members to the Senate. The President nominates 6 more Senators. Every citizen who can read and write or has an income of 500 pesos is entitled to a vote. Each department has its legislature, which has authority to legislate on financial matters. The President is Dr. Rafael Nuñez, who was inaugurated on June 4, 1887. The Vice-President is Carlos Helguin. The Cabinet is made up as follows: Minister of Foreign Affairs, Antonio Roldan; Minister of Finance, José Manuel

Goenaga; of Education, José L. Trujillo; of War, Olegario Rivera; of the Interior, Marcelino Velez; of Justice, Luis A. Meza; of the Treasury, Primitivo Crespo; of Public Works, Marcelino Arango.

Area and Population.—The area of Colombia is estimated at 504,773 square miles. The population is estimated at 3,878,600. Bogotá, the capital, has about 100,000 inhabitants.

Finance.—The revenue for the biennial period 1891-'92 is estimated at 20,351,100 pesos, and the expenditure at 23,911,515 pesos. There is a funded internal debt of 5,037,310 pesos and a floating debt of 24,568,241 pesos, besides a debt of 7,500,000 pesos due to the last war, and 11,932,780 pesos of paper currency. The foreign debt, raised in England, was £2,878,203 in 1890, including the defaulted interest for ten years.

Commerce and Production.—Coffee has superseded cinchona bark as the principal article of export. The latter still exists in vast quantities and of the best quality, and the cessation of the trade is owing to the cost of transportation, which is so great that it can not compete with the cultivated product of the East Indies. Cacao is also raised and exported in large quantities. Cotton and bananas flourish, but the exports are small; and sugar, vegetables, and cereals, though the soil is adapted for them, are imported for the use of the people. Tobacco of excellent quality is exported to Germany. Cattle raising is a common pursuit. The hides and horns are usually sent to the United States. Coal and iron exist in many parts of Colombia, but are not mined except in one or two places. Gold and silver are important products, and could be extracted in much greater quantities but for lack of capital and means of transportation. The largest mines now worked are in Antioquia and Tolima, and are owned by Englishmen. Of late American enterprise and capital are entering the field. The value of the imports in 1889 was \$11,777,624. The chief imports are articles of food and textile fabrics. The exports amounted to \$16,199,718 in value, consisting of coffee, Peruvian bark, pea-nuts, corn, silver ore, cacao, dye stuffs, live animals, hides, and tobacco. In 1890 the chief imports from the United States were wheat flour of the value of \$248,086, machinery of the value of \$147,097, refined sugar of the value of \$141,929, and for less amounts manufactures of iron, coal, sewing-machines, lard, petroleum, and many other articles. The exports to the United States were coffee of the value of \$2,170,963, hides of the value of \$927,866, nuts and fruits of the value of \$329,388, cacao of the value of \$128,024, India-rubber of the value of \$294,606, and small quantities of dyewoods, cinchona, raw sugar, and other merchandise. The share of Great Britain in the imports for 1889 was \$4,547,628; that of France, \$2,411,585; that of Germany, \$1,321,390; that of the United States, \$1,230,476. Of the exports, \$4,547,628 went to Great Britain, \$3,950,531 to the United States, \$1,781,619 to France, and \$1,410,683 to Germany. The total coffee exports amounted to \$3,516,293; gold bars and dust, \$2,460,718; other minerals, \$4,464,750; hides, \$1,188,911; tobacco, \$798,029.

Navigation.—In 1889 the number of vessels entered inward was 894, of 798,762 tons, of

which 583, of 768,908 tons, were steamers. Of the steamers, 351 were British, there being 15 English steamers, 9 American, 4 German, 3 French, and 1 Spanish making regular monthly calls at the ports of Colombia.

Communications.—With the exception of the rivers, which are navigable for certain distances by boats of light draught, and 9 short lines of railroad having a total length of 218 miles, the only mode of transportation is by mule trains. The Panama Railroad in 1889 transported 192,845 tons of merchandise, a falling off of 2,564 tons as compared with the previous year, owing to a decrease in the New York trade. There are 5,250 miles of telegraph in operation. The post-office in 1888 carried 1,063,504 letters and post cards.

The Panama Canal.—The canal projected by Ferdinand de Lesseps had absorbed up to the middle of 1886 the sum of 772,545,412 francs, and it was then estimated that it would take at least as much more to complete the work. A loan of 600,000,000 francs was offered in December, 1888, for subscription, but failed. After a vain effort to reorganize under a new charter, the company went into liquidation, and on March 15, 1889, all payments were suspended and work on the canal was stopped. The Civil Tribunal of the Seine appointed provisional administrators. A committee of the French Chamber of Deputies was directed to examine into the affairs of the company, with a view to the completion of the canal with the aid of the credit of the French Government if such a plan was feasible. In December, 1890, an arrangement was effected with the Colombian Government by parties interested in the canal, in accordance with which the time allowed for its completion was extended for a further period of ten years, on the understanding that a new company should be formed to take over the entire assets of the old one, and that the work of construction should be actively resumed before Feb. 28, 1893. For this concession the promoters agreed to pay 10,000,000 francs in gold and 5,000,000 francs in shares of the new company, besides providing for a guard of 250 soldiers to protect the canal during construction. The committee of the French Chamber recommended the completion of the canal by an international arrangement, by which other governments besides the French should share in the guarantee and other nations be invited to contribute the additional capital. It advised the Ministry of Justice to investigate the affairs of the defunct company, to find if the contractors had obtained exorbitant prices by fraud, or been paid for work that was not done.

Boundary Questions.—Differences regarding the boundary lines dividing Colombia and the neighboring republics of Costa Rica and Venezuela were referred to the Spanish Government for arbitration. On the Venezuelan frontier Colombia established her claim to Goajira, San Francisco, and Arauca. On the Costa Rican border she laid claim to the lands between Chiriqui and the river Sicsola, and even asserted an historical title to the territory extending on the Atlantic side to the frontier of Honduras, and on the Pacific side to Lake Nicaragua, embracing the whole of Costa Rica and the greater part of Nicaragua.

COLORADO, a Western State, admitted to the Union Aug. 1, 1876; area, 103,925 square miles. The population, according to the decennial census, was 194,327 in 1880, and 412,198 in 1890. Capital, Denver.

Government.—The following were the State officers during the year: Governor, John L. Routt, Republican; Lieutenant-Governor, William Story; Secretary of State, Edwin J. Eaton; Treasurer, James N. Carlile; Auditor, John M. Henderson; Attorney-General, Joseph H. Maupin; Superintendent of Public Instruction, Nathan B. Coy; Railroad Commissioner, William A. Hamill; Chief Justice of the Supreme Court, Joseph C. Helm; Associate Justices, Charles D. Hoyt and Victor A. Elliot; Court of Appeals (established this year by act of the Legislature), Presiding Judge, George Q. Richmond; Judges, Gilbert B. Reed and Julius B. Bissell. Messrs. Carlile, Maupin, and Coy are Democrats; the other officials are Republicans.

Finances.—The State debt on Nov. 30, 1890, was as follows: Outstanding warrants, bearing 6 per cent. interest, \$1,393,354.47; outstanding certificates of indebtedness, bearing 6 per cent. interest, \$86,890.49; outstanding loco-weed certificates, no interest, \$16,910.24; Capitol-building bonds, bearing 3½ per cent. interest and held by the Public-School Investment fund, \$150,000; total, \$1,647,155.20. To offset this amount there was \$232,938.57 to the credit of the general revenue fund on Nov. 30, 1890, leaving as the principal of the outstanding indebtedness \$1,414,216.63. Of the \$1,393,354.47 outstanding warrants, the State holds \$948,034.67 in the several investment funds. These warrants have been gradually accumulating since the admission of the State to the Union. Successive Legislatures have violated the State Constitution by making appropriations in excess of the revenue available to pay them, and the Auditor has issued his warrant against all appropriations. A decision of the State Supreme Court in 1889 put an end to this practice by declaring all appropriations in excess of the revenue available to pay them to be void. As this decision cast doubt upon the validity of the outstanding warrants so far as they were drawn to pay appropriations made in excess of revenue, the Legislature this year undertook to revive such warrants by providing that they should be paid out of any unappropriated money at any time in the State treasury. But as such payment can be made out of the revenue of any year only after the appropriations and fixed charges for that year are paid, it is likely to be many years before they are entirely redeemed. Various special funds in the State treasury contain large sums of money, but these are unavailable to pay these warrants. The State is therefore paying 6 per cent. interest on them, while she has about \$800,000 locked up in the treasury in special funds which can not be used.

The Constitution limits the State tax to 4 mills on the dollar, which is the rate annually levied. Of this, about 2½ mills is levied for the general revenue fund, the remainder for special objects.

Valuations.—The total assessed valuation of property in the State for 1890 was \$220,544,064.62, an increase over the figures for 1889 of \$27,-

289,937.24. Included in the assessment are 11,646,519 acres of land, valued at \$38,605,565.70; improvements on lands, valued at \$7,209,282.48; town and city lots, valued at \$73,209,222; mining property, valued at \$5,727,657; railroads and railroad property, valued at \$31,411,921.22; 189,724 horses, valued at \$5,550,410; 9,419 mules, valued at \$409,000; 769,823 cattle, valued at \$7,053,370.70; 657,546 sheep, valued at \$758,584; 29,239 swine, valued at \$73,859.

Legislative Session.—The eighth General Assembly met at Denver on Jan. 7, and adjourned on April 7. In its early days the session was marred by disorderly struggles for supremacy between rival factions in the Lower House. The Speaker of that body, elected on the opening day, was James W. Hanna, who in the Republican caucus had been unanimously selected for that honor after a single ballot. He had no sooner been elected, however, than charges were made that bribery had been practiced in his interest, that he intended to make up the House committees unfairly, and that he was not fit for the place. A faction of 14 Republicans, aided by the Democratic members, thereupon undertook to deprive him of the right of appointing committees.

The coalition thus formed controlled a majority of the House, but the Speaker and his adherents stoutly resisted their efforts to abridge his prerogatives, and on Jan. 9 he announced a list of committees selected by him. Disorder reigned during this session, in the midst of which the Speaker declared the House adjourned. On Jan. 12 the contest was renewed. During the debate of this day distinct charges of bribery were made so openly that an investigating committee was at once appointed. Finally, on Jan. 14, the Speaker ruled that the House journal of Jan. 9, containing his appointment of committees and the record of adjournment, stood approved, and refused to entertain an appeal or motion reopening the question. A member of the coalition thereupon moved that the office of Speaker be declared vacant, another member put the motion to vote and declared it carried by a vote of 28 to 21, and the coalition then proceeded to elect Jesse White as Speaker. Speaker Hanna and his supporters refused to surrender the chair, and the anomaly was presented of two rival Houses attempting to do business in the same hall. Thereafter each House held daily sessions, and when the day arrived for choosing a United States Senator, each House went through the form of voting. The law requires that the Senate and the House, after voting separately, shall meet on the next day in joint session to announce the result of the ballot taken on the day preceeding, and if no choice has been made by both branches, to continue balloting in one body. The question at once arose as to which of the two rival Houses should be recognized as legally constituted and should meet with the Senate in joint session. By agreement of the factions a member of the House, other than the two rival Speakers, was selected to preside over the joint session, in conjunction with the President of the Senate; and when the question arose respecting the vote of the House on the preceeding day, it was ruled after some discussion that no choice had been made by that body. The joint session then pro-

ceeded to ballot for United States Senator, with the following result: Henry M. Teller, Republican, 47; Caldwell Yeaman, Democrat, 27; and the former was declared elected. On Jan. 24 Gov. Routt sought to secure a settlement of the dispute between the rival Houses by addressing a letter to the judges of the Supreme Court, which recited the circumstances of the attempted deposition of Speaker Hanna, and asked their opinion as to who was the legally elected Speaker of the House. Arguments were heard by the court, and on Jan. 28 a decision was rendered to the effect that "as a purely legal proposition, the House of Representatives has the power, by a vote of a majority of the whole number of members elected, to remove its Speaker from office in the manner stated in the executive communication submitted." The court did not expressly say who was the legal Speaker, but the opinion appeared so conclusive of the rights of the parties, that Speaker Hanna and his friends withdrew their claims, and Jesse White was recognized as Speaker for the remainder of the session. On Feb. 4 the Bribery Investigating Committee, appointed on Jan. 12, made its report, stating that the testimony received tended to show that four or five members of the House had been approached and offered bribes to support Speaker Hanna, and recommending that the grand jury of Arapahoe County inquire into the matter. The evidence all came from the enemies of Hanna, and, although some indictments were found by the grand jury, no strong proof to support them could be procured, and the cases were never tried.

An Australian or secret-ballot law was passed at this session. It provides that all ballots cast in elections for public officers shall be printed and distributed at county expense, except that ballots to be used in municipal elections shall be printed and distributed at the expense of the city or town. Candidates may be nominated by the convention or caucus of a political party which at the last preceding election polled at least 10 per cent. of the entire vote cast in the State, county, or other divisions for which the nomination is made, or by nomination papers signed by voters residing within the district for which the nomination is made to the number of 500 when the nomination is for the whole State, to the number of 100 when the office is to be filled by the voters of a district less than the State and greater than a county or by the voters of a county or city, and to the number of 50 in other cases. In municipal elections the city or town clerk, and in other cases the county clerk, shall prepare the ballots and cause them to be distributed. The names of all candidates duly nominated shall be printed on each ballot, those of each political party being arranged in a column under the name and device of the party to which they belong, and just above each name shall be the designation of the office for which the candidate named is nominated. On the back shall be printed the words "Official ballot for," together with the name of the election precinct or division, the date of the election, and a *fac-simile* of the signature of the clerk preparing the ballots. Each county, city, or town clerk shall use precisely the same quality and tint of paper and kind of type and quality and tint of plain black

ink for all ballots furnished by him at any one election. There shall be but one ballot-box at each polling place. The ballots shall be of such form, and the indorsement thereon so printed, that they may be folded in the middle lengthwise and then crosswise, so that when folded the indorsement shall be visible, and not the contents of the ballot. At each polling place at least one voting booth or compartment for every 50 voters who voted in the district at the last election shall be furnished, and a guard rail shall be so constructed that no person outside thereof can approach within six feet of the booths and ballot-box, both of which shall be in plain view of persons outside the rail. The voter shall indicate his choice by marking a cross opposite the name of the candidate to be voted for, or he may vote for all the candidates of any party by marking a cross above such list and near the device or emblem of the party, which shall be printed on the ballot above the party name. He shall fold his ballot so as to conceal his choice, and so that the official indorsement shall appear. To each ballot shall be attached two stubs containing only the number of the ballot, one of which shall be retained by the election clerk who gives out the ballots to the voters and who shall write his initials on the other stub, and such other stub shall be retained by the officer who receives the ballots. Both officers shall keep a record of the name of the voter and the number of his ballot. The officer receiving the ballots shall write on one corner the number of the ballot in the order it is received by him (of which number he shall keep a record), and shall turn back and paste down or seal the corner, so that the number written shall be invisible. Such pasting or sealing shall not be disturbed except in case of a contested election. Electioneering within 100 feet of any polling place is forbidden. The election day in November shall be a legal holiday. Employés shall be allowed two hours for voting without loss of pay. This act shall not apply to elections of school officers that occur at any other time than on the regular election day for State, county, and city officers.

There was also enacted a registration law applying to all cities of the first and second class, and to all other cities having over 15,000 inhabitants. An act to punish crimes against the elective franchise establishes severe penalties for bribery of voters in any form, forbids betting by candidates upon the result of any election, makes intimidation or coercion of voters unlawful, especially when practiced by employers upon their workmen, and requires candidates and party committees to file with the Secretary of State or county, city, or town clerk itemized sworn statements of election expenses.

To forward the construction of the Capitol building, \$150,000 was transferred from the Internal Improvement fund to the Capitol Building fund, provision being made for repaying the former fund with interest. An act was also passed submitting to the people at the election in November, 1891, the question whether additional State bonds to the amount of \$300,000, should be issued and sold to raise more money for this building. The act of 1889 creating a Supreme Court commission was repealed, while by another act a court of appeals was created

having similar powers. The system by which county officers were entitled, in lieu of a fixed salary, to all official fees received by them was changed so as to require such officers to turn over to the State all fees collected in excess of certain fixed sums which should form their salaries, and at the same time the fees chargeable by such officers were reduced by from one fifth to one half of the former figures. The State Treasurer was required to give a bond compelling him to turn over to the State all interest received on public funds in his hands, and preventing him from deriving any personal gain or benefit from such funds.

The State was redistricted for members of the Legislature in such a manner as to increase the number of Senators to 35, and of Representatives to 65. The First Congressional District was formed out of the counties of Larimer, Boulder, Weld, Morgan, Logan, Washington, Sedgwick, Phillips, Yuma, Arapahoe, Jefferson, Park, and Lake, and the Second District out of the remainder of the State. There was appropriated the sum of \$100,000, to be used in securing a suitable exhibit from the State at the World's Fair. To raise money for paying claims arising out of the so-called Ute war the levy of a special tax of one half-mill was authorized. An amendment to the revenue law provides that taxes shall be payable semi-annually.

Other acts of the session were as follow :

To encourage and promote the organization of agricultural and mechanical fair associations.

Accepting the act of Congress that appropriates a portion of the proceeds of the public lands to the endowment and support of agricultural and mechanical colleges.

Repealing the acts of 1887 and 1889 which prevent non-resident aliens from acquiring real estate in the State.

Prohibiting the appointment of non-residents as special officers for the purpose of preserving the public peace.

Appropriating \$21,250 for the assistance of agriculture and the relief of settlers in the counties of Sedgwick, Logan, Phillips, Yuma, Washington, Kit Carson, Arapahoe, and Cheyenne.

Providing a new law to protect and punish wrongs to children.

Abolishing the office of State Dairy Commissioner.

Providing for the dissolution of corporations.

To provide for the incorporation and regulation of trust companies.

To prevent the expenses of any county from exceeding its revenues.

Raising the age of consent in females to sixteen years.

Defining larceny of live stock, and providing penalties therefor.

Prohibiting the sale, giving, or furnishing of tobacco, or any article made in whole or in part of tobacco, to any child under sixteen years, without the written order of the father or guardian of such child.

To prohibit the sale or giving to any Indian of fire-arms, ammunition, or other munitions which can be used in fire-arms.

Amending the game laws.

Providing that the expenses of the family and the education of the children shall be chargeable upon the property of both husband and wife, or either of them, and that they may be sued jointly or separately.

Amending the jury law.

To prohibit the sale of liquors near public works and grading camps of railroads.

Forbidding railroad companies from requiring any conductor, telegraph operator, or other trainman who

has worked eighteen consecutive hours, to go on duty till he has had at least eight hours' rest.

Requiring all saloons to be closed from midnight to six o'clock in the morning, and throughout every Sunday, and forbidding saloon keepers from keeping any wine room or other place in connection with their saloon where women may enter and be supplied with liquor.

To authorize school directors to purchase United States flags and display them on school buildings.

Education.—The following public-school statistics cover the school years ending June 30, 1889, and June 30, 1890:

ITEMS.	1889.	1890.
Number of school-houses	995	1,190
Value of school property	\$3,885,323	\$4,87,809 40
Number of school districts	1,182	1,284
Children of school age	85,224	95,187
Enrolled in public schools	59,118	65,410
Average daily attendance	85,074	88,714
Number of male teachers	587	622
Number of female teachers	1,567	1,758
Receipts from all sources	\$2,087,251 98	\$2,596,945 47
Expended for teachers' wages ..	\$718,971 78	\$818,604 65
Total expenditures	\$1,885,519 44	\$1,944,807 88

Under the present State law local school directors are permitted to own the text books used in the schools and to furnish them free to pupils in attendance. At the close of the school year 1890 201 districts had availed themselves of this privilege, and the system has proved generally advantageous.

At the State University at Boulder there were 151 students during the school year 1889-'90, and 167 on Jan. 1, 1891. The attendance at the Agricultural College in 1890 was 109, a decrease of 10 from the previous year. The Normal School at Greeley was opened on Oct. 6, 1890, and soon had an attendance of 76 normal students and 255 students in the model school. The buildings for this institution have been erected by the city of Greeley and the county of Weld.

Charities.—For the two years ending Nov. 30, 1890, the report of the State Insane Asylum at Pueblo is as follows: Patients on Nov. 30, 1888, 171; admitted during the two years, 278; discharged, 175; remaining on Nov. 30, 1890, 274. The property of the institution consists of two hospital buildings, with out-buildings and 80 acres of land, the whole valued at about \$400,000. At the Mute, Deaf, and Blind Institute there were 111 pupils in November, 1890.

The Industrial School at Golden on Nov. 30, 1888, had 164 inmates. Received during the two years, 205; discharged, 221; remaining on Nov. 30, 1890, 148.

Coal.—The total amount of coal mined in the State in 1889 was 2,400,629 tons; in 1890 it was 3,075,781 tons. The coke produced in 1889 was 184,819 tons; in 1890 it was 228,487 tons. The value of the product for 1890 was \$4,657,220.26. The average number of persons employed in the coal mines is reported to be 6,172, the average price per ton that is paid to the miners is 73-4 cents, and the average wages received by miners \$2.60 a day.

Agriculture and Cattle Raising.—The total area of actual agricultural lands in the State is 4,706,744-06 acres, while the grazing lands proper cover 7,095,764-76 acres. There are 9,950

acres of fruit lands under cultivation. Mesa County furnishes 1,500 acres of this number, and Frémont 1,000. The live stock of Colorado is valued at \$30,500,000. Of this amount the cattle valuation is placed at \$16,046,133; sheep, \$4,306,555. The wool product for 1890 is valued at \$12,000,000.

Irrigation.—Official reports to the National Bureau of Agriculture show that there are about 6,316 miles of irrigating canals in the State, the total area that is at present irrigated being 4,004,409 acres. The estimated cost of these canals is \$10,950,000.

Trans-Mississippi Commercial Congress.—Under this name a convention of about 500 delegates, representing the States and Territories west of Mississippi river, met at Denver on May 19 to discuss the needs and interests of that section. The sessions continued through four days, in the course of which the silver and irrigation problems were discussed at length. Resolutions were adopted urging the establishment of steamship lines between the Gulf ports and Latin-American states and the speedy completion of the Nicaragua Canal; demanding legislation by Congress to prevent mines and mineral lands from becoming the property of railroad corporations under their land grants; urging that the geological survey be devoted to the purposes for which it was established; favoring the improvement of Mississippi river, a deep-water harbor at Galveston, and the immediate construction of the Hennepin Canal; declaring that naturalization laws should be more stringent, and that United States courts only should have power to naturalize; favoring the admission of all the Territories; recommending the repeal of the law of Congress preventing non-resident aliens from owning mining property and other real estate in the Territories; urging the restriction of immigration; and favoring the passage of the Torrey Bankrupt bill by Congress. Respecting the subject of irrigation and the silver question, the following resolutions were adopted:

Resolved, That it is the sense of this Congress that the General Government should, under proper restrictions, cede to the several States and Territories of the arid region the public lands within their borders, except such lands as are more valuable for mining than agricultural purposes; provided, that no State or Territory shall be permitted to sell such lands for less than \$1.25 per acre, nor more than 320 acres to one person, nor to any other than an American citizen who shall at the time of said purchase be an actual citizen of the State or Territory in which said land shall be; and,

Resolved, further, That such State or Territory shall apply the funds arising from the sale of said lands to the reclamation of the same and to school purposes.

Resolved, That the Congress of the United States be hereby petitioned to repeal all laws which in their effect work dishonor upon or, in the least, challenge the sovereignty of the silver dollar as an absolute measure of values, and to restore to silver the place given it as perfect money by the framers of our Government.

Resolved, That the only modification of the above which we will accept is the limiting of the operation of the law to the silver product of the United States, and this we will accept, believing it will be but a change of method which will reach at once the same desired result.

Resolved, That we petition the President and Congress of the United States to once more attempt to bring around an international recognition and adjustment of silver as money, and, should this effort fail, that a limited agreement be sought with the nations of the Latin Union, whereby the mints of those nations may again be opened for the coinage of silver.

The Congress adjourned, to meet at Omaha in October.

Political.—A successor to Chief-Justice Helm was the only State officer to be elected this year. On Sept. 9 a convention of the People's party met at Denver, and nominated J. H. Croxton for this office. The following is a part of the platform adopted:

We are opposed to the constitutional amendments proposed by the Eighth General Assembly providing for an increase of the taxing power and the voting of \$300,000 bonded indebtedness.

This convention is in favor of a strong employers' liability and mechanics' lien act.

On Sept. 29 the Democratic State Convention met at Denver, and nominated Luther M. Goddard. The platform includes the following:

We favor the free and unlimited coinage of silver, and repeat our condemnation of the act of the Republican party which struck down the currency of the people in the interest of and at the dictation of the moneyed aristocracy of this country.

We favor the early completion of the State Capitol building and the proposition to issue bonds to the amount of \$300,000, to the end that the work may not be interrupted.

On the same day the Republican Convention met at Glenwood Springs, and renominated Chief-Justice Helm. The platform approves the administration of President Harrison, while not agreeing with him on the silver question; approves the action of the last Legislature in enacting the Australian ballot law and the salary and fee bill; urges the speedy ratification of the treaty for the removal of the Utes from the State; reaffirms the doctrine of protection and reciprocity; and contains the following paragraphs:

This convention earnestly recommends to the people of the State the voting of the bonds necessary to complete the State Capitol building.

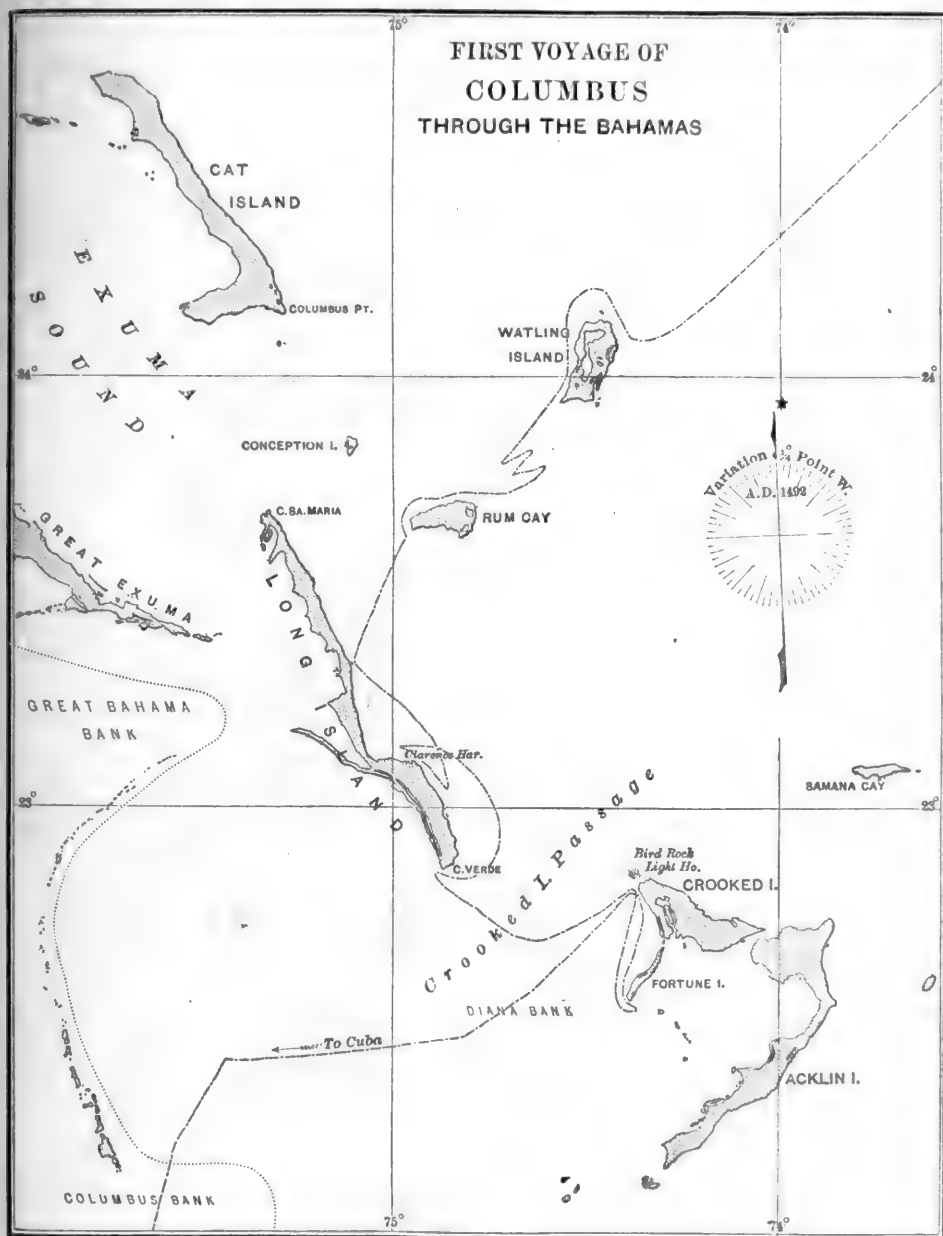

We favor protection against every form of convict or servile labor; prohibition of the employment of young children in factories and mines; protection of railroad employes; protection of employes engaged in factories and mines or other hazardous occupations from every danger that can be removed or diminished; the adjustment of differences between employes and employer by arbitration; and such legislation as may be needed to facilitate and protect organizations of farmers and wage workers for the proper and lawful promotion of their mutual interests.

The monetary condition of the world during the last seventeen years has demonstrated that the demonetization of silver by the United States was, if not a crime, a stupendous blunder, and bimetalism is necessary to the welfare and prosperity of all commercial people. We, therefore, in the interests of the working and producing classes of all countries, demand the full recognition of silver as a money metal by the opening of the mints of the United States to the full and unlimited coinage of silver.

At the election in November the Republican candidate was successful.

COLUMBUS'S FIRST LANDFALL. The exact place where Columbus first landed on the western continent has long been a matter of conjecture. All that is known on the subject is taken from Las Casas's abridgment of Colum-

til Friday [Oct. 12], when they reached a small island of the Lucayos called *Guanahani* by the natives." This island he called San Salvador, and he described it as "very large and very level, and has very green trees and abundance of water

bus's journal or log-book. Under date of Oct. 11 it says: "Two hours after midnight the land appeared, about two leagues off. They lowered all the sails, leaving only a storm square sail, which is the mainsail without bonnets, and lay to un-

and a very large lagoon in the middle, without any mountain, and all is covered with verdure most pleasing to the eye." Subsequently he refers to a "reef of rocks which entirely surrounds that island, although there is within it depth

enough and ample harbor for all the vessels of christendom, but the entrance is very narrow." It is conceded that Columbus first saw one of the Bahama Islands, that he anchored consecutively at four others, and that from the last one he went to Cuba. Of the Bahama group, according to the present enumeration, it was possible for him to have landed on one of 36 islands, 687 cays, and 2,414 rocks; but the choice of his first landfall has been restricted chiefly to the following islands: San Salvador or Cat, Watling, Grand Turk, Mariguana, and Samana or Attwood Cay. A discussion of the claims of each of these is given in Vol. II of Winsor's "Narrative and Critical History of America," and perhaps more fully in Appendix No. 18 of the "Report of the United States Coast and Geodetic Survey" for 1880, where Capt. Gustavus V. Fox makes "An Attempt to solve the Problem of the First Landing-Place of Columbus in the New World." The results of his researches were to the effect that Samana or Attwood Cay was the exact locality. Such was the condition of affairs when in June, 1891, the Chicago "Herald" sent Walter Wellman and Charles Lederer to the Bahamas to fix the spot with exactness. They landed first at Nassau, and there were received by the Governor of the Bahamas, who provided them with a letter requesting the authorities "to assist and promote in every way in their power the objects" of the expedition. A steamer was chartered, and they proceeded first to Cat Island, but found there no coast along which Columbus could row in his boats "in a northeasterly direction to see the other side, which was on the other side of the east" (Columbus's log-book), for there is no north-east coast in the island. The eastern coast is north-northwest and south-southeast, and if he had landed there and taken his boats "to see the other side," he must have steered either north-west or southeast. If he had steered north-northeast, or even due north, he would have gone right out into the ocean. If, perchance, he had landed on the southern shore, where Port Howe is, he would have been compelled to row south-east or southwest "to see the other side." Again, if he had anchored on the southern side of the island the natives would not have told him to "round the island to the southward" to go to the southwest in search of gold, as Columbus says they did. Cat Island has no large lagoon in its middle; it has no "reef running all round it"; it has no such harbor as that which Columbus says he saw; it has no piece of land like an island and yet not like an island, but which could easily be made an island; it is not very level, and neither in its physical features nor in its position relative to other islands that Columbus visited does it meet the requirements of the first voyage. It was decided that Cat Island was not the first landing-place, and the steamer was turned eastward toward Watling Island. This they found to conform to the historical evidences, and geometrically to be unerringly the first landfall. The conditions required by any theory of the first voyage are those indicated by Columbus himself. These are that the island first touched, which he named San Salvador, must have such features as

a north and south coast, surrounding reefs, a large lagoon in its middle, a headland nearly cut from the mainland by the action of the sea, and a spacious harbor near by with a narrow entrance. The second island, which he called Santa Maria, must have coasts approximating north and south and east and west, and must be south or southwest from San Salvador about 25 miles. The

third island, called Fernandina by Columbus, must be visible from the second; it must have a long coast running south-southeast and north-northwest; it must have, somewhere along its shores, a bit of coast running east and west, and near by must be a harbor with several narrow entrances. The fourth island, named Isabella by Columbus, must *not* be visible from the third, but must be almost due east from the south cape of Fernandina; it must have a rocky islet at its northern extremity, with a lagoon near by; to the south of it must lie another island, separated from Isabella by but a narrow channel (so narrow that, without close examination, it might be mistaken for an inlet); and this adjacent island must be surrounded at its southern extremity by shoals that extend south and east. Moreover, all these islands must be so located that in sailing southwest from the northern point of the fourth island a navigator would be able to calculate with approximate correctness his distance and direction from the southern cape of the third island; they must so lie that a ship sailing certain prescribed distances west and southwest would come upon a chain of seven or eight islands lying north and south (designated as *Islas de Arena* by Columbus), with shoal water five or six leagues to the south of them. Finally, the *Islas de Arena* must lie where a voyage of 58 miles south from them would bring a navigator in sight of Cuba, not far from the mouth of a wide river which affords a good harbor. That Cat Island was an impossible San Salvador has already been

shown. Grand Turk Island is almost unworthy of consideration, and Lieut. J. B. Murdock, U. S. N., in a paper published in the "Proceedings of the United States Naval Institute" for April, 1884, entitled "The Cruise of Columbus in the Bahamas, 1492," says of this island, originally proposed by Navarrete: "It is hardly possible to imagine that his track is derived from the log at all." Concerning Mariguana and Samana, neither answers to the description given by Columbus. Neither has the north-and-south coast nor the lagoon. So far as the charts show, neither has the remarkable headland with a harbor with a narrow entrance beside it. Watling Island alone seems to comply with the conditions. According to the Chicago "Herald" expedition, "Watling Island is the Guanahani of the natives, the San Salvador of Columbus, the scene

miles north; seventh, out to sea, and then turning back to a cape or point of the coast farther north; eighth, to Rum Cay; and ninth, to Watling Island." The exact spot on Watling Island where Columbus first landed can not be positively determined, but it is safe to assume that he first anchored off the eastern shore. He was sailing westward at two o'clock in the morning of Oct. 12, and the two hills—one two and the other three miles south of Cut Point—would actually have been the first bits of land to show above the horizon in the moonlight. The location of the reefs, of the harbor with the narrow entrance, of the piece of land like an island, Columbus's use of the words "round the island to the south" in order to go to the southwest, the voyage in the boats outside the reefs along the shore to the north-northeast—all indicate that he

MONUMENT ERECTED ON WATLING'S ISLAND IN 1891.

of the most momentous event in history, because it is the only island which in itself agrees with the discoverer's description, and because it is the only island from which the log can be followed to the five other islands visited by him. If we were to take the log, with the directions and distances sailed, descriptions of coasts, islands, and harbors, and trace the track backward from Port Gibura, Cuba, or any of the adjacent anchorages, with no thought of Watling or any of the other proposed landfall islands, a track so traced would run first to Ragged Islands; second, to the rocky islet or Bird Rock; third, to Fortune Island and the shoals; fourth, to the rocky islet again; fifth, to Cape Verd; sixth, to Clarence Harbor and the east-and-west coast two

was on the eastern or northeastern side of the island. Here, accordingly, was raised a monument by the expedition to commemorate the first landing of Columbus. The monument, as shown in the engraving, is a rectangular structure, flanked at the corners by eight buttresses, faced with an appropriate tablet of marble with the inscription: "On this spot Christopher Columbus first set foot upon the soil of the New World. Erected by the Chicago 'Herald,' June 15, 1891." In front was a grotto in which was placed a marble globe, on whose surface was traced the outlines of the New World, and the site of Chicago marked by a silver star. A rough shaft, capped with a block of granite, surmounted the structure. The shaft contained pieces of

stone from various buildings in Chicago and a large bundle of newspapers, containing copies of the principal journals of the United States. The monument is about 20 feet in height. The dedicatory ceremonies included a prayer by S. W. Roberts, a brief address by Capt. Maxwell-Nairn, the local magistrate, and an oration by Walter Wellman.

COMMERCE AND NAVIGATION OF THE UNITED STATES. The total value of the trade of the United States with other countries for the twelve months ending June 30, 1891, was \$1,729,397,006, exceeding by \$82,257,913 that of 1890, which was greater than the commerce of any previous year, and \$241,797,860 in excess of the total for 1889. The value of the merchandise imports was \$844,916,196, the largest in the history of American commerce, exceeding the total for the fiscal year 1890 by \$55,605,787. The exports of merchandise reached the sum of \$884,480,810, exceeding those of 1890 by \$26,652,126. The values of the total imports of merchandise and of the exports, domestic and foreign, for the last four years have been as follows:

YEARS.	Imports.	Domestic exports.	Foreign exports.	Total exports.
1888...	\$723,957,114	\$683,862,104	\$12,092,403	\$695,954,507
1889...	745,181,652	730,282,609	12,118,766	742,401,375
1890...	759,310,409	845,293,828	12,534,856	857,828,684
1891...	844,916,196	872,270,283	12,210,527	884,916,196

In 1888 there was an excess of imports over exports amounting to \$28,002,607. In 1889 the imports increased, but the exports recovered so as to nearly balance them, the whole merchandise movement of the year showing a balance of \$2,730,277 against the United States. In 1890 the expansion of the export trade was extraordinary, and while the consumption of foreign products went on at a more rapid rate, the balance of trade in favor of the United States reached the large amount of \$68,518,275. In 1891 we see the same steady growth in the productive capacity of the country as measured by the increase in the exportable surplus, and as a result of this continued prosperity a more rapid expansion of the import movement, which nevertheless left a balance in favor of the United States of \$39,564,614. The value of merchandise imported free of duty was \$366,241,352 in 1891, an increase of \$100,572,723. The value of dutiable merchandise was \$478,674,844, a decrease of \$44,966,936. The difference in the proportion of free and dutiable imports was caused mainly by the transfer of sugar and of certain textile materials from the dutiable to the free list.

The value of the imports and exports carried in cars and other land vehicles in 1891 was \$72,856,194, as compared with \$73,571,263 in 1890, \$66,664,378 in 1889, \$54,356,827 in 1888, \$48,951,725 in 1887, and \$43,700,350 in 1886. Of the total imports, goods of the value of \$40,932,755 were brought in cars and other land vehicles, an increase of \$311,394; the value brought in American steam vessels was \$74,211,783, which was \$3,959,778 more than in 1890; the value carried in American sailing vessels was \$53,259,895, or \$1,437,048 less than in the previous year; the value brought in foreign steam vessels was

\$620,659,640, an increase of \$49,210,646; and the value brought in foreign sailing vessels was \$55,855,123, an increase of \$3,561,017. Of the total exports, the merchandise carried in cars and other land vehicles was \$30,116,869 in value, or \$201,077 less than in 1890; the value carried in American steamers was \$42,967,198, or \$6,058,419 more; the value carried in American sailing vessels was \$33,938,428, a decrease of \$4,534,251; the value carried in foreign steamers was \$675,537,455, an increase of \$30,959,672; and the value carried in foreign sailing vessels was \$89,710,333, a decrease of \$5,306,308. The foreign exports carried in cars declined from \$2,631,956 to \$1,806,570, those carried in American sailing vessels from \$947,721 to \$651,080, and those carried in foreign sailing vessels from \$898,749 to \$394,167; while the value carried in American steam vessels advanced from \$1,172,959 to \$1,411,341, and that carried in foreign steam vessels from \$6,883,471 to \$7,947,369.

Imports.—The values of the principal articles and classes of articles exempt from duty imported into the United States during the twelve months ending June 30, 1891, compared with the figures for the preceding year, are given in the following table:

ARTICLES FREE OF DUTY.	1890.	1891.
Animals for breeding.....	\$3,496,655	\$2,465,110
Articles, produce of U. S., returned	4,231,952	4,466,279
Works of American artists.....	400,123	395,858
Asphaltum or bitumen, crude.....	190,555	253,410
Bark, hemlock.....	164,276	274,389
Boiling cloths.....	821,125	296,088
Books, maps, engravings, etc.....	1,115,353	1,655,514
Alizarine.....	25,882	667,862
Argal or crude tartar.....	2,793,885	2,197,507
Cinchona bark.....	282,775	801,070
Cochineal.....	42,485	19,779
Logwood and other dye woods.....	1,725,167	2,010,485
Gums.....	5,687,280	6,906,914
Indigo.....	1,827,937	1,600,639
Licorice root.....	794,508	896,597
Lime, chloride of.....	1,885,080	1,429,509
Mineral waters.....	481,579	862,800
Opium, crude.....	(Dutiable)	* 981,632
Potash, muriate of.....	249,350	923,529
Potash chlorates, nitrates, etc.....	(Dutiable)	* 842,995
Quinia, salts of.....	902,060	883,260
Soda, nitrate of.....	2,709,131	2,928,874
Sulphur.....	2,136,559	2,451,513
Vanilla beans.....	559,867	594,744
All other chemicals, drugs, and dyes	4,238,718	5,444,714
Chicory root.....	(Dutiable)	* 35,512
Cocoa or cacao, crude.....	2,312,731	2,817,168
Coffee.....	78,267,432	96,123,777
Cork wood and bark.....	1,218,876	1,249,008
Cotton, unmanufactured.....	1,392,723	2,825,004
Diamonds and precious stones, uncut.....	202,858	804,626
Eggs.....	2,074,912	† 1,053,961
Ferriaceous substances.....	1,103,726	543,760
Fertilizers.....	1,218,989	1,525,394
Fish, fresh.....	880,208	† 250,986
Bananas.....	4,653,779	5,854,752
Cocoa-nuts.....	822,810	913,283
Currants.....	(Dutiable)	* 1,246,074
Dates.....	(Dutiable)	* 613,545
Other fruits and nuts.....	1,391,081	1,789,910
Furs and fur skins.....	2,165,213	2,822,166
Hair.....	2,866,281	2,265,714
Hats and bonnets, materials for.....	(Dutiable)	* 1,549,725
Other skins.....	9,106,052	11,458,745
Personal effects of immigrants, etc.....	12,775,804	16,497,014
India-rubber and gutta-percha.....	2,735,099	2,920,050
Needles for hand sewing.....	14,554,512	18,020,804
Shot-gun barrels, rough bored.....	(Dutiable)	* 285,132
Ivory.....	(Dutiable)	* 63,115
Vegetable Ivory.....	845,105	886,502
Matting, straw.....	61,477	76,537
	(Dutiable)	* 1,459,093

Total free of duty	\$265,668,629	\$366,241,352

* From Oct. 6, 1890, only. For the preceding period the value is given in the table of dutiable articles.

† Up to Oct. 6, 1890. For the remaining period see the table of dutiable imports.

‡ From April 1, 1891. For the preceding nine months see the table below.

The importing price or cost in the foreign market whence they were imported of the cattle brought in free of duty has sunk from \$56 in 1884 to \$18 in 1891, while the quality of horses imported for breeding purposes has advanced, and the average cost has risen from \$121 to \$311. The price of asphalt per ton in 1891 was \$3.61, a third higher than in the preceding year; the price of alizarine advanced from 17 to 20 cents a pound, and that of cochineal from 21 to 23 cents, while that of cinchona remained at 10 cents, argal fell from 11 to 10 cents, and logwood was lower in price. Of the gums, camphor has risen in four years from 12 to 27 cents a pound, while gum arabic has declined from 34 to 12 cents. Indigo was 77 cents a pound in 1891, as compared with 65 cents in 1890. Chloride of lime or bleaching powder averaged 1 cent a pound in both years. Licorice root was 2 cents a pound, double the price in 1890. Sulphate of quinia continued to decline, falling from 30 to 25 cents per ounce, a quarter of the price in 1884. The price of soda nitrate remained the same; but that of sulphur advanced 25 per cent. Vanilla beans showed some falling off. Unmanufactured cocoa remained unchanged; but coffee rose from 16 to 19 cents a pound. Eggs were 15 cents, a cent more a dozen. Guano rose from \$13.26 to \$17.50 a ton, while phosphates fell off in price at the port of embarkation from \$10.02 to \$8.68. Salmon was a cent a pound cheaper, partly owing to the imposition of a duty, but other fresh fish averaged the same in price. India-rubber advanced from 44 to 52 cents a pound. Ivory was \$3.64 a pound, about 3 per cent. cheaper. The fixed oils were 6 cents a pound, an advance of 1 cent, while the volatile oils fell from 63 to 55 cents per pound. The price of rags did not vary. Raw silk declined from \$3.92 to \$3.66 a pound, while waste silk and cocoons showed a considerable advance. The price of nutmegs was a cent a pound higher, that of pepper fell from 12 to 10 cents, and other spices averaged 15 per cent. lower prices. The

average price of tea advanced from 15 to 17 cents a pound.

The number of cattle imported free of duty in 1891 was 2,740, a decrease of 1,192; of horses, the number was 6,444, or 4,424 less than in 1890; and the number of sheep was 9,606, a decrease of 6,697. The quantity of American spirits stored abroad and reimported was 1,791,591 gallons, 771,395 gallons more than in the preceding year. The quantity of asphaltum imported was nearly the same. The import of hemlock bark was two thirds greater in quantity. In the imports, that of alizarine and madder increased 60 per cent., that of crude tartar declined 12 per cent., that of the barks from which quinine is extracted was slightly greater, and that of cochineal was only about two fifths as large. In the import of logwood there was an increase from 65,870 to 84,155 tons. The import of gum arabic fell off 10 per cent. in quantity, and that of camphor 15 per cent., while that of gambier or terra japonica increased 85 per cent., and that of shellac 35 per cent. Of indigo about a quarter less was imported, of licorice root about the same quantity, of chloride of lime about 8 per cent. more, of muriate of potash 20 per cent. more, of quinine and alkaloids of the same nature a very little more, of nitrate of soda 10 per cent. more, of sulphur 15 per cent. less, and of vanilla beans 18 per cent. more. The import of cocoa was larger by one sixth, and that of coffee increased from 499,159,120 to 519,528,432 pounds. There was an increase of 25 per cent. in the import of guano and of 13 per cent. in that of phosphates for fertilizing purposes. The imports of rubber and gutta-percha increased from 33,842,374 to 34,672,924 pounds. In rags for paper-making there was an increase in quantity of 20 per cent. The import of raw silk fell off from 5,943,360 to 4,917,688 pounds, that of cocoons from 162,531 to 82,053 pounds, and that of silk waste from 1,404,549 to 1,300,789 pounds. The importation of sugar was enormously stimulated by the removal of the duty. The same is true in a less degree of jute, sisal grass, and other raw materials that were transferred to the free list. The effect of the competition of the Spanish and English colonies and of Europe is not noticeable, except in the prices, in the returns of imports of brown sugar from the Hawaiian Islands, which were more than a third greater than in 1890.

The following table gives the values of the principal articles and classes of dutiable merchandise imported in 1891 and the last preceding year:

DUTIABLE ARTICLES.	1890.	1891.
Animals, live	\$3,270,277	\$2,480,255
Art works	1,796,872	2,014,510
Books, maps, engravings	2,878,717	2,571,889
Brass, and manufactures thereof ..	166,668	284,848
Breadstuffs	6,084,272	4,444,449
Bristles	1,286,219	1,857,988
Brushes	767,128	863,773
Buttons	3,207,128	2,096,411
Cement	2,172,952	4,021,998
Coal-tar colors and dyes	1,787,553	1,673,864
Glycerin	928,985	996,686
Logwood and other dyes	218,105	274,409
Opium, crude	1,188,732	* 2,070,738
Opium, prepared for smoking	269,556	567,035
Potash, nitrate of, or saltpeter	8,469,499	* 18,181,616
Caustic soda	1,470,335	1,874,700
Sul soda and soda ash	3,498,288	4,382,917
Other salts of soda	184,471	172,079
Sumac, ground	245,536	822,875

* Prior to Oct. 6, 1890. For the remaining period see the preceding table.

† From July 1 to Oct. 6, 1890. Since the latter classed under manufactures of cotton, flax, silk, or wool, according to materials of chief value.

‡ Since Oct. 6, 1890, only.

§ For nine months ending March 31, 1891. For the remaining three months see the preceding table.

The declared prices of cattle in the foreign markets averaged \$5.56 a head in 1891, having fallen from \$13.47 in 1887; the average price of the horses imported was \$78.05, against \$49.74 in 1890. There was an advance of 25 per cent. and upward in the average cost of cereals. Crude opium advanced from \$2.50 to \$2.86 a pound. Sal soda and caustic soda remained 1 and 2 cents a pound respectively. Copper rose from 7 to 8 cents. Unbleached cottons were still 9 cents a yard, while bleached and dyed goods went up from 13 to 14 cents. Flax was a little lower, hemp was 25 per cent. below the ruling prices in 1890, jute fell off almost as much, and sisal grass a full third. The prices of figs and prunes were double those of the previous year, while raisins and nuts did not vary. Higher prices for window glass account partly for the increase in the value of the glass imports. The imports of hops fell from 6,539,516 to 4,019,603 pounds, but the value was nearly 75 per cent. greater because the price went up from 16 to 45 cents a pound. Linseed went down 7 per cent. in price. Raw sugar averaged 3 cents a pound in both years. Tobacco imported for cigar wrappers was 58 cents a pound, or 3 cents less in 1891. Clothing wools were 21 cents a pound, 2 cents less; combing wools were 23 cents, having fallen 2 cents; and carpet wools were 11 cents, a cent lower. The carpets imported were of much higher grade than in years past. The imports of dutiable live animals included 9,652 cattle, 16,093 horses, and 336,159 sheep, against 26,760 cattle, 38,248 horses, and 377,491 sheep in 1890. The imports of barley fell off from 11,332,545 to 5,078,733 bushels, and those of other grain and flour in a like ratio, with the exception of wheat. The importation of cement, though at higher prices, was nearly 30 per cent. greater in quantity. The imports of unbleached cotton cloth increased from 1,508,239 to 1,802,397 square yards, and those of other piece goods from 26,251,402 to 31,055,214 square yards. The imports of cured fish were greater in quantity than in 1890. The imports of flax fell off 25 per cent., and those of hemp to less than a third of the quantity imported in the previous year. Of the fruits, those that rose in price were imported in smaller quantities, while the rest show a considerable expansion of trade. A larger sum than the entire increase in the value of the iron and steel manufactures is represented by the increased imports of tin plate in anticipation of the duty, the total imports being 1,036,489,074 pounds, of the value of \$35,746,920, as compared with 680,060,925 pounds, of the value of \$20,928,150, in 1890, at the same average price of 3 cents a pound. The imports of linseed declined from 2,391,175 to 1,515,546 bushels. The imports of brandy were less, those of champagne 15 per cent. more in quantity, and those of still wines showed about half that increase. The imports of fine wool for cloth manufacture amounted to 32,230,935 pounds, nearly double as much as in 1890; those of the combing wools were over 10 per cent. less, and those of carpet wools were 10 per cent. greater. While the imports of carpets were larger in quantity and nearly twice as great in value as in the preceding year, the imports of cloth decreased from 16,847,562 to 12,109,825 pounds, and those of dress goods from

110,992,488 to 80,644,096 square yards. Those of shoddy and rags fell from 4,980,327 to 1,185,591 pounds, and those of yarns from 3,473,219 to 2,004,093 pounds.

A large increase in the import of sugar was caused by its transfer to the free list three months before the end of the fiscal year 1891. The total importation of raw sugar, including the import from the Hawaiian Islands, was 3,479,260,785 pounds, valued at \$105,566,355, against 2,933,932,324 pounds, of the value of \$96,085,971, in 1890. A material increase in the value imported is observed in the following articles from the free list: Coffee, of which the imports were \$17,856,345 more in value than in 1890; hides and skins, which show an increase of \$6,048,873; chemicals,

lected on dutiable merchandise was 46.26 per cent. in 1891, 44.41 per cent. in 1890, 45.13 per cent. in 1889, 45.63 per cent. in 1888, and 47.10 per cent. in 1887. Taking free and dutiable merchandise together, the duties averaged 25.25 per cent. in 1891, 29.12 per cent. in 1890, 29.50 per cent. in 1889, 29.99 per cent. in 1888, and 31.02 per cent. in 1887.

Exports.—The total value of the exports of domestic merchandise for the fiscal year 1891 was \$872,270,283, which was greater than in any previous year except 1881 and \$26,976,455 in excess of the domestic exports of 1890. The values of the chief staples of the export commerce for the last three years are given in the following table:

PRINCIPAL EXPORTS.	1889.	1890.	1891.
Cotton, and manufactures of.....	\$247,987,914	\$260,968,069	\$304,317,755
Provisions, comprising meat and dairy products.....	104,122,444	186,264,506	189,017,471
Breadstuffs.....	123,876,661	154,925,927	128,121,656
Mineral oils.....	49,913,677	51,408,089	52,026,734
Animals.....	18,374,805	83,638,128	82,925,086
Iron and steel, and manufactures of, including ore.....	21,156,109	25,542,208	28,909,614
Wood, and manufactures of.....	26,910,672	28,274,529	26,270,040
Tobacco, and manufactures of.....	22,609,668	25,355,601	25,220,472
Leather, and manufactures of.....	10,747,710	12,488,847	13,278,547
Coal.....	6,690,479	6,856,088	8,391,026
Oil cake and oil-cake meal.....	6,927,912	7,999,926	7,452,094
Copper ore.....	7,518,258	6,053,236	7,260,893
Sugar and molasses.....	2,117,538	3,029,413	7,099,788
Chemicals, drugs, dyes, and medicines.....	5,542,768	6,224,504	6,545,354
Fish.....	5,969,235	6,040,826	4,996,621
Spirits of turpentine.....	3,777,525	4,590,931	4,668,140
Copper, and manufactures of, not including ore.....	2,348,954	2,349,392	4,614,597
Vegetable oils.....	1,555,783	5,672,441	4,302,936
Total.....	\$668,178,092	\$777,627,661	\$805,429,124

drugs, and dyes, of which \$4,825,324 worth more were imported; fruits and nuts, the imports of which were \$3,555,144 greater; and crude rubber and gutta-percha, imports of which were \$3,166,292 more in value. In the list of dutiable articles the imports of iron and steel and the manufactures thereof were \$11,575,976 more in value; metals, metal compositions, and manufactures thereof show an increase of \$2,988,588; raw wool was imported to the amount of \$2,967,289 more; and vegetables came in to the amount of \$2,725,722 more. The transfer of jute, sisal grass, and other fibrous materials to the free list caused a decrease of \$13,863,081 under the head of flax, hemp, and jute in the dutiable list, which was more than offset by an increase of \$14,608,019 under the head of textile grasses and vegetable fibers in the free list. There was a decrease of \$5,249,450 in the imports of unmanufactured silk among the free articles, and among the dutiable articles the largest decrease was \$15,522,352 under the head of wool and woolen manufactures. The imports of manufactures of flax, hemp, jute, and allied substances fell off \$4,397,185.

The total value of imported merchandise free of duty entered for consumption in 1891 was \$388,064,404, against \$266,103,047 in 1890, \$256,574,630 in 1889, \$244,104,852 in 1888, and \$233,093,659 in 1887. The total value of dutiable merchandise entered for consumption was \$466,455,173 in 1891, \$507,571,764 in 1890, \$484,856,768 in 1889, \$468,143,774 in 1888, and \$450,325,322 in 1887. In 1891 the amount of duty collected was \$215,790,686. The average rate col-

lected on dutiable merchandise was 46.26 per cent. in 1891, 44.41 per cent. in 1890, 45.13 per cent. in 1889, 45.63 per cent. in 1888, and 47.10 per cent. in 1887.

Grouped according to the source and nature of the articles, the domestic exports of the last two years are classified as follow:

DOMESTIC EXPORTS.	1890.	1891.
Agricultural products.....	\$629,785,917	\$642,751,344
Manufactured products.....	151,151,297	168,927,815
Mineral products.....	22,351,746	22,054,570
Forest products.....	29,478,084	28,711,713
Fishery products.....	7,496,044	6,208,577
Other products.....	5,053,740	3,612,364
Total.....	\$845,293,828	\$872,270,283

Products of agriculture constituted 73.69 per cent. of the total value of exports in 1891, and in 1890 they made 74.51 per cent. of the whole. The proportionate value of the mineral products, which include mineral oils, declined from 2.64 to 2.53 per cent., that of forest products from 3.48 to 3.29 per cent., that of fishery products from .89 to .71 per cent., and that of miscellaneous products from .60 to .41 per cent., these variations being caused by the larger absolute and relative exportation of manufactured products, which formed 19.37 per cent. of the whole in 1891, as compared with 17.88 per cent. in 1890.

The values of the articles or classes of articles, the produce or manufacture of the United States, exported during the year ending June 30, 1891, compared with the values for the preceding year are presented in the following table:

ARTICLES.	1890.	1891.	ARTICLES.	1890.	1891.
Agricultural implements.....	\$3,859,184	\$3,219,180	Stereotype and electrotype plates.....	30,662	28,310
Animals.....	33,683,128	32,935,086	Straw and palm-leaf manufactures.....	63,868	78,544
Art works.....	223,082	406,374	Sugar and molasses.....	3,022,413	7,099,788
Bark, for tanning.....	263,754	241,852	Tin, manufactures of.....	254,896	249,836
Billiard tables.....	42,466	49,224	Tobacco, unmanufactured.....	21,479,556	21,093,556
Blacking.....	238,891	219,903	Tobacco, manufactured.....	8,676,045	4,186,713

			Total domestic exports.....	\$545,293,828	\$572,270,258

The exports of live animals included 374,679 cattle, exported at the average price of \$81.26 a head, as compared with 394,856, at the export price of \$79.18, in 1890; 95,654 hogs, worth \$11.99 apiece, against 91,148, worth \$9.97; 3,110 horses, of the average value of \$252.38, against 3,501, at \$194.35 each; 2,184 mules, worth \$127.59 each; and 60,947 sheep, worth \$4.28 each. The export of wheat was 55,131,948 bushels, at 93 cents a bushel, against 54,387,767, at 83 cents, in 1890; that of corn fell off from 101,973,717 bushels, at 49 cents, to 30,768,213 bushels, at 57 cents; that of wheat flour declined from 12,231,711 to 11,344,304 barrels, of the total values, respectively, of \$57,036,168 and \$54,705,616; of oats, only 953,010 bushels were exported, against 13,692,776 in 1890; and of rye, 332,739 bushels, against 2,257,377. Ginseng, once prominent among the minor exports, is found in decreasing quantities, and the price has risen from \$1.99 a pound in 1885 to \$3.39 in 1891, when the export amounted to 283,000 pounds. The export of copper ore in 1891 was 38,562 tons, an increase of 1,722 tons; that of copper ingots and bars and old copper was 34,554,517 pounds, an increase of 14,317,108 pounds, at 13 cents a pound, 2 cents better than in 1890. The export of Sea Island cotton was 14,588,092 pounds, an increase of 5,367,273 pounds, at 21 cents a pound, 4 cents below the price in 1891. The price of middling upland fell from 11 to 10 cents, while the cotton export, including Sea Island, increased from 5,020,913 bales, or 2,471,799,853 pounds, in 1890, to 5,820,779 bales, or 2,907,358,795 pounds, in 1891. The exports of colored cloths amounted to 39,016,682 yards, which was 3,293,088 yards less than in 1890; but the increase in the quantity of exports of uncolored cloths, of which 135,529,590 yards were exported, made the gain in cotton manufactures equally large in quantity and in value, for the price for both descriptions of cloth continued to average 7 cents a yard. There was little variation in the fish exports, except those of canned salmon, which fell off from 28,681,661 to 22,367,225 pounds. Under the head of fruit the drop in the export of apples from 453,506 to 135,207 barrels, and that of dried apples from 20,861,462 to 6,

973,168 pounds, is particularly noticeable, prices advancing only 20 per cent. The export of glucose was 58,149,427 pounds, an increase of 19,893,266 pounds, at 2 cents, the price for the last three years. Hops were exported to the amount of 8,736,080 pounds, 1,195,226 pounds more than last year, at 27 cents, or 12 cents more a pound. Among the iron and steel exports there was some increase in sewing machines, boilers, wire, builders' hardware, miscellaneous machinery, castings, cutlery, and fire-arms; a large increase in the number and value of locomotive engines; and a decrease in scales, saws and tools, stationary engines, nails, and printing presses. The exports of lamps, saddlery, furniture, jewelry, organs and piano-fortes, toilet soap, matches, paints, and various fine manufactures show a steady growth, while those of paper hangings and writing paper, boots and shoes, sole leather, plated ware, trunks, and varnish were smaller in 1891 than in the preceding year. The export of rosin increased from 1,601,377 to 1,790,251 barrels. The oil cake and oil meal shipped abroad was 633,344,851 pounds, a decrease of 78,359,522 pounds. The exports of lard and of whale oil were considerably less in quantity. The kerosene export increased from 523,295,090 to 571,119,805 gallons, the price remaining 7 cents, while the export of crude petroleum was 91,415,095 gallons, 4,035,558 gallons less than in 1890, at 6 cents, a cent lower per gallon. The cotton-seed oil export was 11,003,160 gallons, a decrease of 2,381,235 gallons, the price falling from 39 to 36 cents, owing to competition in Egypt and elsewhere. The export of oleomargarine or imitation butter was smaller, but that of the oil, which is the form in which the bulk of it is sent abroad, increased from 68,218,098 to 82,133,876 pounds, still at the average price of 10 cents a pound. Among the other beef exports we see an increase in the quantity of canned beef from 82,638,507 to 109,585,727 pounds, and in that of fresh beef from 173,237,596 to 194,045,638 pounds, at an advance in price from 7 to 8 cents, while the export of pickled or salted beef declined from 97,508,419 to 90,286,979 pounds, with but little difference in the total value, owing to higher prices; and the tallow export, 111,689,251 pounds, showed a slight falling off but an improvement in the value. The export price of bacon and hams has been 8 cents for two years. In the export of bacon, 514,675,557 pounds, there was a falling off of 17,224,120 pounds in quantity and \$1,744,646 in value, and the difference in the value not quite made good by the increase in the shipments of hams from 76,591,279 to 84,410,108 pounds, in those of pickled pork from 79,788,868 to 81,317,364 pounds, and in the lard export at 7 cents a pound, as in 1890, from 471,083,598 to 498,343,927 pounds. The exports of butter fell off from 29,748,042 to 15,187,114 pounds, and those of cheese from 95,376,053 to 82,133,876 pounds; and the decline was offset by no advance in prices, which remained 14 cents for butter and 9 cents for cheese. The export of rum increased from 555,749 to 1,025,226 gallons, and there was an export of 136,529 gallons of brandy against 3,334 gallons in 1890, while the export of alcohol was 25 per cent. larger, but a falling off of more than 50 per cent. in the exports of whisky made the total exports

of spirits not much larger, though prices were much higher. The wine exported in casks increased from 393,323 to 543,192 gallons at 65 instead of 61 cents per gallon. The export of spirits of turpentine increased from 11,248,920 to 12,243,621 gallons, at 38 cents a gallon, a decline of 3 cents. The export of refined sugar increased from 27,018,002 pounds at 7 cents to 108,228,620 pounds at 6 cents. The average export price of leaf tobacco was 9 cents a pound in both years, while the quantity of unmanufactured tobacco exported declined from 255,647,026 to 249,232,605 pounds. The prices of lumber and timber were considerably lower, and therefore, in spite of larger exports and the growth of the trade in wood manufactures, the total value was less than in 1890. The material increase in the values of the principal domestic exports was \$39,744,106 in raw cotton, \$4,237,360 in refined sugar, \$3,605,580 in cotton manufactures, \$3,367,406 in iron and steel and their manufactured products, \$2,752,965 in provisions and dairy products, \$2,265,205 in copper, \$1,534,938 in coal, \$1,491,428 in refined mineral oil, \$1,305,940 in paraffine and paraffine wax, \$1,216,903 in hops, and \$1,207,657 in copper ore. Against these gains must be set a decrease of \$26,804,271 in the value of breadstuffs, \$2,004,489 in wood and wood manufactures, \$1,939,434 in gold and silver ores, \$1,624,754 in fruits, \$1,425,229 in furs and fur skins, \$1,369,505 in vegetable oils, and \$1,044,205 in the fish exports.

The total value of foreign merchandise re-exported in 1891 was \$12,210,527, against \$12,534,856 in 1890. The re-exports of dutiable merchandise were \$7,049,819 in 1891, against \$7,992,493 in 1890; and those of free merchandise were \$5,160,708, against \$4,542,363.

Movement of the Precious Metals.—The imports of gold during the fiscal year 1891 amounted to \$18,232,567, and those of silver to \$18,026,880, making a total of \$36,259,447, while the exports of gold amounted to \$86,362,654, and those of silver to \$22,590,988, a total of \$108,953,642, which gives an excess of exports of specie over imports of \$72,694,195. There was an excess of exports amounting to \$18,172,094 in 1890, when \$12,943,342 in gold and \$21,032,984 in silver were imported and \$17,274,491 in gold and \$34,873,929 in silver were exported. In 1890 \$67,678,460 of specie were drained from the country, the exports being \$59,952,285 in gold and \$36,689,248 in silver, and the imports \$10,284,858 in gold and \$18,678,215 in silver. The year before that there was a net importation of \$12,923,803, and for a long time previous the movement of specie was to the United States. These figures do not include the metals not yet extracted from ores and copper matte, of which \$283,545 in gold and \$8,252,036 in silver were imported, and \$100,226 in gold and \$283,545 in silver were exported in 1891.

Commercial Relations.—The tables on page 190 show the distribution of the commerce of the United States by countries during the year ending June 30, 1891.

The imports from European countries formed 53.02 per cent. of the total imports in 1881, 56.27 per cent. in 1886, and 57.01 per cent. in 1891; and of the domestic exports 85.46 per cent. went to Europe in 1881, 80.13 per cent. in 1886, and

COUNTRIES.	Domestic exports.	Foreign exports.	Imports.	Total commerce.	Excess of Imports or exports.
Great Britain and Ireland	\$441,599,807	\$3,814,219	\$194,723,262	\$640,137,288	* \$250,690,764

Africa.....	4,738,847	19,050	4,207,146	8,965,043	* 550,751
All other countries.....	489,138	3,180	1,547,575	2,039,918	1,055,287
Total.....	\$872,270,283	\$12,210,527	\$344,916,196	\$1,729,397,006	* \$39,564,614

* Excess of exports.

79·97 per cent. in 1891. In 1881 Great Britain and Ireland furnished 27·15 per cent. of the imports; France, 10·86 per cent.; Germany, 8·25 per cent.; other European countries, 6·76 per cent.; the West Indies, 13·10 per cent.; British America, 5·92 per cent.; South America, 12·55 per cent.; Asia and Oceania, 11·40 per cent.; Mexico, 1·30 per cent.; Central America, 0·54 per cent.; and all other countries, 2·12 per cent. In 1891 Great Britain's share in the imports was 23·05 per cent.; Germany's, 11·52 per cent.; that of France, 9·08 per cent.; of the rest of Europe, 10·71 per cent.; of the West India islands, 10·23 per cent.; of British America, 4·67 per cent.; of Mexico, 3·23 per cent.; of Central America, 1·19 per cent.; of South America, 14·05 per cent.; of Asia and Oceania, 11·59 per cent.; of other countries, 0·68 per cent. Great Britain took 54·01 per cent. of the domestic exports in 1881 and 50·62 per cent. in 1891; France took 10·16 per cent. in 1881 and 6·86 per cent. in 1891; Germany took 7·79 per cent. in 1881 and 10·49 per cent. in 1891; other European countries took 13·50 per cent. in 1881 and 12 per cent. in 1891; British possessions in North America took 4·05 per cent. in 1881 and 4·29 per cent. in 1891; the West Indies took 3·29 per cent. in 1881 and 3·83 per cent. in 1891; Mexico took 1·04 per cent. in 1881 and 1·63 per cent. in 1891; the rest of North America took 0·27 per cent. in 1881 and 0·85 per cent. in 1891; South America took 2·78 per cent. in 1881 and 3·81 per cent. in 1891; Asia and Oceania took 2·55 per cent. in 1881 and 5·02 per cent. in 1891; and all other countries took 0·56 per cent. in 1881 and 0·60 per cent. in 1891.

The trade with the United Kingdom forms 55 per cent. of the American trade with Europe, and about 37 per cent. of the total foreign commerce of the United States. Next in value is the trade with North America, including the West Indies.

The commerce with North America, including Mexico, Central America, and the West Indies, amounted in 1891 to \$259,775,208, in which sum the imports stand for \$163,226,079 and the exports for \$66,676,950. Owing to defective collection of statistics on the Canadian and Mexican frontiers the exports to those countries are probably stated too low by at least \$30,000,000. As compared with the figures for 1890 there was an increase in 1891 of \$10,813,735 in the domestic exports to France, of \$7,369,766 in the exports to Germany, of \$5,756,518 in those to China, of \$2,146,777 in those to Brazil, of \$1,871,620 in those to Spain, of \$1,723,598 in those to Australasia, of \$1,532,972 in those to Mexico, of \$1,475,641 in those to Central America, and of \$1,329,226 in those to Holland. On the other hand, the exports of domestic products to the Argentine Republic fell \$5,604,552; those to Great Britain and Ireland, \$2,859,202; those to Russia, \$2,769,553; and those to British North American possessions, \$1,198,939. The imports from Brazil were \$23,911,839 more in 1891 than in 1890, those from the West Indies were \$8,457,464 more, those from Great Britain \$8,234,346 more, those from Mexico \$4,605,077 more, those from China \$3,061,379 more, those from British India \$2,552,670 more, those from Australasia \$1,961,345 more, those from Central American states \$1,746,678 more, those from the Hawaiian Islands \$1,581,689 more. There was a decrease of \$6,425,417 in the imports from the Philippine Islands, of \$4,607,059 in those from the Netherlands, of \$1,794,126 in those from Japan, and of \$1,521,300 in those from Germany. The total imports from South America, the West Indies, Central America, and Mexico in 1891 amounted to \$242,512,577, which was 28·70 per cent. of the total imports of merchandise. The exports to the same countries were \$90,413,516, or 10·22

per cent. of the total exports of domestic products. The import and export trade with those countries has increased gradually. In 1870 the imports from them amounted to \$117,398,951, and the exports to them were \$55,140,322 in value. In 1880 the imports from them were \$178,985,906, and the exports to them \$61,546,474. The trade with the countries to the south has already begun to expand as the result of the recently concluded reciprocity treaties. In 1870 the trade with them constituted 20.82 per cent. of the total foreign commerce of the United States, in 1880 it was 15.99 per cent., and in 1891 it was 19.21 per cent. Of the imports from Mexico in 1891, 85.58 per cent. consisted of merchandise free of duty; of those from Central America, 99.38 per cent.; from the West Indies, 48.66 per cent.; from South America, 93.04 per cent. The percentage of dutiable goods from the entire group was 23.36 per cent., and under the new tariff it is expected to be not more than 10 per cent. The principal articles imported from these countries are sugar, coffee, India-rubber, hides and skins, silver ore, tobacco, and fruits, of which only tobacco, silver ore, and certain fruits are now dutiable.

The trade with the different countries of South and Central America is shown in the following table, which gives the imports from each one in 1881 and the exports, domestic and foreign together:

COUNTRIES.	Imports.	Exports.
Mexico.....	\$27,295,992	\$14,969,620
British Honduras.....	219,090	462,889
Guatemala.....	2,618,199	1,997,944

Bolivia.....	8,734	6,880
Peru.....	886,513	1,899,991
Ecuador.....	836,437	908,159
Total.....	\$242,512,577	\$9,418,516

The chief exports from the United States to this group of countries have been manufactures of iron and steel, cotton manufactures, manufactures of wood, wheat flour, refined petroleum, and agricultural implements.

Navigation.—The number of vessels in the foreign trade entered at the seaports of the United States during the year ending June 30, 1891, was 18,197, of 15,394,611 tons, of which 5,778, of 3,670,372 tons, were American, and 12,419, of 11,724,239 tons, were foreign. Of the American vessels, 4,558, of 3,031,162 tons, arrived with cargoes, and 5,778, of 3,670,372 tons, in ballast; and of the foreign vessels, 10,325, of 10,023,137 tons, were with cargoes, and 2,094, of 1,701,112 tons, in ballast. The number of entrances at the port of New York was 5,420 vessels, measuring 6,452,877 tons, of which 1,423 vessels, of

935,087 tons, were American vessels with cargoes; 1,424, of 935,172 tons, were American vessels in ballast; and 3,996, of 5,517,705 tons, were foreign vessels with cargoes. At Boston and Charlestown the entrances numbered 2,472, of 1,502,215 tons, of which 386, of 196,826 tons, were American, and 2,086, of 1,305,389 tons, were foreign vessels; at Philadelphia, 316 American vessels, of 202,528 tons, and 992 foreign vessels, of 1,148,938 tons, were entered; at San Francisco, 485 American and 370 foreign vessels, of 516,159 and 579,617 tons, respectively; at Puget Sound, 1,308 American and 173 foreign vessels, of 944,219 and 134,000 tons, respectively; at New Orleans, 216 American vessels, of 114,349 tons, and 624 foreign vessels, of 771,436 tons; at Baltimore, 175 American vessels, of 65,673 tons, and 448 foreign vessels, of 646,160 tons; at Pensacola, 40 American vessels, of 20,544 tons, and 361 foreign vessels, of 291,723 tons; at Passamaquoddy, 215 American vessels, of 215,177 tons, and 519 foreign vessels, of 54,684 tons; at Savannah, 9 American vessels, of 3,333 tons, and 270 foreign vessels, of 178,927 tons; at Galveston, 31 American vessels, of 6,906 tons, and 152 foreign vessels, of 161,152 tons. The tonnage entered at some of the other seaports was as follows: Key West, 131,466; Pearl River, 108,576; Mobile, 103,284; Charleston, 94,869; San Diego, 90,927; Portland and Falmouth, 89,690; Brunswick, 84,503; Willamette, 77,597; Oregon, 68,306; Wilmington, N. C., 65,664; Wilmington, Cal., 54,079.

The total number of vessels cleared at the ocean ports during the fiscal year 1891 was 18,327, of 15,411,160 tons, of which 5,932, of 3,716,083 tons, were American, and 12,395, of 11,695,077 tons, were foreign. Of the American vessels, 4,058, of 2,859,100 tons, were cleared with cargoes, and 1,874, of 856,983 tons, in ballast; and of the foreign vessels, 9,272, of 11,019,092 tons, were cleared with cargoes, and 3,123, of 675,985 tons, in ballast. At the port of New York 1,007 American vessels, of 785,194 tons, and 3,805 foreign vessels, of 5,263,590 tons, were cleared during the year; at Boston and Charlestown, 474 American vessels, of 189,374 tons, and 1,902 foreign vessels, of 1,037,443 tons; at Puget Sound, 1,412 American vessels, of 1,021,665 tons, and 179 foreign vessels, of 138,490 tons; at San Francisco, 450 American vessels, of 523,325 tons, and 352 foreign vessels, of 544,958 tons; at Philadelphia, 262 American vessels, of 184,210 tons, and 735 foreign vessels, of 807,753 tons; at Baltimore, 161 American vessels, of 48,316 tons, and 545 foreign vessels, of 853,641 tons; at New Orleans, 186 American vessels, of 94,333 tons, and 636 foreign vessels, of 787,424 tons.

The number of vessels entered at the lake ports during 1891 from the ports of the Dominion of Canada was 14,381, of 2,809,684 tons, making the total number of vessels in the foreign trade entered at all the ports of the United States 32,578, and the aggregate tonnage 18,204,295. The clearances at the lake ports numbered 14,376, representing 2,849,672 tons, making the aggregate of shipping cleared at all ports 32,703 vessels, of 18,260,832 tons. Of the vessels entered at the lake ports, 3,096, of 349,735 tons, were American vessels with cargoes; 2,172, of 360,697 tons, were American vessels in ballast; 6,

209, of 1,236,382 tons, were foreign vessels with cargoes; and 2,904, of 812,870 tons, were foreign vessels in ballast. Of the total number cleared at lake ports, 2,154, of 442,007 tons, were American vessels with cargoes; 3,096, of 297,312 tons, were American vessels in ballast; 4,210, of 1,299,753 tons, were foreign vessels with cargoes; and 4,916, of 10,600 tons, were foreign vessels in ballast.

The number of vessels entered from the various foreign countries, with their tonnage, is given in the following table:

The steam vessels entered at the ocean ports in 1891 numbered 8,233, of 11,116,028 tons, of which 2,626, of 2,333,904 tons, were American, and 5,607, of 8,782,124 tons, were foreign steamers. There were cleared 8,231 steamers, of 11,153,393 tons, of which 2,694, of 2,374,069 tons, were American, and 5,597, of 8,779,324 tons, foreign.

The number of vessels, American and foreign, cleared for ports of the Argentine Republic in 1891 was 127, of 85,735 tons; for Austrian ports, 21, of 15,769 tons; for Belgium, 235, of 499,937 tons; for Brazil, 300, of 253,191 tons; for Costa Rica, 41, of 24,670 tons; for Guatemala, 36, of 22,018 tons; for Honduras, 240, of 94,585 tons; for Nicaragua, 134, of 64,365 tons; for Salvador, 3, of 396 tons; for Chili, 55, of 48,216 tons; for China, 54, of 70,041 tons; for Colombia, 187, of 203,992 tons; for Denmark, 43, of 55,153 tons; for Danish colonies, 72, of 46,563 tons; for Ecuador, 11, of 6,451 tons; for French Atlantic ports, 472, of 766,819 tons; for French ports on the Mediterranean, 92, of 117,598 tons; for Miquelon, Langley, and St. Pierre, 35, of 4,866 tons; for the French West Indies, 157, of 70,313 tons; for French Guiana, 21, of 4,042 tons; for French possessions in Asia, 4, of 5,313 tons; for French possessions in Oceania, 18, of 6,531 tons; for French possessions in Africa, 25, of 10,251 tons; for Germany, 888, of 1,643,838 tons; for German possessions, 3, of 453 tons; for England, 2,195, of 4,122,619 tons; for Scotland, 312, of 513,257 tons; for Ireland, 286, of 357,986 tons; for Gibraltar, 28, of 38,682 tons; for Nova Scotia, New Brunswick, and Prince Edward Island, 4,998, of 1,110,452 tons; for Quebec, Ontario, Manitoba, and the Northwest Territory, 14,417, of 2,868,564 tons; for British Columbia, 1,727, of 1,388,702 tons; for Newfoundland and Labrador, 154, of 30,954 tons; for British Honduras, 25, of 12,773 tons; for the British West Indies, 1,066, of 432,594 tons; for British Guiana, 116, of 51,507 tons; for the British East Indies, 60, of 104,312 tons; for Hong-Kong, 55, of 113,353 tons; for Australia, 178, of 194,474 tons; for New Zealand and Tasmania, 25, of 15,908 tons; for the Cape of Good Hope, 57, of 27,766 tons; for British possessions on the west coast of Africa, 20, of 7,129 tons; for other British possessions, 10, of 4,013 tons; for Greece, 3, of 4,174 tons; for Hayti, 249, of 139,028 tons; for the Hawaiian Islands, 187, of 119,847 tons; for continental Italy, 160, of 157,602 tons; for the islands of Italy, 41, of 27,764 tons; for Japan, 62, of 103,588 tons; for Liberia, 4, of 1,358 tons; for Mexico on the Gulf, 282, of 164,889 tons; for Mexico on the Pacific, 204, of 63,623 tons; for the Netherlands, 240, of 369,520 tons; for the Dutch West Indies, 24, of 8,282 tons; for Dutch Guiana, 12, of 4,941 tons; for the Dutch East Indies, 52, of 58,371 tons; for Peru, 27, of 21,768 tons; for Portugal, 126, of 93,512 tons; for the Azores, Madeira, and Cape Verde Islands, 36, of 15,274 tons; for Portuguese possessions in Africa, 3, of 1,828 tons; for Russia on the Baltic and the White Sea, 60, of 51,836 tons; for Russia on the Black Sea, 4, of 2,997 tons; for Asiatic Russia, 9, of 2,155 tons; for Santo Domingo, 65, of 30,177 tons; for Spanish ports on the Atlantic, 84, of 60,265 tons; for Spain on the Mediterranean, 153, of 135,034 tons;

for Cuba, 1,229, of 859,957 tons; for Puerto Rico, 108, of 49,662 tons; for the Philippine Islands, 4, of 4,307 tons; for the Canary Islands, 21, of 6,928 tons; for other Spanish possessions, 2, of 176 tons; for Sweden and Norway, 69, of 51,954 tons; for Turkey in Europe and Asia, 2, of 1,284 tons; for Turkey in Africa, 9, of 5,659 tons; for Uruguay, 57, of 34,909 tons; for Venezuela, 72, of 81,136 tons; for all other countries, ports, and islands, 19, of 7,636 tons; for the whale fisheries, 21, of 3,239 tons.

American Shipping.—In 1858 over 73 per cent. of the exports and imports was carried in American bottoms, and in 1861 the sea-going tonnage in the foreign trade reached 2,642,628, the highest point in the history of the country. During the four years of the civil war the tonnage was reduced to 1,602,583, and since then, owing to the removal of early discriminations in favor of American shipping and the stimulation of iron ship-building by other governments, it has further declined, until in 1891 less than 13 per cent. of the maritime commerce was done by American ships. The registered tonnage in 1891 was 1,005,950, the number of vessels being 1,587, comprising 988,719 tons in the foreign-going ocean trade and 17,231 tons in the whale fishery. Of the commercial tonnage, 236,070 tons were steam vessels and 752,649 were sailing vessels. The enrolled and licensed tonnage comprised 3,609,876 tons documented under Federal laws as engaged in the coastwise trade on the oceans, lakes, and rivers, and 68,933 tons licensed for the fisheries, the total number of vessels being 22,312, of 3,678,809 tons. These make with the registered vessels a total number of 23,890, and a total documented tonnage of 4,684,959 tons. There is an enormous undocumented tonnage, consisting of unrigged barges, flat boats, canal boats, etc., that on the Ohio and its tributaries above Cincinnati, amounting alone to 2,470,547 tons. Of the total documented tonnage, 2,016,264 tons were steam vessels and 2,668,495 sailing or other craft. The documented tonnage on the Northern lakes at the close of the fiscal year 1891 was 1,154,870 tons; on the Western rivers, 308,348 tons; on the Atlantic and Gulf coasts, 2,780,683 tons; on the Pacific coast, 440,858 tons. The documented iron tonnage, including that on the Western rivers, was 741,598 tons. That on the sea-coasts was 554,963 tons, and on the lakes 281,724 tons.

The registered tonnage during 1891 received a net increase of 59,254 tons, and the enrolled and licensed tonnage was increased by 201,007. The documented sailing tonnage increased 62,324 tons, and the steam tonnage 157,175 tons. The number of new vessels built and documented during the year ending June 30, 1891, was 1,384, of 369,302 tons, of which 733, of 144,290 tons, were sailing vessels; 488, of 185,037 tons, were steam vessels; and 163, of 39,975 tons, were barges and canal boats. There were 944 new vessels, of 218,392 tons, built during the year on the Atlantic and Gulf coasts, as compared with 663, of 156,756 tons, in 1890; on the Pacific coast, 122 vessels, of 19,070 tons, as compared with 93, of 12,335 tons; on the Northern lakes, 204, of 111,856 tons, as compared with 191, of 108,526 tons; on the Western rivers, 114, of 19,984 tons, as compared with 104, of 16,506

tons. The iron vessels built during the year measured 105,618 tons, of which 57,989 tons represent vessels built at the lake ports.

CONGO FREE STATE, an independent state in Central Africa, constituted by the general act of the Congo, signed at Berlin on Feb. 26, 1885, which defines the limits of the territory and declares it to be neutral under an international guarantee. The Congo was declared to be an international and neutral river free to the commercial flags of all nations, and police jurisdiction over the stream was confided to an international commission, which was empowered to levy tolls and navigation dues sufficient to defray the expenses. These commissioners were to be appointed by the powers, but only a minority of them named their commissioners, and the commission has never been constituted, its functions being discharged by the officers of the Free State. Leopold II, King of the Belgians, was authorized by the Belgian Parliament in 1885 to assume the title and dignity of Sovereign of the Congo State. The supreme Government, which is composed of the King and heads of departments, has its seat at Brussels. Freedom of trade, which was decreed for the whole basin of the Congo in the original act, the powers reserving for themselves the right of deciding after twenty years whether free entry should be continued, was modified by the International Anti-Slavery Congress at Brussels in 1890. By the act then signed and afterward ratified by all the treaty powers, with the exception of France, Holland, Portugal, and the United States, the Free State was enabled, in order that it might co-operate efficiently in the suppression of the slave trade, to levy certain duties on imports. The Government of the Netherlands was the only one to object to this clause. On Aug. 2, 1889, King Leopold executed a will by which he bequeathed to Belgium all his sovereign rights in the Congo Free State; and on July 3, 1890, the Free State and Belgium entered into a convention by which the former conceded to the latter the right after the lapse of ten years to annex its territories, which on July 31 of the same year were declared inalienable, although a prior convention had given to France a pre-emption claim next to that of Belgium.

The officials employed in the general administration at Boma and in the other districts number 69. The 12 administrative districts are Boma, Banana, Matadi, the Congo Cataracts, Stanley Pool, Kassai, the Equator, Ubangi, the Aruwimi and Welle, Stanley Falls, Lualaba, and East Kwango. The authority of the State is recognized wherever there are missions and factories, and has recently been defied only in the Bolobo country, where it was considered necessary to make an example of the rebellious natives, and in Lukungu, where an agent of the State was killed. The general administration in Africa is directed by a governor-general. The post for a year or two has been vacant, the chief administrative officer being Vice-Governor-General Coquilhat. A judiciary has been organized and a criminal code has been in operation since 1886. For civil and commercial affairs the Belgian law is in force, with certain modifications. The natives are beginning to take their quarrels into the courts for adjudication.

Area and Population.—The area of the Congo State is estimated at 2,091,000 square kilometres, or 804,230 square miles. Estimates of population vary from 12,000,000 to 40,000,000. The number of Europeans in 1885 was 254, of whom 46 were Belgians. At the close of 1889 there were 420, of whom 175 were Belgians; and on Dec. 31, 1890, the number was 744, of whom 338 were Belgians. The mortality among Europeans has declined from 7.08 per cent. in 1886 to 4.80 per cent. in 1890, a result that is ascribed to hygienic progress and experience.

Commerce.—The general export trade in 1887 was valued at 7,667,969 francs; in 1888, at 7,392,348 francs; in 1889, at 8,572,519 francs. In 1890 it leaped to 22,351,980 francs. The special exports, consisting of the produce of the Congo State only, increased from 1,980,441 francs in 1887 to 2,609,300 francs in 1888, and 4,297,544 francs in 1889, and in 1890 to 8,244,199 francs. Special imports in 1890 were valued at 12,720,000 francs. The principal articles in the general export returns for 1889, which include merchandise brought down from regions outside the limits of the State, were ivory of the value of 2,528,000 francs; caoutchouc, 2,137,000 francs; palm kernels, 1,039,000 francs; coffee, 1,169,000 francs; palm oil, 982,000 francs; gum copal, 149,000 francs; ground-nuts, 142,000 francs. In 1889 944 vessels, of 208,246 tons, called at the ports of Banana and Boma.

The Congo is navigable for a distance of 450 miles from its mouth to Vivi. Above that point, for a distance of upward of 200 miles, navigation is interrupted by rapids up to Stanley Pool, beyond which the main stream is navigable as far as Stanley Falls, a distance of 1,000 miles, and many of the tributaries are navigable for long distances. About 7,500 miles of river navigation have already been opened to the steamers of the State and of the missions and commercial houses. The Congo Railroad Company, constituted under Belgian laws with 25,000,000 francs capital, completed in 1888 the surveys for a railroad, 250 miles long, between Matadi, on the lower river, and Leopoldville, on Stanley Pool, the route running parallel with the river at an average distance of 30 miles from the south bank. Construction has been begun, and the road is expected to be open for traffic before the close of 1893.

The Congo State maintains an armed force of eight companies, commanded by European officers, which are stationed at Boma, Lukungu, Leopoldville, on the upper course of the Lukungu, where there are two, one at Bangala, and the other two at the mouth of the Aruwimi and at Stanley Falls. The total number of soldiers is 2,800, besides whom there is a body of 1,000 native militiamen, and at need all the employés and workmen of the Government can be called upon to serve as an auxiliary corps. Belonging to the Government are four steamers on the lower Congo and eleven on the upper course.

Boundary Questions.—The limits of the Congo Free State were fixed by treaty before the scramble for Africa began and the doctrine of effective occupation was laid down. The colonial projects of England and Germany on the east side of Africa, and of England and Portugal in the south, forced the Congo Government to

make efforts not otherwise necessary in the way of exploring and making treaties at the extremities of the region assigned to it in the Congo act. A dispute with Portugal relating to the inclosed territory of Kabinda was referred to the Swiss Federal Council for arbitration.

In another dispute relating to the Muata Yanvo's Empire of Lunda or Ulunda, the Portuguese Government refused to admit the arbitration of Switzerland. This native kingdom, the largest and most populous in the Congo basin, embraces the greater part of the territory between the Kwango and the Kassai, containing nearly 100,000 square miles, with a population of some 2,000,000, ruled by 300 or more chiefs and kings, who are all vassals of the Muata Yanvo, paying tribute in ivory, skins, corn, cloth, and salt to him and to a queen called the Lukoshesha. The Kalunda import textile goods, iron ware, and copper from the south and southeast, and export ivory and slaves, trading with Arab slave-dealers from the east and with the Portuguese on the west. When the Congo State proposed to establish its power in this region and erect a station called the Eastern Kwango, the Portuguese Government objected, asserting that Lunda was within the limits of its sphere. An arrangement was reached by direct negotiation between the two governments whereby the eighth parallel of south latitude forms the southern boundary of the territory of the Congo State as far as its intersection of the Kassai, beyond which it follows the right bank of that river. This divides Lunda, leaving the greater part to Portugal.

A difficulty seemed likely to arise between the Congo State and Great Britain in relation to the right to another powerful native state in the same part of Africa. Msiri's kingdom of Garengeze or Katanga, occupying the country between the Luapala and the Lualaba, the head streams of the Congo, to the west of Lake Bangweolo and Lake Moero, is an elevated region of mountains and table-lands, one of the few spots in the territory assigned to the Congo State that is suitable for European colonization. This country is known to abound in copper, and is supposed to be very rich in gold and other minerals. When the British South America Company undertook to annex to the British Empire the vast region reaching from the Transvaal to the great lakes, relying chiefly on gold discoveries for repayment of the expense, this promising mineral district offered much better returns than the neighboring territory in Nyassaland to which England made good her title. Although it was plainly included in the limits of the Congo State secured by the general act of the Congo, Joseph Thomson and other British emissaries visited the country in 1890 and 1891 for the purpose of acquiring territorial treaty rights for what they were worth, and, what was of more importance, mineral rights that would render the prior claim of the Congo State of little value and lead to the eventual transfer of the country to Great Britain. British activity compelled the Congo Government to send agents to the same district. A Belgian expedition was sent out in the summer of 1890 to reach Katanga by the Lomami river route. In connection with it, in order to forestall the British South Africa Company, an Anglo-Belgian company was formed, under the pat-

ronage of the King, for working the mines of Katanga and the development of the whole region above Riba Riba, on the Lomami, including Manyema, Urua, and Katanga. The abandonment of the South Africa Company's pretensions to the Portuguese territory north of the Zambesi lessened the immediate danger of a British annexation of this region. The Katanga Company, at least one half of whose shares must be held by Belgians, undertakes within three years to place three steamers on the upper Congo, to establish three or more new stations, and to organize a force of police. The Congo State concedes to the company one third of the public lands in that district, with right to work the minerals for ninety-nine years. Commander Cameron acted for the English promoters, who furnished one third of the capital of 3,000,000 francs. The first expedition, led by M. Delcommune, was followed in 1891 by one equipped by the Katanga Company, the leader of which, Lieut. Lemarinel, induced Msiri, whose refusal to treat a few months before with Mr. Sharpe, the British South Africa Company's agent, had saved the Congo State from a vexatious boundary dispute, to acknowledge the suzerainty of the Free State. Captain Stairs led a well-equipped expedition from the east coast across German territory for the purpose of taking actual possession of the country on behalf of the Anglo-Belgian Katanga Company and the Congo Free State.

Finance and Taxation.—The budget of the Congo State amounts at present to about 4,000,000 francs a year. The King of the Belgians has made great sacrifices to institute and maintain the State, and recently contributions have been made by the Belgian treasury in the shape of a loan of 25,000,000 francs authorized by the Chamber, 5,000,000 francs to be advanced immediately after the passage of the bill on July 3, 1890, and 2,000,000 francs a year for the next ten years, at the end of which Belgium can annex, if she will, the Congo State with all its possessions. At no time has the State been able to pay more than one third of its expenses out of the taxes and imposts collected. The protection and facilities for trade afforded by the Congo Free State have attracted merchants of various nationalities to its dominions and caused a wonderful expansion of the export commerce. The progress thus achieved has entailed a corresponding increase in the expenses of administration and police. The whole cost was sustained by the gratuitous sacrifices of King Leopold until it began to exceed his means, when a partial monopoly of the ivory trade was established and other resources were worked for the benefit of the Government. As the merchants complained of this the ivory monopoly was abandoned on condition that house and land taxes, export duties, and duties on exports should be substituted. These taxes were necessarily high. The costs of the Government were greatly enhanced by the efforts made to suppress the slave trade, which was one of the main objects for which the State was founded. Enemies of the Free State alleged that the officials of the Free State were themselves slave-holders or employers of slave labor. As slavery is the custom of Africa, there is often no other labor to be had, as the English and Germans have discovered in their attempts to exploit the east-

coast region. Whatever abuses are practised by individuals, the system countenanced by the authorities is that followed also in British East Africa, of hiring slaves for fixed terms from their masters and allowing them wages, to be applied to buying their freedom. Slave raids are checked wherever the authority of the Congo State is exercised, at one time as far east as Stanley Falls. After that station was abandoned the co-operation of Tippoo Tib was secured at the time of the Stanley expedition for Emin Pasha's relief. More recently Lieut. Deschamps, meeting a band of 7,000 slaves on the River Sankuru, put them to flight with 200 trained native soldiers and released 1,000 slaves. The ultimate results of Emin's rule in the equatorial provinces and of Stanley's expedition for his relief depend on future developments. Egypt still asserts her claim, England tacitly includes it in her sphere of activity, Germany by the aid of accomplished facts may establish a right, and Belgium has aspirations based upon its co-operation in the Stanley expedition. Activity in the northeastern part of the Free State's territory, where so many rivals were seeking to extend their influence, was a matter of necessity. On the western side of the continent the fourth parallel of north latitude was fixed as the northern boundary of the Congo State by agreement with France. The region of the Welle, which is the upper course of the Mobangi, may be claimed as Hinterland by either the French, the Germans, or the Congo State. North of that river, in 5° of north latitude, Capt. van Gele in 1890 made a treaty with the powerful chief Bangasso, who rules on the northern bank of the Mbumo tributary of the Mobangi. A subsequent expedition, consisting of 300 soldiers and 8 European officers, with 5,000 carriers, was dispatched under Capt. van Kerkhoven, whose object was to ascend the banks of the Welle, and penetrate beyond its source into the Nile basin and, if possible, to reach the Bahr-el-Gazelle or Lado, on the White Nile. This considerable force got under way in March, 1891. In the early summer an Arab slave convoy was defeated between the Aruwimi and the Welle, and 2,000 slaves were set free. Capt. Ponthies led an expedition to the upper Himbiri Roubi, with the object of proceeding thence to the northward, erecting a line of fortified camps as a bulwark against Arab slave raiders. He had several encounters with parties of these that he met.

The cost of these distant expeditions, the necessity under which the Free State was placed of engaging in the scramble for Africa, and the concomitant work of suppressing the slave trade, together with the growing expense of protecting commerce, placed the State in a difficult financial position. When an export tax of 10 per cent. was levied on ivory from the banks of the Congo, of 25 per cent. on ivory from elsewhere, and of 10 per cent. on rubber, in addition to heavy taxes on houses and building land, and a duty of from 10 to 30 francs for every servant, the Dutch merchants who had settled on the Belgian bank of the Congo threatened to go over to the Portuguese bank to escape a portion of the taxation. To relieve the State and enable it to fulfill its international obligations, the powers at the Brussels conference authorized it

to impose certain import duties for a limited term of years. Under the terms of the act the sale of spirits was forbidden where their use has not yet been introduced—that is, beyond the Inkissi river and in the whole of the upper Congo district. The Congo State desired also to place heavy restrictions on the importation of fire-arms and ammunition, and to discourage the sale of spirits in the zone where the Brussels conference had placed no interdiction. To this end high license duties were imposed in 1890, which were repealed, however, the abolition of licenses to take effect on Jan. 1, 1892, because Portugal had not supported this action with a similar measure. Personal effects and agricultural and industrial implements were still to be admitted free, and the duties on other articles were not high, but they would be sufficient to allow the more burdensome of the existing taxes to be lightened and would relieve King Leopold of a part of his contributions, although he expected still to have from one third to one half of the cost of administration to pay. The ratifications of the Brussels act were to be exchanged on July 2. After a full discussion of the import and export duties in the French Chamber, the proposed scheme failed to receive the assent of that body, and the French Government obtained an extension of the term allowed for ratification, which most of the powers had given in due time. The United States Government, being unable to act before the meeting of the Senate, likewise obtained an extension. The French Chamber finally ratified the convention on obtaining a modification of the ivory duty. From Feb. 9, 1891, the duty on ivory was fixed at the rates established—that is, 10 and 25 per cent. *ad valorem*, and that on rubber at 10 per cent.—and the direct and personal taxation was lowered to one third of the former rates. This was in pursuance of a protocol signed by France, Portugal, and the Congo State, by which they arranged between themselves to impose a duty of 10 per cent. on salt, fire-arms, and ammunition imported on the west coast of Africa, and of 6 per cent. on other merchandise. The United States also signed a separate agreement admitting the establishment of import duties. As soon as ratifications were exchanged between the other signatories of the antislavery declaration and act of the Brussels conference, the Congo Government fixed a tariff to go into force on Sept. 1. French merchants resisted the imposition of different duties on ivory so effectually that the King's representatives agreed to abolish the separate tariff zones and levy a uniform 10-per-cent. duty. The other tariffs were the same that had been agreed upon between the three powers having possessions on the west coast in the Congo region.

CONGREGATIONALISTS. I. Congregationalists in the United States.—The following is a summary of the statistics of the Congregational churches in the United States as they are given in the "Congregational Year-Book" for 1891: Number of churches, 4,817; of ministers, 4,619; of members, 506,832; of families, 341,043; of additions during the year by confession of faith, 27,592; of baptisms, 1,255 of adults and 9,892 of infants; of members of Sunday schools, 645,976; of Young People's Societies of Christian Endeavor, 2,540, with 122,204

members. Amount of benevolent contributions, so far as reported from 4,042 churches: for foreign missions, \$349,733; for education, \$233,412; for church building, \$169,513; for home missions, \$468,042; for the American Missionary Association, \$163,795; for Sunday schools, \$50,733; for the New West Education Society, \$43,314; for minister's aid, \$19,173; other contributions, \$772,446; for home expenditures (4,094 churches), \$6,091,221. Of the churches, 3,468 are recorded as "supplied" and 1,349 as vacant or supplied by licentiates. Of the ministers, 3,062 are in pastoral work and 1,537 are without charge.

The seven theological seminaries return 46 professors, 35 instructors or lecturers, 9 resident licentiates or fellows, 33 members of advanced or graduate classes, and 549 undergraduate students.

The Congregational Sunday-school and Publishing Society, Chicago, received, during 1890, \$57,748, and expended \$57,841.

The New West Education Commission reported in 1890, 32 schools in Utah and New Mexico, with 75 teachers, 3,284 pupils, of whom 967 were Mormons and 212 were Mexicans, and 1,900 pupils in Sunday schools. Its income for the year had been \$75,301 and its expenditures \$79,629, and it was indebted, on account of buildings, \$9,328.

The library of the American Congregational Association, Boston, contains 29,403 volumes, 55,960 pamphlets, and 34,086 unbound numbers of periodicals.

American Congregational Union.—The thirty-eighth annual meeting of the American Congregational Union was held in New York city, Jan. 8. The Rev. William M. Taylor, D. D., LL. D., presided. The receipts of the society during the year had been \$155,530, \$18,724 having been received for parsonages. One hundred and twenty-eight churches had been aided with \$117,546, whereby \$465,663 worth of property was brought into service; while the payment of \$16,470 to build 47 parsonages had brought property to the value of \$51,769 into use. The total amount of receipts since the first institution of the Albany fund in 1852 and of the Forefathers' fund in 1856, and including those funds, had been \$2,041,623, of which \$109,527 had been received for the building of parsonages since 1882. The Union had since 1864 loaned \$194,284 to 212 churches, of which \$65,840 had been refunded, while some had made contributions more than equivalent to the grants they had received. The loan accounts of 53 of these churches had been closed. In the department of parsonage loans, \$90,938 in all had been loaned to 270 churches, 51 of which had paid up.

American Home Missionary Society.—The sixty-ninth annual meeting of the American Home Missionary Society was held in Saratoga Springs, N. Y., June 2. The executive committee reported that \$460,999 had been received during the year from legacies and contributions, and \$174,181 had been reported by the auxiliaries as received and expended in their respective fields; the expenditures had been \$802,566, and had been met by the current receipts, balances, and loan from bank. Nineteen hundred and twelve missionaries had been employed in 45 States and

Territories, serving 3,270 congregations and missionary districts, of whom 5 had been commissioned to congregations of colored people, and 191 had preached in foreign languages, namely: 10 to Welsh congregations, 38 to German, 103 to Scandinavian, 24 to Bohemian, 3 to Polish, 2 to Indians, 8 to French, 3 to Mexicans, and 1 to Italians. Two hundred and ninety-two new Sunday schools had been organized during the year; and the whole number of Sunday schools under the special care of the missionaries was 2,295, in which were 154,722 pupils. The additions on confession of faith numbered 7,244. Two hundred and twelve churches had been organized, and 56 mission churches had become self-supporting; 171 houses of worship had been completed, and 25 were in course of erection; 12 chapels had been built, and 72 parsonages provided; and 145 men connected with the mission churches were preparing for the ministry. The women's auxiliary societies had contributed \$41,353 to the treasury of the society. Besides the receipt and expenditure of money, the society had distributed \$66,964 worth of supplies to missionaries in the field. A new constitution, prepared and recommended by the executive committee, was amended and adopted. Resolutions were adopted emphasizing the importance of mission work in cities, in view of the fact that the frontier was rapidly moving "from Minnesota to Massachusetts"; advising the establishment of a woman's society in every church; urging that Christian Endeavor Societies and Sunday schools be trained to bear their part in aid of evangelization; and requesting the commissioners thereof to close the doors of the Columbian Exhibition on Sunday.

American Board.—The eighty-first annual meeting of the American Board of Commissioners for Foreign Missions was held in Pittsfield, Mass., Oct. 13. The total receipts of the society for the year had been \$824,812, while the direct expenditures in the mission fields had been \$767,439. Of the receipts, \$484,463, or \$66,542 more than in the preceding year, had been derived from donations, \$184,844 from the three Woman's Boards, and \$206,458 from legacies; the advance in the contributions through the Woman's Boards having been \$15,638, and in the amount received from legacies \$6,656 over those of the preceding year. Of the Swett bequest, \$42,000 had been spent to meet special calls in Japan and China; of the Otis bequest for new missions, \$80,908 had been spent in Africa, China, Japan, and Mexico.

The following is the general summary of the reports from the missions: Number of missions, 21; of stations, 97; of out-stations, 1,136; places for stated preaching, 1,287; average congregations, 70,329; number of ordained missionaries (11 being physicians), 182; whole number of laborers sent from this country, 538; number of native pastors, 204; total of native laborers, 2,648; total of American and native laborers, 3,186; number of churches, 410; of church members, 38,226; added during the year, 3,554; whole number from the first, as nearly as can be learned, 118,507; number of theological seminaries and station classes, 20; of colleges and high schools, 62; number of boarding schools for girls, 54; of common schools, 980; of pupils in common

schools, 37,750; whole number under instruction, 46,403; amount of native contributions, so far as reported, \$114,537.

The board was in control of permanent funds to the amount of \$372,655. A committee was appointed at the meeting to obtain increased subscriptions to the missionary funds to the amount of \$100,000, and \$50,000 were pledged to that purpose before adjournment. A committee was appointed to urge upon the Government the claims of the mission churches in certain of the Pacific islands for restitution for outrages committed against them by the Spanish authorities. A resolution was adopted favoring the closing of the Columbian Exhibition at Chicago on Sunday. A letter was received from the president of the board, the Rev. R. S. Storrs, D. D., expressing his desire not to be continued longer in that office. He said that he had served in it for four years in obedience to the successive commands of the board, but it now seemed to him that it was his clear right to ask to be relieved from the duties of the office. The year just closing had been "one of uninterrupted harmony in the councils of the board and of its Prudential Committee; of the largest contributions ever made to its treasury in the customary annual donations and legacies; of inspiring progress in its foreign work. So far as I can see, no threatening cloud appears in its sky. The progress steadily made in recent years along definite and accepted lines of administration offers, in my judgment, a sure guarantee of future prosperity. It is therefore a fitting time for me to ask, and for you to consent, to have another name substituted for mine in connection with the public leadership of this great institution." Dr. Storrs was, nevertheless, unanimously re-elected, and accepted the result as representing the cordial feeling of the whole board that he had been entirely fair, candid, and courteous in his treatment of its members. The other officers of the board were re-elected.

American Missionary Association.—The forty-fifth annual meeting of the American Missionary Association was held in Cleveland, Ohio, beginning Oct. 22. The executive committee reported that the total receipts of the society for the year had been \$430,974 and the expenditures \$430,355, in addition to which an income had been received from the Daniel Hand fund of \$53,534. The extended and increasing work accomplished by this fund had benefited thousands of the needy people for whom it was given, and was opening new channels of usefulness to those who in their turn were thus enabled to elevate their race. The year had been one of general religious interest, and had been remarkable in the thoroughness of the educational work that had been done. The churches, though among the poor, had raised \$28,853 toward their own support, and had contributed \$3,465 to missionary purposes. The educational work in the South included 6 chartered institutions, 23 normal and graded schools, and 51 common schools—80 schools in all—with 373 instructors and 13,845 pupils. A new school had been undertaken at Cappahosic, Va., and a large educational institution was beginning at Orange Park, Fla. The "mountain work" was growing more rapidly than means were afforded for its sup-

port, so that while enlarged in some directions it had been necessary to contract it in others. It was represented in an educational aspect by the academy at Williamsburg, Ky., and schools at Blowing Rock and the Saluda Seminary in North Carolina. Among the Indians there were 9 churches, with 96 members, 85 missionaries and teachers, 887 pupils, and 1,344 in Sunday schools. The missionaries in Alaska were in charge of a school of 300 pupils. The Normal Training School at Santee had in twenty-one years furnished instruction to nearly a thousand persons. The work among the Chinese included 17 schools, 37 missionaries, and 1,054 pupils. A historical sketch of the association was read by Secretary Striby, who showed that it originated in 1846 by the co-operation of a number of small organizations which were endeavoring to carry on a missionary work free from all connection with churches in which slaveholding was tolerated. It had, however, never been in affiliation with that party of the anti-slavery men who denounced the Church and the Constitution of the United States. A committee appointed at the preceding meeting to consult with the executive officers respecting the increasing needs of the association and the adaptation of its present methods to the enlarged conditions of its work presented a report, which was adopted. It recommended the adoption of a policy looking forward to the endowment of the educational institutions and to leading them up to self-dependence; efforts to extend the influence of Congregationalism, and awaken an enthusiasm for self-government and self-support; and the recognition of the right in the missionaries of immediate appeal to the executive committee, and of their unabridged freedom to correspond with co-operating and auxiliary societies.

II. Congregationalists in British North America.—In the Dominion of Canada and the island of Newfoundland there are two Congregational Unions—those of Ontario and Quebec and of Nova Scotia and New Brunswick. They return together 128 churches, 69 preaching stations, 95 ministers, and 10,689 members. The Congregational Union of Ontario and Quebec reported at its meeting in Guelph, June 10, 63 pastors in office, 117 preaching stations on the Lord's day, an average attendance on religious services of 16,593, a total of 25,896 persons under pastoral care, 9,079 members, 104 Sunday schools, with 1,175 officers and teachers and 9,783 pupils on the rolls, 653 baptisms during the year of adults and 62 of infants, 805 persons admitted during the year on profession, 105 church edifices valued at \$740,700 and providing 33,039 sittings, and 29 parsonages valued at \$43,950. Amount raised for all purposes, \$142,603, of which \$2,713 were for foreign missions. The Rev. Hugh Pedley, of Manitoba, presided at the meeting of the union. In reply to memorials from the Knights of Labor, the Single Tax Association, and other societies, the body expressed its sympathy "with every effort that harmonizes with Christian principle in the uplifting of the suffering poor," and its willingness "to co-operate with them in any direction not inconsistent with the teaching of Jesus Christ, believing that with the growth of true religion there will be also the sure progress of

the people." Another resolution urged legislative representatives to stand firm in demanding that Parliament enact a bill for immediate prohibition of the liquor traffic unassociated with other issues.

The Congregational Union of Nova Scotia and New Brunswick reported 22 churches, 13 ministers, 1,078 members, 3,604 persons under pastoral care, with an average attendance on worship of 2,190, 25 Sunday schools with 147 teachers and 1,061 registered pupils, 21 persons admitted during the year on profession, 18 adults and 37 infants baptized, 23 church buildings valued at \$65,100, and 11 parsonages valued at \$15,900. Amount of benevolent contributions estimated at \$10,939. The Union met at Kingsport, Nova Scotia, July 10. The Rev. J. W. Cox was elected chairman for the year. Resolutions were passed approving the Young People's Societies of Christian Endeavor, and advising ministers and members of churches to co-operate with the friends of prohibition to procure legal enactment thereof with provision for enforcement.

The Canada Congregational Missionary Society is in its fifty-second year. It received during the year ending in June, 1891, \$10,274, and returned four trust funds amounting to \$33,090. It sustains home missions at many points in the provinces of British Columbia, Manitoba, Ontario, and Nova Scotia.

The Canadian Congregational Foreign Missionary Society, which completed its tenth year at its anniversary in June, had received during the year \$2,557. It sustained three missionaries in the Portuguese province of Angola, West Central Africa, who are laboring in co-operation with the American Board. The Woman's Board received \$1,829, \$1,200 of which were for foreign work. The Woman's Missionary Society of Nova Scotia and New Brunswick, which co-operates with the Canada Congregational Missionary Society, received in 1890-'91 \$329. The Newfoundland Congregational Home Missionary Society co-operates with the Colonial Missionary Society in sustaining missionary churches at four of the outposts.

The Congregational Provident Fund Society returned assets of \$14,589 in its Widows' and Orphans' branch. It received \$1,157, and paid to annuitants \$780. On the Retiring Ministers' account, its assets were \$5,843, and its receipts and disbursements had been \$1,315. The Congregational Publishing Company publishes a weekly journal and a year-book, and manages a Sunday school and book room.

III. British Congregationalists.—The whole number of churches, branch churches, and missions in Great Britain, Ireland, and the islands of the British seas (not including mission stations in Scotland and Ireland, but including the churches of the Evangelical Union of Scotland), is given in the reports for 1891 as 4,821 against 4,817 in 1890. The Congregational Union of England and Wales returns a total seating capacity in its 4,589 churches and mission stations for 1,647,500 persons. The Congregational Union of Scotland returns 97 churches and 104 ministers, 16 of whom are without pastoral charge; that of Ireland, 29 churches, 29 ministers, of whom 3 are without charge; and 95 preaching stations, at which the

ministers are assisted by 46 lay preachers; and the Congregational Union of the Channel Islands, 9 churches, 2 branch churches, and 5 ministers in charge.

About 400 churches in Sweden and Norway, with a membership of 100,000, are formed on the Congregational model. There are also Congregational churches in France, Russia, Germany, Spain, and Belgium. With the McAll mission are connected 129 stations in Paris and different cities and towns of France, Algeria, and Corsica, which are assisted by contributions from Great Britain, the United States, and Canada.

In Australia and New Zealand are 7 Congregational Unions, 173 churches, 156 pastors, and 59 resident ministers without pastoral charge.

Fifty-seven Congregational churches, with 7,000 members, are returned in the Sandwich Islands. The Theological Institute at Honolulu educates ministers for both the home and the foreign field.

London Missionary Society.—The ninety-seventh annual meeting of the London Missionary Society was held in London, May 13. The report embodied a review of the last ten years of the work of the society, from which it appears that the income in 1881 was £108,247; in 1891, £114,293. It reached the highest point, £125,250, in 1889. In 1888 it was £124,860, and in 1890, £121,455. The society was now in debt £12,597. The number of missionary agents was 44 higher than in 1881. In ten years 139 new missionaries had been sent out, and 95 names had dropped, 27 of them by death. There were now 13 more ordained missionaries than in 1881, but 10 fewer than in 1871.

The Ladies' Association (missionary) had received £7,276, or £582 more than in 1890, and employed 39 women as agents, against 36 in 1890.

Congregational Union.—The annual meeting of the Congregational Union of England and Wales was held in London, beginning May 10. The Rev. Dr. Herber Evans was elected chairman. Notice was taken of the report of the death of the secretary of the Union, the Rev. Dr. Hannay, and the progress of the effort to erect a suitable memorial of him. The arrangements had been made for the International Congregational Council, to be held in July, and the prospect was good for a satisfactory meeting. The publication department had had a prosperous year. The receipts of the Union had been £10,751, and a credit balance of £602 was returned. In view of the necessity of choosing a new secretary, a special report on the nature and duties of the office was presented by a sub-committee of the General Committee. It gave rise to discussion in which the opinion seemed to prevail that great deliberation should be exercised in the choice of a permanent secretary, and fuller consideration should be given to the duties and responsibilities of the office; after which a resolution was unanimously adopted, affirming the principle that any person appointed secretary of the Union should be a minister holding a leading position in the churches, and referring all matters relating to the duties of that office to a special committee which should report, with a recommendation, at a special business meeting to be convened at the next au-

turnal session of the Union. The assembly, while expressing gratification at the introduction of the bill for providing free education in public elementary schools, urged that the grant for the purpose should appear on the annual estimates, and that increased grants of public money to denominational schools should be conditional on their being subjected to the control of managers appointed by the public; and that there should also be unsectarian schools, managed by school boards, within reach of the children of every locality. A council of secondary education was provided for, whose duty it shall be to attempt to secure the recognition and operation of the principle of religious equality in all the public schools and throughout all departments of the secondary and higher education; to endeavor to secure the liberal and impartial administration of the local grammar schools, and aid in the creation of a public spirit favorable to their free government and efficient management; to promote the organization, equipment, and standard of attainment of non-conformist schools; and to seek the co-operation of the representatives of other free churches in carrying out its objects. The special committee appointed at the annual meeting of 1890 to consider what measures might be taken by the churches to increase their power in dealing with prevalent religious indifference reported, recommending the appointment of a special social questions committee, the principal function of which should be to give information, advice, and other assistance in furtherance of upward social movements. Regarding the measures pending in Parliament concerning marriages in non-conformist places of worship as inadequate for their intended purposes, the meeting expressed the opinion that a public inquiry into the operation of the present marriage laws should precede further attempts at legislation, and that early steps should be taken for obtaining information and eliciting non-conformist opinion on the subject. The assembly thankfully recognized the resolution of the House of Commons condemning the opium-licensing system in India as morally indefensible, and urged that the license be abolished, except as to the legitimate demand for medical purposes.

The autumnal meeting of the Union was held at Southport, beginning Oct. 12. The most important business concerned the election of a secretary to succeed the Rev. Dr. Alexander Hannay, deceased, in connection with which the committee appointed for the purpose in May presented a paper on the nature and duties of the office. The paper declared that the secretary of the Union should clearly recognize that Congregationalism is truly Catholic; that he should have a perception of the natural unity of all the denominational interests, and, without forcing anything, should carefully and wisely inquire how far they can be legitimately consolidated; that he should have faith in the elasticity and progressiveness of Congregationalism, and should always regard the revision of the Constitution of the Union as a possible contingency; that he should be in sympathy with all the churches, should give his whole time to the Union and be paid correspondingly; and that he should be

interested in public questions affecting the welfare of the community, such as those of religious equality, temperance, education, peace, and social reforms generally. The report was adopted, and the Rev. Dr. Alexander Mackennal was chosen Secretary. He subsequently declined to accept the office. A resolution was adopted, to be forwarded to representative bodies of other free churches, inviting a congress of free churches, with a view to the cultivation of closer relations between them. It assumed that those churches had not only common principles to maintain and common interests to guard, but they had a common work to do, which was seriously hampered by the want of a better understanding among themselves. There was a wide-spread and growing conviction that sectarian competition was a disaster to all parties engaged in it, and a grievous dishonor to the Lord. Despite the differences in the extent and grounds of their non-conformity, it was increasingly felt that the various free churches were united by spiritual affinities and interests which were deeper and stronger than any theological or ecclesiastical diversities. The assembly was of the opinion that it was desirable that opportunity should be afforded for the development and manifestation of this essential unity.

International Congregational Council.—The International Congregational Council met in London, July 13. This was the first time that representatives of the Congregational or Independent churches from all quarters of the earth had met in a general conference since their origin. The preliminary steps taken by the Congregational bodies of Great Britain and America to the assembling of the Council are related in the volumes of the "Annual Cyclopædia" for 1889 and 1890. The Council was composed of 300 delegates, of whom 100 were from Great Britain, 100 from America, and 100 from Wales, Scotland, Ireland, the colonies, and other countries. Previous to the opening of the meeting a breakfast was given to the delegates by the committee of the Liberation Society. The Rev. Robert W. Dale, D. D., of England, presided over the sessions. The address of welcome to the delegates was made by the Rev. John Brown, D. D., late chairman of the Congregational Union of England and Wales. The proceedings of the Council consisted in the reading of papers and discussions of subjects concerning the religious life and the aspects and relations of Congregationalism. The opening sermon was preached by the Rev. E. P. Goodwin, D. D., of Chicago. The president's address was on "The Divine Life in Man." The first subject to be discussed was "Domestic Congregationalism; the Importance in the Churches of the Congregational Idea of the Church; Pastoral Oversight and Actual Guidance by Church Officers of Members in their Work"; under which the papers were on "The Obligation of Personal Service in Christian Work," by the Rev. H. Arnold Thomas, of Bristol; "The Service of the Young," by the Rev. Dr. Dunning, of Boston, Mass.; "Guilds," by Robert F. Horton, of Hampstead; and "The Society of Christian Endeavor," by Mr. Nehemiah Boynton, of Boston, Mass. The "Present Direction of Theological Thought in Congregational Churches" was described by President Simon, of Edinburgh, for

Great Britain; Prof. L. F. Stearns, of Bangor, Me., for America; and the Rev. Evan Jenkins, for Wales. On "The Economy of Congregationalism," the Rev. Dr. A. H. Quint spoke of "The Place of American Congregational Councils"; the Rev. A. H. Bradford, of Montclair, N. J., on "Doctrinal Conditions of Church Membership"; the Rev. A. H. Ross, D. D., of Michigan, on the "Effective Organization of Congregationalism"; the Rev. Thomas Greene, of Ashton-under-Lyne, on "Doctrinal Schedules in Trust Deeds"; and the Rev. William H. Moore, of Hartford, Conn., on "Church Statistics." "The Place of Congregationalism in the Making of Great Britain, of New England and the United States, and of the British Colonies" was considered by the Rev. J. Guinness Rogers, of London, the Rev. B. M. Fullerton, of Waltham, Mass., and the Rev. Dr. Jefferies, of Australia. The subject of the third day's discussions was "Congregationalism in its Relations to the Nation." The papers were on "Home Missions," by the Rev. Dr. J. H. McLean, of California; "The Method of meeting the Wants of Growing Towns, the Needs of Scattered Populations, and Decaying Districts," by the Rev. W. F. Clarkson, of London, and the Rev. Hugh Pedley, of Manitoba; "The Attitude of the Churches toward Aggressive Agencies Outside of and Independent of the Churches," by the Rev. Alfred Rowland, of London; "Congregationalism as affected by the Relations between Church and State" in the United States, by President Cyrus Northrup; in England, by the Rev. Dr. Albert Goodrich; in Wales, by the Rev. Dr. Herber Evans; and in Australia, by the Rev. Dr. L. I. D. Bevan. In a conference on "The Churches and Social Ethics," "The Attitude of the Church to the Social Movements of the Time" was presented by the Rev. George Gladstone, of Glasgow; "The Relations of Labor and Capital," by Dr. W. Gladden, of the United States, and Mr. Ben. Tillet, of England; "The Land in its Relations to National Prosperity," by Mr. Albert Spicer; and "Laws respecting the Sale of Spirituous Liquors," by the Rev. Dr. Richard Cordley, of Kansas. The question "What have the Churches gained and lost in Spiritual Influence?" was discussed in the divisions: "Through Changes that have taken place in Doctrinal Beliefs," by the Rev. Dr. E. R. Conder, of London; "Through Changes in the Type of Social Piety," by the Rev. W. Hewgill, of Farnworth, England; and "What is lost through the Defective Realization of the Ideal of the Church," by the Rev. G. S. Barrett, of Norwich. An extemporaneous discussion followed the reading of these papers. In a conference on "The Training of Ministers," Prof. Fisk, of Chicago, described the method of the American seminaries, and Prof. Vaughan Price, of New College, the English system. The "Federation of English-speaking Peoples for International Arbitration, Universal Peace, and Furtherance of National Righteousness" was discussed by the Rev. F. Herbert Stead and the Rev. Dr. F. Newman Hall, of England, and Ex-Senator J. W. Patterson, of New Hampshire. Concerning "Congregationalism and the Church Catholic," papers were presented by the Rev. Drs. Allon, of London, and W. M. Taylor, of New York, the Rev. James Stark, of Aberdeen, the Rev. S. B. Hand-

ley, of Stafford, and voluntary speakers. "The Lord's Day in its Relation to the Churches" was the subject of a paper by the Rev. Dr. Arthur Little, of Dorchester, Mass.; "Sacerdotalism and Modern Unbelief," that of one by the Rev. Dr. James Brand, of Oberlin, Ohio; and "Congregationalism and the Church Catholic," of one by the Rev. Dr. Fairbairn, of Oxford. On the last day of the session "The Claims of Congregational Communities throughout the World on the Sympathy and Aid of the Congregational Churches in England and America" were presented by S. N. Jackson, M. D., of Kingston, Ontario, for Canada; Mr. Josiah Mullins, of Sydney, N. S. W., for Australia; the Rev. W. Mann, of D'Urban, Natal, for Africa; and the Rev. Henry A. Stimson, of St. Louis, for churches on the American frontier and for the African missions. Pastor Moore, of Dordrecht, spoke in behalf of the Congregationalists of the Netherlands; the Rev. A. W. Clark, of Prague, for those of Bohemia; and Mr. Deacon Holmes, of Montclair, N. J., represented the American Missionary Association. The Rev. R. Wardlaw Thompson spoke of the method of dealing with communities that have passed out of heathenism, but have not yet acquired a steadfast Christian moral sense and purpose and power. Dr. N. G. Clark, Secretary of the American Board, introduced the subject of "Congregationalism and the Great Commission," and was followed by representatives of the missionary societies. A valedictory address was delivered by the Rev. Dr. Joseph Parker. Provision was made for holding a second meeting of the Council in the United States, for which purpose the National Congregational Council of the United States was requested to issue a call at its meeting in 1892, naming such year for the meeting as it might decide upon. Besides memorial excursions to Serooby and Plymouth, places associated with the history of the American Pilgrims, the American delegates to the Council, with some of the others, visited Leyden, Holland, where a tablet erected to the memory of the Rev. John Robinson, pastor of the Church of the Pilgrims, was unveiled. The tablet, which is of bronze, bears the following inscription:

The Mayflower, 1620. In memory of Rev. John Robinson, M. A., pastor of the English church worshiping over against this spot, A. D. 1609-1625, whence at his prompting went forth the Pilgrim Fathers to settle New England in 1620. Buried under this house of worship, 4 Mar. 1625; aet. XLIX years. In memoria aeterna erit justus. Erected by the National Council of the Congregational Churches of the United States of America. A. D. 1891.

A presentation address committing the tablet to the care of the Ecclesiastical Commissioners of Leyden was made by the Rev. Charles Ray Palmer. The charge was accepted by the burgomaster in behalf of the commissioners, and an address was made by Prof. Kuenen, who called attention to the fact that Mr. Robinson had been a member of the University of Leyden.

CONGRESS OF THE UNITED STATES. The second session of the Fifty-first Congress began on Dec. 1, 1890. The annual message of the President was sent in, and read as follows:

To the Senate and House of Representatives:

The reports of the several executive departments which will be laid before Congress in the usual course will exhibit in detail the operations of the Govern-

ment for the last fiscal year. Only the more important incidents and results, and chiefly such as may be the foundation of the recommendations I shall submit, will be referred to in this annual message.

The vast and increasing business of the Government has been transacted by the several departments during the year with faithfulness, energy, and success. The revenues, amounting to above \$450,000,000, have been collected and disbursed without revealing, so far as I can ascertain, a single case of defalcation or embezzlement. An earnest effort has been made to stimulate a sense of responsibility and public duty in all officers and employes of every grade, and the work done by them has almost wholly escaped unfavorable criticism. I speak of these matters with freedom because the credit of this good work is not mine, but is shared by the heads of the several departments with the great body of faithful officers and employes who serve under them. The closest scrutiny of Congress is invited to all the methods of administration and to every item of expenditure.

The friendly relations of our country with the nations of Europe and of the East have been undisturbed, while the ties of good will and common interest that bind us to the states of the Western Hemisphere have been notably strengthened by the conference held in this capital to consider measures for the general welfare. Pursuant to the invitation authorized by Congress, the representatives of every independent state of the American continent and of Hayti met in conference in this capital in October, 1889, and continued in session until the 19th of last April. This important convocation marks a most interesting and influential epoch in the history of the Western Hemisphere. It is noteworthy that Brazil, invited while under an imperial form of government, shared as a republic in the deliberations and results of the conference. The recommendations of this conference were all transmitted to Congress at the last session.

The International Marine Conference, which sat at Washington last winter, reached a very gratifying result. The regulations suggested have been brought to the attention of all the governments represented, and their general adoption is confidently expected. The legislation of Congress at the last session is in conformity with the propositions of the conference, and the proclamation therein provided for will be issued when the other powers have given notice of their adhesion.

The conference of Brussels, to devise means for suppressing the slave trade in Africa, afforded an opportunity for a new expression of the interest the American people feel in that great work. It soon became evident that the measure proposed would tax the resources of the Congo Basin beyond the revenues available under the general act of Berlin of 1884. The United States, not being a party to that act, could not share in its revision, but by a separate act the independent state of the Congo was freed from the restrictions upon a customs revenue. The demoralizing and destructive traffic in ardent spirits among the tribes also claimed the earnest attention of the conference, and the delegates of the United States were foremost in advocating measures for its repression. An accord was reached, the influence of which will be very helpful and extend over a wide region. As soon as these measures shall receive the sanction of the Netherlands, for a time withheld, the general acts will be submitted for ratification by the Senate. Meanwhile negotiations have been opened for a new and complete treaty of friendship, commerce, and navigation between the United States and the independent State of the Congo.

Toward the end of the past year the only independent monarchical government on the western continent, that of Brazil, ceased to exist, and was succeeded by a republic. Diplomatic relations were at once established with the new Government, but it was not completely recognized until an opportunity had been afforded to ascertain that it had popular approval and

support. When the course of events had yielded assurance of this fact, no time was lost in extending to the new Government a full and cordial welcome into the family of American commonwealths. It is confidently believed that the good relations of the two countries will be preserved, and that the future will witness an increased intimacy of intercourse and an expansion of their mutual commerce.

The peace of Central America has again been disturbed through a revolutionary change in Salvador, which was not recognized by other states, and hostilities broke out between Salvador and Guatemala, threatening to involve all Central America in conflict and to undo the progress which had been made toward a union of their interests. The efforts of this Government were promptly and zealously exerted to compose their differences, and through the active efforts of the representative of the United States a provisional treaty of peace was signed Aug. 26, whereby the right of the Republic of Salvador to choose its own rules was recognized. Gen. Ezeta, the chief of the Provisional Government, has since been confirmed in the presidency by the Assembly, and diplomatic recognition duly followed.

The killing of Gen. Barrundia on board the Pacific mail steamer *Acapulco*, while anchored in transit in the port of San José de Guatemala, demanded careful inquiry. Having failed in a revolutionary attempt to invade Guatemala from Mexican territory, Gen. Barrundia took passage at *Acapulco* for Panama. The consent of the representatives of the United States was sought to effect his seizure, first at Champerico, where the steamer touched, and afterward at San José. The captain of the steamer refused to give up his passenger without a written order from the United States minister; the latter furnished the desired letter, stipulating, as the condition of his action, that Gen. Barrundia's life should be spared and that he should be tried only for offenses growing out of his insurrectionary movements. This letter was produced to the captain of the *Acapulco* by the military commander at San José, as his warrant to take the passenger from the steamer. Gen. Barrundia resisted capture and was killed. It being evident that the minister, Mr. Mizner, had exceeded the bounds of his authority in intervening, in compliance with the demands of the Guatemalan authorities, to authorize and effect, in violation of precedent, the seizure on a vessel of the United States of a passenger in transit charged with political offenses, in order that he might be tried for such offenses under what was described as martial law, I was constrained to disavow Mr. Mizner's act and recall him from his post.

The Nicaragua Canal project, under the control of our citizens, is making most encouraging progress, all the preliminary conditions and initial operations having been accomplished within the prescribed time.

During the past year negotiations have been renewed for the settlement of the claims of American citizens against the Government of Chili, principally growing out of the late war with Peru. The reports from our minister at Santiago warrant the expectation of an early and satisfactory adjustment.

Our relations with China, which have for several years occupied so important a place in our diplomatic history, have called for careful consideration and have been the subject of much correspondence.

The communications of the Chinese minister have brought into view the whole subject of our conventional relations with his country; and at the same time this Government, through its legation at Pekin, has sought to arrange various matters and complaints touching the interests and protection of our citizens in China.

In pursuance of the concurrent resolution of Oct. 1, 1890, I have proposed to the governments of Mexico and Great Britain to consider a conventional regulation of the passage of Chinese laborers across our southern and northern frontiers.

On the 22d day of August last Sir Edmund Monson, the arbitrator selected under the treaty of Dec. 6, 1888, rendered an award to the effect that no compensation was due from the Danish Government to the United States on account of what is commonly known as the Carlos Butterfield claim.

Our relations with the French Republic continue to be cordial. Our representative at that court has very diligently urged the removal of the restrictions imposed upon our meat products, and it is believed that substantial progress has been made toward a just settlement.

The Samoan treaty, signed last year at Berlin by the representatives of the United States, Germany, and Great Britain, after due ratification and exchange, has begun to produce salutary effects. The formation of the government agreed upon will soon replace the disorder of the past by a stable administration, alike just to the natives and equitable to the three powers most concerned in trade and intercourse with the Samoan Islands. The chief justice has been chosen by the King of Sweden and Norway, on the invitation of the three powers, and will soon be installed. The land commission and the municipal council are in process of organization. A rational and evenly distributed scheme of taxation, both municipal and upon imports, is in operation. Malietoa is respected as King.

The new treaty of extradition with Great Britain, after due ratification, was proclaimed on the 25th of last March. Its beneficial working is already apparent.

The difference between the two governments touching the fur-seal question in the Behring Sea is not yet adjusted, as will be seen by the correspondence which will soon be laid before Congress. The offer to submit the question to arbitration, as proposed by Her Majesty's Government, has not been accepted, for the reason that the form of submission proposed is not thought to be calculated to assure a conclusion satisfactory to either party. It is sincerely hoped that before the opening of another sealing season some arrangement may be effected which will assure the United States a property right, derived from Russia, which was not disregarded by any nation for more than eighty years preceding the outbreak of the existing trouble.

In the tariff act a wrong was done to the Kingdom of Hawaii which I am bound to presume was wholly unintentional. Duties were levied on certain commodities which are included in the reciprocity treaty now existing between the United States and the Kingdom of Hawaii, without indicating the necessary exception in favor of that kingdom. I hope Congress will repair what might otherwise seem to be a breach of faith on the part of this Government.

An award in favor of the United States in the matter of the claim of Mr. Van Bokkelen against Hayti was rendered on the 4th of December, 1888, but owing to the disorders then and afterward prevailing in Hayti the terms of payment were not observed. A new agreement as to the time of payment has been approved and is now in force. Other just claims of citizens of the United States for redress of wrongs suffered during the late political conflict in Hayti will, it is hoped, speedily yield to friendly treatment.

Propositions for the amendment of the treaty of extradition between the United States and Italy are now under consideration.

You will be asked to provide the means of accepting the invitation of the Italian Government to take part in an approaching conference to consider the adoption of a universal prime meridian from which to reckon longitude and time. As this proposal follows in the track of the reform sought to be initiated by the Meridian Conference of Washington, held on the invitation of this Government, the United States should manifest a friendly interest in the Italian proposal.

In this connection I may refer with approval to the suggestion of my predecessors, that standing provision be made for accepting, whenever deemed ad-

visible, the frequent invitations of foreign governments to share in conferences looking to the advancement of international reforms in regard to science, sanitation, commercial laws and procedure, and other matters affecting the intercourse and progress of modern communities.

In the summer of 1889 an incident occurred which for some time threatened to interrupt the cordiality of our relations with the Government of Portugal. That Government seized the Delagoa Bay Railway, which was constructed under a concession granted to an American citizen, and at the same time annulled the charter. The concessionary, who had embarked his fortune in the enterprise, having exhausted other means of redress, was compelled to invoke the protection of his Government. Our representations, made coincidentally with those of the British Government, whose subjects were also largely interested, happily resulted in the recognition by Portugal of the propriety of submitting the claim for indemnity, growing out of its action, to arbitration. This plan of settlement having been agreed upon, the interested powers readily concurred in the proposal to submit the case to the judgment of three eminent jurists, to be designated by the President of the Swiss Republic, who upon the joint invitation of the governments of the United States, Great Britain, and Portugal, has selected persons well qualified for the task before them.

The revision of our treaty relations with the Empire of Japan has continued to be the subject of consideration and of correspondence. The questions involved are both grave and delicate; and, while it will be my duty to see that the interests of the United States are not by any changes exposed to undue discrimination, I sincerely hope that such revision as will satisfy the legitimate expectations of the Japanese Government and maintain the present and long existing friendly relations between Japan and the United States will be effected.

The friendship between our country and Mexico, born of close neighborhood and strengthened by many considerations of intimate intercourse and reciprocal interest, has never been more conspicuous than now, nor more hopeful of increased benefit to both nations. The intercourse of the two countries by rail, already great, is making constant growth. The established lines, and those recently projected, add to the intimacy of traffic and open new channels of access to fresh areas of demand and supply. The importance of the Mexican railway system will be further enhanced, to a degree almost impossible to forecast, if it should become a link in the projected intercontinental railway. I recommend that our mission in the city of Mexico be raised to the first class.

The cordial character of our relations with Spain warrants the hope that by the continuance of methods of friendly negotiation much may be accomplished in the direction of an adjustment of pending questions and of the increase of our trade. The extent and development of our trade with the island of Cuba invest the commercial relations of the United States and Spain with a peculiar importance. It is not doubted that a special arrangement in regard to commerce, based upon the reciprocity provision of the recent tariff act, would operate most beneficially for both governments. This subject is now receiving attention.

The restoration of the remains of John Ericsson to Sweden afforded a gratifying occasion to honor the memory of the great inventor to whose genius our country owes so much, and to bear witness to the unbroken friendship which has existed between the land which bore him and our own, which claimed him as a citizen.

On the 2d of September last the commission appointed to revise the proceedings of the commission under the claims convention between the United States and Venezuela of 1866 brought its labors to a close within the period fixed for that purpose. The proceedings of the late commission were characterized

by a spirit of impartiality and a high sense of justice, and an incident which was for many years the subject of discussion between the two governments has been disposed of in a manner alike honorable and satisfactory to both parties. For the settlement of the claim of the Venezuela Steam Transportation Company, which was the subject of a joint resolution adopted at the last session of Congress, negotiations are still in progress, and their early conclusion is anticipated.

The legislation of the past few years has evinced on the part of Congress a growing realization of the importance of the consular service in fostering our commercial relations abroad and in protecting the domestic revenues. As the scope of operations expands increased provision must be made to keep up the essential standard of efficiency. The necessity of some adequate measure of supervision and inspection has been so often presented that I need only commend the subject to your attention.

The revenues of the Government from all sources for the fiscal year ending June 30, 1890, were \$463,963,080.55, and the total expenditures for the same period were \$358,618,584.52. The postal receipts have not heretofore been included in the statement of these aggregates, and for the purpose of comparison the sum of \$60,882,097.92 should be deducted from both sides of the account. The surplus for the year, including the amount applied to the sinking fund, was \$105,344,496.03. The receipts for 1890 were \$16,030,923.79 and the expenditures \$15,739,871 in excess of those of 1889. The customs receipts increased \$5,835,842.88, and the receipts from internal revenue \$11,725,191.89; while on the side of expenditures, that for pensions was \$19,312,075.96 in excess of the preceding year.

The Treasury statement for the current fiscal year, partly actual and partly estimated, is as follows: Receipts from all sources, \$406,000,000; total expenditures, \$354,000,000, leaving a surplus of \$52,000,000—not taking the postal receipts into the account on either side. The loss of revenue from customs for the last quarter is estimated at \$25,000,000, but from this is deducted a gain of about \$16,000,000, realized during the first four months of the year.

For the year 1892 the total estimated receipts are \$373,000,000 and the estimated expenditures \$357,852,209.42, leaving an estimated surplus of \$15,147,790.58; which, with a cash balance of \$52,000,000 at the beginning of the year, will give \$67,147,790.58 as the sum available for the redemption of outstanding bonds or other uses. The estimates of receipts and expenditures for the Post-Office Department, being equal, are not included in this statement on either side.

The act "directing the purchase of silver bullion and the issue of Treasury notes thereon," approved July 14, 1890, has been administered by the Secretary of the Treasury with an earnest purpose to get into circulation at the earliest possible dates the full monthly amounts of Treasury notes contemplated by its provisions, and at the same time to give to the market for silver bullion such support as the law contemplates. The recent depreciation in the price of silver has been observed with regret. The rapid rise in price which anticipated and followed the passage of the act was influenced in some degree by speculation, and the recent reaction is in part the result of the same cause and in part of the recent monetary disturbances. Some months of further trial will be necessary to determine the permanent effect of the recent legislation upon silver values, but it is gratifying to know that the increased circulation secured by the act has exerted and will continue to exert a most beneficial influence upon business and upon general values.

While it has not been thought best to renew formally the suggestion of an international conference looking to an agreement touching the full use of silver for coinage at a uniform ratio, care has been taken to observe closely any change in the situation abroad,

and no favorable opportunity will be lost to promote a result which it is confidently believed would confer very large benefits upon the commerce of the world.

The recent monetary disturbances in England are not unlikely to suggest a re-examination of opinions upon this subject. Our very large supply of gold will, if not lost by impulsive legislation in the supposed interest of silver, give us a position of advantage in promoting a permanent and safe international agreement for the free use of silver as a coin metal.

The efforts of the Secretary to increase the volume of money in circulation, by keeping down the Treasury surplus to the lowest practicable limit, have been unremitting and in a very high degree successful. The tables presented by him, showing the increase of money in circulation during the last two decades, and especially the table showing the increase during the nineteen months he has administered the affairs of the department, are interesting and instructive. The increase of money in circulation during the nineteen months has been in the aggregate \$93,866,813, or about \$1.50 per capita, and of this increase only \$7,100,000 was due to the recent silver legislation. That this substantial and needed aid given to commerce resulted in an enormous reduction of the public debt, and of the annual interest charge, is matter of increased satisfaction. There have been purchased and redeemed since March 4, 1889, 4 and 4½ per cent. bonds to the amount of \$211,832,450, at a cost of \$246,620,741, resulting in the reduction of the annual interest charge of \$8,967,609, and a total saving of interest of \$51,576,706.

I notice with great pleasure the statement of the Secretary that the receipts from internal revenue have increased during the last fiscal year nearly \$12,000,000, and that the cost of collecting this larger revenue was less by \$90,617 than for the same purpose in the preceding year. The percentage of cost of collecting the customs revenue was less for the last fiscal year than ever before.

The customs administration board provided for by the act of June 10, 1890, was selected with great care, and is composed in part of men whose previous experience in the administration of the old customs regulations had made them familiar with the evils to be remedied, and in part of men whose legal and judicial acquirements and experience seemed to fit them for the work of interpreting and applying the new statute.

The chief aim of the law is to secure honest valuations of all dutiable merchandise, and to make these valuations uniform at all our ports of entry. It had been made manifest, by a congressional investigation, that a system of undervaluation had been long in use by certain classes of importers, resulting not only in a great loss of revenue, but in a most intolerable discrimination against honesty. It is not seen how this legislation, when it is understood, can be regarded by the citizens of any country having commercial dealings with us as unfriendly. If any duty is supposed to be excessive let the complaint be lodged there. It will surely not be claimed by any well-disposed people that a remedy may be sought and allowed in a system of *quasi-smuggling*.

The report of the Secretary of War exhibits several gratifying results attained during the year by wise and unostentatious methods. The percentage of desertions from the army (an evil for which both Congress and the department have long been seeking a remedy) has been reduced during the past year 24 per cent., and for the months of August and September, during which time the favorable effects of the act of June 16 were felt, 33 per cent. as compared with the same months of 1889.

The results attained by a reorganization and consolidation of the divisions having charge of the hospital and service records of the volunteer soldiers are very remarkable. This change was effected in July, 1889, and at that time there were 40,654 cases awaiting attention, more than half of these being calls from the Pension Office for information necessary to the

adjudication of pension claims. On the 30th day of June last, though over 300,000 new calls had come in, there was not a single case that had not been examined and answered.

I concur in the recommendations of the Secretary that adequate and regular appropriations be continued for coast-defense works and ordnance. Plans have been practically agreed upon, and there can be good reason for delaying the execution of them; while the defenseless state of our great seaports furnishes an urgent reason for wise expedition.

The encouragement that has been extended to the militia of the States, generally and most appropriately designated the "National Guard," should be continued and enlarged. These military organizations constitute in a large sense the army of the United States, while about five sixths of the annual cost of their maintenance is defrayed by the States.

The report of the Attorney-General is under the law submitted directly to Congress, but as the Department of Justice is one of the executive departments, some reference to the work done is appropriate here.

A vigorous, and in the main an effective, effort has been made to bring to trial and punishment all violators of the laws; but at the same time care has been taken that frivolous and technical offenses should not be used to swell the fees of officers or to harass well-disposed citizens. Especial attention is called to the facts connected with the prosecution of violations of the election laws, and of offenses against United States officers. The number of convictions secured, very many of them upon pleas of guilty, will, it is hoped, have a salutary restraining influence. There have been several cases where postmasters appointed by me have been subjected to violent interference in the discharge of their official duties, and to persecutions and personal violence of the most extreme character. Some of these cases have been dealt with through the Department of Justice, and in some cases the post-offices have been abolished or suspended. I have directed the Postmaster-General to pursue this course in all cases where other efforts failed to secure for any postmaster, not himself in fault, an opportunity peacefully to exercise the duties of his office. But such action will not supplant the efforts of the Department of Justice to bring the particular offenders to punishment.

The vacation by judicial decrees of fraudulent certificates of naturalization, upon bills in equity filed by the Attorney-General in the circuit court of the United States, is a new application of a familiar equity jurisdiction. Nearly one hundred such decrees have been taken during the year, the evidence disclosing that a very large number of fraudulent certificates of naturalization have been issued. And in this connection I beg to renew my recommendation that the laws be so amended as to require a more full and searching inquiry into all the facts necessary to naturalization before any certificates are granted. It certainly is not too much to require that an application for American citizenship shall be heard with as much care and recorded with as much formality as are given to cases involving the pettiest property right.

At the last session I returned, without my approval, a bill entitled "An act to prohibit book-making and pool selling in the District of Columbia," and stated my objection to be that it did not prohibit, but in fact licensed what it purported to prohibit. An effort will be made under existing laws to suppress this evil, though it is not certain that they will be found adequate.

The report of the Postmaster-General shows the most gratifying progress in the important work committed to his direction. The business methods have been greatly improved. A large economy in expenditures and an increase of four and three quarter millions in receipts have been realized. The deficiency this year is \$5,786,300 as against \$6,350,183 last year, notwithstanding the great enlargement of the service. Mail routes have been extended and quickened, and

greater accuracy and dispatch in distribution and delivery have been attained. The report will be found to be full of interest and suggestion, not only to Congress, but to those thoughtful citizens who may be interested to know what business methods can do for that department of public administration which most nearly touches all our people.

The passage of the act to amend certain sections of the Revised Statutes relating to lotteries, approved Sept. 19, 1890, has been received with great and deserved popular favor. The Post-Office Department and the Department of Justice at once entered upon the enforcement of the law with sympathetic vigor, and already the public mails have been largely freed from the fraudulent and demoralizing appeals and literature emanating from the lottery companies.

The construction and equipment of the new ships for the navy have made very satisfactory progress. Since March 4, 1889, nine new vessels have been put in commission, and during this winter four more, including one monitor, will be added. The construction of the other vessels authorized is being pushed, both in the Government and private yards, with energy, and watched with the most scrupulous care.

The experiments conducted during the year to test the relative resisting power of armor plates have been so valuable as to attract great attention in Europe. The only part of the work upon the new ships that is threatened by unusual delay is the armor plating, and every effort is being made to reduce that to the minimum. It is a source of congratulation that the anticipated influence of these modern vessels upon the *esprit de corps* of the officers and seamen has been fully realized. Confidence and pride in the ship among the crew are equivalent to a secondary battery. Your favorable consideration is invited to the recommendations of the Secretary.

The report of the Secretary of the Interior exhibits with great fullness and clearness the vast work of that department and the satisfactory results attained. The suggestions made by him are earnestly commended to the consideration of Congress, though they can not all be given particular mention here.

The several acts of Congress looking to the reduction of the larger Indian reservations, to the more rapid settlement of the Indians upon individual allotments, and the restoration to the public domain of lands in excess of their needs, have been largely carried into effect, so far as the work was confided to the Executive. Agreements have been concluded since March 4, 1889, involving the cession to the United States of about 14,726,000 acres of land. These contracts have, as required by law, been submitted to Congress for ratification and for the appropriations necessary to carry them into effect. Those with the Sisseton and Wahpeton, Sac and Fox, Iowa, Pottawattamies and Absentee Shawnees, and Cœur d'Alène tribes have not yet received the sanction of Congress. Attention is also called to the fact that the appropriations made in the case of the Sioux Indians have not covered all the stipulated payments. This should be promptly corrected. If an agreement is confirmed, all of its terms should be complied with without delay, and full appropriations should be made.

The policy outlined in my last annual message in relation to the patenting of lands to settlers upon the public domain has been carried out in the administration of the Land Office. No general suspicion or imputation of fraud has been allowed to delay the hearing and adjudication of individual cases upon their merits. The purpose has been to perfect the title of honest settlers with such promptness that the value of the entry might not be swallowed by the expense and extortions to which delay subjected the claimant. The average monthly issue of agricultural patents has been increased about 6,000.

The disability pension act, which was approved on the 27th of June last, has been put in operation as rapidly as was practicable. The increased clerical force provided was selected and assigned to work, and a considerable part of the force engaged in examina-

tions in the field was recalled and added to the working force of the office. The examination and adjudication of claims have, by reason of improved methods, been more rapid than ever before. There is no economy to the Government in delay, while there is much hardship and injustice to the soldier. The anticipated expenditure, while very large, will not, it is believed, be in excess of the estimates made before the enactment of the law. This liberal enlargement of the general law should suggest a more careful scrutiny of bills for special relief, both as to the cases where relief is granted and as to the amount allowed.

The increasing numbers and influence of the non-Mormon population in Utah are observed with satisfaction. The recent letter of Wilford Woodruff, President of the Mormon Church, in which he advised his people "to refrain from contracting any marriage forbidden by the laws of the land," has attracted wide attention, and it is hoped that its influence will be highly beneficial in restraining infractions of the laws of the United States. But the fact should not be overlooked that the doctrine or belief of the church that polygamous marriages are rightful and supported by divine revelation remains unchanged. President Woodruff does not renounce the doctrine, but refrains from teaching it, and advises against the practice of it because the law is against it. Now, it is quite true that the law should not attempt to deal with the faith or belief of any one; but it is quite another thing, and the only safe thing, so to deal with the Territory of Utah as that those who believe polygamy to be rightful shall not have the power to make it lawful.

The admission of the States of Wyoming and Idaho to the Union are events full of interest and congratulation, not only to the people of those States now happily endowed with a full participation in our privileges and responsibilities, but to all our people. Another belt of States stretches from the Atlantic to the Pacific.

The work of the Patent Office has won from all sources very high commendation. The amount accomplished has been very largely increased, and all the results have been such as to secure confidence and consideration for the suggestions of the commissioner.

The enumeration of the people of the United States under the provisions of the act of March 1, 1889, has been completed, and the result will be at once officially communicated to Congress. The completion of this decennial enumeration devolves upon Congress the duty of making a new apportionment of Representatives "among the several States according to their respective numbers."

At the last session I had occasion to return with my objections several bills making provisions for the erection of public buildings, for the reason that the expenditures contemplated were in my opinion greatly in excess of any public need. No class of legislation is more liable to abuse, or to degenerate into an unseemly scramble about the public Treasury, than this. There should be exercised in this matter a wise economy based upon some responsible and impartial examination and report as to each case, under a general law.

The report of the Secretary of Agriculture deserves especial attention in view of the fact that the year has been marked in a very unusual degree by agitation and organization among the farmers looking to an increase in the profits of their business. It will be found that the efforts of the department have been intelligently and zealously devoted to the promotion of the interests intrusted to its care.

A very substantial improvement in the market prices of the leading farm products during the year is noticed. The price of wheat advanced from 81 cents in October, 1889, to \$1.00½ in October, 1890; corn, from 31 cents to 50½ cents; oats, from 12½ cents to 43 cents; and barley, from 63 cents to 75 cents. Meats showed a substantial but not so large an increase. The export trade in live animals and fowls shows a very large increase; the total value of such ex-

ports for the year ending June 30, 1890, was \$33,000,000, and the increase over the preceding year was over \$15,000,000. Nearly 200,000 more cattle and over 45,000 more hogs were exported than in the preceding year. The export trade in beef and pork products and in dairy products was very largely increased, the increase in the article of butter alone being from 15,504,978 pounds to 29,748,042 pounds, and the total increase in the value of meat and dairy products exported being \$34,000,000. This trade, so directly helpful to the farmer, it is believed will be yet further and very largely increased when the system of inspection and sanitary supervision now provided by law is brought fully into operation.

The efforts of the Secretary to establish the healthfulness of our meats against the disparaging imputations that have been put upon them abroad have resulted in substantial progress. Veterinary surgeons sent out by the department are now allowed to participate in the inspection of the live cattle from this country landed at the English docks, and during the several months they have been on duty no case of contagious pleuro-pneumonia has been reported. This inspection abroad and the domestic inspection of live animals and pork products, provided for by the act of August 30, 1890, will afford as perfect a guarantee for the wholesomeness of our meats offered for foreign consumption as is anywhere given to any food product, and its non-acceptance will quite clearly reveal the real motive of any continued restriction of their use; and that having been made clear, the duty of the Executive will be very plain.

The information given by the Secretary of the progress and prospects of the beet-sugar industry is full of interest. It has already passed the experimental stage and is a commercial success. The area over which the sugar beet can be successfully cultivated is very large, and another field crop of great value is offered to the choice of the farmer.

The Secretary of the Treasury concurs in the recommendation of the Secretary of Agriculture that the official supervision provided by the tariff law for sugar of domestic production shall be transferred to the Department of Agriculture.

The law relating to the civil service has, so far as I can learn, been executed by those having the power of appointment in the classified service with fidelity and impartiality, and the service has been increasingly satisfactory. The report of the commission shows a large amount of good work done during the year with very limited appropriations.

I congratulate the Congress and the country upon the passage at the first session of the Fifty-first Congress of an unusual number of laws of very high importance. That the results of this legislation will be the quickening and enlargement of our manufacturing industries, larger and better markets for our bread-stuffs and provisions both at home and abroad, more constant employment and better wages for our working people, and an increased supply of a safe currency for the transaction of business, I do not doubt. Some of these measures were enacted at so late a period that the beneficial effects upon commerce which were in the contemplation of Congress have as yet but partially manifested themselves.

The general trade and industrial conditions throughout the country during the year have shown a marked improvement. For many years prior to 1888 the merchandise balances of foreign trade had been largely in our favor, but during that year and the year following they turned against us. It is very gratifying to know that the last fiscal year again shows a balance in our favor of over \$68,000,000. The bank clearings, which furnish a good test of the volume of business transacted, for the first ten months of the year 1890 show, as compared with the same months of 1889, an increase for the whole country of about 8.4 per cent., while the increase outside of the city of New York was over 13 per cent. During the month of October the clearings of the whole country showed an increase of 3.1 per cent. over October, 1889, while out-

side of New York the increase was 11½ per cent. These figures show that the increase in the volume of business was very general throughout the country. That this large business was being conducted upon a safe and profitable basis is shown by the fact that there were 300 less failures reported in October, 1890, than in the same month of the preceding year, with liabilities diminished by about \$5,000,000.

The value of our exports of domestic merchandise during the last year was over \$115,000,000 greater than the preceding year, and was only exceeded once in our history. About \$100,000,000 of this excess was in agricultural products. The production of pig iron — always a good gauge of general prosperity — is shown by a recent census bulletin to have been 153 per cent. greater in 1890 than in 1880, and the production of steel 290 per cent. greater. Mining in coal has had no limitation except that resulting from deficient transportation. The general testimony is that labor is everywhere fully employed, and the reports for the last year show a smaller number of employes affected by the strikes and lockouts than in any other year since 1884. The depression in the prices of agricultural products had been greatly relieved, and a buoyant and hopeful tone was beginning to be felt by all our people.

These promising influences have been in some degree checked by the surprising and very unfavorable monetary events which have recently taken place in England. It is gratifying to know that these did not grow in any degree out of the financial relations of London with our people or out of any discredit attached to our securities held in that market. The return of our bonds and stocks was caused by a money stringency in England, not by any loss of value or credit in the securities themselves. We could not, however, wholly escape the ill effects of a foreign monetary agitation accompanied by such extraordinary incidents as characterized this. It is not believed, however, that these evil incidents, which have for the time unfavorably affected values in this country, can long withstand the strong, safe, and wholesome influences which are operating to give to our people profitable returns in all branches of legitimate trade and industry. The apprehension that our tariff may again and at once be subjected to important general changes would undoubtedly add a depressing influence of the most serious character.

The general tariff act has only partially gone into operation, some of its important provisions being limited to take effect at dates yet in the future. The general provisions of the law have been in force less than sixty days. Its permanent effects upon trade and prices still largely stand in conjecture. It is curious to note that the advance in the prices of articles wholly unaffected by the tariff act was by many hastily ascribed to that act. Notice was not taken of the fact that the general tendency of the markets was upward, from influences wholly apart from the recent tariff legislation. The enlargement of our currency by the silver bill undoubtedly gave an upward tendency to trade, and had a marked effect on prices; but this natural and desired effect of the silver legislation was by many erroneously attributed to the tariff act.

There is neither wisdom nor justice in the suggestion that the subject of tariff revision shall be again opened before this law has had a fair trial. It is quite true that every tariff schedule is subject to objections. No bill was ever framed, I suppose, that in all of its rates and classifications had the full approval even of a party caucus. Such legislation is always and necessarily the product of compromise as to details, and the present law is no exception. But in its general scope and effect I think it will justify the support of those who believe that American legislation should conserve and defend American trade and the wages of American workmen.

The misinformation as to the terms of the act, which has been so widely disseminated at home and abroad, will be corrected by experience, and the evil auguries as to its results confounded by the market reports,

the savings banks, international trade balances, and the general prosperity of our people. Already we begin to hear from abroad, and from our custom houses, that the prohibitory effect upon importations imputed to the act is not justified. The imports at the port of New York for the first three weeks of November were nearly 8 per cent. greater than for the same period in 1889, and 29 per cent. greater than in the same period of 1888; and so far from being an act to limit exports, I confidently believe that under it we shall secure a larger and more profitable participation in foreign trade than we have ever enjoyed, and that we shall recover a proportionate participation in the ocean carrying trade of the world.

The criticisms of the bill that have come to us from foreign sources may well be rejected for repugnancy. If these critics really believe that the adoption by us of a free-trade policy, or of tariff rates having reference solely to revenue, would diminish the participation of their own countries in the commerce of the world, their advocacy and promotion by speech and other forms of organized effort of this movement among our people is a rare exhibition of unselfishness in trade. And, on the other hand, if they sincerely believe that the adoption of a protective-tariff policy by this country injures to their profit and our hurt, it is noticeably strange that they should lead the outcry against the authors of a policy so helpful to their countrymen, and crown with their favor those who would snatch from them a substantial share of a trade with other lands already inadequate to their necessities.

There is no disposition among any of our people to promote prohibitory or retaliatory legislation. Our policies are adopted, not to the hurt of others, but to secure for ourselves those advantages that fairly grow out of our favored position as a nation. Our form of government, with its incident of universal suffrage, makes it imperative that we shall save our working people from the agitations and distresses which scant work and wages that have no margin for comfort always beget. But after all this is done it will be found that our markets are open to friendly commercial exchanges of enormous value to the other great powers.

From the time of my induction into office the duty of using every power and influence given by law to the executive department for the development of larger markets for our products, especially our farm products, has been kept constantly in mind, and no effort has been or will be spared to promote that end. We are under no disadvantage in any foreign market, except that we pay our workmen and workwomen better wages than are paid elsewhere—better abstractly, better relatively, to the cost of the necessities of life. I do not doubt that a very largely increased foreign trade is accessible to us without bartering for it either our home market for such products of the farm and shop as our own people can supply or the wages of our working people.

In many of the products of wood and iron, and in meats and breadstuffs, we have advantages that only need better facilities of intercourse and transportation to secure for them large foreign markets. The reciprocity clause of the tariff act wisely and effectively opens the way to secure a large reciprocal trade in exchange for the free admission to our ports of certain products. The right of independent nations to make special reciprocal trade concessions is well established, and does not impair either the comity due to other powers or what is known as the "favored-nation clause," so generally found in commercial treaties. What is given to one for an adequate agreed consideration can not be claimed by another freely. The state of the revenues was such that we could dispense with any import duties upon coffee, tea, hides, and the lower grades of sugar and molasses. That the large advantage resulting to the countries producing and exporting these articles by placing them on the free list entitled us to expect a fair return in the way of customs concessions upon articles exported by us

to them was so obvious that to have gratuitously abandoned this opportunity to enlarge our trade would have been an unpardonable error.

There were but two methods of maintaining control of this question open to Congress: to place all of these articles upon the dutiable list, subject to such treaty agreements as could be secured, or to place them all presently upon the free list, but subject to the reimposition of specified duties if the countries from which we received them should refuse to give to us suitable reciprocal benefits. This latter method, I think, possesses great advantages. It expresses in advance the consent of Congress to reciprocity arrangements affecting these products, which must otherwise have been delayed and unascertained until each treaty was ratified by the Senate and the necessary legislation enacted by Congress.

Experience has shown that some treaties looking to reciprocal trade have failed to secure a two-thirds vote in the Senate for ratification, and others, having passed that stage, have for years awaited the concurrence of the House and Senate in such modifications of our revenue laws as were necessary to give effect to their provisions. We now have the concurrence of both Houses in advance, in a distinct and definite offer of free entry to our ports of specific articles. The Executive is not required to deal in conjecture as to what Congress will accept. Indeed, this reciprocity provision is more than an offer. Our part of the bargain is complete; delivery has been made; and when the countries from which we receive sugar, coffee, tea, and hides have placed on their free lists such of our products as shall be agreed upon, as an equivalent for our concession, a proclamation of that fact completes the transaction; and, in the mean time, our own people have free sugar, tea, coffee, and hides.

The indications thus far given are very hopeful of early and favorable action by the countries from which we receive our large imports of coffee and sugar; and it is confidently believed that if steam communication with these countries can be promptly improved and enlarged, the next year will show a most gratifying increase in our exports of breadstuffs and provisions, as well as of some important lines of manufactured goods.

In addition to the important bills that became laws before the adjournment of the last session, some other bills of the highest importance were well advanced toward a final vote, and now stand upon the calendars of the two Houses in favored positions. The present session has a fixed limit, and if these measures are not now brought to a final vote all the work that has been done upon them by this Congress is lost. The proper consideration of these, of an apportionment bill, and of the annual appropriation bills, will require not only that no working day of the session shall be lost, but that measures of minor and local interest shall not be allowed to interrupt or retard the progress of those that are of universal interest. In view of these conditions I refrain from bringing before you at this time some suggestions that would otherwise be made, and most earnestly invoke your attention to the duty of perfecting the important legislation now well advanced. To some of these measures, which seem to me most important, I now briefly call your attention.

I desire to repeat, with added urgency, the recommendations contained in my last annual message in relation to the development of American steamship lines. The reciprocity clause of the tariff bill will be largely limited, and its benefits retarded and diminished, if provision is not contemporaneously made to encourage the establishment of first-class steam communication between our ports and the ports of such nations as may meet our overtures for enlarged commercial exchanges. The steamship, carrying the mails steadily and frequently, and offering to passengers a comfortable, safe, and speedy transit, is the first condition of foreign trade. It carries the order of the buyer, but not all that is ordered or bought. It

gives to the sailing vessels such cargoes as are not urgent or perishable, and, indirectly at least, promotes that important adjunct of commerce. There is now, both in this country and in the nations of Central and South America, a state of expectation and confidence as to increased trade that will give a double value to your prompt action upon this question.

The present situation of our mail communication with Australia illustrates the importance of early action by Congress. The Oceanic Steamship Company maintains a line of steamers between San Francisco, Sydney, and Auckland, consisting of three vessels, two of which are of United States registry and one of foreign registry. For the service done by this line in carrying the mails we pay annually the sum of \$46,000, being, as estimated, the full sea and United States inland postage, which is the limit fixed by law. The colonies of New South Wales and New Zealand have been paying annually to these lines £37,000 for carrying the mails from Sydney and Auckland to San Francisco. The contract under which this payment has been made is now about to expire, and those colonies have refused to renew the contract unless the United States shall pay a more equitable proportion of the whole sum necessary to maintain the service.

I am advised by the Postmaster-General that the United States receives for carrying the Australian mails, brought to San Francisco in these steamers, by rail to Vancouver, an estimated annual income of \$75,000; while, as I have stated, we are paying out for the support of the steamship line that brings this mail to us only \$46,000, leaving an annual surplus, resulting from this service, of \$29,000. The trade of the United States with Australia, which is in a considerable part carried by these steamers, and the whole of which is practically dependent upon the mail communication which they maintain, is largely in our favor. Our total exports of merchandise to Australasian ports during the fiscal year ending June 30, 1890, were \$11,266,484; while the total imports of merchandise from these ports were only \$4,277,676. If we are not willing to see this important steamship line withdrawn, or continued with Vancouver substituted for San Francisco as the American terminal, Congress should put it in the power of the Postmaster-General to make a liberal increase in the amount now paid for the transportation of this important mail.

The South Atlantic and Gulf ports occupy a very favored position toward the new and important commerce which the reciprocity clause of the tariff act and the postal shipping bill are designed to promote. Steamship lines from these ports to some northern port of South America will almost certainly effect a connection between the railroad systems of the continents long before any continuous line of railroads can be put into operation. The very large appropriation made at the last session for the harbor of Galveston was justified, as it seemed to me, by these considerations. The great Northwest will feel the advantage of trunk lines to the South as well as to the East, and of the new markets opened for their surplus food products and for many of their manufactured products.

I had occasion in May last to transmit to Congress a report adopted by the International American Conference upon the subject of the incorporation of an international American bank, with a view to facilitating money exchanges between the states represented in that conference. Such an institution would greatly promote the trade we are seeking to develop. I renewed the recommendation that a careful and well-guarded charter be granted. I do not think the powers granted should include those ordinarily exercised by trust, guarantee, and safe-deposit companies, or that more branches in the United States should be authorized than are strictly necessary to accomplish the object primarily in view, namely, convenient foreign exchanges. It is quite important that prompt action should be taken in this matter, in order that any appropriations for better communica-

tion with these countries and any agreements that may be made for reciprocal trade may not be hindered by the inconvenience of making exchanges through European money centers or burdened by the tribute which is an incident of that method of business.

The bill for the relief of the Supreme Court has, after many years of discussion, reached a position where final action is easily attainable, and it is hoped that any differences of opinion may be so harmonized as to save the essential features of this very important measure. In this connection I earnestly renew my recommendation that the salaries of the judges of the United States district courts be so readjusted that none of them shall receive less than \$5,000 per annum.

The subject of the unadjusted Spanish and Mexican land grants and the urgent necessity for providing some commission or tribunal for the trial of questions of title growing out of them were twice brought by me to the attention of Congress at the last session. Bills have been reported from the proper committees in both Houses upon the subject, and I very earnestly hope that this Congress will put an end to the delay which has attended the settlement of the disputes as to title between the settlers and the claimants under these grants. These disputes retard the prosperity and disturb the peace of large and important communities. The Governor of New Mexico, in his last report to the Secretary of the Interior, suggests some modifications of the provisions of the pending bills relating to the small holdings of farm lands. I commend to your attention the suggestions of the Secretary of the Interior upon this subject.

The enactment of a national bankrupt law I still regard as very desirable. The Constitution having given to Congress jurisdiction of this subject, it should be exercised, and uniform rules provided for the administration of the affairs of insolvent debtors. The inconveniences resulting from the occasional and temporary exercise of this power by Congress, and from the conflicting State codes of insolvency which come into force immediately, should be removed by the enactment of a simple, inexpensive, and permanent national bankrupt law.

I also renew my recommendation in favor of legislation affording just copyright protection to foreign authors, on a footing of reciprocal advantage for our authors abroad.

It may still be possible for this Congress to inaugurate, by suitable legislation, a movement looking to uniformity and increased safety in the use of couplers and brakes upon freight trains engaged in interstate commerce. The chief difficulty in the way is to secure agreement as to the best appliances, simplicity, effectiveness, and cost being considered. This difficulty will only yield to legislation, which should be based upon full inquiry and impartial tests. The purpose should be to secure the co-operation of all well-disposed managers and owners, but the fearful fact that every year's delay involves the sacrifice of two thousand lives and the maiming of twenty thousand young men should plead both with Congress and the managers against any needless delay.

The subject of the conservation and equal distribution of the water supply of the arid regions has had much attention from Congress, but has not as yet been put upon a permanent and satisfactory basis. The urgency of the subject does not grow out of any large present demand for the use of these lands for agriculture, but out of the danger that the water supply and the sites for the necessary catch basins may fall into the hands of individuals or private corporations and be used to render subservient the large areas dependent upon such supply. The owner of the water is the owner of the lands, however the titles may run. All unappropriated natural water sources and all necessary reservoir sites should be held by the Government for the equal use, at fair rates, of the homestead settlers who will eventually take up these lands.

The United States should not, in my opinion, un-

dertake the construction of dams or canals, but should limit its work to such surveys and observations as will determine the water supply, both surface and subterranean, the areas capable of irrigation, and the location and storage capacity of reservoirs. This done, the use of the water and of the reservoir sites might be granted to the respective States or Territories, or to individuals or associations, upon the condition that the necessary works should be constructed and the water furnished at fair rates, without discrimination, the rates to be subject to supervision by the legislatures, or by boards of water commissioners duly constituted. The essential thing to be secured is the common and equal use at fair rates of the accumulated water supply. It were almost better that these lands should remain arid than that those who occupy them should become the slaves of unrestrained monopolies controlling the one essential element of land values and crop results.

The use of the telegraph by the Post-office Department as a means for the rapid transmission of written communications is, I believe, upon proper terms quite desirable. The Government does not own or operate the railroads, and it should not, I think, own or operate the telegraph lines. It does, however, seem to be quite practicable for the Government to contract with the telegraph companies, as it does with the railroad companies, to carry at specified rates such communications as the senders may designate for this method of transmission. I recommend that such legislation be enacted as will enable the Post-office Department fairly to test by experiment the advantages of such a use of the telegraph.

If any intelligent and loyal company of American citizens were required to catalogue the essential human conditions of national life, I do not doubt that with absolute unanimity they would begin with "free and honest elections." And it is gratifying to know that generally there is a growing and nonpartisan demand for better election laws. But against this sign of hope and progress must be set the depressing and undeniable fact that election laws and methods are sometimes cunningly contrived to secure minority control, while violence completes the shortcomings of fraud.

In my last annual message I suggested that the development of the existing law providing a Federal supervision of congressional elections offered an effective method of reforming these abuses. The need of such a law has manifested itself in many parts of the country, and its wholesome restraints and penalties will be useful in all. The constitutionality of such legislation has been affirmed by the Supreme Court. Its probable effectiveness is evidenced by the character of the opposition that is made to it. It has been denounced as if it were a new exercise of Federal power and an invasion of the rites of the States. Nothing could be further from the truth. Congress has already fixed the time for the election of members of Congress. It has declared that votes for members of Congress must be by written or printed ballot; it has provided for the appointment by the circuit court in certain cases, and upon the petition of a certain number of citizens, of election supervisors, and made it their duty to supervise the registration of voters conducted by the State officers; to challenge persons offering to register; to personally inspect and scrutinize the registry lists, and to affix their names to the lists for the purpose of identification and the prevention of frauds; to attend at elections and remain with the boxes till the votes are all cast and counted; to attach to the registry lists and election returns any statement touching the accuracy and fairness of the registry and election, and to take and transmit to the Clerk of the House of Representatives any evidence of fraudulent practices which may be presented to them. The same law provides for the appointment of deputy United States marshals to attend at the polls, support the supervisors in the discharge of their duties, and to arrest persons violating the election laws. The provisions of this

familiar title of the Revised Statutes have been put into exercise by both the great political parties, and in the North as well as in the South, by the filing with the court of the petitions required by the law.

It is not, therefore, a question whether we shall have a Federal election law, for we now have one, and have had for nearly twenty years, but whether we shall have an effective law. The present law stops just short of effectiveness, for it surrenders to the local authorities all control over the classification which establishes the *prima facie* right to a seat in the House of Representatives. This defect should be cured. Equality of representation and the parity of the electors must be maintained, or everything that is valuable in our system of government is lost. The qualifications of an elector must be sought in the law, not in the opinions, prejudices, or fears of any class, however powerful. The path of the elector to the ballot box must be free from the ambush of fear and the enticements of fraud; the count so true and open that none shall gainsay it. Such a law should be absolutely nonpartisan and impartial. It should give the advantage to honesty and the control to majorities. Surely there is nothing sectional about this creed, and, if it shall happen that the penalties of laws intended to enforce these rights fall here and not there, it is not because the law is sectional, but because, happily, crime is local and not universal. Nor should it be forgotten that every law, whether relating to elections or to any other subject, whether enacted by the State or by the nation, has force behind it; the courts, the marshal or constable, the *posse comitatus*, the prison, are all and always behind the law.

One can not be justly charged with unfriendliness to any section or class who seeks only to restrain violations of law and of personal right. No community will find lawlessness profitable. No community can afford to have it known that the officers who are charged with the preservation of the public peace and the restraint of the criminal classes are themselves the product of fraud or violence. The magistrate is then without respect and the law without sanction. The floods of lawlessness can not be leaved and made to run in one channel. The killing of a United States marshal carrying a writ of arrest for an election offense is full of prompting and suggestion to men who are pursued by a city marshal for a crime against life or property.

But it is said that this legislation will revive race animosities, and some have even suggested that when the peaceful methods of fraud are made impossible they may be supplanted by intimidation and violence. If the proposed law gives to any qualified elector, by a hair's weight, more than his equal influence, or detracts by so much from any other qualified elector, it is fatally impeached. But if the law is equal and the animosities it is to evoke grow out of the fact that some electors have been accustomed to exercise the franchise for others as well as for themselves, then these animosities ought not to be confessed without shame, and can not be given any weight in the discussion without dishonor. No choice is left to me but to enforce with vigor all laws intended to secure to the citizen his constitutional rights, and to recommend that the inadequacies of such laws be promptly remedied. If to promote with zeal and ready interest every project for the development of its material interests, its rivers, harbors, mines, and factories, and the intelligence, peace, and security under the law of its communities and its homes, is not accepted as sufficient evidence of friendliness to any State or section, I can not add connivance at election practices that not only disturb local results, but rob the electors of other States and sections of their most precious political rights.

The preparation of the general appropriation bills should be conducted with the greatest care and the closest scrutiny of expenditures. Appropriations should be adequate to the needs of the public service, but they should be absolutely free from prodigality.

I venture again to remind you that the brief time remaining for the consideration of the important legislation now awaiting your attention offers no margin for waste. If the present duty is discharged with diligence, fidelity, and courage, the work of the Fifty-first Congress may be confidently submitted to the considerate judgment of the people.

BENJ. HARRISON.

EXECUTIVE MANSION, Dec. 1, 1890.

The Direct-Tax Bill.—This much discussed measure was finally disposed of. It had passed the Senate the first session of this Congress, and the House took it up and passed it Feb. 24, 1891, amended as follows:

A bill to credit and pay to the several States and Territories and the District of Columbia all moneys collected under the direct tax levied by the act of Congress approved Aug. 5, 1861.

Be it enacted, etc., That it shall be the duty of the Secretary of the Treasury to credit to each State and Territory of the United States and the District of Columbia a sum equal to all collections by setoff or otherwise made from said States and Territories and the District of Columbia, or from any of the citizens or inhabitants thereof or other persons, under the act of Congress approved Aug. 5, 1861, and the amendatory acts thereto.

SEC. 2. That all moneys still due to the United States on the quota of direct tax apportioned by section 8 of the act of Congress approved Aug. 5, 1861, are hereby remitted and relinquished.

SEC. 3. That there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, such sums as may be necessary to reimburse each State, Territory, and the District of Columbia for all money found due to them under the provisions of this act; and the Treasurer of the United States is hereby directed to pay the same to the governors of the States and Territories and to the commissioners of the District of Columbia, but no money shall be paid to any State or Territory until the Legislature thereof shall have accepted by resolution the sum herein appropriated and the trust imposed, in full satisfaction of all claims against the United States on account of the levy and collection of said tax, and shall have authorized the governor to receive such money for the use and purposes aforesaid. *Provided,* That where the sums or any part thereof, credited to any State, Territory, or the District of Columbia, have been collected by the United States from the citizens or inhabitants thereof, or any other person, either directly or by sale of property, such sums shall be held in trust by such State, Territory, or the District of Columbia for the benefit of those persons or inhabitants from whom they were collected, or their legal representatives: *And provided further,* That no part of the money collected from individuals and to be held in trust as aforesaid shall be retained by the United States as a setoff against any indebtedness alleged to exist against the State, Territory, or District of Columbia in which such tax was collected: *And provided further,* That no part of the money hereby appropriated shall be paid out by the governor of any State or Territory or any other person to any attorney or agent under any contract for services now existing or heretofore made between the representative of any State or Territory and any attorney or agent. All claims under the trust hereby created shall be filed with the governor of such State or Territory and the commissioners of the District of Columbia, respectively, within six years next after the passage of this act; and all claims not so filed shall be forever barred, and the money attributable thereto shall belong to such State, Territory, or the District of Columbia, respectively, as the case may be.

SEC. 4. That it shall be the duty of the Secretary of the Treasury to pay to such persons as shall in each case apply therefor, and furnish satisfactory evidence that such applicant was at the time of the sales

hereinafter mentioned the legal owner, or is the heir at law or devisee of the legal owner of such lands as were sold in the parishes of St. Helena and St. Luke's in the State of South Carolina, under the said acts of Congress, the value of said lands in the manner following, to wit: To the owners of the lots in the town of Beaufort, one half of the value assessed thereon for taxation by the United States direct-tax commissioners for South Carolina; to the owners of lands which were rated for taxation by the State of South Carolina as being usually cultivated, \$5 per acre for each acre thereof returned on the proper tax book; to the owners of all other lands, \$1 per acre for each acre thereof returned on said tax book: *Provided,* That in all cases where such owners, or persons claiming under them, have redeemed or purchased said lands, or any part thereof, from the United States, they shall not receive compensation for such part so redeemed or purchased; and any sum or sums held or to be held by the said State of South Carolina in trust for any such owner under section 3 of this act shall be deducted from the sum due to such owner under the provision of this section: *And provided further,* That in all cases where said owners have heretofore received from the United States the surplus proceeds arising from the sale of their lands, such sums shall be deducted from the sum which they are entitled to receive under this act. That in all cases where persons, while serving in the army or navy or marine corps of the United States, or who had been honorably discharged from said service, purchased any of said lands under section 11 of the act of Congress approved June 7, 1862, and such lands afterward reverted to the United States, it shall be the duty of the Secretary of the Treasury to pay to such persons as shall in each case apply therefor, or to their heirs at law, devisees, or grantees, in good faith and for valuable consideration, whatever sum was so paid to the United States in such case. That before paying any money to such persons the Secretary of the Treasury shall require the person or persons entitled to receive the same to execute a release of all claims and demands of every kind and description whatever against the United States arising out of the execution of said acts, and also a release of all right, title, and interest in and to the said lands. That there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of \$500,000 or so much thereof as may be necessary to pay for said lots and lands, which sums shall include all moneys in the Treasury derived in any manner from the enforcement of said acts in said parishes, and not otherwise appropriated. That section 1063 of the Revised Statutes is hereby made applicable to claims arising under this act without limitation as to the amount involved in such claim: *And provided further,* That any sum or sums of money received into the Treasury of the United States from the sale of lands bid in for taxes in any State under the laws described in the first section of this act in excess of the tax assessed thereon shall be paid to the owners of the land so bid in and resold, or to their legal heirs or representatives.

The amounts levied, collected, and remaining unpaid under the direct-tax law were given as shown in the table on the next page.

To these estimates should be added the sum of \$500,000 to carry out the provisions of section 4 of the bill.

The following was the vote on the passage of the bill:

The Senate concurred on the House amendment, Feb. 27, 1891, and the President approved of the measure March 2, 1891.

Circuit Court of Appeals.—At the first session of this Congress the House passed a bill "to define and regulate the jurisdiction of the courts of the United States," the purposes of which was

to relieve the Supreme Court by the creation of a circuit court of appeals. The Senate passed the House bill with amendments, and a conference committee agreed upon a report concurring in the Senate amendments. This report was adopted Feb. 27, 1891.

In the discussion of it Mr. Rogers, of Arkansas, said:

"No member upon the floor of the House, I think, has been a more earnest advocate of a reorganization of the Federal judiciary system, and the remuneration of its judges, than I have during the past eight years of my congressional life; so that the observations I shall now make I make from the most friendly standpoint to the object sought to be attained by legislation on this subject.

"The primary motive, or rather the primary consideration or object of legislation upon this point, was to relieve the Supreme Court of the United States, whose docket is now congested by some seventeen hundred cases, or more, perhaps, than four years of consecutive work if no other business was added to it. I say that was the primary object. Incidental to that object were two other objects. One was the divorce of the district from the circuit courts and the divorce of the Supreme Court from the inferior courts; in other words, that we should have a system rather than a medley; that the great reservoir of original jurisdiction should rest in the district courts of the United States; that the circuit courts should be abolished and an intermediate court of appeals established between the district courts and the Supreme Court, whose appellate jurisdiction should be final, and thereby limit the appellate jurisdiction of the Supreme Court and give it consequent relief.

"I am sorry to say this conference report defeats all of these objects; every single one of them. As I said, there are now seventeen hundred cases, or somewhere between fifteen and seventeen hundred cases, on the Supreme Court docket. By the terms of this bill every one of these cases will remain on that docket to be finally determined; and that court will have to do four years of consecutive hard work to get rid of the docket now pending in that court.

"This is not only true, but here, by the terms of this bill, the congestion of the docket is to be intensified to an extent that no one of us can foresee at this time. By the terms of the fifth section of the bill appeals are granted from the district and circuit courts of the United States in all cases of capital or other infamous crimes.

"An infamous crime has been decided by the Supreme Court of the United States to be any offense which may be punished by imprisonment at hard labor in the penitentiary. The effect of this provision of the bill will be to extend the appellate jurisdiction of the Supreme Court of the United States over almost the entire criminal code of the United States, involving a large number of internal-revenue cases; involving a large number of felonies from the district courts at Fort Smith, Ark., and at Paris, Texas, and other courts exercising exclusive jurisdiction over certain defined territory of the United States. It likewise will embrace almost all the violations of the postal service. It will

likewise embrace a very large number of counterfeiting cases.

"From every Federal tribunal in this country these infamous offenses may be taken by writs of error to the Supreme Court of the United States. Therefore, not only is the primary consideration for which legislation was sought defeated, but the evil which was attempted to be remedied is intensified, I think I am safe in saying, by at least from three hundred to one thousand cases annually which will be carried to the Supreme Court of the United States from this great domain over which it has never heretofore exercised any appellate jurisdiction. The result will be that, independent of the civil cases which have the right of appeal or writ of error from the district and circuit courts of the United States to the Supreme Court under the terms of the bill, and in which field the number of cases is greatly diminished by the bill, this new criminal appellate jurisdiction which is imposed upon the Supreme Court will more than overbalance the number of cases which are cut off by the creation of the intermediate courts of appeal. I think I have made that point clear, or, if I have not, I have been unfortunate.

"A vice of the present organization of the Federal judicial system is that there are eight circuit judges exercising original jurisdiction, and exclusive jurisdiction almost, over the great domain of civil litigation of all classes and kinds. These eight circuit judges are compelled, in the discharge of their duties, to gallop all over the country, consuming a large proportion of their time in travel. To illustrate, take the eighth circuit, composed of Nebraska, Minnesota, Iowa, Missouri, Kansas, Arkansas, and North and South Dakota, all this vast domain, extending almost from the Gulf to Canada, is now in one circuit presided over by a single circuit judge, and of course his time was very largely absorbed in travel while his duties were discharged by the district judges.

"Now, our bill sought to abolish the circuit courts as courts of original jurisdiction and thereby get rid of that evil, and confer all original jurisdiction on the district courts; then add one or more circuit judges to each circuit, and organize with these circuit judges one circuit court of appeals with appellate jurisdiction; but this bill intensifies the evil by assigning two circuit judges to each circuit to do the same kind of service, and gallop all over the country in the old way. To illustrate further the vice of this system, I think I speak within bounds when I say as to the four courts in my own State that no circuit judge or associate justice of the Supreme Court of the United States has ever appeared at any of them but one; and I think I may safely add that no circuit judge and no associate justice of the Supreme Court ever in his life, at any one time, spent more than two weeks in the State, and sometimes they do not go there for one, two, or three years. The fact is, that the whole circuit-court system as organized now and as proposed by this bill is vicious and a failure.

"But I now invite your attention to another vice in this system. These nine intermediate appellate courts are organized by this bill, and their first terms are to be held at such times as the court may appoint; but when these nine

courts meet in their nine respective places there will not be a single case upon their docket to be tried. These great tribunals, with all the dignity of the supreme court of a great State, are organized and directed to go to hold court, and not a case to be heard in any one of them, and this, too, when 1,700 cases are on the Supreme Court docket, three fourths of which should be certified to them for trial; but there is no provision on this bill that those cases which by the terms of the bill itself in future shall go to these tribunals by writ of error or appeal shall be certified down their for immediate consideration.

"Then by the terms of this bill there are created nine additional officers—marshals of the United States. There is no necessity whatever for the appointment of a single additional marshal, because the marshals already authorized where these courts are held could discharge every duty required by the terms of this bill. That, however, is a defect that may readily be cured.

"And while I make these objections to the bill, candor compels me to say that I think the only exigency which would have compelled the majority of the House conferees to consent to this bill is the fact that the parliamentary status and business of the two Houses is such that it was thought impossible otherwise to get through a bill of any description; and, secondly, because the vices which I have pointed out are of such a character as will compel Congress in a short time to adopt three or four amendments such as I have suggested for the purpose of securing the relief which was the only motive and almost the sole purpose of the legislation sought.

"I have now, in the brief time allowed me, tried to point out the reasons which compelled me to dissent from this conference report, and which will induce me to vote against it. In short, and finally, the bill gives no relief to the Supreme Court now, and it is exceedingly doubtful whether in its present condition it ever will. Indeed, it is probable that it will result in an increase of its already overburdened docket.

"Second, it perpetuates the vice of the present system in not abolishing the circuit courts, as courts of original jurisdiction, and condemns eighteen instead of nine circuit judges to a life of travel rather than a life of judicial usefulness.

"Third, it makes the circuit courts of appeal, instead of being organized, stable, and independent tribunals, with one set of judges each—it makes of them courts whose judges are constantly shifting and changing, because no judge can sit in the trial of any cause in the circuit court of appeals wherein he had presided in the court below, whether he be a circuit or district judge.

"Fourth, it does not disassociate the Chief Justice and associate justices of the Supreme Court of the United States from the circuit court work.

"Fifth, it converts our great constitutional court, the Supreme Court of the United States, into an appellate court to try not capital cases only, but criminal cases of almost every class, except misdemeanors of the lowest grades.

"Finally, it provides for nine United States marshals, for whom there is no earthly use. If these evils were corrected, I would, from a sense of profound duty, even at the sacrifice of parting

company with my political associates, support and vote for this measure. As the bill is now constructed I would not vote for it under any circumstances, believing it is better to have no legislation rather than legislation which, while it corrects some evils, intensifies others and fails utterly to correct the one primarily sought to be corrected, and concerning which the complaints are general, severe, and of long standing—namely, relief for the Supreme Court of the United States."

Mr. Culberson, of Texas, said:

"Mr. Speaker, the House bill relieved the judges of the Supreme Court of duty in circuit courts, thus enabling them to devote their entire time to the business in the Supreme Court.

"The circuit court of appeals consisted of three circuit court judges in each circuit, and was required to hold one term in each year at a place designated in each circuit.

"If for any reason a quorum of the court should fail to attend, it was provided that a district judge or judges might be assigned to this duty.

"This plan of reorganization provided for a review of every civil case and of nearly every criminal case which might be tried in the court of original jurisdiction, either by the circuit court of appeals or by the Supreme Court, and in some cases by both.

"This secured to every litigant the right to have his case reviewed by a court of last resort, and thus overthrew the judicial despotism we have been accustomed to in some sections of the country.

"In respect to the relief of the Supreme Court, I may say that the division of the appellate jurisdiction now exercised by the Supreme Court and the new appellate jurisdiction created by the bill was made substantially upon this basis: All cases tried in the court of original jurisdiction might be reviewed in the circuit court of appeals, and if there should be no Federal question involved (as if jurisdiction should have been acquired by the court of original jurisdiction upon the ground of citizenship) the judgment of the court of appeals should be final, but if a Federal question was involved the judgment of the circuit court of appeals might be reviewed by the Supreme Court.

"I propose to support the Senate amendment, not because I prefer the plan proposed by the Senate to that proposed by the House, but for the reasons which induced me to support the House bill. The same objects and results sought to be attained by the House proposition are secured by the Senate amendment.

"A moment now as to the scheme of relief proposed by this amendment. It provides for the appointment of only nine circuit judges. A circuit court of appeals is created in each circuit. It consists of a judge of the Supreme Court and two circuit judges. It is required to hold one term each year at a place designated in the circuit. The appellate jurisdiction is divided between these courts of appeal, as shown by the following synopsis of the bill:

7. It provides for appeals from the district courts and from the circuit courts direct to the Supreme Court in the following instances only:

a. Where a question of jurisdiction is raised;

- b. Final decrees in prize causes;
- c. Cases of crime punishable by death;
- d. Cases involving the construction or application of the Constitution of the United States, but not in cases involving the construction or application of acts of Congress;
- e. Cases in which the constitutionality (only) of any law of the United States, or the validity or construction of a treaty, is drawn into question;
- f. In cases in which the law of a State is claimed to be in contravention of the Constitution of the United States.
8. It leaves the jurisdiction of the Supreme Court in respect of cases brought from the highest court of a State, as the law now is.
9. It gives the court of appeals jurisdiction to review decisions of the district and circuit courts in all other cases.
10. It provides that the judgments of the court of appeals shall be final in all cases—
 - (a) In which the jurisdiction is dependent upon the character of the suitors, as citizens or aliens;
 - (b) In cases arising under the patent laws;
 - (c) In cases under the revenue laws;
 - (d) In cases under the criminal laws; and
 - (e) In admiralty cases other than prize.
11. It authorizes the court of appeals to certify to the Supreme Court questions of law.
12. It authorizes the Supreme Court in the cases last mentioned to review the whole case.
13. It also authorizes the Supreme Court to require the court of appeals to send up for consideration any case pending therein.
14. In all other cases in the court of appeals it authorizes an appeal to the Supreme Court from the court of appeals when the matter in controversy exceeds \$1,000.

These are the broad and leading features of the legislation proposed by the majority of the committee. It will be seen from the foregoing that in general the Supreme Court of the United States is excluded from reviewing—

- I. Cases in which the jurisdiction of the national courts depends upon the character of suitors.
- II. All cases arising under the patent laws.
- III. All cases under the revenue laws.
- IV. All cases under the criminal laws.
- V. All admiralty cases other than prize.

"It will be seen from this statement that the division of labor between these courts and the Supreme Court is better arranged and less expensive to litigants than that proposed in the House measure.

"There is no restriction upon the right of review, and in my judgment there is no question of the efficiency of the plan to give ample relief to the court.

"My colleague on the committee thinks that the failure to incorporate in this amendment a provision to remove the causes now pending in the Supreme Court of which the circuit court of appeals would have jurisdiction under this bill to the proper circuit court of appeals was a grave mistake, and will result in postponing the relief sought to be given the Supreme Court by this measure.

"I concur in that opinion and believe that it was a grave mistake, and I have no doubt that Congress will rectify it as soon as practicable.

"Mr. Speaker, in respect to the objection to the provision which secures a defendant in a case of conviction of a capital or otherwise infamous crime an appeal direct to the Supreme Court of the United States, I desire to say that I believe that a more meritorious provision could not be inserted in this measure.

"If there is any class of judgments which de-

serve a higher and greater consideration than another, it seems to me that a judgment which takes life or liberty falls within it.

"It is true, Mr. Speaker, that this measure, if it should become the law, will require the appointment of nine circuit judges by this Administration.

"But I take it that the true question is, not whether this necessary judicial force is to be furnished from the Republican party or the Democratic party, or both combined, but, is it needed?

"Shall the demand of the bar of the United States, without regard to party, be ignored? Shall the best interests of the country, so long outraged and disgraced by the law's delays, continue to be neglected because the President of the United States may fill these places with his party friends?

"So far as I am concerned, I yield to what I believe to be the best interests of the country, without regard to party. Regretting sincerely to differ with Democratic colleagues on the committee, I shall vote for this conference report."

On March 3, 1891, the President approved of the measure.

Salaries of District Judges.—On Feb. 14, 1891, the House passed a bill, previously passed by the Senate, "fixing the salaries of the several judges of the United States district courts at \$5,000 per annum." The considerations in favor of the measure are thus presented in the report of the House Judiciary Committee:

Justices of the Supreme Court.—The salaries of the justices of the Supreme Court were first fixed by act of Sept. 23, 1789, at the sum of \$4,000 for the Chief Justice and \$3,500 for the associate justices. Feb. 20, 1819, they were changed to the sum of \$5,000 for the Chief Justice and \$4,000 for the associate justices. March 3, 1855, they were again raised to \$6,500 and \$6,000; March 3, 1871, to \$8,500 and \$8,000; and March 3, 1873, to \$10,500 and \$10,000, at which amount they have ever since remained.

These justices stay in Washington continuously from October to May each year, and not a little is expected of them socially. The expenses of living in Washington have steadily increased for some time. Rents, real estate, and living expenses generally are high there. Besides, as before stated, the justices of the Supreme Court do more or less circuit work in their respective circuits each summer, and have traveling expenses then to meet.

On Sept. 1, 1857, Associate-Justice Benjamin Robbins Curtis, of Boston, tendered his resignation as such justice to the President, and it was accepted. In letters to his friends he stated that his main reason for doing so was that the salary was so small—it was then \$6,000—he could not support his family in Washington without expending, in addition to his salary, his entire private income, and that he did not deem it his duty to do so.

After his resignation he entered at once upon the practice of his profession, and was so engaged until his death. His brother, Mr. George Ticknor Curtis, of New York, in his biography of the ex-justice, says that his aggregate professional receipts from the time of his resignation until his death, a period of nearly seventeen years, were about \$650,000. This would make an average annual income of a little over \$38,000. But even that is not so large an income as many lawyers of the country have received during the time that has elapsed since Justice Curtis's death and are now receiving.

Circuit Judges.—The act providing for the appointment of circuit judges fixed their salary at the sum of \$6,000, and it has not been changed. These

Judges have laborious duties to perform and matters of great importance and magnitude submitted to them for adjudication. They have to hold court in the various districts in their respective circuits. The first circuit embraces four States, the second three, third three, the fourth five, the fifth six, the sixth four, the seventh three, the eighth seven, and the ninth three. In several of the States there are two districts, and in some three. Most of these judges, therefore, have to travel a good deal and to be away from home the larger part of the time on expense.

Since provision was made for their appointment, two at least, Judges Dillon and McCreary, of the eighth circuit, have resigned on account of the salary being so small. Both were men of the highest standing and ability and able judges. The former is in New York and the latter in Kansas City. Both are engaged in practice, and undoubtedly have an income much larger than the salary of a circuit judge. Judge Lowell, of the first circuit, has also resigned and resumed practice in Boston. He was also an able judge. He did not resign perhaps on account of the small salary, as at the time of his resignation he is understood to have been in independent circumstances, but he undoubtedly felt that he was entitled to a respite from heavy work.

By act of Congress passed March 3, 1887, provision was made for the appointment of a second circuit judge in the second circuit, composed of the States of Vermont, New York, and Connecticut, and soon thereafter the Hon. E. Henry Lacombe was appointed to the place. He qualified and entered upon the duties of his office in June of that year, so that now there is a senior and a junior circuit judge in that circuit.

District Judges.—The judiciary act of September, 1789, provided for thirteen district courts, with a judge in each district, and fixed the salaries of the judges at from \$800 to \$1,800. These districts have been increased in number, so that now there are fifty-eight. The salaries of these judges have also been increased. At the present time one of these judges receives \$5,000, one \$4,500, eleven \$4,000 each, and the remaining forty-five \$3,500 each. The one receiving \$5,000 is Judge Hoffman, of San Francisco. The one receiving \$4,500 is Judge Billings, of New Orleans. The eleven receiving \$4,000 are Judges Blodgett of Chicago, Norris of Baltimore, Nelson of Boston, Nixon of Trenton, Brown of New York, Benedict of Brooklyn, Cox of Utica, Sage of Cincinnati, Butler of Philadelphia, Ahleson of Pittsburg, and Ross of Los Angeles.

These judges usually work only in their respective districts, but in many of these districts court is now held in two different places, and in some of them in three, so that these judges also are obliged to be away from home considerably on expense. These judges, besides holding district court, also hold circuit court in the absence of the circuit judge, and in some of the circuits do perhaps as much or more of the circuit work than the circuit judge does, as in some of the circuits it is not possible for the circuit judge to get into each district more than twice a year, and then not for a long time.

In addition to the foregoing salaries, all of these judges are now allowed to retire after ten years of service and after reaching the age of seventy years, upon the salary they have been receiving, and to draw it as long as they live.

There are now nine Federal judges living who have retired and are receiving their salary. Justice Strong, of the Supreme Court; Circuit Judge Drummond; District Judges Erskine, Bryan, and Treat; Judges Loring and Drake, of the Court of Claims; and Judges Wylie and McArthur, of the Supreme Court of the District of Columbia.

It should be said also that all these appointments are for life or during good behavior, and that in that respect the terms of the Federal judges differ from most, and perhaps all, of those of the judges of our State courts.

For purposes of comparison and at some trouble I

have ascertained the amount of salaries paid to the judges of the courts of England and some of her colonies, and to the judges of the courts in the States of this country where the salary equals or exceeds the lowest amount paid to our Federal district judges, which I give below.

In England the Lord Chancellor receives a salary of £10,000, the lords of appeal in ordinary £6,000 each. In the Supreme Court of Judicature, the master of the rolls receives £5,000, and the lords justices £5,000 each. In the High Court of Justice, the justices receive £5,000 each. In the Queen's Bench, the Lord Chief Justice of England receives £8,000, and the justices, fourteen in number, £5,000 each. In the Probate and Admiralty Courts and the Court of Arches, the judges receive £5,000 each. In the city courts of London, in the Lord Mayor's Court, the judges receive £3,500 each. In the City of London Court, £2,400 each, and in the county courts in the neighborhood of the metropolis, £1,500 each.

The measure was approved by the President on Feb. 21.

International Copyright.—On Dec. 3, 1890, the House passed an international copyright bill. Among the provisions was a prohibition against the importation of copyrighted books, except two copies for use on special permission to the importer from the owner of the copyright in this country. There was also a provision against importing more than two copies of any magazine or newspaper. In the Senate the House bill was amended in some respects, the most important changes being on these two points. The Senate amendments provided for the importation of foreign-made books, like other articles, on the payment of duty, and also provided for the importation of foreign periodicals. The bill as amended passed the Senate Feb. 18, 1891. A conference committee was appointed, and after some delay and discussion an agreement was reached and a report made, March 2, in favor of the bill in the following form, the House accepting the less important Senate amendments and a compromise being reached on the more important ones:

Be it enacted, etc., That section 4952 of the Revised Statutes be, and the same is hereby, amended so as to read as follows:

"Sec. 4952. The author, inventor, designer, or proprietor of any book, map, chart, dramatic or musical composition, engraving, cut, print, or photograph or negative thereof, or of a painting, drawing, chromo, statue, statuary, and of models or designs intended to be perfected as works of the fine arts, and the executors, administrators, or assigns of any such person shall, upon complying with the provisions of this chapter, have the sole liberty of printing, reprinting, publishing, completing, copying, executing, finishing, and vending the same; and, in the case of dramatic composition, of publicly performing or representing it or causing it to be performed or represented by others; and authors or their assigns shall have exclusive right to dramatize and translate any of their works for which copyright shall have been obtained under the laws of the United States."

SEC. 2. That section 4954 of the Revised Statutes be, and the same is hereby, amended so as to read as follows:

"Sec. 4954. The author, inventor, or designer, if he be still living, or his widow or children, if he be dead, shall have the same exclusive right continued for the further term of fourteen years upon recording the title of the work or description of the article so secured a second time, and complying with all other regulations in regard to original copyrights, within six months before the expiration of the first term; and such persons shall, within two months from the

date of said renewal, cause a copy of the record thereof to be published in one or more newspapers printed in the United States for the space of four weeks."

SEC. 3. That section 4956 of the Revised Statutes of the United States be, and the same is hereby, amended so that it shall read as follows:

"SEC. 4956. No person shall be entitled to a copyright unless he shall, on or before the day of publication in this or any foreign country, deliver at the office of the Librarian of Congress, or deposit in the mail within the United States, addressed to the Librarian of Congress, at Washington, D. C., a printed copy of the title of the book, map, chart, dramatic or musical composition, engraving, cut, print, photograph, or chromo, or a description of the painting, drawing, statue, statuery, or a model or design for a work of the fine arts for which he desires a copyright, nor unless he shall also, not later than the day of the publication thereof in this or any foreign country, deliver at the office of the Librarian of Congress, at Washington, D. C., or deposit in the mail within the United States, addressed to the Librarian of Congress, at Washington, D. C., two copies of such copyright book, map, chart, dramatic or musical composition, engraving, chromo, cut, print, or photograph, or in case of a painting, drawing, statue, statuery, model, or design for a work of the fine arts, a photograph of the same: *Provided*, That in the case of a book, photograph, chromo, or lithograph, the two copies of the same required to be delivered or deposited as above shall be printed from type set within the limits of the United States, or from plates made therefrom, or from negatives or drawings on stone made within the limits of the United States, or from transfers therefrom. During the existence of such copyright the importation into the United States of any book, chromo, lithograph, or photograph so copyrighted, or any edition or editions thereof, or any plates of the same not made from type set, negatives or drawings on stone made within the limits of the United States, shall be, and it is hereby, prohibited. Except in the cases specified in paragraphs 512 to 516, inclusive, in section 2, of the act entitled 'An Act to reduce the revenue and equalize the duties on imports, and for other purposes,' approved Oct. 1, 1890; and except in the case of persons purchasing for use and not for sale, who import subject to the duty thereon not more than two copies of such book at any one time; and except in the case of newspapers and magazines, not containing in whole or in part matter copyrighted under the provisions of this act, unauthorized by the author, which are hereby exempted from prohibition of importation: *Provided, nevertheless*, That in the case of books in foreign languages, of which only translations in English are copyrighted, the prohibition of importation shall apply only to the translation of the same, and the importation of the books in the original language shall be permitted."

SEC. 4. That section 4958 of the Revised Statutes be, and the same is hereby, amended so that it will read as follows:

"SEC. 4958. The Librarian of Congress shall receive from the persons to whom the services designated are rendered the following fees:

"First. For recording the title or description of any copyright book or other article, 50 cents.

"Second. For every copy under seal of such record actually given to the person claiming the copyright, or his assigns, 50 cents.

"Third. For recording and certifying any instrument of writing for the assignment of a copyright, \$1.

"Fourth. For every copy of an assignment, \$1.

"All fees so received shall be paid into the Treasury of the United States: *Provided*, That the charge for recording the title or description of any article entered for copyright, the production of a person not a citizen or resident of the United States, shall be \$1, to be paid as above into the Treasury of the United States, to defray the expenses of lists of copyrighted articles as hereinafter provided for.

"And it is hereby made the duty of the Librarian of Congress to furnish to the Secretary of the Treasury copies of the entries of titles of all books and other articles wherein the copyright has been completed by the deposit of two copies of such book printed from type set within the limits of the United States, in accordance with the provisions of this act, and by the deposit of two copies of such other article made or produced in the United States; and the Secretary of the Treasury is hereby directed to prepare and print, at intervals of not more than a week, catalogues of such title entries for distribution to the collectors of customs of the United States and to the postmasters of all post-offices receiving foreign mails, and such weekly lists, as they are issued, shall be furnished to all parties desiring them, at a sum not exceeding \$5 per annum; and the Secretary and the Postmaster-General are hereby empowered and required to make and enforce such rules and regulations as shall prevent the importation into the United States, except upon the conditions above specified, of all articles prohibited by this act."

SEC. 5. That section 4959 of the Revised Statutes be, and the same is hereby, amended so as to read as follows:

"SEC. 4959. The proprietor of every copyright book or other article shall deliver at the office of the Librarian of Congress, or deposit in the mail, addressed to the Librarian of Congress, at Washington, District of Columbia, a copy of every subsequent edition wherein any substantial changes shall be made: *Provided, however*, That the alterations, revisions, and additions made to books by foreign authors heretofore published, of which new additions shall appear subsequently to the taking effect of this act, shall be held and deemed capable of being copyrighted as above provided for in this act, unless they form a part of the series in course of publication at the time this act shall take effect."

SEC. 6. That section 4963 of the Revised Statutes be, and the same is hereby, amended so as to read as follows:

"SEC. 4963. Every person who shall insert or impress such notice, or words of the same purport, in or upon any book, map, chart, dramatic or musical composition, print, cut, engraving, or photograph, or other article, for which he has not obtained a copyright, shall be liable to a penalty of \$100, recoverable one half for the person who shall sue for such penalty and one half to the use of the United States."

SEC. 7. That section 4964 of the Revised Statutes be, and the same is hereby, amended so as to read as follows:

"SEC. 4964. Every person who, after the recording of the title of any book and the depositing of two copies of such book, as provided by this act, shall, contrary to the provisions of this act, within the term limited, and without the consent of the proprietor of the copyright first obtained in writing, signed in presence of two or more witnesses, print, publish, dramatize, translate, or import, or, knowing the same to be so printed, published, dramatized, translated, or imported, shall sell or expose to sale any copy of such book, shall forfeit every copy thereof to such proprietor, and shall also forfeit and pay such damages as may be recovered in a civil action by such proprietor in any court of competent jurisdiction."

SEC. 8. That section 4965 of the Revised Statutes be, and the same is hereby, so amended as to read as follows:

"SEC. 4965. If any person, after the recording of the title of any map, chart, dramatic or musical composition, print, cut, engraving, or photograph, or chromo, or of the description of any painting, drawing, statue, statuery, or model or design intended to be perfected and executed as a work of the fine arts, as provided by this act, shall, contrary to the provisions of this act, within the term limited, and without the consent of the proprietor of the copyright first obtained in writing, signed in presence of two or more witnesses, engrave, etch, work, copy, print, publish,

dramatize, translate, or import, either in whole or in part, or by varying the main design with intent to evade the law, or, knowing the same to be so printed, published, dramatized, translated, or imported, shall sell or expose to sale any copy of such map or other article as aforesaid, he shall forfeit to the proprietor all the plates on which the same shall be copied and every sheet thereof, either copied or printed, and shall further forfeit \$1 for every sheet of the same found in his possession, either printing, printed, copied, published, imported, or exposed for sale, and in case of a painting, statue, or statuery, he shall forfeit \$10 for every copy of the same in his possession, or by him sold or exposed for sale; one half thereof to the proprietor and the other half to the use of the United States."

Sec. 9. That section 4967 of the Revised Statutes be, and the same is hereby, amended so as to read as follows:

"Sec. 4967. Every person who shall print or publish any manuscript whatever without the consent of the author or proprietor first obtained shall be liable to the author or proprietor for all damages occasioned by such injury."

Sec. 10. That section 4971 of the Revised Statutes be, and the same is hereby, repealed.

Sec. 11. That for the purpose of this act each volume of a book in two or more volumes, when such volumes are published separately and the first one shall not have been issued before this act shall take effect, and each number of a periodical shall be considered an independent publication, subject to the form of copyrighting as above.

Sec. 12. That this act shall go into effect on the 1st day of July, A. D. 1891.

Sec. 13. That this act shall only apply to a citizen of a foreign state or nation when such foreign state or nation permits to citizens of the United States of America the benefit of copyright on substantially the same basis as its own citizens; or when such foreign state or nation permits to citizens of the United States of America copyright privileges substantially similar to those provided for in this act; or when such foreign state or nation is a party to an international agreement which provides for reciprocity in the grant of copyright, by the terms of which agreement the United States of America may at its pleasure become a party to such agreement. The existence of either of the conditions aforesaid shall be determined by the President of the United States, by proclamation made from time to time, as the purposes of this act may require.

There were bitter protests against the measure in this form in both the Senate and the House of Representatives. In the latter body, March 2, Mr. Springer, of Illinois, said:

"Mr. Speaker, in the original bill there was a prohibition of certain books coming into this country under any circumstances. The Senate amended that by what is known as the Sherman amendment, so as to subject such books to the duty imposed by the existing tariff law. Now, the conference committee have modified that amendment by specifying what the exceptions are that are permitted to come in, and I desire to have read from the clerk's desk paragraphs 512 to 516 inclusive of the McKinley bill, which are the paragraphs referred to in this report, and which have not been considered by the House and are new matter entirely."

The clerk read as follows:

512. Books, engravings, photographs, bound or unbound, etchings, maps, and charts, which shall have been printed and bound or manufactured more than twenty years at the date of importation.

513. Books and pamphlets printed exclusively in languages other than English; also books and music in raised print, used exclusively by the blind.

514. Books, engravings, photographs, etchings, bound or unbound, maps and charts imported by authority or for the use of the United States, or for the use of the Library of Congress.

515. Books, maps, lithographic prints and charts specially imported, not more than two copies in any one invoice in good faith, for the use of any society incorporated for educational, philosophical, literary, or religious purposes, or for the encouragement of the fine arts, or for the use or by order of any college, academy, school, or seminary of learning in the United States, subject to such regulations as the Secretary of the Treasury shall prescribe.

516. Books, or libraries, or parts of libraries and other household effects of persons or families from foreign countries, if actually used by them not less than one year, and not intended for any other person or persons, nor for sale.

"The provisions of law as just read by the clerk show the books that come in free under the present law and which will continue to come in free if this bill should pass. Among the books thus admitted free are books in other languages than English. They are permitted to come in free, notwithstanding the copyright law. Books published in all languages except that which we habitually speak and read can come into the country without payment of duty as heretofore.

"The writings of Confucius in Chinese, or the Koran, or books in Sanskrit or any other language not ordinarily spoken in this country, are admitted without the payment of duty, but books in the language which we ordinarily speak or read are excluded by this bill. I simply wanted to call attention to this matter to show that Congress is now making a discrimination against the mother-tongue."

Mr. Kerr, of Iowa, said:

"As the gentleman from Illinois has just said, this bill in its present form is an absolute prohibition of the importation into this country of foreign books. Under previous laws, I believe, they were admitted by paying a duty of 30 per cent.; and the American publishers had the advantage of 25 or 30 per cent. in the publishing of books in this country. Under the law now proposed to be enacted, we shall be left entirely at the mercy of American publishers.

"The present bill pretends to be in the interest of the American author; but it affords him no protection whatever. Both the American author and the American reader are left entirely at the mercy of the great publishing houses of the country. Hereafter, if this bill should become a law, no American can buy a book that he can read (unless he first learns a foreign language) without paying just such price as the American publisher, operating without competition from any other source, may see fit to place upon it. This is in effect a Chinese wall against intelligence."

Mr. Breckenridge, of Arkansas, said:

"This evidently is not a copyright proposition disentangled from other questions. If it were that, or if it were within any reasonable limit an approximation to that, I should be among its warmest supporters; for I believe in the copyright doctrine (if it may be so defined) quite as strongly as any gentleman here. But I am repelled more than some others are by those matters which are associated with the copyright privileges or guarantees provided for in this bill.

"When we have a protective tariff on books, which is an inducement and a compulsion to that extent to have the plant of the publication put up in this country, it is enough, without our singling out books so essential for human advancement and making the protective feature, upon those articles absolutely prohibitory, which we do in the terms of this bill. It is not wise legislation, it is not just to the people of this country, that we should protect that feature of our commerce by absolute prohibition.

"Of course we provide for books to be obtained by some means; but, so far as imports are concerned, the publishers in this country can put up the price upon the works of a foreign author to any extent that they may please, if they can accomplish a combination; and of course the price which they may demand must come out of the buyer of the book before he can get access to it. In scientific matters and in many lines of study which enter into our industries, this is a question of exceeding importance.

"The gentleman from Illinois alludes to our discrimination against the 'mother-tongue.' We have a very large foreign element in this country, and we know that it is necessary that it should steadily assimilate with the mass of our people. When we make it easy for our foreign-born citizens to get books in their native language, we discourage that assimilation which we recognize as necessary for our social and political welfare.

"I do not believe in seeking to nationalize a community by banishing a particular tongue from the schools, by forbidding parents from educating their children in any language that they please. I do not believe in those arbitrary methods which obtain in the more despotic governments of Europe. But I believe it is equally wrong to legislate against that nationalization and assimilation of sentiment and of speech as we are doing in this bill.

"There is another feature of this matter to be considered. When certain general conditions, not here accurately defined, are fulfilled, then the President can put this law into operation by proclamation; and when those conditions, being very general in their character, are not, in his judgment complied with, he can revoke the operation of the law. It is a new and not a good feature of our policy when we take a step like this, which is virtually legislation by proclamation.

"We are reposing practically legislative power in the hands of the Chief Executive of this country. He is to judge of situations. We are not accurately defining them. He is not simply to proclaim a law we pass, but to judge of situations and proclaim the recall, and is empowered to promulgate as well as recall. It is an unwise policy, a policy that I think, if there were nothing else in the bill that I objected to, would induce me to vote against it, coupled as it is with other impolitic provisions."

The conference report was adopted by the following vote:

YEAS—Adams, Allen of Michigan, Atkinson of West Virginia, Banks, Bartine, Belden, Bliss, Boatner, Boutelle, Bowden, Brosius, Browne of Virginia, Brunner, Burrows, Burton, Butterworth, Bynum, Caldwell, Carter, Caruth, Caswell, Cheadle, Clark of

Wyoming, Cogswell, Coleman, Comstock, Covert, Craig, Culbertson of Pennsylvania, Cummings, Daltzell, De Lano, Dingley, Dunnell, Dunphy, Evans, Farquhar, Featherston, Fitch, Flower, Funston, Geary, Geissenhainer, Gibson, Greenhalge, Grout, Hall, Hansbrough, Harner, Hermann, Kerr of Pennsylvania, Ketcham, Kinsey, Knapp, La Follette, Laidlaw, Lansing, Lawler, Lee, Lehlbach, Lodge, Maish, McComas, McCormick, McDuffie, McKenna, McKinley, Miles, Miller, Moffitt, Moore of New Hampshire, Morey, Morrow, Mudd, Niedringhaus, O'Donnell, O'Neil of Massachusetts, O'Neil of Pennsylvania, Parrett, Payne, Penington, Pindar, Price, Quinn, Raines, Randall, Reilly, Reyburn, Rife, Rowell, Russell, Sawyer, Seull, Sherman, Shively, Simonds, Smith of West Virginia, Smyser, Snider, Spinola, Spooner, Stewart of Vermont, Stockbridge, Stone of Pennsylvania, Stump, Sweet, Tarsney, Taylor of Tennessee, Thompson, Tillman, Townsend of Colorado, Tucker, Turner of New York, Vandever, Vaux, Waddill, Wade, Walker, Wallace of New York, Wickham, Willcox, Williams of Ohio, Wilson of Washington, Wilson of West Virginia, Wright, Yardley, Yoder—127.

NAYS—Abbott, Alderson, Atkinson of Pennsylvania, Bankhead, Barnes, Barwig, Bergen, Blanchard, Breckenridge of Arkansas, Brickner, Brookshire, J. B. Brown, Buchanan of Virginia, Buckalew, Bunn, Catchings, Clements, Cooper of Indiana, Cowles, Crain, Crisp, Dibble, Dickerson, Dockery, Dolliver, Edmunds, Ellis, Forney, Fowler, Gest, Grimes, Grosvenor, Hatch, Haugen, Haynes, Heard, Herbert, Holman, Hooker, Kennedy, Kerr of Iowa, Lacey, Lane, Lester of Virginia, Lewis, Lind, Mansur, Martin of Indiana, Martin of Texas, McClammy, McCreary, McMillin, McRae, Montgomery, O'Ferrall, O'Neill of Indiana, Owens of Ohio, Paynter, Peel, Perkins, Ray, Rogers, Seney, Skinner, Smith of Illinois, Springer, Stephenson, Stockdale, Stone of Missouri, Sweney, J. D. Taylor, Thomas, Washington, Whitelaw, Williams of Illinois, Wilson of Kentucky, Wilson of Missouri—77.

NOT VOTING—Allen of Mississippi, Anderson of Kansas, Anderson of Mississippi, Andrew, Arnold, Baker, Bayne, Beckwith, Belknap, Biggs, Bingham, Bland, Blount, Boothman, Breckinridge of Kentucky, Brewer, Brower, T. M. Browne, Buchanan of New Jersey, Bullock, Campbell, Candler of Georgia, Candler of Massachusetts, Cannon, Carlton, Cheatham, Chipman, Clancy, Clarke of Alabama, Clark of Wisconsin, Clunie, Cobb, Connell, Cooper of Ohio, Cothran, Culbertson of Texas, Cutcheon, Dargan, Darlington, Davidson, Dorsey, Enloe, Ewart, Finley, Fithian, Flik, Flood, Forman, Frank, Gear, Gifford, Goodnight, Hare, W. I. Hayes, E. R. Hays, Hemphill, Henderson of Illinois, Henderson of Iowa, Henderson of North Carolina, Hill, Hitt, Hopkins, Houk, Kelley, Kilgore, Langston, Lanham, Laws, Lester of Georgia, Magner, Mason, McAdoo, McClellan, McCord, Miliken, Mills, Moore of Texas, Morgan, Morrill, Morse, Mutchler, Norton, Nute, Oates, Osborne, Outhwaite, Owen of Indiana, Payson, Perry, Peters, Pickler, Pierce, Post, Pugsley, Quackenbush, Reed of Iowa, Richardson, Robertson, Rockwell, Rowland, Rusk, Sanford, Sayers, Scranton, Stahlnecker, Stewart of Georgia, Stewart of Texas, Silvers, Stone of Kentucky, Struble, Taylor of Illinois, E. B. Taylor, Townsend of Pennsylvania, Tracey, Turner of Georgia, Turner of Kansas, Van Schaick, Wallace of Massachusetts, Wheeler of Alabama, Wheeler of Michigan, Whiting, Whitthorne, Wike, Wiley, Wilkinson—125.

In the Senate, March 3, Mr. Sherman, of Ohio, said:

"Now, the question is whether the Senate of the United States are willing to enter upon this new field of legislation, to abandon a practice, whether good or bad, which has existed for over a hundred years, by which anybody can print any book published in a foreign country

at will and pleasure and sell it to the people of the United States. This bill departs from that old practice and adopts a new one, to give to the author his right of authorship and the exclusive right to sell his books in the United States of America. But it goes beyond that. It gives to the publisher employed by the author the exclusive right to publish the book without competition with foreign countries. It is that theory and that principle which has been twice negated by the decided vote of the Senate, and that now has been surrendered.

"The effect of the proposition as it now stands is to make the copyright granted an exclusive monopoly to publish a book in the United States without any competition from foreign countries except that contained in two provisions. First, I will refer to the provision offered by the Senator from Kansas. It takes the heart and life out of that proposition. The proposition of the Senator from Kansas was to allow magazines and newspapers of current literature to come into the country free. Most of it comes in free of all duty whatever under the existing law. But now if the London 'Times' contains a chapter of a book that is copyrighted in this country it must be excluded. Take the great magazines with which we are familiar, 'Blackwood's' and the various other magazines published in England, some of which, it is said, have a larger circulation in the United States than in England. If such a magazine contains portions of chapters or extracts from an author, in certain cases it would be in violation of this rule, and consequently it could not be imported here.

"The liability of any book or magazine or paper being confiscated by the revenue officers because it contains matters that have been copyrighted in this country would be a new departure from anything that has ever happened before. It would be an embarrassment without limit. It practically nullifies the clause inserted upon motion of the Senator from Kansas. All those who are familiar with the ordinary quarterlies and reviews and monthlies of England know that the great body of those magazines rest upon reviews and criticism involving extracts from works that are copyrighted in this country or that are supposed to be copyrighted in this country.

"Now as to the other proposition, the object of the amendment that was finally formulated by the Senator from Kentucky, the idea of which I first suggested, is that there ought to be competition between the publishers in England and the publishers in our own country, a competition in accordance with our general laws, which by duties on imported books gives to the home publisher a great advantage.

"These books can not be introduced here, except that two copies may be ordered by a single person. So if I desire to send to England for a book that has been copyrighted in this country, I have the privilege to do so, but at what cost and expense? If I send an order for two books to a London bookseller and have them directed to me here, I have the right, according to this proposition, upon paying the duty, to import them. But what is that right worth? In the first place, I have to buy the books at the retail price. A man can not get books into this country except by a

triplicate invoice. Anybody who undertakes to purchase a suit of clothes or anything of that kind from abroad has to have a triplicate invoice signed by the consul in London, the cost of which I do not know, but it is considerable for every invoice. It costs just as much to make out an invoice for two books as it would cost for a thousand books, and he can only make this invoice for two books and no more. He has to pay at least from \$1.50 to \$3 for the expense of invoicing. Then, further, is the expense of transportation, and besides he has to pay the duty; so that in effect the cost would be added to so great an amount in this favor that is granted to the American people to import books from abroad that no one except a very rich man could afford to import any books whatever.

"In other words, it is a denial to the people of the United States of the right to import any books that have been copyrighted in this country except at an expense which would place this privilege far beyond the reach of ordinary people. So none but the rich, who are indifferent to the cost of importation, could indulge in this bounty given to the people of the United States.

"Now, the right to import books, the right to read books, the love of books, is more general in this country than anywhere else, as I said this afternoon; and yet this right which every American citizen has enjoyed since the declaration of American independence is so limited and cribbed by the operations of this proposed law that it can not be exercised practically; and it would be better entirely to strike out this provision and leave it to a broad inhibition to prohibit absolutely the importation of any books from abroad."

In condemnation of these criticisms, Mr. Evans, of New York, said:

"Mr. President, we can not discuss the fundamentals of copyright. What we are to discuss is how we will extend the privilege of copyright, which involves the monopoly of copyright of foreign authors for the benefit of the people of this country. Two arguments reach the subject: the benefit we are to have from foreign authorship made in our country valuable to the writer, and the reciprocal advantage to our authors in their authorship in the foreign country.

"We have been treated this afternoon to an hour's discussion on minor and trivial topics. The arrangement now laid before the Senate would dispose of all those objections. We were told that a rich man or a scholar loving books should be at liberty to have handsome books, costly books, with good type for his failing eyes. We were told it was absurd that returning travelers bringing their books for their use on ship-board should have to throw them overboard when they reach here. That has been disposed of.

"We were told that foreigners coming here should not be cut off from their relations to their foreign authorship and their foreign affections in literature. That has all been disposed of. All these things are now brought into the discussion by the enemies of the copyright. But these objections amount to nothing.

"What is there left, then? It is seriously nothing but this, that whereas now all foreign literature may be appropriated to the consumption and the enlargement of knowledge there-

from without cost and without protection to the author, if we recognize the copyright, cheap literature and cheap access to knowledge will be burdened.

"Mr. President, there is nothing in that but the mere question whether you will give copyright protection to foreign authorship. Foreign authorship can not get it in the spirit separated from the body. The body in which literature appears is by type and print and publishing. That is what needs to be protected, not thoughts while not committed to the public, while diffused by conversation, or public knowledge that is in the mind until it is promulgated; but the author has no mode of protection at home or abroad except in the vehicle of publication by which readers are open in access to his thoughts and the revenue from that patronage shall arise.

"Therefore, when Senators tell us that for years they have been in favor of copyright, in favor of protecting foreign authorship, in favor of justice and duty, and then tell us that they are not for this measure here to-night, what worth is it that they have all those noble sentiments in favor of the protection of literature?"

The Senate concurred in the conference committee's report by the following vote:

YEAS—Aldrich, Allen, Chandler, Dawes, Dixon, Dolph, Edmunds, Farwell, Frye, Hawley, Hiscock, Hoar, Jones of Nevada, McMillan, Morrill, Pasco, Pierce, Platt, Sawyer, Shoup, Spooner, Stanford, Stewart, Warren, Washburn, Wilson, Wolcott—27.

NAYS—Bate, Berry, Call, Carlisle, Casey, Coke, Culom, Daniel, Faulkner, Gorman, Gray, Ingalls, Kenner, Morgan, Pettigrew, Plumb, Ransom, Sherman, Walthall—19.

ABSENT—Allison, Barbour, Blackburn, Blair, Blodgett, Brown, Butler, Cameron, Carey, Cockrell, Colquitt, Davis, Eustis, Evarts, George, Gibson, Hale, Hampton, Harris, Higgins, Jones of Arkansas, McConnell, McPherson, Manderson, Mitchell, Moody, Paddock, Payne, Power, Pugh, Quay, Rengan, Sanders, Squire, Stockbridge, Teller, Turpie, Vance, Vest, Voorhees—40.

Later in the day an attempt was made to recall the bill from the House and have it reconsidered, but the effort failed. The measure was approved by the President March 3, 1891.

Apportionment of Representatives.—Mr. Dunnell, of Minnesota, from the Committee on the Eleventh Census, reported, Dec. 16, 1890, the following bill for the apportionment of Representatives among the States on the basis of that enumeration:

Be it enacted, etc., That after the 3d of March, 1893, the House of Representatives shall be composed of 356 members, to be apportioned among the several States as follows: Alabama, 9; Arkansas, 6; California, 7; Colorado, 2; Connecticut, 4; Delaware, 1; Florida, 2; Georgia, 11; Idaho, 1; Illinois, 22; Indiana, 13; Iowa, 11; Kansas, 8; Kentucky, 11; Louisiana, 6; Maine, 4; Maryland, 6; Massachusetts, 13; Michigan, 12; Minnesota, 7; Mississippi, 7; Missouri, 15; Montana, 1; Nebraska, 6; Nevada, 1; New Hampshire, 2; New Jersey, 8; New York, 34; North Carolina, 9; North Dakota, 1; Ohio, 21; Oregon, 2; Pennsylvania, 30; Rhode Island, 2; South Carolina, 7; South Dakota, 2; Tennessee, 10; Texas, 13; Vermont, 2; Virginia, 10; Washington, 2; West Virginia, 4; Wisconsin, 10; Wyoming, 1.

Sec. 2. That whenever a new State is admitted to the Union the Representative or Representatives assigned to it shall be in addition to the number 356.

Sec. 3. That in each State entitled under this ap-

portionment the number to which such State may be entitled in the Fifty-third and each subsequent Congress shall be elected by districts composed of contiguous territory and containing as nearly as practicable an equal number of inhabitants. The said districts shall be equal to the number of the Representatives to which such State may be entitled in Congress no one district electing more than one Representative.

Sec. 4. That in case of an increase in the number of Representatives which may be given to any State under this apportionment, such additional Representative or Representatives shall be elected by the State at large, and the other Representatives by the districts now prescribed by law until the Legislature of such State in the manner herein prescribed shall redistrict such State, and if there be no increase in the number of Representatives from a State the Representatives thereof shall be elected from the districts now prescribed by law until such State be redistricted as herein prescribed by the Legislature of said State.

Sec. 5. That all acts and parts of acts inconsistent with this act are hereby repealed.

In presenting the measure Mr. Dunnell said:

"Mr. Speaker, it seems to me that I shall have discharged my duty as chairman of the Committee on the Eleventh Census if in a few words, and a very few words, I shall explain the provisions of the bill. It appears here responsive to the requirements of the second section of Article XIV of the Constitution of the United States, and is based upon the eleventh census, that was officially announced on the 25th of November last.

"The first section of the bill provides for the number of Representatives that shall be allowed from each State in the Fifty-third and subsequent Congresses. It provides for a membership of 356, which is an increase of 24 members over the present number. Later I will call attention to the method that has been used in ascertaining the number to which each State is entitled under the census. The first section simply alludes to the membership as it shall be in the Fifty-third and subsequent Congresses. Before I proceed to define the method by which the number was ascertained I shall say in a general way that sections 2, 3, 4, and 5 are almost identical with the corresponding sections as they appear in the apportionments based upon the ninth and also upon the tenth census. There is no new provision incorporated in those sections, and they are, as I have already said, substantially the same. There was no contest in the committee over these sections except such as was merely verbal.

"Twenty-five of the forty-four States will receive under this bill the same number of Representatives which they now have. There are thirteen States, as will be seen in the report of the committee, which will be entitled under the bill to an additional member—Alabama, Arkansas, California, Colorado, Georgia, Kansas, Massachusetts, Michigan, Missouri, New Jersey, Oregon, Washington, Wisconsin. There are two additional members allowed under the bill to each of the following States: Illinois, Minnesota, Pennsylvania and Texas. Three additional members are given to the State of Nebraska.

"I might, if I saw fit, make some allusion to the census of this year, upon which the new apportionment of members has been made. I could do so with pride as an American citizen, in not-

ing the great growth of the population of the United States compared with the population a hundred years ago. On page 4 of the report will be seen the figures of the population of 1790, 3,929,214. The population of the United States this year is 62,622,250. But, Mr. Speaker, I do not consider it necessary to dwell upon this increase in our population. It will, however, be a matter to be considered when we discuss the question whether our present representation shall remain, or whether it shall be increased according to the provisions of this bill.

"There is a diversity of opinion among the members of the House, and there was some among the members of the committee, upon that point. There were those upon the committee favoring the present number of members. There was also upon the committee one gentleman, the member from South Carolina, who advocated a large increase in the membership of the House. The committee finally decided to accept and adopt the number 356. I shall be asked why this number rather than any other was selected. I reply that it was selected because it was found to be the number first reached between 332 and 375 that would secure to each State its present representation.

"The committee discovered in the House a decided unwillingness, almost universally entertained and very largely expressed, to consent to any reduction in the present number of members assigned to any State. This bill, therefore, provides that no State shall suffer a decrease in its present representation. This was one object sought in the apportionment which has been made. The number 356 is also fortunate, as was found, in this, that, using it primarily as a divisor in the aggregate population of the United States, after subtracting the population of the District of Columbia and the four Territories, a ratio was obtained which, divided into the population of each State, gave the most favorable results. That ratio was 173,901. With this as a ratio, the present bill has been constructed. The outcome has already been stated to the House.

"As I have already said, there has been an increase to thirteen States of one member each. Four States get two additional members each, and one State gets three additional members. Using that number, 173,901, as the divisor, the ratio, it was discovered in its use that there would be left no fraction, and no State unprovided for having a fraction more than one half. That was not found to be true with any other ratio than 173,901. If gentlemen will turn to page 13 of the report they will see that no major fractions remain in making up the number of members assigned to the House. On an even division by this ratio the number of members found was 339. This statement will be found substantially presented on the third page of the report accompanying this bill.

"In order to obtain the number 356, after having obtained the number 339, whether pursuing the old or the new method, fractions were sought which would entitle a given State to an additional member, as 17 additional members were needed in order to make the total number 356. The following States were found to have major fractions: Alabama, California, Georgia, Indiana, Iowa, Kentucky, Maine, Maryland, Massa-

chusetts, Oregon, Rhode Island, South Carolina, South Dakota, Texas, Vermont, Virginia, and Wisconsin. Using the major fractions as they were found to exist, the additional 17 members were secured and there was no major fraction left, so that, approximately, complete justice was done to all the States.

"As I said a moment ago there were those upon the committee who desired to retain the present number, but it was found that that could not be used without contravening what seemed to be the universal sentiment of the House, because very many States would lose one from their present representation. There would be ten States that would lose one member each. Letting this fact guide us, there was found to be no other number that we could reasonably make use of than 356, and no other ratio than 173,901.

"Mr. Speaker, this bill, in my judgment, is an eminently fair one, and I think it must commend itself to all the members of this House as fair and just. Recognizing the wish of the House that there should be no diminution of membership, the committee were forced, as I have said, to the acceptance of the number 356. Gentlemen will, of course, see that some number ultimately must be used, and some ratio ultimately must control the committee. Three hundred and fifty-nine is a number that would let in three additional Representatives. A good argument can be made in favor of that number. It would give the State of Arkansas, the State of Minnesota, and the State of New York one additional member each. I made the motion in the committee that 359 be adopted, but it did not meet the concurrence of the committee.

"The difficulty in increasing to 359 will be seen by an examination of the tables presented in the report. It will be seen that by using the ratio which would then be necessary, namely, 172,448, and going through with all the States in that way, there would remain to some States fractions unprovided for as large as the fractions which now remain unprovided for to Arkansas, Minnesota, and New York. And, if we were to step forward 2, 3, 4, or any given number, we would have a different ratio, and therefore a different condition of the remaining unprovided for fractions.

"So that, Mr. Speaker, there is a necessity for stopping somewhere. No State is really legislated against, because no State having a major fraction is left out. If I recollect, Mr. Speaker—and I was a member of the House when the apportionment bill based upon the ninth census and also the bill based upon the tenth census passed—a major fraction absolutely controlled in both of those cases. We are making no departure, therefore, when we insist that the number 356 has been properly taken and may be properly adhered to. If we depart from it we shall find ourselves liable to do injustice to another class of States, while no State is really unjustly treated by the proposed apportionment."

Mr. Flower, of New York, attacked the apportionment on the ground that the enumeration of the population of New York city was incorrect:

"Under this bill the State of New York will have 34 Representatives in Congress, the same number that it now has. It is my purpose to

present to this House some reasons why that number should be increased upon the basis of 173,902.

"The Federal census showed a population in the city of New York of 1,513,000, and the subsequent police census showed a population of 1,710,715, a difference of nearly 200,000.

"Section 9 of the census act is as follows:

It shall be the duty of each enumerator, after being qualified in the manner aforesaid, to visit personally each dwelling house in his subdivision, and each family therein, and each individual living out of a family in any place of abode, and by inquiry made of the head of such family, or of the member thereof deemed most credible and worthy of trust, or of such individual living out of a family, to obtain each and every item of information and all the particulars required by this act, as of date June 1, 1890. And in case no person shall be found at the usual place of abode of such family or individual living out of a family competent to answer the inquiries made in compliance with the requirements of this act, then it shall be lawful for the enumerator to obtain the required information as nearly as may be practicable from the family or families, or person or persons, living nearest to such place of abode.

"This section of the law clearly and specifically sets out the duty of the enumerators and leaves no reasonable excuse, under ordinary circumstances, for a failure to make a substantially correct enumeration. If the occupants of the house are not at home and can not be reached for the purpose of personal inquiry of them, it is the plain duty of the officers to resort to the next sources of information concerning those persons. The mere fact so frequently found set out in the returns of the enumerators, that certain houses were closed, is no justification for their failure to ascertain the number of persons occupying those houses.

"Inquiry of those residing or doing business in the neighborhood would in nearly all cases provide them with information which, if not sufficiently accurate to enable them to make proper returns, would at least afford grounds for more particular inquiry at those places from which the usual inhabitants were then absent, and the local authorities, when it was made their duty to ascertain the number of persons within the territory to which they were assigned to make an enumeration, resorted to these sources of information with perfectly satisfactory results. The Federal enumerators had their schedules so loaded down with impertinent questions concerning the mental, physical, and moral conditions of the people that they did not seem to think it worth while to be especially particular in acquiring information as to the exact numbers that were within their particular bailiwicks.

"If the Federal enumerators had properly performed their duties, the subsequent enumeration made by the police officers of New York city would have presented to the country a most remarkable spectacle of the inaccuracy of those most familiar with the people and the localities of their own city. This variance of numbers is within itself, in the absence of any well-grounded charge of fraud or purposed false enumeration by the local authorities, a sufficient reason to arouse a proper suspicion that the Federal enumerators, selected not because of their special fitness for the positions they were to fill and the

duties they were to perform, but mainly upon the recommendation of local Republican political organizations, were, to say the least, incompetent.

"There is not the slightest reason in the world for believing that the police officers of New York city were either incompetent or intentionally inaccurate, and in this state of the case the very least that might be reasonably expected of those upon whom devolves the duty of ascertaining the whole number of inhabitants of a State is that they would take the necessary steps to verify their own enumeration, especially when the law clearly provides, as does the act of March 1, 1889, for the verification of returns.

"These local authorities, after making their enumeration, selected one political division of the State—the Second Ward—for the purpose of comparison with the Federal enumeration. The Federal enumeration had shown in that ward a population of 927. The police enumeration showed a population of 1,340, a difference of 413. It was found upon comparison that the Federal enumerators had included some that were not included in the local enumeration. This showing was made the main basis of the application to the Federal authorities for the retaking of the census for that city.

"The selection of the Second Ward was made because of the small territory covered by it and the comparatively small population. It was a ward the population of which is composed largely of persons residing in business houses, and while it is not pretended that the discrepancy throughout the whole city is proportionately as great as here, the selection was not made because of the larger proportion of the discrepancy in this ward, but wholly for the reason that I have stated.

"Affidavits of several hundred of the inhabitants of the ward were taken by the local authorities, all showing that these persons were residing at the same places when the local authorities enumerated them at which they resided on the first day of June, and throughout the continuance of the Federal enumeration, and that they had been omitted by the Federal enumerators. Some attempt was made by the Superintendent of the Census to discredit some of these affidavits in the hearing before the Census Committee; but of all the hundreds of affidavits there presented there was nothing approaching successful contradiction in more than two or three cases. And to that hearing, which is soon to be printed, I invite the attention of this House. There is set forth clearly the grounds upon which the city of New York claims that she is entitled to a re-enumeration, and the evidence of the inaccuracy of the work of the Federal enumerators. The argument and the evidence together are somewhat voluminous, and I shall not occupy the attention of the House in going thoroughly into the matter.

"About the only pretense set up as an excuse for refusing a re-enumeration that is at all worthy of attention is that an enumeration made now would show a very different number of inhabitants from that shown by an enumeration taken June 1. I say worthy of attention; but I think that very slight attention will satisfy anybody that this is a mere pretense.

"The people can be relied upon to disclose to the enumerators on the first of June everything concerning their private affairs, their mental and bodily ailments, that the census schedules called for, but they can not be relied upon to give truthful answers at this time as to whether or not they were residents of certain localities at the time that they should have been enumerated under the law. This is the sum and substance of this whole matter. If the people of New York city can be trusted to give truthful answers to questions directed at their sanity and chronic diseases, they can be trusted now to give truthful answers to the only other question that it is necessary for them to reply to in order to verify the enumeration taken in June.

"Sir, this demand for a re-enumeration is no unusual or unreasonable proposition. It is a mere repetition of a demand that is made by various municipalities and States once every ten years. It is a very rare thing, if indeed it ever occurs, that a census is taken in this country which passes wholly unquestioned in every locality, and I believe that never yet has there been a stronger showing of inaccuracy of any census heretofore taken as there has been as to the eleventh census in the city of New York.

"Certainly there has never been as strong a demand so persistently and unanimously urged by any locality as that which has come up from my city; and yet time and again recounts have been allowed. While General Grant was President of the United States a recount was allowed in New York and Philadelphia, both on a much slighter showing than we have now presented. Kansas City, Mo., and various other cities and localities throughout the country have had a re-enumeration to verify the first returns of this census. The whole State of South Carolina was re-enumerated under the tenth census; and the instances of these re-enumerations have been too frequent and too many to justify any attempt upon my part to state them all.

"It is not a crime to ask to be counted, and, until the undignified and vituperative responses of some of the Federal officials to the requests of the New York authorities were promulgated, the people of that city and State were not aware that there was any special obloquy attached to a request for a full and fair enumeration.

"If New York city is allowed to have her people counted she will be entitled certainly to one more Representative than this bill provides for, and probably to two; and it is the plain duty of this Congress to afford her every reasonable opportunity to show the full number of her inhabitants, and especially so in view of the fact that there have recently been admitted to the Union, the States to which I have referred, and which will have, under any circumstances, a power and influence in the Government wholly disproportioned to their population.

"The city of New York is ready at any time to afford every facility to the Federal authorities to make any investigation and any enumeration that they may be disposed to make. The police officers of that city are at the command of the census authorities to join with them in making a canvass of the population. Anything less than an enumeration of all the inhabitants of that city will be a plain denial of justice to

our people. Political screeds, promulgated from the Interior Department, and directed at the Chief Executive of our State, will not answer the just demand of our people to have themselves counted in the eleventh census."

Mr. Holman, of Indiana, criticised the measure for increasing the membership of the House:

"The present number is 332. The number fixed by the last apportionment was 325 and 7 members added since by the admission of new States, and this bill increases the number from 332 to 356. The evidence around us on all hands is that even the present number of members is too large for safe, prudent, and intelligent legislation. Certainly gentlemen will admit that to secure intelligent legislation each member must have an opportunity to understand fully what is transpiring. That can not be done even now. Indeed, Mr. Speaker, it is obvious that even now, with 332 members in this House, it is impossible for all gentlemen to keep the run of current business. Many are too remote from the clerk's desk to even hear in the midst of the confusion incident to a large assembly the reading of bills on which they are called.

"I have not indulged the hope that there would be any reduction in the number of Representatives from the present number. It would require a very strong sentiment of reform in Congress to effect that, and a large amount of self-denial on the part of the statesmen of the several States of the Union. Indeed, as has been already stated by the gentlemen from Minnesota, ever since the organization of our Government, when the number of members of this House was 65—never since that time, except on one occasion, has the House of Representatives been willing to reduce the numbers, and in every other apportionment the number has been increased. That exception was in 1843. That was a very interesting period of our history. The apportionment of 1843 was an incident to the political contest of 1840.

"The spirit of reform had taken at that period a stronger hold on the American people than has occurred at any other period in our history. The political ground swell of 1840 had in the main grown out of the surplus in our Treasury in previous years, the result of excessive tariff taxation and the excessive inflation of the currency with worthless paper money, and the recoil incident to them which prostrated every industry and brought our people face to face with the demand for searching reforms in the Government. That canvass of 1840 produced a wonderful effect upon the public mind.

"It was a political cyclone in which the old party organizations were badly broken to pieces. The party triumph in that campaign turned to ashes, but its purifying effect was felt for years afterward in the economic methods as well as in the general policy of our country. So that, looking back to the history of that period, it is not remarkable that the statesmen of that era were able to look at the question of the number of members of this House with self-denying impartiality, with no object in view except the public good. The good of our country is undoubtedly the desire of all of us now, but local considerations and patriotic pride in our several States control in a very large degree our political ac-

tion. We shrink from an apportionment that would reduce the power of our respective States in this hall and in the electoral college, yet some time or other this will be inevitable.

"I am in favor of an ample number of members to represent in Congress every possible interest of the people of the several States of the Union. I wish to have every State fully represented so that no interest shall be left without a voice on this floor. But in my humble judgment that end is already reached and more; the 332 members now authorized to be elected to Congress do represent every conceivable interest of the American people. Even with the present number it is said that the House is no longer a deliberative body. If it is not, we have no wise or intelligent legislation.

"What, sir, are the evils of an excessive number of Representatives, a House composed of members beyond a reasonable number? What are the evils attending a legislative body too large for intelligent deliberation?

"In the first place, it diminishes the personal responsibility of members. In fact, it dwarfs the individual member, no matter how great and intelligent the constituency he represents. As a result of diminished responsibility, with increased numbers, the number of efficient members and the legislative power and intelligence of the House are absolutely diminished. I take up the record of yesterday's proceedings, the last 'Congressional Record' issued, and I refer to the vote upon two important bills, the only measures voted upon yesterday by yeas and nays. In one case the affirmative vote was 91, the negative vote 105, those not voting 135, and this bill involved a probable expenditure of \$15,000,000; so that even with a House of 332 members the absentees actually exceeded the number voting for or against the proposition.

"In the other case, on a bill involving very considerable public interests, the affirmative vote was 73, the negative vote 80, while the absentees numbered 169, the absentees actually exceeding in number both the affirmative and negative votes. This is a fair sample of the condition of our legislation with a membership of 332. What will it be when you add 24 to that number? What will it be in the next decade? Such absenteeism would be impossible with the number fairly responsible. I have heard the example of the British House of Commons repeatedly quoted as an argument in favor of enlarged representation on this floor. That example is constantly quoted, and we are told that our House of Representatives is framed on the British model. There are 670 members of the British House of Commons, and I deny that there is any analogy in fact between our House of Representatives and the British House of Commons.

"But what is the result of so large a House? A quorum is 40; so that in a legislative body composed of 670 members—a larger number than can by any human possibility deliberate in legislation—40 members constitute the legislative assembly and can enact laws. Is this much of an argument for following the British example in legislation? That is a result—and perhaps one of the inevitable results—of excessively large legislative bodies. The power in all such bodies is finally vested in a few great committees and

the Speaker of the House. Does not the present state of the rules in this House and the power of the Speaker and a few chairmen admonish gentlemen of the result and peril of excessive numbers? There is, however, another consideration which I want to mention very briefly, and which to my mind is of still greater importance than any other that can be urged.

"By the greatly increased number of members of Congress you not only diminish individual responsibility, create absenteeism, and render deliberation and prudent and intelligent legislation impossible, but the tendency of great Houses of Congress (Senate and House) is to dwarf the local legislatures of the several States. Such I think is the inevitable tendency at least in its effect on the public mind, when, in fact, in the nature of things, the State Legislatures dealing in all that concerns the local and domestic affairs of our people, in all their widespread and countless forms, do, except as to a few great and important matters of national concern, affect the welfare of our people more than the proceedings of Congress."

The following table was given in illustration of the apportionment:

Total population of the States, 61,908,906.		Ratio, 1: 173,901.		
STATES.	Population.	No. of representatives on even division.	Fraction resulting.	Final number of representative.
Alabama.....	1,518,017	8	121,809	9
Arkansas.....	1,128,179	6	84,773	7
California.....	1,208,130	6	164,724	7
Colorado.....	412,198	2	64,896	2

Wyoming.....	60,705	1	1
Total.....	61,908,906	839	8,384,469	839

The bill passed the House on Dec. 17, 1890, by a vote of 187 yeas to 82 nays—not voting, 63.

The measure passed the Senate on Jan. 29, 1891, after a moderate discussion, by a vote of 37 yeas to 24 nays—absent, 27. The President approved it on Feb. 10, 1891.

Immigration Bill.—This measure, "in amendment of the various acts relative to immigration and the importation of aliens under contract or agreement to perform labor," was introduced in the House by Mr. Owen, of Indiana, and referred to the Committee on Immigration and Naturalization. It was reported back, discussed, and amended, and passed the House, Feb. 25, 1891, as follows:

Be it enacted, etc., That the following classes of aliens shall be excluded from admission into the United States, in accordance with the existing acts regulating immigration, other than those concerning Chinese laborers: All idiots, insane persons, paupers or persons likely to become a public charge, persons suffering from a loathsome or a dangerous contagious disease, persons who have been convicted of a felony or other infamous crime or misdemeanor involving moral turpitude, polygamists, and also any person whose ticket or passage is paid for with the money of another or who is assisted by others to come, unless it is affirmatively and satisfactorily shown on special inquiry that such person does not belong to one of the foregoing excluded classes, or to the class of contract laborers excluded by the act of Feb. 26, 1885. But this section shall not be held to exclude persons living in the United States from sending for a relative or friend who is not of the excluded classes, under such regulations as the Secretary of the Treasury may prescribe: *Provided,* That nothing in this act shall be construed to apply to or exclude persons convicted of a political offense, notwithstanding said political offense may be designated as a "felony, crime, infamous crime, or misdemeanor involving moral turpitude" by the laws of the land whence he came or by the court convicting.

SEC. 2. That no suit or proceeding for violations of said act of Feb. 26, 1885, prohibiting the importation and migration of foreigners under contract or agreement to perform labor, shall be settled, compromised, or discontinued without the consent of the court entered of record with reasons therefor.

SEC. 3. That it shall be deemed a violation of said act of Feb. 26, 1885, to assist or encourage the importation or migration of any alien by promise of employment through advertisements printed and published in any foreign country; and any alien coming to this country in consequence of such an advertisement shall be treated as coming under a contract as contemplated by such act; and the penalties by said act imposed shall be applicable in such a case: *Provided,* This section shall not apply to States, and immigration bureaus of States, advertising the inducements they offer for immigration to such States.

SEC. 4. That no steamship or transportation company or owners of vessels shall directly, or through agents, either by writing, printing, or oral representations, solicit, invite, or encourage the immigration of any alien into the United States except by ordinary commercial letters, circulars, advertisements, or oral representations, stating the sailings of their vessels and the terms and facilities of transportation therein; and for a violation of this provision any such steamship or transportation company, and any such owners of vessels, and the agents by them employed, shall be subjected to the penalties imposed by the third section of said act of Feb. 26, 1885, for violations of the provisions of the first section of said act.

SEC. 5. That section 5 of said act of Feb. 26, 1885, shall be, and hereby is, amended by adding to the second proviso in said section the words "nor to ministers of any religious denomination, nor persons belonging to any recognized profession, nor professors for colleges and seminaries," and by excluding from

the second proviso of said section the words "or any relative or personal friend."

SEC. 6. That any person who shall bring into or land in the United States by vessel or otherwise, or who shall aid to bring into or land in the United States by vessel or otherwise, any alien not lawfully entitled to enter the United States, shall be deemed guilty of a misdemeanor, and shall, on conviction, be punished by a fine not exceeding \$1,000, or by imprisonment for a term not exceeding one year, or by both such fine and imprisonment.

SEC. 7. That the office of superintendent of immigration is hereby created and established, and the President, by and with the advice and consent of the Senate, is authorized and directed to appoint such officer, whose salary shall be \$4,000 per annum, payable monthly. The superintendent of immigration shall be an officer in the Treasury Department, under the control and supervision of the Secretary of the Treasury, to whom he shall make annual reports in writing of the transactions of his office, together with such special reports, in writing, as the Secretary of the Treasury shall require. The Secretary shall provide the superintendent with a suitably furnished office in the city of Washington, and with such books of record and facilities for the discharge of the duties of his office as may be necessary. He shall have a chief clerk, at a salary of \$2,000 per annum, and two first-class clerks.

SEC. 8. That upon the arrival by water at any place within the United States of any alien immigrants it shall be the duty of the commanding officer and the agents of the steam or sailing vessel by which they came to report the name, nationality, last residence, and destination of every such alien, before any of them are landed, to the proper inspection officers, who shall thereupon go or send competent assistants on board such vessel and there inspect all such aliens, or the inspection officer may order a temporary removal of such aliens for examination at a designated time and place, and then and there detain them until a thorough inspection is made. But such removal shall not be considered a landing during the pendency of such examination.

The medical examination shall be made by surgeons of the Marine Hospital Service. In cases where the services of a marine hospital surgeon can not be obtained without causing unreasonable delay, the inspector may cause an alien to be examined by a civil surgeon, and the Secretary of the Treasury shall fix the compensation for such examinations.

The inspection officers and their assistants shall have power to administer oaths, and to take and consider testimony touching the right of any such aliens to enter the United States, all of which shall be entered of record. During such inspection after temporary removal the superintendent shall cause such aliens to be properly housed, fed, and cared for, and also, in his discretion, such as are delayed in proceeding to their destination after inspection.

All decisions made by the inspection officers or their assistants touching the right of any alien to land, when adverse to such right, shall be final unless appeal be taken to the superintendent of immigration, whose action shall be subject to review by the Secretary of the Treasury. It shall be the duty of the aforesaid officers and agents of such vessel to adopt due precautions to prevent the landing of any alien immigrant at any place or time other than that designated by the inspection officers, and any such officer or agent or person in charge of such vessel who shall either knowingly or negligently land or permit to land any alien immigrant at any place or time other than that designated by the inspection officers, shall be deemed guilty of a misdemeanor and punished by a fine not exceeding \$1,000, or by imprisonment for a term not exceeding one year, or by both such fine and imprisonment.

That the Secretary of the Treasury may prescribe rules for inspection along the borders of Canada, British Columbia, and Mexico so as not to obstruct, or

unnecessarily delay, impede, or annoy passengers in ordinary travel between said countries: *Provided*, That not exceeding one inspector shall be appointed for each customs district, and whose salary shall not exceed \$1,200 per year.

All duties imposed and powers conferred by the second section of the act of Aug. 3, 1882, upon State commissioners, boards, or officers acting under contract with the Secretary of the Treasury shall be performed and exercised, as occasion may arise, by the inspection officers of the United States.

SEC. 9. That for the preservation of the peace and in order that arrests may be made for crimes under the laws of the States where the various United States immigrant stations are located, the officials in charge of such stations, as occasion may require, shall admit therein the proper State and municipal officers charged with the enforcement of such laws, and for the purposes of this section the jurisdiction of such officers and of the local courts shall extend over such stations.

SEC. 10. That all aliens who may unlawfully come to the United States shall, if practicable, be immediately sent back on the vessel by which they were brought in. The cost of their maintenance while on land, as well as the expense of the return of such aliens, shall be borne by the owner or owners of the vessel on which such aliens came; and if any master, agent, consignee, or owner of such vessel shall refuse to receive back on board the vessel such aliens, or shall neglect to detain them thereon, or shall refuse or neglect to return them to the port from which they came, or to pay the cost of their maintenance while on land, such master, agent, consignee, or owner shall be deemed guilty of a misdemeanor, and shall be punished by a fine not less than \$300 for each and every offense; and any such vessel shall not have clearance from any port of the United States while any such fine is unpaid.

SEC. 11. That any alien who shall come into the United States in violation of law may be returned, as by law provided, at any time within one year thereafter, at the expense of the person or persons, vessel, transportation company, or corporation bringing such alien into the United States, and if that can not be done, then at the expense of the United States; and any alien who becomes a public charge within one year after his arrival in the United States from causes existing prior to his landing therein shall be deemed to have come in violation of law and shall be returned as aforesaid.

SEC. 12. That nothing contained in this act shall be construed to affect any prosecution or other proceedings, criminal or civil, begun under any existing act or acts hereby amended, but such prosecution or other proceedings, criminal or civil, shall proceed as if this act had not been passed.

SEC. 13. That the circuit and district courts of the United States are hereby invested with full and concurrent jurisdiction of all causes, civil and criminal, arising under any of the provisions of this act; and this act shall go into effect on the first day of April, 1891.

The measure passed the Senate Feb. 27, and was approved by the President March 3, 1891.

Postal Subsidy.—At the first session of this Congress the Senate passed two bills in aid of American shipping. The first, known as the shipping or tonnage bill, provided for the payment to any vessel of more than 500 tons register, whether sail or steam, constructed and owned in the United States, and engaged in the foreign trade, the sum of 15 cents per gross registered ton for the first 500 miles or fraction thereof sailed outward, and the same sum for the first 500 miles or fraction thereof sailed homeward; and 30 cents per gross registered ton for each 1,000 miles sailed thereafter, and *pro rata* for

any distance less than 1,000 miles sailed after the first 1,000 miles. The payments were to continue at that rate for ten years, and thereafter for a second term of nine years at a reduction of 3 cents per year. The second measure was known as the postal subsidy bill, and it authorized the Postmaster-General to enter into contracts for not less than five years, nor more than ten, with American citizens for carrying the mail in American steamships at certain fixed rates of compensation. The opposition to these bills in the House was determined, and it was only with great difficulty that the former was brought up for discussion. It was debated Feb. 26 and 27, 1891, on the usual lines of party argument, and finally it was sent back to the Committee on Merchant Marine and Fisheries, with orders to report forthwith in its place the latter measure, with a reduction of 33 per cent. on the maximum rates of compensation. The postal subsidy bill was reported at once and passed by a vote of 139 yeas to 120 nays—not voting, 70. The following is the text of the measure:

Be it enacted, etc., That the Postmaster-General is hereby authorized and empowered to enter into contract for a term not less than five nor more than ten years in duration, with American citizens; for the carrying of mails on American steamships, between ports of the United States and such ports in foreign countries, the Dominion of Canada excepted, as in his judgment will best subserve and promote the postal and commercial interests of the United States, the mail service on such lines to be equitably distributed among the Atlantic, Mexican Gulf, and Pacific ports. Such contracts shall be made with the lowest responsible bidder for the performance of said service on each route, and the Postmaster-General shall have the right to reject all bids not in his opinion reasonable for the attaining of the purposes named.

SEC. 2. That before making any contract for carrying ocean mails in accordance with this act the Postmaster-General shall give public notice by advertising once a week for three months in such daily papers as he shall select in each of the cities of Boston, New York, Philadelphia, Baltimore, New Orleans, St. Louis, Charleston, Norfolk, Savannah, Galveston, and Mobile, and when the proposed service is to be on the Pacific Ocean, then in San Francisco, Tacoma, and Portland. Such notice shall describe the route, the time when such contract will be made, the duration of the same, the size of the steamers to be used, the number of trips a year, the times of sailing, and the time when the service shall commence, which shall not be more than three years after the contract shall be let. The details of the mode of advertising and letting such contracts shall be conducted in the manner prescribed in chapter viii of Title XLVI of the Revised Statutes for the letting of inland mail contracts so far as the same shall be applicable to the ocean mail service.

SEC. 3. That the vessels employed in the mail service under the provisions of this act shall be American-built steamships, owned and officered by American citizens, in conformity with the existing laws, or so owned and officered and registered according to law; and upon each departure from the United States the following proportion of the crew shall be citizens of the United States, to wit: During the first two years of such contract for carrying the mails, one fourth thereof; during the next three succeeding years, one third thereof; and during the remaining time of the continuance of such contract at least one half thereof; and shall be constructed after the latest and most approved types, with all the modern improvements and appliances for ocean steamers. They shall be divided into four classes. The first class shall be iron or steel screw steamships, capable of maintaining a speed of

90 knots an hour at sea in ordinary weather, and of a gross registered tonnage of not less than 8,000 tons. No vessel except of said first class shall be accepted for said mail service under the provisions of this act between the United States and Great Britain.

The second class shall be iron or steel steamships, capable of maintaining a speed of 16 knots an hour at sea in ordinary weather, and of a gross registered tonnage of not less than 5,000 tons. The third class shall be iron or steel steamships, capable of maintaining a speed of 14 knots an hour at sea in ordinary weather, and of a gross registered tonnage of not less than 2,500 tons. The fourth class shall be iron or steel or wooden steamships, capable of maintaining a speed of 12 knots an hour at sea in ordinary weather, and of a gross registered tonnage of not less than 1,500 tons. It shall be stipulated in the contract or contracts to be entered into for the said mail service that said vessels may carry passengers with their baggage in addition to said mails, and may do all ordinary business done by steamships.

SEC. 4. That all steamships of the first, second, and third classes employed as above and hereafter built shall be constructed with particular reference to prompt and economical conversion into auxiliary naval cruisers, and according to plans and specifications to be agreed upon by and between the owners and the Secretary of the Navy, and they shall be of sufficient strength and stability to carry and sustain the working and operation of at least four effective rifled cannon of a caliber of not less than 6 inches, and shall be of the highest rating known to maritime commerce. And all vessels of said three classes heretofore built and so employed shall, before they are accepted for the mail service herein provided for, be thoroughly inspected by a competent naval officer or constructor detailed for that service by the Secretary of the Navy; and such officer shall report, in writing, to the Secretary of the Navy, who shall transmit said report to the Postmaster-General; and no such vessel not approved by the Secretary of the Navy as suitable for the service required shall be employed by the Postmaster-General as provided for in this act.

SEC. 5. That the rate of compensation to be paid for such ocean mail service of the said first-class ships shall not exceed the sum of \$4 a mile, and for the second-class ships \$2 a mile, by the shortest practicable route, for each outward voyage; for the third-class ships shall not exceed \$1 a mile, and for the fourth-class ships two thirds of \$1 a mile for the actual number of miles required by the Post-Office Department to be traveled on each outward-bound voyage: *Provided*, That in the case of failure from any cause to perform the regular voyages stipulated for in said contracts, or any of them, a *pro rata* deduction shall be made from the compensation on account of such omitted voyage or voyages; and that suitable fines and penalties may be imposed for delays or irregularities in the due performance of service according to the contract, to be determined by the Postmaster-General: *Provided further*, That no steamship so employed and so paid for carrying the United States mails shall receive any other bounty or subsidy from the Treasury of the United States.

SEC. 6. That upon each of said vessels the United States shall be entitled to have transported, free of charge, a mail messenger, whose duty it shall be to receive, sort, take in charge, and deliver the mails to and from the United States, and who shall be provided with suitable room for the accommodation of himself and the mails.

SEC. 7. That officers of the United States Navy may volunteer for service on said mail vessels, and when accepted by the contractor or contractors may be assigned to such duty by the Secretary of the Navy whenever in his opinion such assignment can be made without detriment to the service, and while in said employment they shall receive furlough pay from the Government, and such other compensation from the contractor or contractors as may be agreed upon by the parties: *Provided*, That they shall only

be required to perform such duties as appertain to the merchant service.

SEC. 8. That said vessels shall take, as cadets or apprentices, one American-born boy under twenty-one years of age for each 1,000 tons gross register, and one for each majority fraction thereof, who shall be educated in the duties of seamanship, rank as petty officers, and receive such pay for their services as may be reasonable.

SEC. 9. That such steamers may be taken and used by the United States as transports or cruisers, upon payment to the owners of the fair actual value of the same at the time of the taking, and if there shall be a disagreement as to the fair actual value between the United States and the owners, then the same shall be determined by two impartial appraisers, one to be appointed by each of said parties, they at the same time selecting a third, who shall act in said appraisement in case the two shall fail to agree.

The Senate passed the bill on March 2, and the President approved it on March 3.

Cattle Inspection.—On March 2, 1891, the House passed the following measure as an amendment by way of substitute to the Senate bill for cattle inspection passed at the first session of the Congress:

Be it enacted, etc., That the Secretary of Agriculture shall cause to be made a careful inspection of all cattle intended for export to foreign countries from the United States, at such times and places, and in such manner, as he may think proper, with a view to ascertain whether such cattle are free from disease; and for this purpose he may appoint inspectors, who shall be authorized to give an official certificate clearly stating the condition in which such animals are found, and no clearance shall be given to any vessel having on board cattle for exportation to a foreign country unless the owner or shipper of such cattle has a certificate from the inspector herein authorized to be appointed, stating that said cattle are sound and free from disease.

SEC. 2. That the Secretary of Agriculture shall also cause to be made a careful inspection of all live cattle the meat of which is intended for exportation to any foreign country, at such times and places, and in such manner, as he may think proper, with a view to ascertain whether said cattle are free from disease and their meat sound and wholesome, and may appoint inspectors, who shall be authorized to give an official certificate clearly stating the condition in which such cattle and meat are found; and no clearance shall be given to any vessel having on board any fresh beef for exportation to and sale in a foreign country from any port of the United States until the owner or shipper shall obtain from an inspector appointed under the provisions of this act such certificate.

The Secretary of Agriculture shall cause to be inspected prior to their slaughter all cattle, sheep, or hogs which are subjects of interstate commerce, and which are to be slaughtered at slaughter-houses, canning, salting, packing, or rendering establishments in any State or Territory, all carcasses, the products of which are to be exported and sold for human consumption into any other State or Territory or the District of Columbia; and in addition to the aforesaid inspection there may be made in all cases where the Secretary may deem necessary or expedient, under rules and regulations to be by him prescribed, a post-mortem examination of the carcasses of all cattle, sheep, and hogs about to be prepared for human consumption at any slaughter-house, canning, salting, packing, or rendering establishment in any State or Territory or the District of Columbia, which are the subjects of interstate commerce.

SEC. 4. That said examination shall be made in the manner provided by rules and regulations to be prescribed by the Secretary of Agriculture; and after said examination the carcasses and products of all

cattle, sheep, and swine found to be free of disease, and wholesome, sound, and fit for human food, shall be marked, stamped, or labeled for identification as may be provided by said rules and regulations of the Secretary of Agriculture.

Any person who shall forge, counterfeit, or knowingly and wrongfully alter, deface, or destroy any of the marks, stamps, or other devices provided for in the regulations of the Secretary of Agriculture, of any such carcasses or their products, or who shall forge, counterfeit, or knowingly and wrongfully alter, deface, or destroy any certificate provided in said regulations, shall be deemed guilty of a misdemeanor, and on conviction thereof shall be punished by a fine not exceeding \$1,000, or imprisonment not exceeding one year, or by both said punishments in the discretion of the court.

SEC. 5. That it shall be unlawful for any person to transport from one State or Territory or the District of Columbia into any other State or Territory or the District of Columbia, or for any person to deliver to another for transportation from one State or Territory or the District of Columbia into another State or Territory or the District of Columbia the carcasses of any cattle, sheep, or swine, or the food products thereof, which have been examined in accordance with the provisions of sections 3 and 4 of this act, and which on said examination have been declared by the inspector making the same to be unsound or diseased. Any persons violating the provisions of this section shall be deemed guilty of a misdemeanor and punished for each offense as provided in section 4 of this act.

SEC. 6. That the inspectors provided for in sections 1 and 2 of this act shall be authorized to give official certificates of the sound and wholesome condition of the cattle, sheep, and swine, their carcasses and products, described in sections 3 and 4 of this act, and one copy of every certificate granted under the provisions of this act shall be filed in the Department of Agriculture, another copy shall be delivered to the owner or shipper, and when the cattle, sheep, and swine, or their carcasses and products are sent abroad, a third copy shall be delivered to the chief officer of the vessel on which the shipment shall be made.

SEC. 7. That none of the provisions of this act shall be so construed as to apply to any cattle, sheep, or swine slaughtered by any farmer upon his farm, which may be transported from one State or Territory or the District of Columbia into another State or Territory or the District of Columbia: *Provided, however,* That if the carcasses of such cattle, sheep, or swine go to any packing or canning establishment and are intended for transportation to any other State or Territory or the District of Columbia as hereinbefore provided, they shall there be subject to the post-mortem examination provided for in sections 3 and 4 of this act.

The Senate concurred in the House amendment, and the President approved the measure, March 3.

Free Coinage.—One of the much discussed measures in this session of the Congress was that "to provide against a contraction of the currency." It was brought up in the Senate Dec. 30, 1890, and was reported from the Finance Committee in the following form:

Be it enacted, etc., That the Secretary of the Treasury is hereby directed to purchase from time to time, during the calendar year 1891, silver bullion to the aggregate of 12,000,000 ounces at the market price thereof, not exceeding \$1 for 371.25 grains of pure silver, in addition to the amount required to be purchased by the act approved July 14, 1890, entitled "An Act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," of which sum of 12,000,000 ounces there shall be purchased, at the discretion of the Secretary of the Treasury, not exceeding 3,000,000 ounces in

any one month; and the Secretary of the Treasury shall issue in payment for such purchases of silver bullion Treasury notes of the United States of the same form and description and having the same legal qualities as the notes provided for by the said act. And such Treasury notes shall be a legal tender and be received, redeemed, and reissued in the same manner and to the same extent as other Treasury notes.

SEC. 2. That the compulsory requirement of deposits of United States bonds with the Treasurer of the United States by national banks having a capital of not more than \$50,000 is hereby limited in amount to \$1,000 of bonds for each and every national bank: *Provided,* That the voluntary withdrawal of bonds for the retirement of such national-bank notes shall not exceed the sum of \$3,000,000 in any one month: *And provided further,* That this act shall not apply to the deposits of bonds which may be required by the Secretary of the Treasury to secure deposits of public moneys in the national banks.

SEC. 3. That upon any deposits already or hereafter made of any United States bonds bearing interest, in the manner required by law, any national banking association making the same shall be entitled to receive from the Comptroller of the Currency circulating notes of different denominations, in blank, registered and countersigned as provided by law, not exceeding in the whole amount the par value of the bonds deposited: *Provided,* That at no time shall the total amount of such notes issued to any such association exceed the amount at such time actually paid in of its capital stock.

SEC. 4. That the Secretary of the Treasury is hereby authorized to issue, in a sum or sums not exceeding in the aggregate \$200,000,000, coupon or registered bonds of the United States, in such form as he may prescribe, and of denominations of \$50 or some multiple of that sum, redeemable in lawful money at the pleasure of the United States, on and after July 1, 1900, and bearing interest payable semi-annually in such money at the rate of 2 per cent. per annum. And he is authorized to sell or dispose of any of the bonds issued under this act at not less than their par value for any lawful money of the United States, or for gold or silver certificates, and to apply the proceeds thereof to the redemption of or to the purchase of any of the bonds of the United States, and for no other purpose whatever. And a sum necessary to pay the expense of preparing, issuing, advertising, and disposing of said bonds is hereby appropriated out of any money in the Treasury not otherwise appropriated.

SEC. 5. Whenever the market price of silver bullion shall have been continuously for a period of one year \$1 or more for 371.25 grains of pure silver all purchasing of silver bullion by the Secretary of the Treasury shall cease, and thereupon and thereafter any owner of silver bullion not too base for the operations of the mint may deposit the same in amounts of the value of not less than \$100 at any mint of the United States to be formed into standard dollars or bars for his benefit and without charge; and at the said owner's option he may receive instead the equivalent thereof in the Treasury notes of the said act approved July 14, 1890.

SEC. 6. That the Secretary of the Treasury be, and he is hereby, authorized to cause the subsidiary silver coins of the United States now in or which may hereafter be received into the Treasury and subtreasuries of the United States, which are abraded, worn, mutilated, defaced, or otherwise unfit for circulation, or are of denominations for which there is no current demand, to be recoined at the mints of the United States into such denominations of silver coins now authorized by law as may be required to meet the demand therefor. That the loss incident to the recoinage of such uncurrent silver coins into new coins shall be paid from the gain arising from the coinage of silver bullion into coin of a nominal value exceeding the cost thereof, denominated "the silver profit fund."

SEC. 7. The Secretary of the Treasury is hereby authorized and directed to issue Treasury notes of the act approved July 14, 1890, to an amount equal to the market value of the bullion made from the trade dollars now in the Treasury, and of the bullion to be formed from other trade dollars, and also upon the bullion value of 10,000,000 of the abraded and otherwise uncurrent subsidiary silver coin now in the Treasury.

SEC. 8. That paragraph 8 of chapter cccxxvii of the Supplement to the Revised Statutes of the United States, which requires that refining and parting of bullion shall be carried on at the mints of the United States and at the assay office at New York, be amended by inserting, after the word "law" in the fourth line, the following words: "and from the proceeds of the sale of by-products resulting from the operations of the refinery," so that the paragraph shall read:

"And it shall be lawful to apply the moneys arising from charges collected from depositors for these operations pursuant to law, and from the proceeds of the sale of by-products resulting from the operations of the refinery, so far as may be necessary, to the defraying in full of the expenses thereof, including labor, materials, and wastage."

SEC. 9. That an act to authorize the receipt of United States gold coin in exchange for gold bars, approved May 26, 1882, be amended to read as follows:

"That the superintendents of the coinage mints and of the United States assay office at New York may, with the approval of the Director of the Mint, but not otherwise, receive United States gold coin from any holder thereof, in sums of not less than \$5,000, and pay and deliver in exchange therefor gold bars in value equaling such coin so received: *Provided*, That the Director of the Mint, with the approval of the Secretary of the Treasury, may impose for such exchange a charge which in his judgment shall equal the cost of manufacturing the bars."

SEC. 10. That it is the continued policy of the United States to use both gold and silver as full legal-tender money under the ratio now existing in the United States, or that may be hereafter established by the United States, acting in accord with other nations; and the United States is willing to join with other commercial nations in a conference to adopt a common ratio between gold and silver, with a view of establishing, internationally, the use of both metals as full legal-tender money, and securing fixity of relative value between them. And when, in the judgment of the President, a sufficient number of such nations shall have entered into such international arrangement he may declare the ratio so fixed to be the existing ratio in the United States, and all coinage thereafter shall be at such ratio until changed by law. The President shall, by and with the advice and consent of the Senate, appoint commissioners, not exceeding three, who shall attend any such conference on behalf of the United States, and they shall report their doings to the President, who shall transmit the same to Congress. Said commissioners shall receive the sum of \$5,000 each and their reasonable expenses, to be approved by the Secretary of State; and the amount necessary to pay such compensation and expenses is hereby appropriated out of any money in the Treasury not otherwise appropriated.

SEC. 11. That all the acts and parts of acts inconsistent with the provisions of this act be, and the same are hereby, repealed.

Mr. Stewart, of Nevada, submitted an amendment involving free coinage, and supported that policy in an elaborate speech. Among other things, he said:

"The scheme reported by the Finance Committee is another dose of the ordinary quack medicine prescribed by dealers in money for financial disorders which their previous prescriptions have produced. The silver men propose a return to

the ancient remedy which has been used for thousands of years and never failed to cure when the mines of gold and silver were productive. The yield of the two precious metals combined will furnish a sound currency for the present, and may be sufficient in quantity for an indefinite time. It will certainly give time to discover some other remedy, if any exists, to prevent contraction if the mines should again fail.

"The shock to civilization produced by the demonetization of silver has not been barren of results. Usurers and gamblers in money by this great outrage have attracted public attention to the methods by which they rob and enslave the masses. Theoretically every government in the civilized world is empowered to make money, and it was assumed that this sovereign authority was really exercised in the interest of the people. It is now seen that a ring of parasites at every capital city in the United States and Europe has from time immemorial had exclusive control of the law-making power, and has created or destroyed the circulating medium as would best serve the purposes of extortion."

Mr. Reagan, of Texas, gave notice of an amendment for the same purpose. He said:

"The coinage of dollars was suspended by the act of 1873, and the silver dollar was then substantially retired from use as a part of our money. Silver had been a part of our constitutional currency, at par with gold, and a unit of value from the time of the passage of the act of 1792 until the passage of the act of 1873.

"The passage of the act demonetizing the silver dollar inflicted on this country greater injury than was probably ever inflicted on this or any other country by a single act of legislation. It caused a reduction of values of all property and products about 33 per cent. It took from the people the use of about one half of the metal money of the country, and it increased the burdens of all indebtedness from one third to one half.

"This was done in the face of the fact that the United States was then, as now, the greatest silver-producing country in the world, producing more than 40 per cent. of all the silver being mined in the world. It was done in the face of the fact that the United States was at that time one of the great debtor nations of the world, our national debt then being about \$2,500,000,000; when most of the States were large debtors; when most of the municipal corporations of the country were largely indebted; when the railroad corporations of the country owed three or four billions of dollars, most of their obligations being held in Europe, and when other corporations and private citizens were largely indebted, for we had before that time an abundant currency, business had been active, and credits extensive. This was done, too, in the face of the fact that our people had millions of dollars engaged in the silver mining, in which business tens of thousands of our people found employment which furnished support for hundreds of thousands of other people. One of the consequences of this demonetization of silver was that after the fall of prices caused by it it required double the amount of the products of the soil, double the number of days' work, to pay either the public or the private indebtedness of the country.

"That that act was inspired by the selfish greed of bondholders, monometallists, and money-holders I think there can be no doubt. That it was the deliberate purpose on their part (whether understood by members of the two Houses or not, I know not) to sacrifice the interest of the great body of the people in order, by an unjust and iniquitous law, to promote their own fortunes there can be no doubt. No such legislative crime, in my opinion, has ever been committed in this country; and I do not know in the history of any legislation a crime of equal magnitude to it.

"The passage of such an act under circumstances that show that neither the House of Representatives nor the Senate understood it, passed substantially without discussion—for the special question of demonetizing silver was not discussed in either House—is a thing that ought to attract the profound attention of the American people, and it did not fail to attract their profound attention when they came to know what had been done in this respect. And from the time the people came to know what had been done in the demonetization of silver they commenced the struggle to restore its coinage; at least they commenced that struggle as soon as the Democracy of the country got the control of the House of Representatives, and that struggle was kept up until, in 1878, the House of Representatives passed a bill providing for the free and unlimited coinage of silver. That bill came to the Senate, and was so amended as to strike out the provisions for free coinage and to substitute one authorizing the Government to purchase not more than four million nor less than two million dollars' worth of silver per month, and to coin that.

"That act, instead of making silver a unit of value and money, as it had stood from the time of the passage of the act of 1792 to the passage of the act of 1873, made silver a commodity which, like wheat or cotton, or other products of the soil, was to be valued by its gold value, and not allowed to possess the money value which it had possessed before that value was taken from it by the act of 1873.

"But the people were not content with this disposition of the question, and the struggle was kept up from year to year until last year, when we passed another bill which made some concession to the demands of the people of this country, but still preserved silver as a commodity to be valued by gold and did not make it money. That that was done in the interest of the bondholders and moneyed class, and against the interest of the great body of the people, I think there can be no doubt.

"Now, again, Mr. President, the question comes back to us—as I stated in the Senate a year ago in debate upon this question that it would come back and continue to come back until justice should be done and until silver can be restored to the place it occupies under the Constitution and in the traditions of this country side by side with gold."

Mr. Sherman, of Ohio, said, in opposition to free coinage:

"With a silver supremacy gold would no longer be in sight as money, but would be held as a commodity to be sold to the highest bidder,

and the stock of gold, being on Nov. 1, 1890, as stated by the Director of the Mint, \$624,010,285, is so large, being nearly twice as large as that of silver, that its sudden withdrawal from use as money would create a contraction possibly of greater stringency than has ever been known by our people. The one hundred and seventy-five millions of gold certificates outstanding, covering gold in the Treasury, may at any moment drop out of circulation, if not already hoarded. Of course the clouds now hovering over us, even with a silver lining, do not fail to be widely regarded as portentous.

"The production of gold in the world in 1889 was \$118,832,000, being more than in any year save one since 1873; and the amount of gold received at our mints and assay offices every year from 1880 to 1889, inclusive, has far exceeded that of silver, being \$612,526,877 of gold and only \$379,046,208 of silver. Notwithstanding large exports of gold last year our present stock is supposed to equal that of all Europe. Yet one would infer from the tenor of the debate that gold was about as near extinction on the American Continent as the buffalo, and say 'nobody ever sees it.' The vitriolic denunciations of gold which periodically leap out here clearly indicate that nothing less than the absolute domination of silver and the expulsion of gold from our country is the real and supreme object aimed at. It is my deliberate opinion, however, shared by business men generally, that whenever a practical divorce between gold and silver shall occur in the United States, silver will have lost its most powerful friend, and will suffer greater degradation in its commercial and money value than it has recently experienced.

"One subterranean purpose can not be concealed, though softly denied, and that is to scale all debts, public and private, or to supply medium for their liquidation at a cost largely reduced from that required and existing at the time of the original contracts.

"At the last session of Congress it was often urged that if the Secretary of the Treasury had only purchased to the full limit of law the \$4,000,000 worth of silver instead of two millions per month everything would have been lovely, money plentiful, silver at par, and the silver goose cooked, and that no further demand in behalf of silver or anything else would have been made. The new law, therefore, was passed for the purchase of 4,500,000 ounces of pure silver per month, equal in coinage value to more than \$5,000,000 per month, or over sixty millions annually, and yet the cry here is now more vociferous than ever for more, for a larger dose. Not even the permanent and high-salaried national Executive Silver Committee, long planted as the advisers of Congress on Pennsylvania Avenue, will jog one and nudge another and claim that the Secretary of the Treasury has been a laggard, or that he has not purchased all the silver possible under the latest law, and yet the contest of the silver men for more is like that of Macbeth:

"Damned be him that first cries, 'Hold, enough!'

"It may be well to probe the silver problem to the bottom—to discover, if possible, its merits. It is now manifest that the Government's purchase and locking up of one half of the an-

nual silver product of the world has not promoted the increase of its value, which to-day is fully four cents per ounce less than it was on the passage of the silver act of the last session, though its price then had been lifted by the general anticipation of some such measure. It is now urged that the United States markets and mints shall be opened to the whole silver product of the world. The patient is either to be cured or killed. The audacity of such an experiment solely at our risk, it appears to me, is more conspicuous than its financial soundness. It can not be possible to hold the price of silver in America at from 15 to 30 per cent. above its price in Europe. Yet we are asked to attempt this miracle, as if it were a very little thing.

"There is much uncertainty whether or not our action may not encourage all European nations to further depreciate the value of silver by wholly discarding its use except as subsidiary coinage. If silver is in purgatory now, it will not do, by our further action, to sink it to hades, where it would be past praying for. All the silver States, except Nevada, have interests paramount to that of silver, and that of itself is believed to be more prosperous than any industry of all other States. Its price very likely for a brief time might be increased by some extravagant act of Congress—a bomb of great noise and hollow sound—but, if our massive present accumulations were to be so broadly extended as to bring about such a short-lived result, would it be any more justifiable than the buying and hoarding for a higher price the entire crop of cotton, tobacco, wheat, or corn, iron, or tobacco?"

"If we consent to the issue of United States Treasury notes on silver, why refuse them on land? Some large profits would doubtless accrue to the rich owners of silver mines by free coinage until the coin itself should drop to the level of the commercial value of silver bullion, but every farthing of these large profits realized above the commercial value would be at the loss of the Government, and, therefore, at the loss of the people. For the sake of argument let it be admitted that there is a temporary need of an increase of circulating currency, yet the proposition is not merely to bridge over a fleeting exigency by pouring out a flood to satisfy a sudden thirst, but the design is to pour out a continuous flood for all time to come. The Government is to take all the silver offered at a fixed price forever, being a dollar for each 371½ grains, and payable by the issue of legal-tender notes, whether more currency shall be needed or not, the increase not being based upon any reasonable or probable ratio of the increase of population or business. Large power and advantage would accrue to the happy owners of silver, to whom legal-tender paper by millions must be exclusively issued for their silver bullion, but in the end that advantage would perish in the general disaster that would overtake the whole country by the vain attempt of men to increase their property by computing it in a cheap dollar."

Mr. Teller, of Colorado, argued against the notion that free coinage would result in silver imports:

"I have asserted over and over again for ten years that there is no country in the world that wants to part with its silver, save and except

Germany, and Germany parted with so much of it that all the agricultural interests of Germany were in arms against the further parting with it. When they made their appeal to Bismarck, Bismarck said, 'We have already too much water in the soup, and it is too thin.' He said on another occasion: 'Too many people are pulling for this gold blanket, and somebody has got to be left out in the cold if you attempt to cover yourselves with gold alone.'

"Now, Mr. President, I insist that a proposition that is simply a return to the financial system that has been in vogue all over the world for the last two or three hundred years at least, in the use of metal that has been thus in common use as money, I say that it is incumbent on the opponents of that proposition to come here with something besides, as I said, declamation, assertion, and prophesy, and that is all they have ever come here with.

"Mr. President, there has never been an argument made here during the years I have been a member of this body that has deserved the name of argument to show that the fears of these dangers to result have the slightest foundation. It has been ignorant assertion on the part of the opponents of the measure, which they can not prove and do not attempt to prove. I challenge the gentlemen who take that side in this discussion, and who are asserting that there is danger in this proposition, to tell us wherein that danger lies. If there is a troop threatening danger, who is the captain of the troop, who heads it, and under what banner does it come?"

"They tell us Spain will send it here, that France will send it here, when the whole history of the world is against their assertion, more particularly when they touch France than any other country in the world. If Senators think that India would adopt the gold standard and abandon silver they reckon without their host, for the British power made them abandon the gold standard, which they did years ago and adopted silver, because it was to the interest of the British Government that they should have that silver standard. And it is to their interest to-day, and you could no more get the British Government to consent that India should abandon silver and establish a gold standard than you could get her to agree to abandon gold and adopt silver in their own country—not a particle."

Mr. Evarts, of New York, defended the legislation of the previous session: "Mr. President, there is nothing whatever that should change our satisfaction with the resolution that we came to in July last. If we have been disappointed in there being less activity on the part of the Executive in promoting by diplomatic means an opportunity of a resolution of this great difficulty abroad, we have found nothing in the experience of this country that could show us that we erred when we took our stand then, or that we should now be any wiser than we would have been if we had undertaken free coinage."

"Mr. President, the people of this country, the people of commercial countries in Europe, can not hide from themselves the severity of this relation, putting these two metals so wide apart, as was accomplished by the sequel of what happened in 1873. All invective against the errors of Germany and the errors in our legislation do

not bring us any nearer to the solution of the mischief that was wrought on all the methods and the gradual approaches by which this great consummation can be reached. Impatience is no teacher. Experience is the only teacher by which we should be guided. And now, without disturbance of either foreign exchanges or domestic derangement, we, under the wise result that we reached six months ago, are asked to take this action merely from impatience, because the cure could only be in some degree as long as the evil had progressed.

"Mr. President, as I insisted then, so I must insist now, the great enemy of the effort for the parity of the metals in the affairs of the world is this rash patronage of the silver mines that makes a prominent and easy but an obvious suggestion of activity in that direction. I know, and I appreciate the fact, that those who favor the two metals as I do are not governed by a desire to patronize the mines; but, nevertheless, those who avow both an interest, as we all feel, in the patronage of the products of the mines as of the fields in our country, with a concurrent interest and duty on their part to restore an equality between the metals in the world at large, should not suffer their counsels and their hopes and their plans to be so biased and overclouded by the lesser interests that they will not take counsel from the larger sphere of the experience of the nation, which is the only one that we can learn a lesson from.

"Mr. President, it is enough for me to say that for my guidance the intent or casual influences in this or that derangement of the affairs in our great cities or in our European relations are no counsel for us at all. Just as long as Congress sits, just so long in this country if Congress does not become wise enough to turn its face against them, there will be efforts to make this Government a bank, not only of issue and deposit, but of discount, and I know no more paltry legislation than that by which the two Houses of Congress are to be appealed to at every juncture of our affairs, however local, however temporary, or however serious, that we are to be resolved into a board of bank directors or the managers of a clearing house. No, just as soon as Congress adjourned with the two metals on the basis in which we placed them six months ago and with such liberalization as is proposed in the enlargement of the paper issues of the country either by banks or in the Treasury or in the tender notes, the country will go on and on.

"What have we seen that has already come to our advantage in regard to the value of silver? It has risen as it now stands to 105, something over 80 cents in the dollar, when we started from it at something like 70 cents, and if there was a miscalculation, or if the combinations of speculators suddenly forced up the price, and the country or the people were disappointed at the suddenness of relief being followed by a recoil, that does not teach us to abandon the wisdom by which we are to move step by step, maintaining our own control of the situation and not plunge by an irrevocable step in a disaster from which we can not retreat.

"No, Mr. President, this is our position now, as it was six months ago, and we are waiting and must expect to wait a slow procession toward

the goal at which we aim, and that is a restoration of the parity of silver and gold in the money of the world."

The measure was variously amended in the Senate, and, finally, on Jan. 14, 1891, the following substitute was adopted and passed:

S. 4675. A bill to provide against the contraction of the currency, and for other purposes:

That from and after the date of the passage of this act the unit of value in the United States shall be the dollar, and the same may be coined of 412½ grains of standard silver, or of 25·8 grains of standard gold, and the said coin shall be a legal tender for all debts, public and private. That hereafter any owner of silver or gold bullion may deposit the same at any mint of the United States, to be formed into standard dollars or bars for his benefit and without charge; but it shall be lawful to refuse any deposit of less value than \$100 or any bullion so base as to be unsuitable for the operations of the mint.

SEC. 2. That the provision of section 3 of "An Act to authorize the coinage of the standard silver dollar and to restore its legal-tender character," which became a law Feb. 28, 1878, is hereby made applicable to the coinage in this act provided for.

SEC. 3. That the certificates provided for in the second section of this act shall be of denominations of not less than one or more than one hundred dollars, and such certificate shall be redeemable in coin of standard value. A sufficient sum to carry out the provisions of this act is hereby appropriated out of any money in the Treasury not otherwise appropriated. So much of the act of July 14, 1890, entitled "An Act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," as requires the purchase of 4,500,000 ounces of silver bullion per month, be, and the same is hereby, repealed.

SEC. 4. That the certificates provided for in this act and all silver and gold certificates already issued shall be receivable for all taxes and dues to the United States of every description, and shall be a legal tender for the payment of all debts, public and private.

SEC. 5. The owners of bullion deposited for coinage shall have the option to receive coin or its equivalent in the certificates provided for in this act and such bullion shall be subsequently coined.

The vote on the passage of the bill was as follows:

YEAS—Allen, Barbour, Bate, Berry, Blackburn, Butler, Cameron, Cockrell, Coke, Daniel, Eustis, Faulkner, Gibson, Gorman, Hampton, Ingalls, Jones of Arkansas, Jones of Nevada, Kenna, McConnell, Manderson, Mitchell, Morgan, Paddock, Pasco, Power, Fugh, Reagan, Sanders, Shoup, Stanford, Stewart, Teller, Turpie, Vance, Vest, Voorhees, Walthall, Wolcott—39.

NAYS—Aldrich, Allison, Carey, Casey, Cullom, Davis, Dixon, Dolph, Edmunds, Evarts, Frye, Hale, Hawley, Higgins, Hiseock, Hoar, McMillan, Platt, Quay, Sawyer, Sherman, Spooner, Stockbridge, Warren, Washburn, Wilson of Iowa, Wilson of Maryland—27.

ABSENT—Blair, Blodgett, Brown, Call, Carlisle, Chandler, Colquitt, Dawes, Farwell, George, Gray, Harris, Hearst, McPherson, Moody, Morrill, Payne, Pettigrew, Pierce, Plumb, Ransom, Squire—22.

The title of the measure was changed to read: "A bill to provide a unit of value, and for the coinage of gold and silver and other purposes." In the House the Committee on Coinage, Weights and Measures reported adversely to the bill, and it fell by the way.

The Federal Election Bill.—No measure considered by this Congress, except the tariff bill, was so voluminous, aroused so much partisan feeling, or was so fully debated as that "to

amend and supplement the election laws of the United States, and to provide for the more efficient enforcement of such laws, and for other purposes." Indeed, the defeat of the measure is considered the greatest triumph gained by the Democrats in the Fifty-first Congress. It was passed at the first session by the House, July 2, 1890, and the Senate postponed its consideration until the second session. It was taken up at the beginning of the session, and occupied the attention of the Senate largely until Jan. 17, 1891. Elaborate speeches were made in opposition to it, and it was clearly the intention of Democratic Senators to talk against time rather than permit the bill to come to a vote. The Republican leaders, to meet this device, proposed an amendment to the Senate rules providing for cutting off debate, "when any bill, or resolution, or other question, shall have been under consideration for a reasonable time, it shall be in order for any Senator to demand that debate thereon shall be closed. On such demand no debate shall be in order, and pending such demand no other motion, except one motion to adjourn, shall be made. If such demand be seconded by a majority of the Senators present, the question shall forthwith be taken thereon, without debate. If the Senate shall decide to close debate on any bill, resolution, or other question, the measure shall take precedence of any other business whatsoever, and the question shall be on all pending

been lost, or shall have failed of a second, it shall not be in order to renew the same until one Senator shall have spoken on the pending measure, or one vote upon the same shall have intervened. Pending proceedings under the foregoing rule, no proceedings in respect to a quorum shall be in order until it shall have appeared upon a division or on taking a yea-and-nay vote that a quorum is not present and voting. All questions of order, whether upon the bill or otherwise, shall be decided without debate, and, pending proceedings under the foregoing rule, no obstructive or dilatory motion or proceedings of any kind shall be in order." This change of rules was limited to the remainder of the session, and there was added to it a resolution applying it to the election bill. The attempt to enforce this *clôture* system failed, and by a combination between the Democrats and several Republican Senators anxious for the adoption of free-coinage legislation the election bill was forced out of the way to take up apportionment and subsequently the free-silver measure. So it came to pass that this measure, which was called by its opponents "the Force bill," failed to become a law.

Appropriations.—The appropriations of the Fifty-first Congress were very heavy, as a whole, and the following table will show the points of increase and decrease as compared with the Fiftieth Congress:

TABLE COMPARING BY ACTS THE APPROPRIATIONS MADE BY THE FIFTIETH AND FIFTY-FIRST CONGRESSES.

PURPOSE OF ACTS.	Fiftieth Congress, fiscal years 1889 and 1890.	Fifty-first Congress, fiscal years 1891 and 1892.	Increase, Fifty-first Congress over Fiftieth Congress.	Decrease, Fifty-first Congress from Fiftieth Congress.
Agricultural.....	\$3,885,750 00	\$4,827,258 50	\$1,441,478 50
Army.....	48,757,915 73	48,820,000 98	82,085 25
Diplomatic and consular.....	8,408,490 00	8,867,740 00	\$40,750 00
District of Columbia.....	10,728,820 28	11,866,669 32	697,849 09
Fortifications.....	5,205,594 00	8,007,788 00	2,802,144 00
Indian.....	16,841,154 18	23,648,300 88	7,807,146 70
Legislative, etc.....	41,601,798 88	43,058,427 00	1,456,628 12
Military Academy.....	1,217,810 50	837,360 75	\$380,449 75
Navy.....	41,685,845 62	55,677,690 81	14,042,844 19
Pension.....	* 175,017,400 00	† 288,329,751 69	113,812,351 69
Post-office.....	127,465,578 02	150,183,921 60	22,667,343 58
River and harbor.....	22,897,616 20	25,188,295 00	2,288,678 10
Sundry civil.....	51,618,146 49	67,148,646 21	15,530,499 72
Deficiencies.....	24,398,901 56	22,667,636 94	1,726,264 62
Miscellaneous.....	20,426,657 84	11,267,436 87	9,159,221 47
Total.....	\$598,692,004 95	\$764,294,868 55	\$181,969,549 44	\$11,806,685 54
Permanent annual.....	224,381,854 85	224,115,261 00	216,598 84
Grand total.....	\$817,968,859 80	\$988,410,129 55	\$151,969,549 44	\$11,523,279 69
Net increase.....	\$170,446,269 75	\$170,446,269 75

* Includes \$3,500,000 pension deficiencies for 1888, passed at the first session of the Fiftieth Congress, and \$8,000,000 pension deficiencies for 1889, passed at the second session of the Fiftieth Congress.

† Includes \$25,821,907.35 pension deficiencies for 1890, passed at the first session of the Fifty-first Congress, and \$29,235,598.34 pension deficiencies for 1891, passed at the second session of the Fifty-first Congress.

amendments, if any are then pending, and upon the measure in its successive stages, according to the rules of the Senate, but without further debate, except that every Senator who may desire shall be permitted to speak upon the measure, including all amendments, not more than once and not exceeding thirty minutes. If the Senate shall have decided to close debate as herein provided no motion shall be in order but a motion to adjourn or to take a recess. When such motion shall be seconded by a majority of the Senate, when either of such motions shall have

Minor Measures.—Among the minor measures passed was the bill transferring officers on the retired list of the army from the limited list to the unlimited; the bill for preserving discipline among customs officers; the bill for the relief of mission Indians in California; the bill extending the benefits of the act of Feb. 8, 1887, providing for the allotment of land in severalty to Indians in various reservations; the bill enabling the Secretary of the Interior to carry out the provisions of the act dividing the reservation of the Sioux Indians in Dakota; the bill to pro-

hibit the use of tobacco by minors under the age of sixteen in the District of Columbia; the bill to amend the act for the forfeiture of railroad land grants; the bill to prevent book making and pool selling in the District of Columbia; the bill to provide for the erection of a prison for the confinement of United States prisoners; the bill regulating junk dealers and pawnbrokers in the District of Columbia; the bill to provide for the adjudication of claims arising out of Indian depredations; the bill to promote the construction of a safe deep-water harbor on the coast of Texas; the bill to provide for a United States land court in the Territories; the bill to prevent counterfeiting and provide penalties therefor; the bill for the construction of industrial-school buildings for Indians in Wisconsin and other States; the bill to regulate the granting of leases at Hot Springs, Arkansas; the bill relating to the treaty of reciprocity with the Hawaiian Islands; the bill to facilitate the collection of commercial statistics; the bill for the inspection of vessels in the cattle trade.

Public Buildings.—Bills were passed providing for the construction of public buildings at Portland, Ore.; at Youngstown, Ohio; at St. Paul, Minn.; at Roanoke, Va.; at Norfolk, Va.; at Fort Dodge, Iowa; at Sioux City, Iowa; at Madison, Ind.; at Pawtucket, R. I.; at Sioux Falls, S. D.; at Mankato, Minn.; at Saginaw, Mich.; at Taunton, Mass.; at Stockton, Cal.; at Staunton, Va.; at Kansas City, Mo.; at Beatrice, Neb.; at Lewiston, Me.; at St. Albans, Vt.; at Newburgh, N. Y.; at Worcester, Mass.; at Clarksville, Tenn.; at Rock Island, Ill.; at Haverhill, Mass.; at Racine, Wis.; at New York city; at San Diego, Cal.; at Danville, Ill.; at Philadelphia, Pa.; at Camden, Ark.; at Pueblo, Col.; at Savannah, Ga.; at Bloomington, Ill.; at South Bend, Ind.; at Plattsburgh, N. Y.; at Reidsville, N. C.; at Rome, Ga.; at Akron, Ohio; at Rockford, Ill.; at Fargo, N. D.; at Davenport, Iowa; at Portsmouth, Ohio; at Richmond, Ky.

CONNECTICUT, a New England State, one of the original thirteen: ratified the national Constitution Jan. 9, 1788; area, 4,990 square miles. The population, according to each decennial census, was 237,946 in 1790; 251,002 in 1800; 261,942 in 1810; 275,143 in 1820; 297,675 in 1830; 309,978 in 1840; 370,792 in 1850; 460,147 in 1860; 537,454 in 1870; 622,700 in 1880; and 746,258 in 1890. Capitol, Hartford.

Government.—The following were the State officers during the year: Governor, Morgan G. Bulkeley, Republican, holding over after the expiration of the term for which he was elected, in consequence of the failure of the General Assembly to declare the result of the election of November, 1890, at which his successor was chosen; Lieutenant-Governor, Samuel E. Merwin, Republican; Secretary of State, R. Jay Walsh, Republican; Treasurer, E. Stevens Henry, Republican (the last-mentioned three officials held over under the same tenure as the Governor); Comptroller, Nicholas Staub, Democrat; Secretary of the State Board of Education, Charles D. Hine; Insurance Commissioner, Orsamus R. Fyler; Railroad Commissioners, George M. Woodruff, William H. Haywood, William O. Seymour; Chief Justice of the Supreme Court, Charles B.

Andrews; Associate Justices, Elisha Carpenter, Edward W. Seymour, and David Torrance. There is one vacancy on the Supreme Bench, caused by the failure of the General Assembly to confirm the renomination by Gov. Bulkeley of Judge Dwight Loomis, whose term expired early in the year. The terms of Insurance Commissioner Fyler and Railroad Commissioner Seymour expired on July 1. As the General Assembly refused to confirm the action of Gov. Bulkeley in renominating them, the latter, on July 1, issued an order reappointing them for a period extending till sixty days after the meeting of the next General Assembly. The Democrats claim that these renominations are void, on the ground that Gov. Bulkeley has no right to exercise any of the prerogatives of the Governor's office.

Finances.—For the fiscal year ending July 1, 1891, the State Treasurer makes the following report: Balance in the treasury, July 1, 1890, \$597,674.26; total receipts for the year ensuing, \$1,843,913.71; total expenditures, \$1,757,511.87; balance on July 1, 1891, \$984,076.10. The receipts were derived from the following sources: Tax on mutual insurance companies, \$247,048.18; tax on stock of non-residents, \$90,972.52; savings-bank tax, \$261,753.85; railroad tax, \$817,516.76; military commutation tax, \$123,903.60; tax on investments, \$80,524.47; collateral inheritance tax, \$74,758.23; tax on telegraph companies, \$10,653.46; received from Commissioner of Insurance, \$51,654.52; interest on cash balances in the treasury, \$33,879.66; miscellaneous receipts, \$51,247.76. The one-mill tax on property, which has heretofore been paid by the towns, and which for the year ending June 30, 1890, amounted to \$354,557.65, was remitted this year by the State Treasurer under authority conferred by a statute of 1889. Notwithstanding this loss of revenue, the receipts for the fiscal year exceeded the expenditures by the sum of \$86,401.84.

The State debt was reduced during the year to \$3,440,200 by the redemption on Dec. 1 of bonds of 1887 to the value of \$100,000. An important suit against the New York, New Haven, and Hartford Railroad Company, which involved the right of the State to collect a large amount of taxes claimed to be due, and aggregating about \$100,000, was decided against the State during the year.

Legislative Session and Election Contest.—The General Assembly convened at Hartford on Jan. 7 for its regular biennial session. Each House was divided politically as follows: Senate—Republicans 7, Democrats 17. House—Republicans 133, Democrats 119; the Republicans having a majority of 4 on joint ballot. The Senate was organized on the opening day by the election of David M. Read, Democrat, as President *pro tem.*, and the House by the election of Allan W. Paige, Republican, as Speaker. On the same day the returns of the November election were laid before the House for its action, in accordance with the Constitution. They were referred to a joint committee on canvass of votes, and then transmitted to the Senate. These returns, on their face, indicated the election of the Democratic candidates by the following majorities: Governor, Luzon B. Morris, 26; Lieutenant-Governor, Joseph W. Alsop, 558; Secretary, John

J. Phelan, 544; Treasurer, Marvin H. Sanger, 290; Comptroller, Nicholas Staub, 1,662. (See "Annual Cyclopædia" for 1890, page 242.) They also showed that the local election officers in certain towns and election districts had thrown out many Prohibition and other ballots for alleged technical irregularities; and it was claimed by the Republicans that these ballots, if counted, would so change the result that there would be no choice by the people, because no candidate would have a majority over all opponents. The provisions of the State Constitution governing the action of the General Assembly in this matter are as follows:

A fair list of the persons and number of votes given for each, together with the returns of the presiding officers (of election in each town or district) shall be, by the Treasurer, Secretary, and Comptroller, made and laid before the General Assembly then next to be holden, on the first day of the session thereof.

Said Assembly shall, after examination of the same, declare the person whom they shall find to be legally chosen, and give him notice accordingly.

If no person shall have a majority of the whole number of said votes, or if two or more shall have an equal and the greatest number of said votes, then said Assembly, on the second day of their session, by joint ballot of both Houses, shall proceed without debate to choose a Governor from a list of the names of the two persons having the greatest number of votes, or of the names of the persons having an equal and highest number of votes so returned as aforesaid.

It appears from the above-quoted provisions that the General Assembly shall *examine* the returns and declare the persons whom it finds legally chosen. The question that arose at this time, on which the two parties were divided, was, how extensive an examination of the returns was contemplated by this language of the Constitution. The Senate, immediately after organizing, declared the Democratic position in the following resolution, which was sent to the House for concurrence, and was there referred to a committee:

Resolved, That the provisions of the Constitution . . . clearly prohibit any revision by the General Assembly of the conduct of the several electors' meetings, and any alteration of the count of ballots as made by the officers of the several electors' meetings.

Resolved, That the General Assembly is a legislative body and is not a judicial body, and ought not to hear and determine any question concerning the election of State officers, except to declare the persons whom they shall find to be legally chosen after an examination of such fair list of the persons and number of votes given for each, together with the returns of the presiding officers, and all other questions shall be heard and determined by the ordinary judicial tribunals in the due, orderly, and customary course of judicial procedure.

In accordance with this view the Senate, after receiving the returns from the House on the opening day, at once examined them, and by a series of resolutions declared the election of the Democratic candidates. When these resolutions were sent to the House on the following day, Jan. 8, that body, instead of taking action thereon, voted that a special investigating committee of 8 members be appointed by the Speaker, with authority to examine carefully the returns, to send for necessary persons and papers, and to sit during any recess of the House. It was then voted that a recess be taken till Jan. 20, a new rule having been first adopted by which the first

legislative day should extend over every such recess and until a resolution of adjournment should be adopted. The Senate continued its sessions through Jan. 13, adjourning on that day till Jan. 20. Before adjournment, on Jan. 13, the Democratic candidates, whom it had by resolution declared elected, appeared before it and took the oath of office administered by one of its members. The officials so qualified then demanded possession of their respective offices from the Republican incumbents, and were refused on the ground that they were not legally entitled thereto. When the House reassembled, on Jan. 20, its investigating committee was not ready to report, but on Jan. 28 a majority and a minority report were submitted. The Republican majority of the committee set forth its findings as follows:

It appears from the face of the returns that there were in the whole State 1,289 general ballots rejected; 459 for being "double," which, since the passage of the so-called secret-ballot law, is no longer, in the opinion of the committee, legal cause for rejection; and 831 for all other causes. Of said 831, 111 general ballots were rejected for the following causes, none of which assignment of causes, in the opinion of the committee, justifies the rejection of a ballot, to wit:

"Illegal," New Britain.....	15
"Illegal," Killingworth.....	8
"For having on the word 'for,' Brooklyn.....	4
"Because of word 'for,' Waterbury.....	43
"Prohibition votes not printed in conformity with the law," Norwalk.....	80
"Not printed according to law," Stratford.....	11
"Not as prescribed by law," Wolcott.....	1
Total.....	111

It further appears that 121 general ballots were rejected, and no cause assigned therefor.

Your committee further find from the face of said returns that in many towns throughout the State the number of votes for State officers counted and returned by the counters and moderators exceeds the number of votes cast in said towns respectively.

When your committee, in pursuance of their duties, proposed to examine evidence explanatory of said returns, which was called for by questions arising on the face of the returns, the Democratic minority refused to sit with the committee, on the ground that neither the committee nor the General Assembly had power to take any extrinsic evidence regarding the returns.

Your committee, in pursuance of their duties, examined the evidence explanatory of said returns, and find that in the Fourth district of the town of Norwich 38 general ballots were returned as counted in excess of the number of general ballots cast in that district, and in excess of the number of names checked as voting in said district.

Your committee further find that 20 of said wrongfully returned general ballots were counted for the Democratic candidates for Governor, Lieutenant-Governor, Treasurer, and Secretary, and 10 of them for the Democratic candidate for Comptroller, by reason of a clerical error in footing the number of votes counted for them respectively. Your committee have been unable to find for whom the remaining 18 votes were counted, or the cause of their being counted.

Your committee further find that 126 Republican general ballots were rejected in the Fifth District of Bridgeport for having an alleged distinguishing mark, and that said distinguishing mark was merely a minute speck made by defective printing, was found on numerous ballots used in other places at said election, and was not a distinguishing mark in the meaning of the law.

Your committee further find that 103 general ballots, which are part of the class of 111 hereinbefore

referred to as rejected, were rejected solely because the word "for" was printed thereon as part of the title of each office voted for, and that therefore the said ballots were illegally rejected.

The committee found a total of 808 ballots rejected for illegal reasons, and 20 ballots illegally counted in Norwich for the Democratic candidates. Assuming all these rejected ballots to be Republican, it found that the only candidate having a majority of all the votes cast was the Democratic candidate for Comptroller.

The report of the Democratic minority of the committee declared all the Democratic candidates to be duly elected.

Prolonged debates upon these reports consumed the time of the House for nearly a week. On Feb. 3, by a strict party vote, the resolutions recommended by the majority of the committee were passed. These resolutions declared the facts found by the majority of the committee to be true, and postponed any further action by the House till the Senate should join with it in an examination of the returns. The Senate replied by a resolution declaring that on the first day of the session it had made all the examination of the returns it could lawfully make and had declared the result, and that it could lawfully take no further action in the premises. The House then passed a resolution proposing a conference committee of five members from each House, which should take into consideration the report of the House investigating committee. The Senate refused to accede to this, but proposed a like committee to take into consideration the separate action of the two Houses regarding the late election. This resolution, after considerable debate and some misunderstanding between the two Houses regarding the use of the word "late" therein, was finally adopted by the House. The committee was appointed on Feb. 10, and on Feb. 12 it reported that no basis of agreement respecting the controversy could be reached. The House then passed a resolution declaring Nicholas Staub to be elected Comptroller, by virtue of which, on Feb. 16, the office was peaceably surrendered to him by Comptroller Wright. By another resolution at the same time the House expressed its willingness to unite with the Senate in the passage of a joint resolution requesting the advice of the judges of the Supreme Court on all questions of law involved in their differences, and pledged itself to abide by their decision. The Senate refused to accept this offer, insisting that there was nothing to be arbitrated or decided. It claimed that Luzon B. Morris and his Democratic associates on the State ticket were the only legal State officials, and it further refused to transact any business of legislation whatever till the House should declare them elected. It also refused to recognize in any manner Gov. Bulkeley and the other hold-over Republican officials. Gov. Bulkeley, on Feb. 17, sent several communications to the Senate, among them the renomination of Judge Loomis of the Supreme Court, but it refused to receive any such communications, and numerous messages sent by him subsequently were likewise refused. In the House several bills were passed, among them the regular appropriation bills, but the Senate rigidly adhered to its purpose of obstruction, and although several other propositions

were offered by the House no prospect of a settlement appeared for several weeks. About March 17 the House passed a bill, known as the Judson bill, which provided that any person voted for at the recent election may bring a petition to a judge of the Superior Court within fifteen days after the passage of the act, and that the decision of this judge shall be subject to appeal to the Supreme Court of Errors. The bill empowers the court to open the ballot-boxes. If the General Assembly is not in session when final judgment is rendered, the person administering the office of Governor is directed to convene the Assembly, which shall correct the election returns in accordance with the finding of the court.

When this bill reached the Senate, several counter-propositions in the form of bills for effecting a settlement were introduced and discussed in that body. Finally, on March 26, all these were referred to a Senate committee of two Republicans and two Democrats, in order that it might agree upon a measure that both parties would support. This committee, on April 1, reported no agreement possible. The Senators then withdrew their several propositions, and the Senate refused to pass the Judson bill. It further resolved

That this body will not further consider any offer looking toward a compromise or settlement, so long as the House maintains its present attitude toward the Constitution, and will not receive or entertain any bill or resolution relating to the State officers, emanating from the House, until the House has performed its constitutional duty.

This action was no sooner taken than the House passed a resolution adjourning till Nov. 11. The Senate then adjourned from week to week, holding only a brief session on each Tuesday, till April 27, when it adjourned to May 14. On that day, after a short session, it adjourned to June 15, from that day to June 29, and from June 29 to Sept. 7, without taking any action on the bills pending before it. As the appropriations made by the preceding General Assembly covered only the two years ending July 1, 1891, the failure of the Senate to act on the appropriation bills passed by the House caused considerable embarrassment to the State and to the public institutions.

When the House adjourned from April 1 to Nov. 11 without having declared the election of any State officers except the Comptroller, the Democrats decided to bring their case into the courts, and on April 14 two writs of *quo warrant* were filed in the Superior Court at New Haven, one brought by Luzon B. Morris against acting-Gov. Bulkeley, and the other by Joseph W. Alsop against acting-Lieut.-Gov. Merwin. These cases involved a decision of the legality of the action of Gov. Bulkeley and Lieut.-Gov. Merwin in retaining possession of their respective offices. On May 8 the defendants filed their answers, and early in June replications were filed by the plaintiffs. Later, in June, Joseph W. Alsop died, and his case was therefore discontinued. No hearing had been held in the other case when the Senate reassembled on Sept. 7. It, therefore, again adjourned to Nov. 10, after listening to eulogies of Dr. Alsop. On Oct. 16, before Judge Thayer of the Superior

Court, the defendant in *Morris v. Bulkeley* filed a demurrer attacking the jurisdiction of the court, and the judge reserved all questions of law involved in the case for the Supreme Court. That tribunal heard arguments on Nov. 23 and 24, and reserved its decision. As the Republicans had hitherto shown anxiety to have the dispute settled by the courts, it was scarcely expected that they would raise the objection to the jurisdiction set out in their demurrer. Earlier in the year Marvin H. Sanger had brought a writ of *quo warranto* against Treasurer Henry, and the case came up for a hearing in the Superior Court on Nov. 10. Judge Thayer continued it to await the decision in *Morris v. Bulkeley*.*

The State Senate reassembled on Nov. 10, and again adjourned to Dec. 7, from which date it adjourned to Jan. 6, 1892. The House assembled on Nov. 11, and adjourned to Jan. 6, 1892.

One of the few duties of the General Assembly, the performance of which was not prevented by the dispute between the two Houses, was the election of a United States Senator. The Republican caucus early in January unanimously renominated Senator O. H. Platt, and at a joint session of the General Assembly on Jan. 21 he was re-elected by a vote of 141 to 134 for Carlos French, the Democratic nominee.

Legal Complications.—Early in his term the Democratic State Comptroller refused to draw an order for the monthly salary of the Governor's private secretary, on the ground that, as Gov. Bulkeley was illegally holding his office, any person appointed by him as private secretary should not be recognized as a legal State official. Secretary Austin Brainard thereupon brought a writ of mandamus late in March against Comptroller Staub, in the Superior Court, to compel him to issue the order. The defendant filed an answer on April 7, alleging, among other things, that Gov. Bulkeley had no title to the office held by him. On motion to strike out this part of the answer, Judge Hall, late in June, ruled that the validity of the Governor's title was a collateral question, which could not be passed upon in the present case. On a trial of the case on its merits before Judge Robinson of the same court, a decision was rendered about Nov. 15 to the effect that, as the plaintiff was *de facto* private secretary of a *de facto* Governor, it was the duty of the Comptroller, as a purely ministerial officer, to draw his order in payment of the salary, regardless of the title under which the plaintiff held. An appeal was taken to the State Supreme Court. For the reason alleged in this case the Comptroller also refused to draw orders for the salaries of Treasurer Henry and other hold-over officials and appointees of Gov. Bulkeley.

On July 1 the period expired for which the appropriations were made by the General Assembly of 1889. Comptroller Staub at once sought the advice of counsel respecting his authority to draw orders when no appropriation

existed for their payment, and was instructed that in such case he might legally draw orders for all expenses necessary to maintain the essential operations of the State government, those operations being essential which the General Assembly had by law commanded to be performed, as distinguished from those which it had merely authorized or permitted. Treasurer Henry at first refused to pay any orders except those drawn against the unexpended balances of former appropriations, but informed the holders of State orders that the *Etna* Life Insurance Company would cash them at their full value upon presentation at its office, the company trusting to future legislation for reimbursement. Early in August, however, the Treasurer obtained legal advice that he might pay orders issued for all services authorized by the Constitution or by any act of the General Assembly, in the same manner as if a special appropriation had been made therefor, and that the distinction made by the advisers of Comptroller Staub between acts which the General Assembly had commanded and those which it had authorized should not be observed. Under this opinion, the Treasurer was justified in paying nearly every order presented. But the Comptroller, under the advice of his counsel, refused to draw orders for any objects not strictly essential to the maintenance of the government. Among others, he refused to issue orders for the expenses of the encampment of the National Guard at Niantic, and Paymaster Fenn brought a writ of mandamus to compel the issue of such orders. The case had not been tried at the end of the year.

Under the State law the Comptroller and the Treasurer are required to meet as a Board of Equalization to examine and correct the returns of insurance companies as to the value of their capital stock, etc. When the time for meeting came in October, Comptroller Staub, who had never officially recognized Treasurer Henry, invited the Democratic claimant, Marvin H. Sanger, to meet with him and examine the returns. Treasurer Henry did not assert his right to act as one of the board, but declined to accept the value placed by Messrs. Staub and Sanger upon the insurance stock, or to recognize any of their acts as legal. He announced his willingness to receive checks from the insurance companies to the amount of the value placed by the latter upon their stock, and to credit them on account, but would not accept such checks in full payment for taxes.

Late in February Gov. Bulkeley issued a requisition upon Gov. David B. Hill, of New York, for the return of one Fardon, who was charged with the crime of burglary. When the papers were presented to Gov. Hill, on Feb. 24, he refused to honor them, on the ground that he could not recognize Gov. Bulkeley as the legal Governor of Connecticut, believing that he was a usurper, and that Judge Morris was entitled to the office. On March 5 he refused another requisition from Gov. Bulkeley for the return of one Colbert, charged with horse stealing.

Decision.—In the suit of *Fields vs. Osborne* the State Supreme Court, early in June, rendered a decision that indirectly settled some of the disputed questions involved in the contest over State officers. The suit turned upon the validity

* The State Supreme Court did not render its decision in *Morris v. Bulkeley* till Jan. 5, 1892. It then found Morgan G. Bulkeley to be Governor, both *de facto* and *de jure*. His right to hold over till both houses of the General Assembly should unite in declaring the election of his successor was affirmed. The questions in dispute between the two houses regarding the right of the General Assembly to go behind the returns were not considered.

ty of certain ballots which contained the word "for" before the name of each office to be filled, and which also contained, in some cases, the words "For Judge of Probate, Henry H. Steadman," and in other cases the words "and *ex officio* Registrar of Births, Marriages, and Deaths," printed after the words "Town Clerk." The court held that, as no office of judge of probate was to be filled at the election in which these ballots were used, and as the statutes provide for the election of a town clerk, and not for any officer called town clerk and *ex officio* registrar, etc., the addition of the above-quoted phrases vitiated the ballots under the provisions of the ballot law of 1889. This ruling was decisive of the case; but the court went further and intimated its opinion that the word "for" printed before the name of each office was not such an addition to the ballots as to render them void, unless it should be added for a fraudulent purpose in order to identify them. As the local election officers in many cases at the election of November, 1890, had rejected so-called "for" ballots as illegal, this decision seemed to sustain the contention of the Republicans as to the illegality of such action. The case arose out of a local election in the town of Branford.

Education.—The following statistics from the latest report of the State Board of Education cover the school year 1889-'90: Children of school age in the State, 159,241; number enrolled in the public schools, 126,505; enrolled in other schools, 19,066; not enrolled in any school, 23,562; average daily attendance in the public schools in winter, 86,275; in summer, 81,038; number of male teachers in the public schools in winter, 460; in summer, 356; female teachers, in winter, 2,766; in summer, 2,852; average monthly wages, male teachers, \$76.24; average monthly wages, female teachers, \$39.34. The total receipts for school purposes during the year amounted to \$2,015,667, of which the sum of \$119,430 was derived from the income of the school fund, \$238,861 from the State tax for schools, \$953,890 from town-school taxes, and \$580,010 from district-school taxes. On June 30, 1890, the principal of the State-school fund was \$2,020,073.

The Normal School buildings at New Britain have been enlarged, and the buildings for the new school at Willimantic are under way.

During the school year 1889-'90 372 pupils were enrolled at New Britain and 70 at Willimantic.

Savings Banks.—On Oct. 1, 1890, there were 86 savings banks in the State, having assets and liabilities amounting to \$123,432,832.24. The deposits therein amounted to \$116,406,675.39, and they had accumulated a surplus of \$4,177,383.50. Since Oct. 1, 1889, the increase of deposits had been \$6,035,713.09, and of surplus \$375,856.32. There were 305,863 depositors, an increase of 10,967 in one year. Eight State banks, eight trust companies, and ten investment companies also do business in the State.

Tobacco.—The number of planters in the State during the census year 1890 was 2,815; the area devoted to tobacco, 6,331 acres; the product, 8,874,924 pounds; and the value of the crop to the producer, estimated on a basis of actual sales, \$1,132,111.

Manufactures.—The following summary of the business of 636 manufacturing establishments in the State is reported by the State Labor Commissioner: Value of goods manufactured, \$125,723,066.51; value of stock and materials, \$67,228,873.72; cost of manufacture (less rent, interest, and taxes), \$45,541,069.81; rent, interest, and taxes, \$2,392,008.90; net profits, \$10,561,114.08. The capital employed was \$117,361,435.13; the amount paid for labor, \$32,720,018.18; and the number of hands employed, 75,191. The amount paid for wages was 28.41 of the cost of goods manufactured; and the value of stock and material 58.37 per cent.

Local Option.—At the town elections held throughout the State early in October, 83 towns voted for license under the local-option law and 85 against license. There were few changes from the results of the preceding October election.

COREA, called by the natives Ta Chō-sūn (Great or All Chō-sūn), an independent kingdom in Asia, between China, the Yellow Sea, and the Sea of Japan. The name means Morning Radiance. From the Russian province of Primorskaja it is separated by the Tumen, and from the Chinese province of Shing-King by the Yalu river. It thus closely adjoins the three powerful nations—China, Russia, and Japan (see map in "Annual Cyclopædia" for 1885, page 264). Long supposed to be a peninsula, though by first European travelers of the seventeenth century asserted to be an island, Corea has a complete water boundary. On the northern frontier, in north latitude 42° and longitude 127° 42', rises the main peak of the ever-white mountains, named Paik-Tu, or White Head, in the crater of which lies the Dragon's lake. Out of this flow the two rivers that divide Corea from Russia and China, making the country an island. In descending the Yalu river on the west a striking difference is noted in flora, fauna, and man. The Chinese, dressed in blue, plow their fields, using horses, on lands from which deciduous trees have been mostly cleared away. The Coreans, dressed in white, use oxen as beasts of draught and burden, and the trees are mostly evergreen. The area of Corea is estimated at 82,000 square miles and its sea-coast line at 1,740 miles. The most careful estimates, based on Government reports, give Corea a population of 12,000,000.

History.—The present race of people in Corea is a composite formed of many tribes and emigrants from the north and west. Tradition shows the movement of large bodies of men from Manchuria into this river-made island, but tradition and written history gather around the name of Ki Ja (or Ki-shi) as the civilizer of the country. Leaving China on the fall of the Chow dynasty, 1122 B. C., Ki Ja entered the present northeastern province of Ping-an with 5,000 followers. He reduced the various tribes to order, began the capital city that still bears the name of Ping-an, promulgated laws, divided the country into administrative districts, and introduced Chinese writing, literature, art, medicine, and measures. Intending to reflect the glories of China, his model, he named the country Chō-sūn, or Morning Radiance. His successors reigned until about 221 B. C., from which time until 9 A. D. Corea was in disorder or annexed to China. The era of the

three kingdoms lasted from A. D. 9 to 960, during which period border conflicts, feudalism, Buddhism, wars with China and Japan, and trade with the Arabs were the chief features of history. In 960 A. D. Wu Wang extinguished the rival states and gave political unity to the country under the name Koria (whence our Corea), and fixing his capital at Sunto, north of Seoul, a splendid city now largely in ruins. The Mongol invasion and the first recorded use of the mariner's compass, used in navigating a Chinese fleet to Corea, A. D. 1122, occurred during this period. In 1392, on the fall of the Mongols, Tai Jo became paramount, fixed his *seoul*, or capital, on Han river, and founded the present dynasty and methods of political administration. Han-yang the capital, is in the province of Kiung-kai, and is known to Europeans as Seoul, or Sŭul. The invasions of the Japanese in 1592-'97 and the Manchus in 1627, the long isolation of the country from any but Chinese influences, the introduction of Christianity, and the modern opening of the country by treaties with foreign nations are the chief events in modern Chō-sŭn. The present Hap-mun, or King, is the twenty-eighth sovereign of his line, and his name, like most Korean words when Romanized, has a different spelling and pronunciation, according as it is expressed in Korean, Chinese, or Japanese. This trilingual presentation of Korean vocables explains the apparent confusion in geographical and other nomenclature.

Government.—The Government is an absolute monarchy of the patriarchal type, greatly modified by surviving and powerful features of feudalism. The nobles, by means of their family influence, hereditary privileges, and numerous retainers, possess great power and compel the policy of the Government. The King governs with three councilors, forming a triple premiership, aided by the six departments of the executive—viz., revenue, rites, war, justice, public works, and ceremonies. With the six generals who command respectively the left, right, front, middle, rear, and special guards or barracks, so called, resides the balance of power; for under these are the military governors of the eight provinces, and, in effect, so also are the civil functionaries. In this way the authority of the King is hampered and often completely negatived. These eight provinces take their names from the union of the first half of the names of the two principal cities in each.

Classes and Domestic Politics.—The general division of the people is into the *yang-ban*, men of high, and *song-nom*, men of low rank—that is, the scholar class and the common people. As in China and old Japan, "the four classes" consist of the literary, agricultural, artisan, and trading. Yet there is no fixed birth caste, and the higher classes are being continually recruited from the lower, wealth being usually the factor that decides social position, at least locally. In general, it may be said that in the north Chinese ideas and customs prevail, while in the south the influence of the Japanese language and civilization is strikingly manifest. China claims the right of interference with Corea's foreign policy, which an increasing sentiment resents. The varying adherence of rival parties to the ideas of Chinese or of Japanese

civilization respectively, forms what may be called the national politics of Corea. Local politics are conditioned by the constant avarice and rapacity of the magistrates with their hordes of paid dependents and the countervailing struggles of the guilds of the working classes and the jealousy of the nobles and their followers.

Climate, Soil, and Crops.—The eight provinces are formed by natural features, and are, in general, river basins bounded by mountains. In the north the winters are long and the cold severe. Here also is the haunt of the tiger. In the southern half fertile plains abound, and the amount of arable land and the area of plantation on the almost innumerable islands are large. The climate is bracing, except during the rainy season, which is from June to September. The autumn is nearly cloudless, and the winter means usually a stretch of clear weather, except during the plentiful snow. Many of the rivers are frozen over during four months of the year. It is admirably adapted to agriculture. Hitherto, owing to the wretched system of government, by which the people are systematically plundered by the magistrates and their minions, little incentive to cultivate the soil to the fullest extent has existed. Besides, there was no foreign outlet for surplus produce, even were the means of transportation adequate to move the crop products beyond the region of growth. The cost of transportation across the country at its narrowest width is about 8 per cent. of the value of the goods. Now, the demand from foreign ports, the better prices obtainable, and the improvement in water transportation have greatly stimulated the farmers to increased efforts, and the acreage of cultivation is larger than ever. On land, bulls and ponies are still the sole means of transport. The ports of Chemulpo, near the capital, and Fusan and Wensan are open by treaty; but occasional visits to other ports are cautiously allowed to foreign vessels.

Foreign Trade.—The foreign trade for the year 1890 increased beyond all expectations, the total value being more than double that of 1889:

MOVEMENT.	1889.	1890.
Exports.....	\$1,886,580	\$3,563,820
Imports.....	8,016,645	5,210,445

Corean beans make the best *soy* and *miso*, articles used in Japan, and the former is exported to Europe as the basis of several condiments. In 1889, 26,455 tons were exported, and in 1890, 41,209 tons. In the same years the export of rice was 2,031 and 54,711 tons, respectively. This increase of rice export promises to be permanent, and much Japanese capital has been invested in rice husking and cleaning mills at Fusan and Chemulpo, the white rice finding its way to Europe. Dried fish is exported, the amount in 1890 reaching 2,200 tons. At present the Japanese get the largest share of the trade, and nearly monopolize the fisheries. In 1890 716 fishing boats, employing 3,500 men, were registered, the average annual net earnings of each boat being \$600. They also have 22 boats, employing 256 men, for capturing whales, and the 17 caught in 1890 netted \$10,000. As the Corean national dress is white cotton, handsomely and glossily

starched in summer, and heavily padded in winter, there is little demand for woollens; but cotton goods, mostly from Manchester, England, find a steady sale. In 1890 shirtings to the value of \$1,474,745 and lawns and muslins worth \$390,020 were imported, against the figures \$903,100 and \$189,070 for the same articles in 1889. Thus far, the natives seem to prefer the British textiles, even with their heavy loading of size. These they wash and bleach, sizing them heavily again with starch in order to give them that peculiar luster which the Korean women so skillfully impart. In their commercial dealings the people are almost bigotedly conservative. Once becoming accustomed to a particular brand, trade mark, or style of goods, they can not easily be induced to change it, even for a manifestly better article. Most of the yarn imported comes from Bombay. Three fourths of the silk imported—to the amount of \$129,360 in 1889 and \$235,805 in 1890—comes from China. American drills and sheetings are not in much demand. About \$222,000 worth of zinc and tin and \$245,000 worth of copper were imported, chiefly for the minting of cash; but the people much prefer the old to the new money. The conservative instinct is shown also in the steady use of American petroleum, notwithstanding the Russian efforts to introduce a cheaper article; while against all competitors, German quinine, first in the field, obstinately holds its own. Telegraph materials figure in the list of imports, for the building of a line of wire between Seoul and Gensan. There are telegraph lines between Fusan and Seoul, and from Seoul to Peking. Notwithstanding the excellence and cheapness of the native tobacco, and its strong fiber, fitting it for wrappers, American cigarettes were imported to the amount of \$9,575. Foreign manufactures amounted in all to \$3,951,305. Trade across the Russian frontier has also been steadily maintained, amounting in the aggregate to \$78,860. In the treaty ports the number of foreign settlers has increased. The Chinese at Chemulpo have obtained a new concession of land for settlement, and the Japanese have made a similar application for more room. The total number of ships entering the three open ports in 1889 was: Of sailing ships, 975, aggregating 29,485 tons burden; steamers, 249, aggregating 74,352 tons. In 1890, 2,939 sailing vessels of 37,457 tons, and 1,958 steamers of 276,390 tons. In this work of transport the following flags were represented:

NATIONALITY.	Vessels.	Tonnage.
Corean.....	83	6,508
Japanese.....	1,436	294,001
Chinese.....	59	7,982
German.....	81	12,298
Norwegian.....	7	8,108
Total.....	1,621	318,847

The chief articles of export are beans, rice, hides, bones, grain, cattle, fish, and silk. The imports include textiles, metals, kerosene, machinery, manufactured tobacco, matches, arms, and ammunition. The development of trade since 1885 is shown herewith: In 1885, \$1,912,430; 1886, \$1,486,590; 1887, \$3,017,030; 1888, \$3,098,175; 1889, \$3,458,740; 1890, \$6,910,035.

No account is here taken of the export of ginseng, which is a Government monopoly, and one of the chief sources of revenue, netting the Government annually over \$500,000.

Religion.—The Koreans were formerly Buddhists, this form of faith having been introduced from Tibet and China, A. D. 352. It spread over the country, and reached its height of power in the fourteenth century, the nation being then priest-ridden, the country filled with monasteries, and the court favorites and most influential men about the King being Buddhist monks. To this period belong not only the colossal sculptures, twin images or granite monoliths, cut out of the solid rock or mountain spurs and at a distance resembling light-houses, called *miryok* (stone men), but also the solid stone pagodas, of which a few still remain. It is said that the substitution, by a priest named Shi Ton, of an illegitimate son for the king's heir precipitated the fall of the ruling dynasty and forever abolished the power of the Buddhist priests. The founder of the present royal house forbade forever the entrance of a Buddhist priest or monk within the walls of the royal capital. Hence there is no Buddhist temple in Seoul, and in the other cities Buddhism is in exceedingly low estate. The monks are still allowed to occupy the monasteries, but in reality they act as a clerical militia, and the monastic buildings, often fortified and in strategic positions, form part of the military system of defense under the control of the King's generals. Unlearned, often illiterate, and under a social and political ban, most of the monks have degenerated into mountebanks and beggars. The majority of the people follow the Confucian ethics; but superstition is rife, and the worship of local deities or patrons in the form of heroes, or even of sacred beasts, is common. Shamanism is prevalent, and the number of mythical animals believed in is large. Geomancers, necromancers, and fortune-tellers abound.

Christianity was introduced in 1777 by Korean students who accompanied the annual embassy to Peking, and obtained books from the Jesuit missionaries there. Companies of Christian believers were formed, and in 1836 the first French priest, in disguise, "violated the frontier," and was soon followed by others, despite the martyrdom of several, which was followed by the menace of French ships of war. In 1866 4 bishops and 18 priests had secretly entered, and the Roman Catholics claimed a following of 60,000 converts. Dreadful persecutions, culminating in 1866, when 9 French priests were publicly beheaded, have crimsoned the Christian martyr roll of Corea with probably 10,000 names. There are now 50,000 Roman Catholics in Corea, and the strong force of missionaries who minister to them are all from the Société des Missions Étrangères, of Paris. Protestant Christianity is represented (1891) by 21 missionaries, most of whom have recently arrived. This work began in 1884. In the Presbyterian church 107 persons, in 1890, had been baptized, and in the Methodist, 50. The various evangelistic agencies are prosecuted, and the hospital, printing-press, and school are made use of, and tracts, books, and Scriptures are circulated. In the tours made by the missionaries the country has been widely explored. The Protestant missions are English, American,

Canadian, and Australian, and in denomination Presbyterian, Methodist, and Episcopalian. Steps have been taken for the translation of a standard version of the Bible, the first efforts in this direction having been made by the Rev. John Ross, of Mukden, China, ten years ago.

Medical Science.—Corean medical literature enjoys a good reputation in China. Several standard works in the art of therapeutics have long been known in Japan also. Nevertheless, the treatment of their own sick is rude and barbarous from the standpoint of Western science. The poor and the infected are cast out from their homes, and left with food and water in rude huts of straw on the waste lands beyond the city gates. The Government, appreciating the value of the medical skill displayed by an American physician, H. N. Allen, after the *coup d'état* and the battle between the Chinese and the Japanese in 1884, has established the Royal Corean Hospital in Seoul. Served by American physicians on modern principles and methods, 11,000 cases were treated in this hospital in 1889. The Methodist hospital treated 8,000 cases in the same year. There is also a Japanese hospital at Fusan.

Education and Literature.—The basis of education is the Chinese literature. Appointments to the Government service are through the literary examinations held at stated intervals in the provincial and national capitals. At Seoul, in the Royal Corean Government College, Western languages and science are taught, the three chief instructors being Americans, graduates of colleges in the United States. Several young men, graduated at this institution, are now employed in Government service. Education for the people is entirely a matter of private enterprise. Libraries and book-shops are found in the large cities, but there is little true vernacular literature, the books containing serious information being in Chinese. There is a genuine native alphabet, consisting of 25 letters, 11 vowels and 14 consonants, and classified according to the organs of speech. It is phonetic, and is one of the simplest and most perfect in the world. This Un-mun alphabet was invented in the fourteenth century, at about the same time that movable metal types were used for printing, wooden types having been known since 1320, and authentic printed Corean books bearing the date 1317-'24 A. D. being extant. The apparatus for the study of Corean by Europeans now consists of a large dictionary and a grammar by the French missionaries, a grammar and dictionary in English by the Rev. H. G. Underwood, a dictionary by H. Scott, and phrase books and critical articles by W. G. Aston, John Ross, and others.

COSTA RICA, a republic in Central America. The executive authority is concentrated in the hands of a President, who is elected for four years, and the legislative power is vested in a single chamber, called the House of Representatives, composed of 26 members, elected indirectly for four years, one half retiring each second year. José Joaquín Rodríguez was elected President on May 8, 1890.

Area and Population.—The republic is estimated to have an area of 20,000 square miles, and its population in 1889 was estimated at 209,644. In that year there were 9,151 births, 5,238 deaths, 6,330 arrivals, and 3,706 departures.

Finance.—The revenue for 1889-'90 was \$5,078,166, and the expenditure \$5,924,915. The chief items of expenditure were \$2,046,647 for the debt, \$549,112 for war, \$980,517 for public works, and \$449,877 for education. The foreign debt, contracted in England at 6 and 7 per cent. interest in 1871 and 1882, amounted to £2,691,300, and the interest in default to £2,691,300 in 1887, when the whole was converted into a loan of £2,000,000 paying 5 per cent. interest. The debt was disputed by the Costa Rican Government, which expended \$500,000 in an unsuccessful suit against the London bankers, because of the total nominal sum of \$26,218,425 only \$4,877,865 had reached the treasury. The converted debt is guaranteed on the customs revenue, and since 1888 the interest has been regularly paid. All the debts outstanding in 1890 amounted to \$17,712,338 in silver. A land and loan company with a capital of \$5,000,000 has been granted important concessions for the sake of promoting agriculture and immigration.

Commerce and Production.—The chief commercial products are coffee and bananas. Out of a total exportation valued in 1889 at \$6,965,371, coffee stood for \$6,186,656, and bananas for \$569,020. About three fifths of the coffee went to England and the remainder and all the bananas to the United States. Other exports are hides, skins, cocoa-nuts, cacao, mother-of-pearl, cedar wood, and gold. Rice, corn, wheat, and potatoes are cultivated in addition to tropical products. The total value of the imports in 1889 was \$6,306,408.

The shipping entered at Costa Rican ports in 1889 consisted of 309 vessels, of 367,052 tons.

Communications.—There were 180 miles of railroad completed before the beginning of 1890, to which 51 miles have been added, uniting Port Limon with San José, the capital.

The telegraphs in 1889 had a total length of 600 miles. The number of dispatches in 1888 was 112,639.

Public Affairs.—Since the last Central American war, Costa Rica has made peaceful progress in developing her great agricultural resources and building railroads with the aid of American capital and in improving the sanitation of the towns and advancing education. A plot against the Government was suspected or discovered in April, 1891, and several persons were arrested, but no disturbance of the peace occurred.

Reciprocity.—A treaty of commercial reciprocity between Costa Rica and the United States was negotiated in 1885, which was never ratified by the two governments. Under it, sugar, coffee, cacao, pea-nuts, ginger, bananas, potatoes, *pita* or hat straw, gums, dye woods, rubber, hides, timber, and other Costa Rican products were to be admitted free into the United States, and cattle, salt, petroleum, coal, preserved meat, bricks, lime, mining and agricultural machinery, and cotton from the United States into Costa Rica. In 1891 negotiations were reopened for a treaty containing the same provisions. The Costa Rican Government was bound not to impair the security of the foreign debt, for which the customs receipts are pledged, and therefore sought to make an arrangement with the English bondholders to release this lien and free its hands.

CRISP, CHARLES FREDERICK, an American statesman, thirty-second Speaker of the United States House of Representatives, born in

CHARLES FREDERICK CRISP.

Sheffield, England, Jan. 29, 1845. His parents were actors, and were on a professional visit to England at the time of the son's birth. The father, William H. Crisp, a native of England, was a naturalized citizen of the United States. An older son and two daughters adopted the players' profession, but all are now dead. Charles was brought back to the United States while still an infant, and was educated in the schools of Savannah and Macon. In May, 1864, he enlisted in the Tenth Virginia infantry (Confederate), with which he served for three years, becoming a lieutenant, when in May, 1864, he was made a prisoner of war and was sent to Fort Delaware. Here he remained in confinement until June, 1865, when, the war being over, he was released. His parents being in Ellaville, he went thither, and soon afterward began the study of law in Americus. He was admitted to the bar in 1866, and began practice in Ellaville, removing in 1873 to Americus, which is still his home. In 1872 he was appointed Solicitor-general of the Southwestern Judicial District of Georgia, and the next year he was reappointed for a term of four years. In June, 1877, he was appointed judge of the Supreme Court of Georgia for the Southwestern Circuit, and in 1878 the Legislature elected him to that office. In 1880 he was re-elected for four years; but two years later he resigned the judgeship and accepted a nomination for member of Congress from the Third District of Georgia. He has served continuously in that

body ever since. In 1883 he presided over the Georgia Democratic State Convention. In the House of Representatives he has been known as a faithful attendant, seldom absent from his seat, and a hard worker and ready debater. He was chairman of the Committee of Elections in the Fiftieth Congress, and has served on those on Commerce, Manufactures, and the Pacific Railroads. The large Democratic majority in the House of Representatives of the Fifty-second Congress threw the contest for the Speakership into the Democratic caucus. The foremost aspirants were Roger Q. Mills, of Texas, and Mr. Crisp. Mr. Mills was the candidate of those who favored the nomination of Grover Cleveland for the presidency in 1892 and a radical reduction of the tariff. Mr. Crisp is understood to be a free-trader in theory, but practically more conservative than Mr. Mills. He is also understood to favor the free coinage of silver. Other aspirants for the nomination were Messrs. Springer, of Illinois, McMillin, of Tennessee, and Hatch, of Missouri. There was a long contest, and thirty ballots were necessary before a nomination was made. It was pointed out that Mr. Crisp's support came principally from those States that invariably give Democratic majorities; that those States which favored his nomination cast 120 Democratic votes in the electoral college, while those that favored Mr. Mills cast but 38. The adherents of Mr. Mills based their argument on the desirability of gaining victories in

States heretofore Republican. The following table is a record of the ballots:

BALLOTS.	Crisp.	Mills.	Springer.	McMillin.	Hatch.	Sevens.
First.....	84	78	32	18	14	1
Second.....	89	80	28	18	11	1

* Hatch withdrew and voted for Crisp.

On motion of Mr. Brown, of Indiana, the nomination was made unanimous. Mr. Crisp, being notified and called for, addressed the caucus as follows:

REPRESENTATIVE: I am profoundly grateful for this mark of your confidence and esteem. I pledge myself here and now to devote whatever of industry and ability I possess to the advancement of the real interests of the Democratic party. I beg to say to you now, as I speak to you my first words since I am your selection for Speaker, that my election means no step backward in tariff reform. I beg to say to you that there is in our party to-day no man who more earnestly believes in the Democratic doctrine of tariff reform than I do. After the long struggle through which we have passed, when Representatives are fatigued, when other officers are to be nominated, it does not become me to consume your time. I beg to say, however, that during the progress of this canvass, I have said no word respecting any individual which would at all justify him in having any harsh feeling of any kind against me. I have felt that it was a friendly struggle. I have felt that we were all Democrats, and I have felt that whoever might be chosen Speaker, whenever this House meets and organizes we start as one body, working and laboring for a common cause—the principles of the Democratic party. I thank you again for your confidence and for your kindness, and assure you that this whole contest has left in my bosom no unkind feeling toward any member of the House.

On Tuesday, Dec. 8. Mr. Crisp was duly elected Speaker of the House of Representatives. The Republican minority cast their votes for ex-Speaker Thomas B. Reed.

CUBA AND PUERTO RICO, two islands which constitute the Spanish possessions in the West Indies. The area of Cuba is 36,013 square miles, inclusive of that of the Isle of Pinos and other islands and keys. The population on Dec. 31, 1890, was officially estimated at 1,631,687 persons, of whom 65 per cent. are white. Havana, the capital, has 250,000 inhabitants. The colony is administered by a governor-general, who is responsible to the Minister of the Colonies in Madrid, but has power in certain cases to suspend the action of any law or decree of the home authorities. Over each of the six provinces is a civil governor, who acts under the direction of the Governor-General. The island is represented in the Spanish Cortes by 2 Senators from each province and by 30 Deputies.

Finances.—The revenue for the fiscal year 1890-91 was estimated at 25,815,376 pesos, and the expenditure at 25,446,807 pesos. Of the revenue, 14,791,300 pesos were the estimated receipts from customs. The debt called for an expenditure of 10,447,267 pesos, the Ministry of War for 6,229,427 pesos, and the Ministry of the Interior for 4,237,862 pesos. The capital of the debt is stated at \$181,000,000, and the customs revenue is pledged to pay the interest. Besides the general taxation, amounting to over \$25,000,000 a year, the 153 municipalities levy \$8,000,000 a year. The total annual income of the people is estimated at \$80,000,000. To complete the railway system, which now has a length of about 1,000 miles, a loan of \$40,000,000 has been authorized. The Government owns 2,810 miles of telegraphs.

The Army and Navy.—The armed force maintained by the Spanish Government in Cuba is 26,340 men, besides which there is an organiza-

tion of volunteers numbering 63,115. In Puerto Rico 3,566 troops are stationed. A fleet of 68 gunboats cruises about the shores of both islands.

Commerce.—Sugar and tobacco are the staple products of Cuba. The yield of sugar in 1888 was 656,719 tons, and of molasses 157,791 tons. The annual production of tobacco is 300,000 bales. In 1888 there were 182,636 bales exported from Havana, besides 220,000,000 cigars. The forests contain valuable woods, and the mineral wealth of the country is very great, consisting of gold, copper, iron, manganese, an abundance of asphalt, and beautiful marbles. The whole island is exceedingly fertile, yet only one tenth of the surface is cultivated. All tropical fruits and some that are natives of the temperate zone can be easily raised. The commerce is chiefly with Spain, the United States, and Great Britain. The principal imports are flour, salted provisions, lard, textile manufactures, hardware, glass and crockery, and machinery. The United States in 1889 imported from Cuba 1,000,000,000 pounds of sugar, valued at \$36,277,489, molasses of the value of \$3,416,754, tobacco and cigars for \$9,237,836, and fruits and nuts for \$1,576,751. The principal exports from this country to Cuba were meat and dairy products of the value of \$3,257,883, iron and steel manufactures of the value of \$1,988,018, breadstuffs of the value of \$1,336,047, wood and its manufactures of the value of \$1,110,946, and coal of the value of \$581,095.

Puerto Rico.—Puerto Rico, or Porto Rico, is the fourth largest island of the Antilles, and is said to be the most healthful and fertile. The area is 3,550 square miles. The population numbers 784,709 persons, of whom about 300,000 are negroes. The Captain-General, who administers the Government—Luis Daban in 1891—is assisted by a council of military officers nominated by the Crown. The estimated revenue for the year 1888-'89 was 3,863,100 pesos, and the estimated expenditure 3,973,491 pesos. There are 470 miles of railroad and a telegraph system uniting the principal towns.

The principal products are sugar, coffee, tobacco, cotton, rice, cattle, and tropical fruits, especially plantains and bananas. There are salt basins that are exploited by the Government. Valuable cabinet woods and timber are obtained in the forests. The foreign commerce in 1889 consisted of \$14,177,557 of imports and \$11,066,683 of exports. There was an increase of \$1,095,560 over the exports of 1888, owing to larger crops of sugar and tobacco, higher prices for coffee, and an increased exportation of cattle to the neighboring West India islands. Of 63,610 tons of sugar exported 38,724 tons went to the United States, and of 20,703 tons of molasses the United States took 17,949 tons. The exportation of this article was less than in the previous year, because more was used for making rum. Of the total imports, \$3,920,147 came from Spain, \$3,778,015 from the United States, \$3,109,433 from England, \$1,477,321 from Germany, \$945,033 from Cuba, and the rest from France, Denmark, Uruguay, the Argentine Republic, Belgium, and other countries. The importation of flour from the United States was \$1,610,033; of lard, \$451,581; of pork and hams, \$214,392. These figures represent the bulk of the imports of those arti-

cles. Of other provisions imported the United States furnished 35 per cent.; of metals, 13 per cent.; of glassware and porcelain, 15 per cent.; of lumber, 60 per cent.; of hoops and staves, 93 per cent.; of coal, 70 per cent.

Reciprocity Treaty with Spain.—In January, 1891, Secretary Blaine opened a correspondence with the Spanish Government in which he proposed a new treaty of commerce in which the reciprocity provisions of the new American tariff law would be applied to the products of Cuba and Puerto Rico, in return for compensating advantages to American trade. During the negotiations Señor Canovas asked for a reduction or complete remission of the heavy tobacco duties of the McKinley tariff, in regard to which the United States Government could make no arrangement, because new legislation would be required. Minister John W. Foster stood out for the abolition of the duties on flour that were raised in 1889 for the protection of Castilian wheat growers and millers, and although he was unable to secure the free admission of flour, he obtained such a reduction of the duty as will permit the United States to recover and increase the lost trade in cereals. The Spanish Government was constrained to make concessions prejudicial to Spanish producers, and to sacrifice about \$6,000,000 of revenue by the pressure brought to bear by the people of Cuba and Puerto Rico, who have been driven to the verge of rebellion by protective duties and other onerous burdens, and who deputed a commission of notables to press their demands for reciprocity with the United States, in order to escape the injury that would result from discriminating duties against their sugar and coffee and free themselves from the monopoly prices that they have paid for Spanish flour and other manufactures. The most-favored-nation clauses in commercial treaties with Great Britain, Belgium, and other countries necessitated the new Spanish treaty into two parts, one of which will not go into effect till after those treaties expire on June 30, 1892. The treaty was signed at Madrid on June 26, 1891. The United States agrees to admit sugar, molasses, coffee, and hides, the produce of the Spanish West Indian colonies, free of duty. Under the first or transitory schedule, which entered into operation on Sept. 1, 1891, the following articles of American produce or manufacture are admitted free into Cuba and Puerto Rico: Salted, smoked, or canned

meats, bacon and hams, lard, and tallow; preserved and fresh fish and shell fish; oats, barley, rye, buckwheat, and flour from these cereals, and starch and alimentary products of maize, except corn meal; cotton-seed oil and oil cake; hay, straw, and bran; fruits, fresh, dried, and preserved, except raisins, and vegetables and other garden products; tar, pitch, and turpentine; lumber, timber, and cooperage materials, boxes, and doors, frames, and sashes; wagons and carts; sewing machines; crude petroleum; coal; and ice. Corn and corn meal are admitted at a tariff of 25 cents per 100 kilogrammes, wheat at 30 cents, and wheat flour at \$1, and the duties on butter and cheese, on refined petroleum, and on boots and shoes are reduced 25 per cent. As a definitive arrangement, going into force on July 1, 1892, earthy matters and stone, mineral waters, ice, coal, crude petroleum, resins and turpentine, bricks and tiles, pig iron, and iron castings for building, wrought-iron manufactures, raw cotton, animal greases, books, timber and wood manufactures as enumerated above, fertilizers, agricultural and mechanical tools, machinery and wagons, materials for railroads and other public works, ship-building materials, salted meat and provisions as enumerated above, lard and butter, cheese, fish and shell fish, the cereals and cereal products made free in the temporary arrangement, and also the fruits and vegetables and the forage described above, plants and seeds, and tan bark are permanently exempted from duty. The duties on corn, wheat, and flour specified in the transitory schedule are made permanent, and railroad and street cars are not to pay a higher duty than 1 per cent. *ad valorem*. On carved and polished stone, glassware, glazed tiles, earthenware, fine iron manufactures, steel and iron axles and springs, scales, needles and cutlery, tin plate, copper and brass manufactures, furniture, straw and wicker manufactures, crackers, pastes and farinas, canned goods, preserves and pickles, sauces, rubber manufactures, and rice are admitted at a reduction of 50 per cent. A reduction of 25 per cent. is allowed in the permanent schedule on refined mineral oil, cotton manufactures, rope and cordage, colors and varnishes, soap, medicines and drugs, candles, printing and wall paper, wrapping paper and paper boxes, leather and skins of all kinds, boots and shoes, trunks and traveling bags, harness and saddlery, watches and clocks, and carriages.

D

DELAWARE, a Middle Atlantic State, one of the original thirteen; ratified the Federal Constitution Dec. 7, 1787; area, 2,050 square miles. The population, according to each decennial census, was 59,096 in 1790; 64,273 in 1800; 72,674 in 1810; 72,749 in 1820; 76,748 in 1830; 78,085 in 1840; 91,532 in 1850; 112,216 in 1860; 125,015 in 1870; 146,608 in 1880; and 168,493 in 1890. Capital, Dover.

Government.—The following were the State officers during the year: Governor, Robert J. Reynolds (Democrat); Secretary of State, David

T. Marvel; Treasurer, Wilbur F. Burnite; Auditor, John P. Dulaney; Attorney-General, John Biggs; Insurance Commissioner, Isaac N. Fooks; Chief Justice of the Supreme Court, Joseph P. Comegys; Associate Justices, Ignatius C. Grubb, John W. Houston, and Charles M. Cullen; Chancellor, Willard Saulsbury.

Finances.—The balance in the State treasury on Dec. 31, 1889, was \$79,101.18; the total receipts for the year ensuing were \$289,086.47; the total expenditures were \$270,428.45; and the balance remaining on Dec. 31, 1890, was

\$97,759.20. The separate figures for each of the three funds, which make up the totals above given, are as follow: General fund, balance on Dec. 31, 1889, \$53,626.05; receipts for the year ensuing, \$170,243.09; expenditures, \$158,097.46; balance on Dec. 31, 1890, \$65,171.68. Oyster fund, balance on Dec. 31, 1889, \$10,018.43; receipts for the year ensuing, \$7,437.48; expenditures, \$5,278.84; balance on Dec. 31, 1890, \$12,177.07. School fund, balance on Dec. 31, 1889, \$15,456.70; receipts for the year ensuing, \$111,405.90; expenditures, \$106,452.15; balance on Dec. 31, 1890, \$20,410.45. The sources of State revenue are the income from investments and the taxes derived from the use of franchises granted to railroad companies and other quasi-public corporations, so that no tax, except license fees, is levied upon the citizens. The bonded State debt is \$899,750, to meet which the State holds in its general fund securities to the amount of \$673,050. Among these securities is a mortgage for \$400,000 on the property of the Junction and Breakwater Railroad, which became due this year. By an act of the General Assembly passed early in the year, the State has agreed on payment of \$215,000 on the principal of this mortgage, to continue on mortgage the balance of \$185,000 for a period of forty years, at 3 per cent. interest. Another mortgage for \$200,000, given by the Breakwater and Frankford Railroad, is to be similarly renewed.

Legislative Session.—The regular biennial session of the General Assembly began on Jan. 6, and ended on May 16. On Jan. 21, by joint resolution, Wilbur F. Burnite was chosen State Treasurer and John P. Dulaney State Auditor. Early in the session a bill was passed providing that the question of calling a constitutional convention should be submitted to the people on the third Tuesday of May. An important result of the session was a secret-ballot law. It provides that all voting rooms shall be furnished with booths—at least one for each 150 voters—so constructed that the election inspectors may easily see whether they are occupied. No person except applicants to vote and election officials shall be allowed within 30 feet of the entrance to the voting room. There shall be a roped passage, 4 feet wide and 30 feet long, through which the voters enter. Blanket ballots are to be used, with the nominees of each party collected by columns, each column headed by the name of the party and the party emblem. Voters are to mark their ballots by a stamp. Any names not on the ballot must be written with ink. A free text-book bill provides that text-books shall be supplied in the public schools at the expense of the State, appropriates \$9,000—\$3,000 for each county—to colored schools, and places these schools and the expenditure of the money in the control of the county superintendents. It also makes the Governor President of the State Board of Education, instead of the President of Delaware College, who now holds that office. Another act appropriates \$8,000 for the erection of buildings for a college of agriculture and the mechanic arts, to be open exclusively to colored students, and diverts to its maintenance 20 per cent. of the money coming to the State from the Federal Government for support of such institutions.

The sum of \$25,000 was appropriated to the Delaware College for buildings to be used by the Department of Agriculture and the Mechanic Arts. To provide for the collection and arrangement of the products of the State at the World's Fair at Chicago, \$10,000 was appropriated, and a State World's Fair commission appointed, consisting of one Republican, one Democrat, and one woman from each county. An act, known as the Five Commissioners' bill, the terms of which were much discussed before its final passage, reconstructs the levy court of New Castle County, an ancient institution for the management of county affairs. The commissioners of this court are now to be elected by the people—one from each of the five districts. The county treasurer and a county comptroller are also to be elected by the people. The former official is empowered to receive all county taxes, but such taxes, when unpaid after a fixed time, shall be placed in the hands of collectors of delinquent taxes, who are to be appointed by the levy-court commissioners. By two other acts the duties of the levy court in Kent and Sussex Counties are changed, and provision is made for the election by the people of a county treasurer in each county. Two registration acts, one for the city of Wilmington and another for the remainder of the State, were passed at this session. Two amendments to the State Constitution were proposed—one amending Article IX by substituting general election day for the third Tuesday of May, the other amending Article IV so as to legalize the use of the Myer's voting machine, so-called.

Other acts were as follow:

To prohibit the taking or sending out of the State—or, by a non-resident, out of the county—of any quail, partridge, robin, woodcock, English snipe, or wild rabbit, under a penalty of \$5 for each bird or rabbit.

For the protection of mamoose or young sturgeon.

For the protection of registered, banded, and homing pigeons.

To provide for the appointment of commissioners for the promotion of uniformity in legislation.

To punish procurors and procuresses.

The act concerning peach yellows applies to that part of the State south of Kenton and Duck Creek Hundreds goes into effect Oct. 1, and provides for the eradication of all diseased trees, except that the inspectors may, in their discretion, pass such trees as are being doctored with favorable results.

Abolishing militia encampments and everything pertaining thereto.

Prohibiting the unauthorized wearing of the insignia of the Union Veterans' League.

Giving a workman the right to enter a lien on a building for labor performed, no matter how small the claim.

To punish the embezzlement or fraudulent abstraction or misapplication of money or other articles of value by cashiers, servants, agents, or clerks.

To prevent life-insurance companies and agents doing business in the State from discriminating in rates where the risks are equal.

To legalize the issue of certain State bonds. (Providing for a reissue of the \$75,000 bonds, first ordered to be issued in 1889, for the purchase of the Delaware State Hospital for the Insane at Farnhurst, and providing that the proceeds of the sale of these bonds shall be applied to paying off the floating debt of New Castle County.)

Education.—There is no State Superintendent of Public Schools, and no figures covering

the schools of the whole State are available. A recommendation of the Governor that the appointment of such an official be authorized was rejected by the General Assembly of this year. Another recommendation that text-books in the public schools be supplied free to pupils was adopted. The increase in the revenue for school purposes derived from liquor licenses will enable this law to be enforced without the levy of any additional tax upon the people, the revenue from these sources being \$23,689.57 for 1889, under the old license law, and \$65,783.34 for 1890, under the new law.

For the school year ending in June 81 pupils were enrolled at the State College, a large increase. The prospects of the institution, educationally and financially, are promising. A new building to accommodate the Department of Mechanic Arts will soon be erected, under authority of an act of the General Assembly passed this year.

Militia.—The National Guard of the State, consists of 557 officers and men, organized into one regiment of infantry (8 companies) and one squadron of cavalry. Encampments have been held each year at an annual cost to the State of about \$10,000; but by an act of the General Assembly of this year they are hereafter abolished.

Charities.—On Jan. 1 there were 163 patients at the State Insane Hospital, of whom 93 were males and 70 females. On Oct. 1, the number had increased to 181, of whom 103 were males and 78 females.

Population by Races.—The following table shows the white and colored population of the State in 1880 and 1890, as reported in the Federal census:

COUNTIES.	WHITE.		COLORED.	
	1890.	1880.	1890.	1880.
Kent.....	24,418	24,760	8,243	8,114
New Castle.....	32,440	65,074	14,708	12,636
Sussex.....	32,571	30,326	6,076	5,692
The State.....	139,429	120,160	29,022	26,442

There were also 38 Chinese and 4 Indians in the State in 1890.

Treasury Investigation.—Late in February rumors were current that the retiring State Treasurer, William Herbert, had found difficulty in settling with his successor, and that State securities to a large amount were missing from the Treasurer's office. On March 2, a committee of the House appointed to secure information on the subject reported as follows:

The books of ex-Treasurer Herbert were delivered to Treasurer Burnite on Feb. 26, and by them it appears that the balance due the State at the time of his entrance upon the duties of the office was \$146,142.14. On Feb. 10 Mr. Herbert paid over to Mr. Burnite \$94,725.39, and on Feb. 26 he paid over two checks, one for \$20,000 and one for \$31,417.75. The check for \$20,000 Mr. Burnite was authorized to use at once; but later two checks, one for \$17,000 and one for \$3,000, were substituted for it, and the check for \$17,000 was paid by the bank on which it was drawn, leaving two checks amounting in all to \$34,417.75 yet unpaid. Subsequent to this report, further negotiations took place between Mr. Herbert and his successor, the result being that the amount due the State, as finally adjusted, was found to be \$37,397.34. This sum was

paid over by Mr. Herbert on April 8, he and his bondsmen receiving a full discharge.

In the committee report above quoted no mention was made of the missing State securities. This subject was left to a joint investigating committee appointed on the same day, March 2, and having authority to send for persons and papers. At the outset this committee found that securities supposed to be held by the State to the amount of over half a million dollars were missing, and probably had not been in the custody of any State Treasurer for a score of years. The missing assets consisted of a Breakwater and Frankford Railroad mortgage of \$200,000, 8,714 shares of Farmers' Bank stock, 254 shares of Union National Bank stock, 114 shares of National Bank of Smyrna stock, and 57 shares of stock of the National Bank of Delaware. They were supposed to be in a tin box, which was passed from one treasurer to another but which no one ever took the trouble to examine in detail. When Treasurer Burnite examined the box he found its contents to comprise only a Junction and Breakwater Railroad mortgage of \$400,000, and a State bond of \$156,750 belonging to the School fund. None of these missing securities were discovered by the committee; but the mortgage for \$200,000 was found to be duly recorded among the public records of the county, and the loss of the original could not thereby prejudice the right of the State. In the matter of the bank stock the committee secured written acknowledgments from the several banks that the State owned the shares for which it was supposed to have certificates. Evidence before the committee brought out the fact that some of the banks in question had never issued certificates to the State, while in other cases certificates had been issued early in the century. As such certificates could be of no value in the hands of any private person, the State is well protected from loss, in spite of the carelessness of its servants.

Special Election.—Pursuant to the law enacted early in the year, a special State election was held on May 19 to ascertain the sense of the people respecting a convention to revise the State Constitution. A total of 17,220 votes was cast, of which 17,105 were in favor of the convention and 115 against it. Under the provisions of the existing Constitution, the vote necessary to call a convention must be equal to a majority of the highest number of votes cast in the last three preceding general elections. Under this requirement, about 17,600 affirmative votes were needed; but as the number polled was 500 below that figure, the convention can not be called. In 1887 an election was held for the same purpose, with the same result.

DENMARK, a monarchy in northern Europe. The legislative power is vested in the Rigsdag or Diet, consisting of the Landsting, or upper house, of 66 members, of whom 54 are elected indirectly by restricted suffrage and 12 are nominated for life, and the Folkething, of which the 102 members are chosen by direct household suffrage in the ratio of 1 to 16,000 of population. The Rigsdag meets annually on the first Monday in October, and must conclude its business by the 1st of April. All money bills must be introduced by the Government in the Folkething.

The reigning sovereign is Christian IX, born

April 8, 1818. He was the fourth son of Duke Wilhelm of Schleswig-Holstein-Sonderburg-Glücksburg and of Princess Louise of Hesse-Cassel, and was selected in 1852 by the great powers as heir to the childless Frederick VII., at whose death, on Nov. 15, 1863, the male line of the house of Oldenburg that had reigned since 1448 became extinct. The heir-apparent is Prince Frederik, born June 3, 1843. His eldest sister, Princess Alexandra, born Dec. 1, 1844, married the Prince of Wales in 1863; his brother, Prince Wilhelm, born Dec. 24, 1845, was elected King of the Hellenes by the Greek Assembly in 1863 under the title of Georgios I.; the second sister, Marie Dagmar, born Nov. 26, 1847, married in 1866 the Czarevich, now the Emperor of Russia; Princess Thyra, the third sister, married the Duke of Cumberland in 1878; and Prince Waldemar, the youngest brother, born Oct. 27, 1858, married the Princess Marie, eldest daughter of the Duc de Chartres in 1885. The executive power is exercised through a State Council, which was composed in 1891 of the following members: President and Minister of Finance, Jacob B. S. Estrup, appointed June 11, 1875; Minister of the Interior, H. G. Ingerslev, appointed Aug. 7, 1885; Minister of Justice and Minister for Iceland, J. M. V. Nellesmann, appointed June 11, 1875; Minister of Foreign Affairs, Otto Ditlev, Baron Rosenørn-Lehn, appointed Oct. 11, 1875; Minister of War, Col. J. J. Bahnsen, appointed Sept. 13, 1884; Minister of Marine, Commander N. F. Ravn, appointed Jan. 4, 1879; Minister of Education and Ecclesiastical Affairs, J. F. Scavenius, appointed Aug. 24, 1880.

Area and Population.—The kingdom has an area of 14,124 square miles. The population, according to the decennial census taken on Feb. 1, 1890, was 2,185,159, consisting (without the 12,954 inhabitants of the Faeroe Islands) of 1,059,222 males and 1,112,983 females. The population of the city of Copenhagen was 312,387; of the islands of the Baltic, 917,457; of the peninsula of Jutland, 942,361. For each of the two last decennial periods the increase has been 10 per cent., or at the rate of 1 per cent. per annum. The town population has increased 28·7 per cent. in the last ten years, and the rural population 3·77 per cent. The population of Copenhagen with the suburbs was 375,251; that of Aarhus, 33,308; of Odense, 30,277; of Aalborg, 19,503; of Hersens, 17,290; of Randers, 17,617. The number of marriages in 1888 was 15,091; of births, 69,220; of deaths, 43,661; surplus of births, 25,559. Emigration, which is mostly directed to the United States, took away 8,967 people in 1889, as compared with 8,659 in 1888.

The Faeroe Islands, 340 square miles in extent, form practically a part of the kingdom. Their population in 1890 was 12,954, comprising 6,225 males and 6,729 females.

Finance.—The revenue was estimated for 1889 at 54,457,514 kroner, or Danish crowns, of the value of 27 cents, and expenditure at 57,251,480 kroner. For 1891 the budget makes the revenue 54,683,727 kroner, of which 29,861,000 kroner are derived from customs and excise, 9,635,900 kroner from direct taxes, 3,916,988 kroner represent the interest on State assets, 2,630,000 kroner come from stamp duties, 2,103,000 kroner from judicial and registration fees, and 6,536,837 kroner from other

sources. The expenditure for the year ending March 31, 1891, is estimated at 62,300,803 kroner, of which 10,286,309 kroner are for military purposes, 6,620,611 kroner for the navy, 6,941,611 kroner for the debt, 3,469,978 kroner for justice, 3,324,584 kroner for finance administration, 3,326,644 kroner for the interior department, 3,430,490 kroner for pensions, 2,476,501 kroner for public worship and education, 1,223,240 kroner for the civil list, 411,544 kroner for foreign affairs, 306,616 kroner for the Rigsdag and Council of State, 94,664 kroner for Iceland, 8,712,745 kroner for improvement of state property and reduction of the debt, and 11,674,856 kroner for extraordinary purposes of state. The total amount of the debt at the end of the fiscal year 1889 was 190,331,149 kroner. The foreign debt is only 11,677,700 kroner, paying 4 per cent. interest, while the interest of the bulk of the debt held in the country is 3½ per cent. The reserve fund amassed in the Treasury for sudden emergencies amounted on March 31, 1889, to 17,821,796 kroner. The total available funds amounted to 81,905,797 kroner, nearly half the capital of the debt.

The Army.—The soldiers of the first ban, in which the period of service is from the age of twenty-two to that of thirty years, are trained for six months in the infantry and nine for the cavalry, and afterward may be called out for thirty days to take part in the annual manœuvres. The second ban comprises all able-bodied Danes between the ages of thirty and thirty-eight years. The annual conscription is about 11,000 men. The total war effective is 59,562 men. In the first ban were enrolled in 1890 1,176 officers and 41,733 rank and file, and in the second ban 294 officers and 16,318 non-commissioned officers and soldiers.

The scheme of national defenses adopted by the Government in 1882 includes the fortification of Copenhagen on both the sea and the land sides, and the construction of forts and intrenched camps at the chief strategic points. This was expected to cost, with additions to the fleet, the sum of 72,000,000 kroner. The Rigsdag has persistently refused to consent to this expenditure. Nevertheless, the Government has built the maritime fortifications of Copenhagen, levying taxes and making payments in accordance with the estimates approved by the Landsthing, but rejected by the Folkething, and promulgated by royal decree on April 1, the day following the closure of each session. Minister of War Bahnsen, in August, 1891, announced that the fortification of Copenhagen would be completed in two years more at a total cost of 35,000,000 kroner, of which 17,000,000 are for fortifications on the land side, 12,000,000 for sea forts, and 6,000,000 for guns.

The Navy.—The efficient ships in the Danish navy comprise 5 armored vessels of the first class, 3 of the second class, 1 first-class, 2 second-class, and 6 third-class cruisers, 8 iron gunboats, and 10 first-class and 10 second-class torpedo boats. The "Iver Hvitfeldt" is a barbette ship of 3,260 tons, built in 1886, carrying 2 28-ton guns, having 11½-inch armor at the water line, and a speed of 15½ knots. The "Helgoland," a central-battery ironclad, launched in 1878, has 12-inch side armor, is armed with 136-ton and 4 22-ton guns,

and can steam $13\frac{1}{2}$ knots. The other ironclads, built on older models, have thin armor and lighter guns. The "Tordenskjold," launched in 1880, is a torpedo cruiser protected by deck armor, carrying 1 heavy gun, a 50-ton or 14-inch Krupp breechloader in an armored barbette, and 2 swift torpedo launches, besides appliances for ejecting Whitehead torpedoes. Her speed is $13\frac{1}{2}$ knots. The "Pyen" is a protected cruiser, launched in 1888, of 2,700 tons displacement, capable of making $13\frac{1}{2}$ knots, and having an armament of 18 light guns. The "Valkyrie," launched in the same year, has a displacement of 3,000 tons, $2\frac{1}{2}$ -inch steel plating on the sloping deck, 2 10-ton and 6 $4\frac{1}{2}$ -ton guns, and engines of 5,000 horsepower capable of propelling the cruiser at the rate of 17 knots an hour.

Commerce and Production.—Nearly half the area of Denmark is pasture and meadow land, and one third arable land. In 1889 the harvest of wheat was 4,825,311 bushels; of rye, 16,798,647 bushels; of barley, 19,323,617 bushels; of oats, 25,758,591 bushels; of potatoes, 16,913,832 bushels; of other root crops, 28,825,434 bushels. The value of the agricultural produce was 274,396,459 kroner. There were 375,533 horses and 1,459,527 horned cattle in 1888, and during that year 17,753 horses and 89,404 head of cattle were exported, and besides these 59,155 sheep and goats and 16,926 hogs. Provisions, live animals, and cereals constitute 70 per cent. of the exports of the country. The export of butter to Great Britain has increased fivefold in twenty years, and now represents about three quarters of the exports of provisions, which make nearly half the total exports of the country. The total value of the imports in 1888 was 274,401,000 kroner, and that of the exports was 192,699,000 kroner. The values of the principal exports were as follow: Colonial products, 6,735,888 kroner; beverages, 2,813,166 kroner; textile manufactures, 4,450,466 kroner; metals and metal goods, 3,106,926 kroner; coal, 1,657,746 kroner; timber and wood manufactures, 3,824,154 kroner; grain, 15,466,086 kroner; live animals, 29,799,234 kroner; butter, eggs, and pork products, 92,455,704 kroner.

The share of each country in the imports of 1888 was: Germany, 100,280,790 kroner; Great Britain, 62,548,128 kroner; Sweden and Norway, 43,467,882 kroner; Russia, 25,657,146 kroner; United States, 9,656,802 kroner; Holland, 6,401,988 kroner; Belgium, 5,889,798 kroner; France, 5,131,188 kroner; Danish colonies, 3,321,818 kroner; the rest of America, 567,360 kroner. Of the exports, Great Britain took 116,126,046 kroner; Germany, 35,969,988 kroner; Sweden and Norway, 25,589,412 kroner; Danish colonies, 3,781,368 kroner; Russia, 3,516,570 kroner; United States, 1,979,136 kroner; France, 1,589,886 kroner; Holland, 1,012,098 kroner; Belgium, 818,226 kroner; minor American countries, 22,590 kroner.

The imports of precious metals in 1888 were 4,000,000 and the exports 2,500,000 kroner.

Navigation.—The number of vessels entered at Danish ports in 1889 was 26,833, of 2,034,140 tons, and the number cleared was 26,198, with 550,261 tons of cargo. Of those entered, 11,992, of 1,335,099 tons, were steamers; and of those cleared, 11,854, of 424,218 tons. This was exclusive of the coasting trade, which embraced 28,

381 vessels, of 498,649 tons, entered, and 29,617, of 473,375 tons, cleared.

The merchant fleet in 1890 comprised 3,096 sailing vessels, of 185,393 tons, and 311 steam vessels, of 103,824 tons, showing an increase in one year of 45 sail vessels, of 10,103 tons, and in the steamers an increase of 18 in the number and 8,173 in the tonnage.

Communications.—The state railroads in 1890 had a length of 1,000 miles. The total cost was 160,240,362 kroner. There were besides 230 miles of private railroads. The length of telegraph lines was 3,674 miles, of which 2,700 miles belonged to the Government. The total length of wires was 10,280 miles. The number of messages in 1889 was 1,539,665, of which 545,493 were domestic, 960,908 foreign, and 33,264 official. The post-office in 1888 conveyed 45,258,000 letters and post cards, and 2,932,000 samples, circulars, etc.

Iceland.—The chief of the dependencies of Denmark is Iceland, which, under the charter of Aug 1, 1874, legislates for itself and administers its own affairs, under the direction of the Danish minister for Iceland, through a governor, who has under him an *amtmand* for the western and one for the northern division of the island. The legislative authority is vested in the Althing, having 36 members, of whom 30 are elected by the people and 6 are named by the King. The area of Iceland is 36,756 square miles. The population in 1880 was 72,445. It has diminished through emigration to the United States and the Canadian northwest, and at the end of 1888 was reduced to 69,224.

Colonies.—The habitable shore of Greenland constitutes a Danish colony, which has an area estimated at 46,740 square miles. The population at the end of 1888 was 10,221, comprising 4,838 males and 5,383 females. The colony imported from Denmark in 1889 goods of the value of 453,425 kroner, and exported to Denmark produce worth 558,445 kroner.

The most productive of the colonial possessions of Denmark are the three little sugar islands in the West Indies, called the Danish Antilles. St. Croix, or Santa Cruz, is 74 square miles in extent, and has a population of 18,430; St. Thomas has an area of only 23 square miles, but contains 14,389; and St. John, 21 square miles, supports 944 inhabitants. The bulk of the population consists of negroes. The sugar exports have greatly declined in recent times.

Politics and Legislation.—A section of the Left, having grown tired of the barren struggle between the executive and legislative branches of the Government that has impeded legislative progress and nullified the Constitution for twenty years, entered into negotiations with the Conservatives during the session that ended on March 31, 1891, and came to an agreement with them on the question of the allotment of garden land to agricultural laborers and on the sugar duties. Subsequently they concurred in important changes in the poor laws, and made the beginning to a thorough revision of the tariff and internal revenue laws. The constitutional conflict, which hinges on the question of responsible or Parliamentary government, has not been abandoned by the Liberals who thus joined with the Government party for the purpose of carry-

ing through measures not involved in the interminable controversy between the majority in the Folkething and the Estrup ministry. One of these was the establishment of a free port of entry at Copenhagen, a project that first came under discussion in 1887. An area is set apart and treated as foreign territory, not subject to custom duties or regulations until the goods stored or manufactured therein are actually sold and enter into the commerce of the country, when they are treated as imported wares. The project is expected to cost 10,000,000 kroner. Both the mercantile and the industrial department will be committed to a joint-stock company, which will carry the scheme into operation within two years after receiving the cession of the requisite area for the free-port domain. The company must pay to the harbor department a specified proportion of its income, to take the place of navigation dues, which were abolished by act of the Rigsdag. The Government reserves the right to prohibit the manufacture within the free port of articles that are duty free, but the materials of which are dutiable, such as books, oleo-margarine, and artificial fertilizers. The duties on sugar, which have been heretofore 4½, 8½, 9½, and 13½ öre per pound, or approximately from 1½ to 3½ cents, were reduced to 1, 2, 3, and 6 öre, and the tax on the domestic manufacture of beet-root sugar was lowered to 2½ öre from 8½ öre. The import duty on chocolate was also lowered, and that on petroleum was fixed at 2 öre per pound, half the former rate. To compensate for the loss of revenue excise and import duties were placed upon beer, to go into effect on Oct. 1, 1891, at the same date as the reduction in the customs tariffs. It was intended to abolish the rice duty, but, owing to the opposition of the agricultural interest and the reluctance of the Government to make any greater sacrifice of revenue than it was compelled to, the duty was retained for the present. The question of the beer tax caused so serious a split in the ranks of the Left as to give the Government party a hope that it could gain a majority in the Folkething, though it also was divided on the same question. On one side it was contended that the tax would fall almost entirely on the poor, who are the chief consumers of beer, and on the other that it would promote temperance by discouraging beer drinking. There has been heretofore no excise duty on beer. The duty was fixed for the first four years at 7 kroner and after Oct. 1, 1895, at 10 öre per *tonde* of 29 gallons. Imported beer pays 10 öre per pound in bottles and 4 öre in the cask for four years, and thereafter 15 and 6 öre respectively. The poor laws have been very liberal in Denmark. The parish authorities must provide the necessities of life to all who can not maintain themselves, either in their own houses or in the public poor-houses, or by putting them out to be cared for. No one is permitted to starve or to go without clothing or shelter. Whoever accepts aid as a pauper for himself or his family forfeits his political rights. If at any time he becomes able, he is obliged to pay back to the municipal authorities the sum they have expended for his maintenance as a pauper. The custom has been for the authorities to give out the care and maintenance of the town poor to the lowest bidder. By the law passed in the session of 1890-'91

the practice of farming them out is prohibited. Husband and wife must not be separated if they conduct themselves properly; aged persons must not be subjected to annoying or disturbing surroundings; and children must not be placed under immoral influences. If persons who have received aid are able afterward to support themselves and their families entirely by their own efforts, their debt to the parish is canceled, and they are restored to all the rights of citizenship. The poor law was supplemented by an act to provide superannuation pensions for the industrious poor. All persons lacking means of support are to be provided for and maintained from the completion of their sixtieth year till their death, not as paupers, but as pensioners on the state, provided they are of good character, have never been convicted of crime, have not impoverished themselves by improvident living or by bestowing their property on their children, and have not received poor relief for the ten years immediately preceding their superannuation. The communal authorities are directed to carry out these provisions from July 1, 1891, and the Government will contribute 1,000,000 kroner a year for the first four years, and after that 2,000,000 kroner a year, to be divided in proportion to the expense entailed by the act on each commune. It is calculated that this will divide the cost equally between the parishes and the national treasury.

The division between the democratic groups of the Left and the Moderates became more clearly defined when the followers of Berg and Hørup joined with the Socialist party led by Holm in a protest against any compromise or dealings with the unconstitutional ministry. The Moderates were as firm as before in their opposition to the fortification of the capital, and to the right claimed by the ministry to remain in office with the support of the Landsting alone, or to decree a provisional budget and spend the public funds without the consent of Parliament. As both King and people are weary of the quarrel, there is a prospect that, unless a majority is found that accepts the Conservative view, the ministry will give place to one owning responsibility to Parliament. Minister Scavenius resigned on July 6, and Minister of Justice Nellemann took charge of the Department of Public Worship *ad interim*.

DICTIONARIES, NEW. In October, 1891, appeared the twenty-fourth and last number of "The Century Dictionary," an encyclopædic lexicon of the English language, prepared under the superintendence of William Dwight Whitney, Professor of Comparative Philology and Sanskrit in Yale College, and the managing editorship of Benjamin E. Smith, late of Johns Hopkins University. It contains 7,046 pages in the body of the work, and costs \$60 unbound. It has the largest vocabulary of all the dictionaries now complete. Todd's "Johnson" has 58,000 words; "Worcester's" latest edition, 116,000; "Webster," 118,000; "The Imperial," 130,000; "The Encyclopædic," 180,000; "The Century," about 215,000 words and 50,000 phrases. It takes up all the words of literature, science, and art, professions and trades, and also provincial and colloquial words, abbreviations, and foreign words and phrases which are in

familiar use in English books and conversation. Several particulars are noticeable in the articles. A systematic attempt is made for the first time to give the colloquial as well as the formal pronunciation of each familiar word. The derivation of each word and its relation to other words in kindred languages are more thoroughly given, by Prof. Whitney's special collaborator in this department, Dr. C. P. G. Scott, than in any other general dictionary. The affixes and suffixes have their full articles. The laws of phonetic change are kept in mind throughout, and the whole etymology is freshly done on the basis of the latest authorities.

A very large number of new definitions of common words have been added, thousands of non-technical words and familiar meanings, which one is surprised to find have not been in former dictionaries. Then there are definitions of an immense number of scientific terms, the work of eminent specialists in science and art, and given with scientific accuracy. The writers do not, however, confine themselves to explication of the words, but deal with the objects named, after the manner of a cyclopædia, describing and illustrating by diagrams and pictures. There are 7,500 illustrations, many of them beautiful pictures. The work is in every way a splendid specimen of the printer's art. About 300,000 illustrative quotations are given. American writers are represented with greater fullness than in any similar work.

The philological attitude of Prof. Whitney and his collaborators is further shown in the declaration of principles adopted in the orthography. The preface says: "The essentially phonetic rule of spelling, that of two or more forms which have equal authority, or are equally supported by usage, the one is to be preferred which is simplest or nearest the phonetic standard, has been adopted."

And at the end of the work is printed a "List of Amended Spellings recommended by the Philological Society of London and the American Philological Association." The list occupies seven pages. "The corrections are in the interest of etymological and historical truth, and are to be confined to words which the changes do not much disguise from the general reader." The list is printed in "The Century Dictionary," Prof. Whitney says, as a record of an important movement which promises to be of special interest to lexicographers in the near future. "It may be confidently predicted that future English dictionaries will be able to recognize to the full, as this dictionary has been able to recognize in part, the right of the English vocabulary to be rightly spelled."

The first volume of "The Encyclopædic Dictionary" bears the date of 1888, and it is now complete. It is styled "A new and original work of reference to all the words in the English language, with a full account of their origin, meaning, pronunciation, and use, with numerous illustrations." The general plan is like that of "The Century," but it is not pitched so high. It is a less costly book every way. The pronunciation is simple, not entering into niceties of unaccented syllables or colloquial use. The etymology in the early parts is much like the old "Webster," in the later like "Skeat" abridged.

The definitions are concise, the illustrations comparatively inexpensive, the encyclopædic matter easy. The page is smaller than that of "The Century" or "Murray," making a more convenient book to handle. The columns are comparatively narrow, and the matter printed in brief paragraphs, set up so as to be easily distinguished. The whole is admirable for convenient popular use.

A new edition of "Webster's Dictionary" also appeared in 1890. It is called "The International." The publishers recognized that the progress of linguistic science demanded a new working over of the old unabridged "Webster," which dated from 1864, and they have had a large corps of workers occupied upon it for more than ten years, embodying the amplification and enrichment of the language during another generation, under the supervision of Noah Porter, D. D., LL. D., ex-President of Yale College. The new vocabulary has 1,681 pages for the 1,538 of the old one, and the page is somewhat larger. The primary object of the revision has been the incorporation of the new words and meanings that have come into use. The plan has included whatever recasting of the earlier matter was required by the advance of philology, as, for instance, in the supervision and readjustment of the etymology, by Prof. Edward S. Sheldon, of Harvard. Occasion has also been taken for a comprehensive and minute scrutiny and rectification of the entire work. The pressure of new material of value and the limitation of a one-volume dictionary have enforced both condensation and selection and forbidden any attempt merely to swell the list of words. Upon a general survey of the new "Webster" in comparison with the old one, the reader notices the respelling of the vocabulary words for pronunciation, the careful indication of the sounds of the unaccented syllables by a freer use of obscure sounds, and the employment of abridgment in printing, sometimes to an inconvenient degree. A closer examination shows many and important additions and changes in every column. The new material is most conspicuous in the departments of science and technology. These have been defined and illustrated by eminent scientists and by the aid of freely provided and admirably drawn pictorial illustrations. The brief history of the language by Prof. Hadley has been revised by Prof. Kittredge, of Harvard. The introductory discussion of pronunciation has been replaced by a new and more acute treatise by Prof. Samuel Porter, stated in the language of Mr. Bell's system of phonetics, so far as that applies. The "Dictionary of Noted Names of Fiction" in the appendix has been much enlarged and improved by Prof. Henry A. Beers, of Yale. Some new grammarian ought to have taken in hand the "Pronouncing Vocabulary of English Christian Names, with their Derivation, Signification, etc." The other material of the appendix is as good as ever. "As a comprehensive popular dictionary," the publishers have reason to say, "we believe that 'Webster's International' is worthy to retain that pre-eminence which has long been held by 'Webster's Unabridged.'"

The publishers of "Worcester's Dictionary" are preparing a new edition of that favorite

work; and Messrs. Funk & Wagnalls, with the assistance of a large number of American and English scholars, are preparing a new "Standard Dictionary of the English Language," which is to be very comprehensive in the number of words treated—more than 200,000 in all. The following are some of the features embraced in the plan of this work: 1. The etymology is placed after the definition. 2. In the definition of a word the most common meaning is given first, preference being given to "order of usage" rather than the historical order. 3. The different parts of each science are so treated that the student can easily trace the definition of all its branches, and have before him the full meaning of the science—that is, while the terms belonging to each branch or subordinate branch of a science are defined in their proper vocabulary places, the references to their superior and their subordinate branches are so given that the definition of the science as a whole can easily be traced and collected, and when so collected will be found by the student to be a full and harmonious exposition of the entire science. 4. Not only is the author of each quotation given, but the edition, volume, and page where the quotation is found. 5. When thought important, the antonyms as well as the synonyms of words are recorded. 6. The scientific alphabet recommended by the American Philological Association is used in giving the pronunciation of words. 7. The amended spellings of about 4,000 words recommended by the American Philological Association and the Philological Society of London are treated as recognized forms of words and placed in the dictionary in their proper alphabetical order. 8. The large amount of matter usually given in the appendix of a dictionary is in the "Standard" grouped under a single alphabet.

Quite different from all these, and still more worthy of record as important dictionary work, is the "New English Dictionary on Historical Principles, founded mainly on the materials collected by the Philological Society, and edited by James A. H. Murray, with the assistance of many scholars and men of science." The collection of the materials for this dictionary has been a public interest of the English-speaking nations for three generations. The materials are quotations from books to exhibit the meanings of every word. To provide them, it was necessary to read all the early books and the important later books and copy out the needed passages. The Philological Society called for volunteers. Thirteen hundred readers have responded, and three and a half millions of quotations from more than five thousand authors were gradually collected. The University of Oxford assumed the pecuniary responsibilities of publication, and Dr. Murray, with thirty or more subeditors and a great host of eminent helpers, is working up the dictionary. The primary interest is in the historic materials. By classifying the slips under their words, and arranging the slips of each word in order of time, a complete biography of each word is drawn up, verified year by year by exact quotation of the original records. So much unsuspected knowledge is brought out in this way, that the most accomplished students of English feel as if they know next to nothing

about any word before the slips of Dr. Murray have been examined. One hundred and eighty-three meanings of the verb *cast* are found, sixty-three of them obsolete. Most of them are older than Shakespeare. Many a word makes a book. The further working up of the dictionary—the etymology, the pronunciation, the orthography—is worthy of the historic material. Seven parts have now been issued. Two appeared during the year 1891, 352 pages in one and 344 pages (from *e* to *every*) in the other, the last being under the editorship of Henry Bradley, President of the Philological Society, the first from Dr. Murray. The vocabulary of this dictionary is larger than that of any other, the number of meanings much greater. In linguistic interest no dictionary compares with it. It is not encyclopædic; it has no pictures.

The German dictionary begun by Jacob and William Grimm, the prototype of the great historical dictionaries, of which the first number was issued in 1854, is going steadily on under the care of Drs. Heyne, Hildebrand, Lexer, and Wülcker. In 1891 Hildebrand advanced in *g* to *geriesel*, Heyne in *r* to *ruck*, Lexer in *t* to *todestag*, Wülcker in *v* to *verleihen*. It is likely to be completed during the present century. Meantime Heyne is editing a "German Webster."

DISASTERS IN 1891. Startling as are the figures given herewith, they fall far short of the truth. If all losses of life and property were recorded as published in the daily press the list would greatly exceed any reasonable limit. In the case of train accidents alone is an approximate degree of accuracy attainable, since the statistics are from semi-official sources, as compiled by the "Railroad Gazette." Minor accidents involving the loss of one life, the maiming of one or two individuals, or the destruction of a comparatively small amount of property, are usually omitted. The summaries at the end of each month's record include all train accidents, whether mentioned in the context or not.

January 1. Fires: residence of Secretary Blaine, Washington, D. C., valuable works of arts and furniture damaged; State Prison burned, Clinton, N. Y., loss \$175,000. Trains wrecked: Oskaloosa, Iowa, 1 killed, several hurt; Wichita, Kan., 2 killed; Paterson, N. J., 2 killed, 2 hurt.

2. Fires: 20 young girls badly burned at a school festival, Leeds, England. New York: 2 theatres burned, the Fifth Avenue and Hermann's, with much of the adjacent block. Train wrecked near New Durham, N. J., 6 hurt, cause, fog.

3. Grade-crossing accident near Northampton, Mass., sleighing party run over, 2 killed, 4 hurt. Fires: large brewery, Richmond, Va.; tannery, Fulton, N. Y., loss, \$100,000; mills, Providence, R. I., loss, \$100,000; hotel burned, Corsicana, Texas, 4 lives lost. Explosion in a mine, Ostrau, Poland, 60 killed. Collision at sea: steamer *Caroline* sunk in the English Channel.

4. Fire in Aurora Mo., loss, \$30,000.

5. Hoisting gear breaks in the shaft of Utica mine, near San Andreas, Cal., 12 killed. Pesth, Hungary: ice breaks in Danube river, many drowned.

6. Three lost children found frozen to death, Barber County, Kan. Fire: toy factory burned, St. Louis, loss, \$30,000. Disastrous snow blockade in Europe.

7. Fire at Cairo, Ill., loss, \$100,000. Train derailed near Gaffney City, S. C., 4 killed, 2 hurt.

8. Cyclone in Texas, much damage done near

Sherman. Explosion: 2 men killed by a cartridge, Amherst, Mass. Lancaster, Pa.: 2 men killed by a fall from a scaffold.

9. Severe weather in Europe. Snow as far south as Algiers.

11. Fire: a lumber mill burned, Norfolk, Va., loss, \$100,000. Steamers in collision on the Firth of Forth, 13 drowned. Locomotive falls from elevated railroad, New York city, engineer hurt, signals misunderstood.

12. Damage from ice gorges in the New England rivers and disastrously high tides on the coast. Steamer City of Washington damaged by a hurricane, 2 lives lost. Fires: Cambridgeport, Mass., loss, \$50,000; Chicago, Ill., stables burned, loss, \$40,000. Avalanche in Bosnia, 17 killed.

13. Shipwreck: schooner Otter on the Long Island coast, 2 drowned. Locomotive boiler bursts near Ashland, Pa., 2 killed. France: ice breaks in the Seine river, 9 drowned.

14. Runaway car near Westport, N. Y., 4 killed. Grade-crossing accident near Clyde, Ohio: sleighing party run over, 4 killed. Fire: Richmond, Va., locomotive works burned, loss, \$25,000.

15. Siberia: a pestilence prevails, said to be "the black death," thousands die.

16. Earthquake: a shock of considerable violence in New Hampshire. Snow storm in southern Italy.

17. Fire: carpet mills in Philadelphia, loss, 1,500,000. Explosion: brewery in Aurora, Ind., 2 killed, 4 hurt. Severe cold threatens the lives of peasantry in many parts of Europe.

18. Explosion: natural gas at Findlay, Ohio, a hotel wrecked, 3 killed, 6 hurt. Fire: tin warehouse in Pittsburg, loss, \$45,000.

19. Severe weather in Europe, many deaths and widespread suffering. Train derailed by robbers near Brownsville, Texas, 2 hurt, passengers locked in freight car, express robbed.

20. Fires: Electric works in Chicago, loss, \$142,000. Earthquake in Switzerland.

21. Fires: Hillsborough, N. Dak., loss, \$70,000; opera house burned, Winona, Minn. Explosion: fire-damp in a Russian mine, about 100 killed.

22. Heavy rains cause much damage in the Middle and New England States.

23. An aged man and his wife run over and killed by a train near Washington. Fire: in Buffalo, N. Y., loss, \$250,000, 1 fireman killed, 4 hurt.

24. Fires: in Jersey City, 3 killed, 6 hurt, most of them firemen; fire engine run down by a railway train, its driver killed. Germany: explosion in a mine, 40 killed.

25. Disastrous storm on the north Atlantic coast: at Birmingham, Conn., damage to the amount of \$1,000,000 has been done within a few days. Fires: paper mill burned, Appleton, Wis., loss, \$175,000; Spokane Falls, Wash., loss, \$61,000. Train wrecked near Butte, Mont., 1 killed, 8 hurt.

26. Explosion: fire-damp in coke works, Mount Pleasant, Pa., 110 killed. Army transport train wrecked by collision near Florence, Kan., 3 soldiers killed, 10 hurt, many cavalry horses killed and hurt.

29. Three foot passengers killed by a railway train near Gallitzin, Pa. Blizzard in the Northwest, traffic generally stopped. Faulty construction: Omaha, Western Art Association building falls, many valuable works ruined. Landslide in Greece, 25 killed.

30. Fire: Cygnet, Ohio, 6 blocks of buildings burned, 2 lives lost.

31. Faulty construction: hoisting gear gives way, Harrisburg, Pa., 2 killed.

Summary of train accidents in January: 106 collisions, 93, derailments, 12 miscellaneous; total, 211. Killed: 38 employés, 3 passengers; total, 46. Hurt: 118 employés, 90 passengers, 2 trespassers; total, 210.

February 1. Fire: jail burned at Friar's Point, Miss., 3 lives lost. Train wrecked near Dillon, Mont., 2 killed, several injured.

2. Blizzard in the Northwest, many fishermen adrift on Lake Huron. Train wrecked near Griffen, Ga., 14 hurt.

3. Train wrecked near Cory, Pa., 2 killed, 3 hurt.

4. Mines flooded at Jeansville, Pa., 18 drowned, and Wilkesbarre, Pa., 3 drowned. Fires: Board of Trade building burned, Dubuque, Iowa, loss, \$20,000; Winnebago, Ill., loss, \$50,000; railroad warehouse burned, Findlay, Ohio.

5. Fire: poorhouse burned, Waterville, Me., 1 life lost. Train wrecked near Shelby, Ala., 3 killed.

6. Explosion: giant powder near Kokomo, Col., 2 killed, 3 hurt. Landslide, Switzerland, 22 wood-cutters buried.

7. Explosions: giant powder near Wyoming, Pa., 2 killed, 1 hurt; steam boiler, Riedsville, Ga., 6 killed. Blizzard in the Northwest. Fire: Ellisville, Ill., almost wholly destroyed.

8. Blizzard in North and West, wires down, traffic blockaded. Shipwrecks: supposed loss of steamer Simon Dumois; steamer Chiswick aground off Scilly Isles, 11 lives lost.

9. Violent wind at Helena, Mont., much damage. Train derailed, Randallia, Iowa, 19 hurt, wreck burned.

11. Train wrecked near Ingleside, Mo., 2 killed, 4 hurt.

12. Explosions: natural gas at Marietta, Ind., 2 hurt; steam boiler at Quebec, 20 killed.

14. Fire in the general post-office, New York, 1 killed, \$25,000 damage. Train wrecked near Susquehanna, Pa., 2 killed, 10 hurt.

15. Fire: carpet factory burned, Philadelphia, loss, \$150,000, cause, an electric wire.

16. Explosion in a mine, Scottsdale, Pa., 4 killed. A rock falls upon a passenger train near Duquesne Heights, Pa., 1 woman killed, 3 men hurt. Fires: St. Mary's hospital burned, Rochester, N. Y.; oil cars burned, Philadelphia, 1 explodes, 4 hurt; buildings burned, New Westminster, British Columbia, loss, about \$500,000, 1 killed.

17-20. Destructive floods in the Ohio watershed, all industries suspended, 2,500 houses flooded in Wheeling alone.

17. Fire: steamer burned at Wuhu, China, about 200 lives lost.

18. Shipwreck: Italian bark Mascotta, sunk in New York harbor, 4 lives lost. Fire: tenement house burned, Brooklyn, N. Y., a mother and 4 children perish.

19. Fires: a keg of powder explodes in burning building, Watseka, Ill., several hurt; opera house burned, Rochester, N. Y.; roundhouse burned, Kansas City, with 18 locomotives.

20-28. Floods in Arizona, Yuma nearly destroyed.

20. Train wrecked, New York city, 6 killed, 9 hurt, wreck fired.

21. Fire: tenement house burned, Brooklyn, N. Y., 6 lives lost. Shipwreck: British Steamer Iowa, sunk by ice, all hands saved by steamer Chester, 422 cattle lost.

22. Shipwreck: ship Elizabeth, off San Francisco, 18 lives lost. Fires: buildings burned, Kansas City, estimated loss, \$240,000; opera house burned, Evansville, Ind.

25. Tornado: many buildings destroyed in Indiana.

26. Fires: Minneapolis, loss, \$75,000; grain elevator and warehouse burned, Chicago, estimated loss, \$150,000.

28. Tram cable breaks in the Marion County mines, Tennessee, 2 killed, 11 hurt.

Summary of train accidents in February: 93 collisions, 93 derailments, 10 miscellaneous; total, 196. Killed: 52 employés, 7 passengers, 2 trespassers; total, 61. Hurt: 161 employés, 108 passengers, 6 trespassers, total, 275.

March 1. Lightning strikes 4 churches and many dwellings in Massachusetts. Fire: 20 buildings burned, Hermon, N. Y., loss, \$75,000.

2. Explosion: steam boiler, Charleston, Mo., 3 killed. Floods continue in Arizona. Gale on the James river, Virginia, 20 lives lost.

3. Pontoon bridge, St. Charles, Mo., wrecked by

Ice, loss, \$20,000, 5 men supposed to be lost. Fire: dye works burned, Roxbury, Mass., loss, \$75,000, cause, a lamp explosion.

5. Snow slide in Utah, 4 killed. Fire: steamer City of Richmond burned in New York, loss, \$200,000.

6. Trains in collision near Mineral Point, Pa., 7 hurt.

8. Tornado in Mississippi, 2 killed. A father and his 2 daughters killed by a train near Lima, Ohio.

9-10. Destructive "blizzard" in Great Britain, railway traffic blocked all over the kingdom, deaths from cold, shipwrecks, and much suffering everywhere, about 70 lives lost. Train wrecked near Havana, Ill., 3 killed, 11 hurt.

10. Fire: business building burned, Buffalo, estimated loss, \$225,000.

12. Floods: levees give way on the Mississippi river. Explosion: steam boiler bursts at Elftingham, Ill., 3 killed. Derrick falls in Boston, 2 killed. Fires: banks burned, Pittsburgh, Pa., loss, \$300,000 (insured \$225,000); Omaha, Neb., loss, \$150,000 (insured \$130,000); cotton mills burned, Pacola, S. C., estimated loss, \$90,000. Destructive floods in Russia and Spain.

14. Fires: Syracuse, N. Y., estimated loss, \$1,000,000; insane asylum burned, Nashville, Tenn., 9 lives lost; Chicago, Flood Block burned, loss, \$50,000; Findlay, Ohio, glass works burned, loss, \$40,000. Shipwreck: United States steamship Galena on Gay Head, Martha's Vineyard; Government tug Nina lost at the same time and place; U. S. torpedo boat Triana wrecked while on the way to offer aid. (The Galena was afterward floated off.)

15. Fire: glass works burned, Fostoria, Ohio, loss, \$30,000.

16. Explosion in the arsenal at Omdurman, Egypt, about 100 dervishes killed. Shipwreck: British steamer Roxborough Castle sunk in collision off Scilly Islands, 22 lost.

17. Fire: business blocks burned, New York city, loss, \$1,500,000. Explosion: blasting powder in Bendie colliery, Pa., 2 killed. Train wrecked near Greencastle, Mo., 1 killed, 12 hurt, cause, a broken wheel.

18. Shipwreck: steamer Utopia sunk in collision with British ironclad at Gibraltar, 560 lives lost. Fires: New York, tenement house burned, 4 killed, several hurt; Joliet, Ill., opera house burned, loss, \$50,000.

19. Fires: engine house burned, Houghton, Mich., loss, \$30,000; opera house burned, Detroit, Mich., loss, \$35,000.

20. Fires: store burned, St. Joseph, Mo., estimated loss, \$110,000; ice houses burned, Oswego, Ill., loss, \$62,000. Train wrecked near Barry Station, Pa., 3 killed, 4 hurt.

22. Flood: levees give way on the lower Mississippi.

24. Train wrecked, Racine, Wis., 1 killed, 4 hurt, wreck fired.

25. Shipwreck: steamer Strathairn, on the North Carolina coast, 19 lost. Train accident: Racine Junction, Wis., 2 killed.

27. Shipwreck: Norwegian bark Dictator near Cape Henry, 9 lives lost. Fires: hotel, Jacksonville, Fla.; court house, Cork, Ireland. Trains wrecked: Las Vegas, New Mexico, 1 killed, 4 hurt; Wells Bridge, N. Y., 1 killed, 3 hurt, wreck fired.

28. Severe gale in the North and Middle Atlantic States, many vessels wrecked. Fire: Camden, N. J., railroad buildings burned.

30. Explosion: smelting furnace bursts, Terre Haute, Ind., 2 killed.

Summary of train accidents in March: 74 collisions, 128 derailments, 10 miscellaneous; total, 212. Killed: 35 employés, 6 passengers, 3 trespassers; total, 44. Hurt: 96 employés, 90 passengers, 5 trespassers; total, 191.

April 2. Train wrecked near Hornellsville, N. Y., 3 killed, 2 hurt. Fires: 5 buildings burned, Campello, Mass.; several houses burned, Brockton, Mass.

3. Fire: oil works burned, Pittsburgh, loss, \$150,000. Explosion: fire-damp in an English colliery, 10 killed, several hurt.

4. Severe storm on the north Atlantic, much damage to shipping on the New England coast.

6. Fire: building burned, Rochester, Pa., 9 lives lost. Train derailed near Westfield, Mass., 3 hurt, cause, ties maliciously placed on track.

7. Explosion: natural gas in a Pittsburgh tenement house, 11 hurt. Fire: gas works burned St. Augustine, Fla.

10. Explosion in the Sultan's palace, Zanzibar, 13 killed, 20 hurt.

11. Fire: Chicago, several buildings burned, estimated loss, \$1,000,000. Drowned: 4 men at Orange, Mass. Explosion of glycerine at Pittsburgh, 3 killed.

13. Five men drowned at St. Louis. Trains in collision near Tryon City, N. C., 5 killed, 10 hurt.

14. Fire: stock sheds burned, Pittsburgh, with 137 cattle, loss, \$40,000. Trains in collision near Mount Sterling, Ohio, 3 killed.

15. Train accident near Santa Fé, New Mexico, 3 killed. Fires: coal breaker burned, Olyphant, Pa., 500 men out of work, loss, \$100,000; Albany, N. Y., loss, \$40,000. Railroad bridge breaks near Gainesville, Texas, 3 killed.

16. Shipwreck: British steamer Glamorgan sunk in collision. Train accident near Fallston, Md., bridge breaks, wreck burned, 4 killed, 1 hurt, cause, an unsound trestle. Fires: grain elevator burned, Utica, N. Y., loss, \$50,000; Evansville, Ind., loss, \$90,000.

17. Shipwreck: British ship St. Cathariss, off the Caroline Islands, 90 lives lost. Tornado: Marion, Ind., buildings wrecked, several persons hurt. Five men drowned near Addison, W. Va.

18. Trains in collision near Kipton, Ohio, 9 killed, 4 hurt. Explosions: at Aspen, Col.; and Norristown, Pa., 5 killed. Fire: Little Rock, Ark., loss, \$500,000.

21. Fire: smelting works burned, St. Louis, loss, \$50,000.

22. Fires: business blocks burned, Rome, N. Y., loss, \$500,000; furniture factory burned, Chicago, loss, about \$100,000.

23. Poisoned: 5 died, several sickened by tainted water in Burlington, Iowa. Fires: machine shop burned, Denver, loss, \$125,000 (insured \$60,000). Explosion of gasoline in Chicago, several buildings destroyed, 2 persons killed. Explosion in a fort near Rome, Italy, 7 killed, many hurt.

26. Train derailed near Indianapolis, 6 hurt, cause, broken rail, flaw undiscoverable.

28. Trains in collision near Warings, Md., wreck burned, 4 killed, 1 hurt. Fires: cotton house burned, Honey Grove, Texas, loss, \$125,000; elevator burned, Kansas City, loss, \$50,000.

29. Bad construction: opera house falls at Troy, Ala., 2 killed, many hurt. Fire in Chattanooga, loss, \$180,000.

Summary of train accidents in April: 67 collisions, 108 derailments, 6 miscellaneous; total, 181. Killed: 52 employés, 4 trespassers; total, 56. Hurt: 100 employés, 42 passengers, 7 trespassers; total, 149.

May 1. Great forest fires in New Jersey and Pennsylvania. Explosion: fireworks factory in New York, 4 girls killed.

2. Fires: the towns of Austin, Minn., and St. Kilian, Wis., were nearly destroyed; Altoona, \$75,000 loss; Tyrone, Pa., \$20,000 loss.

4. Fire: Upper Marlborough, Md., 5 lives lost.

5. Fire: iron works burned, Breaker's Island, N. Y., loss, \$400,000; coal mine damaged, Edwardsville, Pa., loss, \$250,000.

6. Fire: wheel factory burned, Sidney, Ohio, loss, \$100,000.

7. Explosion in a West Virginian mine, 4 killed.

8. Shipwreck: brig Edith sunk by collision in Chesapeake Bay.

9. Church building falls while under repair, at Ashland, Ky., 4 killed. Train derailed near Trinidad, Col., 3 men and 300 cattle killed. Forest fires in Wisconsin and Michigan.

10. Trains in collision near Cloverdale, Va., 2 killed, 1 hurt, and near Shepherd, Mich., 3 killed, 13 hurt. Train cut off, wrecked and burned by forest fires near Moore's Run, Pa., several lives lost. Fire: Salem, S. Dak., elevators burned, loss, \$50,000; opera house and other buildings, Plano, Ill.

J., 19 buildings, loss, \$100,000; Cleveland, Ohio, business and dwelling houses, loss, \$100,000; Peoria, Ill., elevator, loss, \$90,000; Loda, Ill., business houses, loss, \$75,000; Pittsburg, Pa., factories, loss, \$75,000; Brazil, Ind., factory, loss, \$40,000; Nashville, Tenn., gas-works office, loss, \$35,000.

Summary of train accidents in October: 120 collisions, 91 derailments, 13 miscellaneous; total, 224. Killed: 42 employes, 13 passengers, 3 trespassers; total, 58. Hurt: 100 employes, 74 passengers, 5 trespassers; total, 179.

November 1. Fires: Sandringham Hall, England, residence of the Prince of Wales, loss, \$50,000; Beverly, Mass., freight houses, bank, factories, cars, etc., loss, \$200,000; Ellwood City, Pa., post office and business houses, loss, \$60,000; Newark, N. J., hat factory, loss, \$40,000; Carsonville, Mich., nearly destroyed; Ludington, Mich., lumber mill and warehouse burned; North Baltimore, Ohio, business houses, loss, \$200,000.

2. Fires in Macon and Albany, Ga., Martin's Ferry, Ohio, Jersey City, N. J., St. Louis, Mo., and Portland, Me. Train wrecked near Danville, Va., 1 killed, 3 hurt.

4. Hoisting gear breaks, Anaconda mine, Nevada, 17 killed. Fires in Indianapolis, Pittsburg, and Newark, total loss, \$150,000. Train wrecked near Waco, Tex., 4 killed, 1 hurt.

5. Fires in New York, Arthur's Bay, Mich., Brownsburg, Ind., losses, about \$184,000.

6. Fires: Luray, Va., hotel burned, Ashley junction, S. C., losses, about \$170,000.

7. Explosions: giant powder at Clipper Gap, Cal., 3 killed; blasting caps at Last Chance mine, Idaho, 3 killed. Fire: Orange, Mass., loss, \$200,000.

8. Explosion of gas in a mine, Nanticoke, Pa., 12 killed, 4 hurt. Lightning: Louisville, Ky., Board of Trade building struck, loss, \$50,000. Fire: Canton, Ohio, loss, \$75,000.

9. Cyclone in the Bay of Bengal: many shipwrecks at Calcutta, about 150 lives lost at the Andaman Islands.

10. Explosion: dynamite at Hayward, Wis., 10 hurt, 3 fatally.

11. Fires: Augusta, Ga., loss, \$125,000, San Antonio, Texas, loss, \$47,000, Findlay, Ohio, loss, \$40,000. Destructive storms in England. Train wrecked near Adrian, N. Y., 1 killed, 10 hurt.

12. Fires: Warsaw, N. Y.; Duluth, coal piles; Slater, Mo.; Tampa, Fla., cigar factories; London, England; total loss, about \$377,000.

13. Fires: Columbus, Ohio, 5 lives lost; Silver City, Iowa; Pittsburg, Pa.; losses, about \$175,000.

15. Fire: Cleveland, Ohio (\$200,000).

17. Destructive wind storm on the New Jersey coast. Fires: Minneapolis factories burned; Kearney, N. J.; Chattanooga, Tenn.; St. Louis, Mo., damage, nearly \$1,350,000; Brooklyn, N. Y., 72 families homeless.

18. Train wrecked near Greensburg, Pa., 3 killed. Fires: warehouses, St. Paul, estimated loss, \$950,000; onyx works, New York city, loss, \$75,000; two buildings, Pine Bluff, Ark., loss, \$45,000.

19. Fires: storehouse, Birmingham, Ala., loss, \$60,000; hotel and stores, Edgerton, Mo., loss, \$50,000; canning factory, Kansas, Ill., loss, \$40,000.

20. Explosion: steam boiler, Mentoga, Tenn., 2 killed.

21. Water conduit breaks, Brooklyn, N. Y., 4 men buried, water famine threatened.

22. Shipwrecks: two barges on Lake Michigan, 18 lives lost.

23. Tornado in Washington, 1 killed, several injured, and several buildings wrecked. Destructive storms in Virginia and Maryland. Fires: hotel, Jamestown, N. Y., 4 lives lost; business blocks in Middleburg, Vt., and two bridges, loss, \$150,000; busi-

ness houses, Paragould, Ark.; oil mills, Memphis, Tenn., loss, \$60,000.

24. Tornado in Mississippi, destruction of property. Explosion: powder mills, Summeyton, Pa., 1 killed. Fires: shoe factory, Minneapolis, loss, \$350,000; hotel, Beverly, Mass., loss, \$90,000; public library, Masonic Hall, and stores, Elion, N. Y., loss, \$60,000. Train wrecked near Alberton, Ia., 1 killed, 5 hurt.

25. Landslide near Canton, Wash., railroad track buried, 25 or more lives said to have been lost. Fires: factories in Fremont, Ohio, loss, \$350,000; packing houses, Dallas, Texas, loss, \$200,000; hotel, Marshalltown, Iowa, loss, \$75,000.

26. Fire: church and business blocks, St. Albans, Vt., loss, \$100,000.

28. Trains wrecked: Toledo, Ohio, 9 killed, 20 hurt; near Charleston, S. C. (caused by malice). Fire: factory burned, Newark, N. J., loss, \$75,000.

29. Shipwreck: brig lost at sea with 270 persons. Fires: Lynn, Mass., loss, \$80,000; church burned, Columbus, Ga., loss, \$40,000; Escambia, Mich., heavy loss in grain, flour, and coal. Earthquake (slight), Seattle, Wash.

30. Bridge breaks near Kalispell, Mont., 5 killed, 10 hurt. Fires: 6 blocks of buildings, Winnebago, Ill.; electric-light company, Chicago, loss, \$300,000; car sheds, St. Joseph, Mo., loss, \$70,000.

Summary of train accidents in November: 112 collisions, 110 derailments, 4 miscellaneous; total, 226. Killed: 46 employes, 17 passengers, 6 trespassers; total, 69. Hurt: 134 employes, 64 passengers, 9 trespassers; total, 207.

December 1. Bridge breaks at North Fork, Columbia river, Mont., 3 killed, 3 hurt. Fires: pottery works, North Cambridge, Mass., loss, \$45,000; rolling mills, Owatonna, Minn., loss, \$40,000.

2. Explosion: dynamite, Haverstraw, N. Y., 5 killed. Train accident near Harlem, N. Y., 2 killed, several hurt. Fires: Detroit, 5 lives lost; Dewitt, Ark., 3 lives lost; wagon works, Sterling, Ill., loss, \$100,000; paint works, Lincoln, Neb., loss, \$80,000.

3. Train wrecked near Pennington, N. J., 4 killed, 15 hurt. Fire: Plainfield, N. J., loss, \$150,000.

4. Ten barges sunk off Haverstraw, N. J., several lives lost. A falling wall kills 10 men in St. Paul. Four trains wrecked near East Thompson, Conn., 7 killed. Blizzard in the Northwest, snow blockade. Fires: cotton mills, Des Moines, Iowa, loss, \$150,000; mill at Cœur d'Alène, Idaho, with 400,000 feet of lumber; toy factory, Sheboygan, Wis.; bookbindery, Buffalo, N. Y., loss, \$38,000.

6. Explosion: fire-damp in a mine at St.-Etienne, France, about 70 killed. Fire: publishing house in Philadelphia, loss, \$200,000.

7. Shipwreck: steamer Fountain City supposed to be lost in a recent gale on the Lakes. Violent gale in the English Channel, 24 lives lost. Mining accident in Poland, killed, 180 (estimated).

8. Explosion: Buffalo, 1 killed, several hurt. Train wrecked near West Plains, Mo., 4 killed, 19 hurt. Scaffold falls, Leighton, Pa., 2 killed, 5 very badly hurt.

9. Fires: Louisville, Ky., 12 lives lost, loss, \$500,000; business houses, New Richmond, Wis., loss, about \$75,000; theatre burned, Cleveland, loss, \$75,000.

10. Fires: business section of Ardmore, Indian Territory, loss, \$100,000; Pinos Altos, New Mexico, almost burned up, only two buildings left, loss, \$100,000; buildings burned, Frankton, Ind., loss, \$40,000; business block, Williamsburg, Iowa (incendiary); hotel and printing offices burned, Dodgeville, Wis. Disastrous gales on English waters, many small vessels lost. Balloon burst at Bombay, aeronaut killed.

11. Storm on the Pacific coast, many lives lost. Fires: factory burned, Seattle, Wash., loss, \$140,000; business block, Red Key, Ind., loss, \$50,000.

12. Violent and destructive gale in southern California. Fires: mill burned, Attleborough, Mass., loss, \$40,000; rice mill, New Orleans, loss, \$40,000; large barn, Maynard, Mass., 103 cows and 5 horses burned.

13. Fire: business house burned, Cincinnati, loss, \$30,000. Renewed storms in Great Britain.

14. Fires: business section of Oaks, N. Dak., 1 life lost; 7 oil tanks, Bridgeton, N. J., 1 life lost; 8 buildings, Centralia, Pa., several persons injured in a rush. Shipwreck: ship Enterkin lost off English coast, 30 drowned.

16. Train wrecked near Pittsburg, 4 killed, many hurt. By other train accidents, 3 killed, 5 hurt. Fires: mill burned, Riverside, N. J., loss, \$60,000; factories burned, Lebanon, Mo., loss, \$50,000; business houses, Vermilion, Ohio, loss, \$25,000. Shipwreck: steamer Prince Soltykoff sunk off Brest, 1 survivor.

17. Fires: mill, Burrillville, R. I., loss, \$85,000; store, La Crosse, Wis., loss, \$40,000; factory, Aurora, Ill., loss, \$30,000; tin factory, Laurel Hill, N. Y., loss, \$75,000.

18. Earthquake: violent shocks in Sicily. Fire: steamer Abyssinia burned at sea, all hands rescued by German steamer Spree.

19. Fires: buildings burned, Croton Landing, N. Y., loss, \$50,000; hotel, Needham, Mass., loss, \$50,000.

20. Fires: nearly half of Truckee, Cal., burned, loss, \$50,000. Famine officially recognized in 12 provinces in Russia.

22. Shipwrecks: steamer wrecked at Punta Arena, Cal., 9 drowned. Snow storm in Italy, 15 lives lost. Fire: business block, Hutchinson, Kan., loss, \$140,000.

23. Fires: scale factory, New York city, loss, \$115,000; potteries, Trenton, N. J., loss, \$100,000; mills, Detroit, Mich., loss, \$150,000 (insured \$30,000); warehouse, Sacramento, Cal., loss, \$90,000; dye house, Providence, R. I., loss, \$50,000; hotel, Quincy, Ill., loss, \$100,000; total for the day, \$605,000. Explosion: dynamite on board a French lugger at Antwerp, 2 killed.

24. Train wrecked, near Hastings, N. Y., 15 killed, 7 hurt.

22-25. Dense fog in England, traffic generally suspended.

26. Fires: insane asylum, Pontiac, Mich., inmates saved; Chattanooga, Tenn., loss, \$500,000.

27. Panic caused by alarm of fire in a theatre in Gateshead, England, 10 killed, many hurt. Shoe houses, Boston, burned, loss, \$450,000.

28. Fires: cotton in cars, St. Louis, loss, \$50,000; factory, Maspeth, L. I., loss, \$40,000.

Summary of train accidents in December: 125 collisions, 101 derailments, 8 miscellaneous; total, 232. Killed: 62 employes, 17 passengers, 6 trespassers; total, 172. Hurt: 157 employes, 8 passengers, 2 trespassers; total, 331.

Summary of train accidents for 1891: 1,137 collisions, 1,206 derailments, 103 miscellaneous; total, 2,446. Killed: 550 employes, 177 passengers, 63 trespassers; total, 790. Hurt: 1,447 employes, 1,183 passengers, 56 trespassers; total, 2,686.

DISCIPLES OF CHRIST. The meetings in connection with the General Christian Missionary Convention were held at Allegheny City, Pa., Oct. 17 to 21. The receipts for the year for home-mission work had been \$37,413. Sixty-one missionaries had been employed, under whose labors 82 new places had been visited, 26 new churches organized, and 1,287 conversions reported. The reports of the work of the State organizations, which is additional to that of the General Convention but co-operative with it, had not yet been made up for the year; but the summaries for the year ending Dec. 1, 1890, showed that it included in that year \$147,142 contributed by State and district boards and mission stations, \$140,193 of pledges for local and future work, and the whole or part time labors of 309 evangelists, by whom 255 new and unorganized places were visited, 142 churches

and 206 Sunday schools were organized, and 8,907 conversions were reported. The receipts for Church extension had been \$18,289, or \$2,097 more than in 1890. A fund of \$105,413 had been accumulated for this work. Reports were made of the progress of negro evangelization, from which it appeared that there were now 25,000 negro members among the disciples. The Foreign Christian Missionary Society had received \$62,619 and expended \$67,555, drawing upon the surplus from the previous year to make up for the deficiency in receipts. From the mission fields were returned 41 members in China, 245 in Japan, 51 in India, and 659 in Turkey; with, in all these fields together, 1,541 pupils in Sunday schools and 822 in day schools; 22 native helpers in India and 8 in Turkey; and a dispensary, orphanage, and book shop in connection with the Indian mission. In Denmark there were 141 members, with 120 pupils in Sunday schools; and in England, at Southampton, Fulham, Cheltenham, and Birkenhead, 589 members and 772 in Sunday schools. The Christian Women's Board of Missions had received during the year \$43,134. This board had in seventeen years contributed \$243,000 for missions.

DOMINION OF CANADA. The historical events of Canada in 1891 were somewhat momentous.

The Census of the Dominion, taken in common with that of the rest of the British Empire, simultaneously, in 1891, presented some peculiar incidents, owing to the extent and character of the country. Under the *de jure* system adopted, the staff of enumerators numbered only about 4,300 persons, who had to traverse the immense area of Canada by every imaginable mode of locomotion. A steamer with enumerators on board went in and out the deep indents of the Pacific coast-line as far as Alaska, and thence to Queen Charlotte Islands, to enumerate the people. Pack-horses were required in the mountain regions of British Columbia to carry the enumerators and their portfolios through the valleys among the "sea of mountains." Dog trains were a necessity in the Saskatchewan country. To obtain the population on the northern slope of the "Height of Land" in Ontario and Quebec, a canoe expedition set out from the head waters of the Lievre river, to go by lake and river portages to Albany river, at James's Bay. Camping outfits and canoes were requisite to enable the enumerators to take the population in the Nipissing district, just beyond the "Height of Land." The enumerators in Manitoba had now to foot it, now to go by buck-board, and now by boat; and, in one instance, the man, losing himself, could only save his own life by killing and eating his horse. Many townships in Algoma had to be taken by slow and toilsome pedestrianism. For the north shore of the Gulf of St. Lawrence a schooner was chartered, the enumerators put on board, and dropped at different points until the Straits of Belle Isle were reached, from which point the schooner was directed to the Isle of Anticosti, the census of which having been taken, she returned to the straits and sailed along the coast of Labrador, picking up the enumerators and returning to the mouth of the Saguenay.

The result shows that, as in the United States and in other countries, there has been within the past decade a marked gravitation of population from the rural to the urban districts, a fact which mainly accounts for the actual decrease of population in some of the census districts. Thus, while the total population of the Dominion shows an increase during the decade 1881-'91 of 11.66 per cent., the urban population has been as follows: Cities and towns having over 5,000 inhabitants, 40.8 per cent.; over 3,000, 44.9 per cent.; over 1,500, 20.3 per cent. The above table is a statement of the population of Canada for 1871, 1881, and 1891, by provinces.

A parliamentary general election was held on March 5. The result, in brief, was that the existing ministry was sustained at the polls by a majority not notably less than that which had sustained them in the last House of Commons. On April 29, this, the seventh Parliament of Canada, met in its first session, Hon. Peter White having been elected Speaker, and was formally opened by His Excellency Lord Stanley of Preston, Governor-General, with the following speech:

Honorable Gentlemen of the Senate: Gentlemen of the House of Commons: I am glad to welcome you to the duties of the first session of a new Parliament, which I hope will be memorable for wise deliberations and for measures adapted to the progress and development of the Dominion.

The season in which you are assembled has opened auspiciously for the industries of our people. Let us hope that their labors may be crowned with fruitful returns from land and sea, and that the great resources of Canada may continue to reward the toil and enterprise of its inhabitants.

My advisers, availing themselves of opportunities which were presented in the closing months of last year, caused the Administration of the United States to be reminded of the willingness of the Government of Canada to join in making efforts for the extension and development of the trade between the republic and the Dominion, as well as for the friendly adjustment of those matters of an international character which remain unsettled. I am pleased to say that these representations have resulted in an assurance that, in October next, the Government of the United States will be prepared to enter on a conference to consider the best means of arriving at a practical solution of these important questions. The papers relating to this subject will be laid before you.

Under these circumstances, and in the hope that the proposed conference may result in arrangements beneficial to both countries, you will be called upon to consider the expediency of extending, for the present season, the principal provisions of the protocol annexed to the Washington treaty, 1888, known as the *Modus Vivendi*.

A disposition having been manifested in the United Kingdom to impose on sea-going ships engaged in the cattle trade increased safeguards for life and greater restrictions against improper treatment, a careful inquiry has been made as to the incidents of that trade in so far as this country is concerned. The evidence elicited on this inquiry will be laid before you. While I am glad to learn that our shipping is free from reproach in that regard, your attention will be invited to a measure which will remove all reasonable apprehensions of abuses arising in the future in connection with so important a branch of our commerce.

The early coming into force of the Imperial Statute relating to the vice-admiralty courts of the Empire has made it necessary to revise the laws in force in Canada respecting our courts of maritime jurisdiction, and a measure will therefore be laid before you designed to reorganize those tribunals.

A code of criminal law has been prepared, in order that this branch of our jurisprudence may be simplified and improved, to which your best attention is invited.

Measures relating to the foreshores of the Dominion and to the obstruction of its navigable waters will be submitted to you; and you will also be asked to consider amendments to the acts relating to the Northwest Territories, to the Exchequer Court act, and to the acts relating to trade marks.

Gentlemen of the House of Commons: The accounts for the past year will be submitted to you. The revenue, after providing for the services to which you appropriated it, has left a surplus for the works which you designed to be carried on by capital expenditure.

The estimates for the coming year will be laid before you at an early date.

Honorable Gentlemen of the Senate: Gentlemen of the House of Commons: I pray that, in the consideration of these matters and in the performance of all the labors which will devolve on you, your deliberations may be divinely aided, and that your wisdom and patriotism may enlarge the prosperity of the Dominion and promote in every way the well-being of its people.

Death of the Premier.—The measures foreshadowed in the viceregal speech received eventually their due attention but the more important practical legislation of the session was, in the main, suspended through the sudden illness

and speedy decease of the Premier, Sir John Alexander Macdonald, on the 6th of June. After the ex-minister's obsequies, the Hon. Senator J. J. C. Abbot was called upon by the Governor-General to form a new Government, as, according to British usage, all ministers resign upon the death or resignation of the Premier. Mr. Abbot invited the ex-ministers to resume their several portfolios, which was done, and the work of legislation was resumed. There was the usual annual protracted debate upon prohibition of the manufacture and sale of intoxicating liquors, terminating in the adoption of a ministerial motion to appoint a royal commission to inquire, during the recess, into the results of the liquor traffic. In the course of his budget speech, the Finance Minister remarked:

With reference to the foreign trade for the year 1889-'90, I may say that the aggregate trade was some \$14,000,000 in excess of that of the preceding year, and marked one of the best years in the history of the confederation, being some \$65,000,000 in excess of the trade in 1878-'79, the last year of the Administration which preceded the present Government. The exports for the last year under review were \$7,500,000 more than they were in the year 1888-'89, and some \$25,000,000 in advance of the exports for the year 1878-'79. There was a gratifying increase of the trade between Canada and Great Britain of \$7,000,000 over and above the year 1888-'89, and our trade increased to a greater or lesser degree with France, Germany, Portugal, Italy, Holland, Belgium, China, Japan, and Switzerland. There was a decrease of about \$1,000,000 in our trade with the United States of America, a slight decrease in our trade with Spain, and somewhat larger with Newfoundland and with South America and the West Indies. . . . Our interprovincial trade, which year by year has been becoming more and more a factor and an incident of our development, has its steady increase; and, although we have not at hand an unerring means of denoting by statistical records what the exact increase in the volume of this trade is, yet from certain large indications that we get we are assured that it is a constantly increasing factor, and that it carries with it all that increased energy and life and prosperity which come from such a branch of industry.

After referring to the large increase in railway traffic and in mining activity during the year, Mr. Foster went on to say:

I think we can congratulate ourselves upon the buoyant nature of the revenue of the past financial year—a revenue the largest in the history of this country—a revenue which did not come from increased taxation as a result of charges and additions to the tariff, but which is an evidence of the power of the people to buy, and consequently marks, to a certain extent, their prosperity and the soundness of their financial condition. . . . Taking, then, into consideration the fact that the revenue gave more than I anticipated, that the actual expenditure fell below the receipts, I am able to say to the House that, on Consolidated fund account, after all the services for which appropriations have been made had been taken care of by the Government, there remains a surplus of \$3,885,893 over the ordinary receipts. That is not, however, to say that we have that sum of \$3,885,893 actually in pocket. There are capital expenditures as follows: Railways and canals, \$3,419,132; on public works, \$495,421; Dominion lands, \$133,832; Northwest Rebellion claims, \$47,000; to which, if we add the railway subsidies, \$1,319,500, and the transfer of the Cobourg debentures, \$44,496, we have a total capital expenditure of \$5,776,301. So that the account as a whole of expenditure and income comes in this way: That we took care of the ordinary expenses of the country out of the Consolidated fund;

that we laid up in the sinking fund against our debt and for the reduction of our debt \$1,779,237; and had a surplus of \$3,885,893, which we placed over against a capital expense, and came out at the end with an increase of debt of only \$3,170.

No general revision of the tariff was proposed, but the duty on sugar, amounting to about \$3,500,000 annually, was wholly swept away. On the other hand, small additional duties were imposed upon malt and malt liquors, spirits, and tobacco, and a few other articles.

Frauds Discovered.—The principal cause of the session's being protracted to an inordinate length was the startling discovery of alleged frauds on the part of certain public officials, and of other persons associated therein with departmental officers. This led to a long and thorough investigation before a large committee of the House, in which both Ministerialists and Oppositionists, as a rule, obviously used their best efforts to unearth the suspicious facts and to fix the blame where it belonged. The more startling and momentous of the transactions in question occurred in connection with the Board of Works Department, and, in a minor degree, with the Department of the Interior. It was maintained by those who assumed the part of prosecutors that certain contractors and would-be contractors had glaringly used bribery and other corrupt schemes in their relations with department officials in order to secure Government contracts and to enable them to "scamp" their work with impunity when contracts were thus obtained. In other instances it was declared that departmental subordinates had themselves boldly swindled the Government which they professed to serve by procuring contracts and Government favors in the names of friends who were willing to become their accomplices. It was maintained in certain quarters that these fraudulent proceedings had reached such proportions and had arrived at such a degree of effrontery that even some of the ministers themselves could not have been unaware of the frauds; that at least, if they did not connive at these proceedings, they were highly censurable for their lack of vigilance and general remissness in the discharge of their duties. At least one member of the House of Commons was implicated in these charges. Early in the course of the investigations referred to there was a flutter among the parties implicated. As revelations were evolved numbers of departmental officials were requested to resign. Others did not wait for the request. Several of them have judiciously gone to parts unknown. Meanwhile one member of the House of Commons was, on motion of the Minister of Justice, expelled the House, and a writ was issued for a special election to choose his successor.

While the investigation was still going on the Minister of Public Works thought it wise to resign his portfolio, although at the close of the committee's proceedings the majority report exonerated that gentleman (Hon. Sir Hector Langevin) from all knowledge of or part in the reprehensible transactions in which some of his subordinates figured. The minority report of the committee in question declined to accede to that of the majority on this point. The vote was a strictly party one. Legal proceedings

have been instituted by governmental direction against several of the more prominent of the implicated for conspiracy, fraud, embezzlement, getting money under false pretenses, and similar charges, and have been prosecuted with vigor. As an important result of this commotion, one of the earliest acts of the new Premier, Mr. Abbot, was to move for the appointment of a royal commission to examine thoroughly and report upon the whole subject and the working of the Canadian civil service. The commission has been appointed, the four members of which are regarded with general commendation, and they entered upon their labors in the last week of November. The commissioners—George Hague, manager of the Merchants' Bank; Judge Burbridge, E. Barbeau, and J. M. Courtney, deputy Minister of Finance, with J. H. Flock, barrister, of London, as secretary—are to examine into the condition of the civil service in Ottawa, and consider suggestions from experienced persons as to the best method of correcting irregularities. It is understood that the instructions to the commissioners will empower them to inquire into and report upon the matter of appointments, promotions, discipline, and duties, including hours and extent of service and absence, salaries, and superannuation of members of the service. The investigation will cover all the departments, as well as the staff of the Senate and House of Commons. The commissioners are given power to summon witnesses. The parliamentary session closed on the 30th of September, and was the longest on the records of the Dominion.

Navigation.—In the registered tonnage of its mercantile marine the Dominion, taken separately, still retains its position as the third country in the world. It is surpassed in this respect only by the United Kingdom and the German Empire, Norway coming next as owner of shipping.

Fisheries.—The value of the product of the fisheries of Canada, by provinces, for the year

ending Dec. 31, 1890, was as follow: Nova Scotia, \$6,636,445; New Brunswick, \$2,699,055; Quebec, \$1,615,120; Prince Edward Island, \$1,041,109; Ontario, \$2,009,637; British Columbia, \$3,481,432; Manitoba and Northwest Territories, \$232,104; total, \$17,714,902, against \$17,655,256 in the preceding year. The total number of vessels and boats employed in the fisheries in 1890 was 30,872, valued at \$3,077,136; of men engaged in this industry, 63,725; of nets, 5,541,285 fathoms, valued at \$1,695,358. The other fishing material was valued at \$2,600,147.

Railways.—The Dominion Government has expended \$139,745,691 in the form of bonuses, at different times, to different railways, down to the close of 1890, which sum represents a considerable portion of the public debt, and is directly productive to the country at large, although it brings in no immediate return to the Government. In addition to this sum paid by the Dominion Government, subsidies of Dominion lands—principally to lines in Manitoba and the Northwest Territories—have been granted at various times, amounting altogether, down to the close of 1890, to 46,499,433 acres. If these lands are placed at the lowest estimate, \$2 an acre, they represent a sum amounting to \$93,998,866; if valued at the present valuation placed on their unsold lands by the Canadian Pacific Railway Company, based on an average of the sales of 1889 and 1890, \$3.57 an acre, they would represent a sum of \$166,002,965. In 1890, the paid-up capital that had been invested in railways amounted to \$786,447,812. The progress of Canadian railroad construction is briefly shown by the following figures: 1840, 16 miles in operation; 1850, 71; 1860, 2,087; 1870, 2,497; 1880, 6,891; 1890, 13,256; and in 1891, 14,320.

Crops.—In anticipation of the completion of the statistical returns relative to the agricultural harvest of 1891, it can only be said that, taking the Dominion throughout, the product for that year was considerably in excess of that of every preceding year.

E

EARTH, AREA AND POPULATION OF THE. In 1866 Dr. Ernst Behm estimated the population of the earth at 1,350,000,000. This calculation was revised from time to time in accordance with newer statistics and estimates of geographers and travelers. In 1872 Dr. Behm, in conjunction with Dr. Hermann Wagner, who is now Professor of Geography at Göttingen, published a critical analysis and compilation of the available statistics of the area and population of all countries and continents as a supplement to "Petermann's Mittheilungen," of which Dr. Behm was editor. New issues of their "Bevölkerung der Erde," in which all the figures were brought down to date, were published at intervals of about two years, till 1882. Dr. Behm died while the eighth issue was in preparation, and it was not completed, because Prof. Wagner was not able to do the work alone. In the sixth issue (Gotha, 1880) the estimate of the world's population was 1,456,000,000. The population

of China was estimated at 405,000,000. Later investigations showed that this was an excessive estimate, and when the seventh issue appeared it was reduced to 350,000,000. The difference was partly offset by higher estimates of the population of some other countries, the total population of the earth footing up 1,434,000,000. In 1886-'87 Prof. Levasseur published a collection of statistics of the area and population of the earth in the "Bulletin" of the International Statistical Institute. He made the total population 1,483,000,000. In 1891 the geographical establishment of Justus Perthes issued an eighth edition of the "Bevölkerung der Erde," Prof. Wagner, who has worked up the figures for Europe and Asia, having found a coadjutor in Dr. A. Supan, the present editor of "Petermann's Mittheilungen," who looked after the sections dealing with Africa, America, Australia, Oceania, and the polar regions. In regard to countries that have no censuses, such as Turkey in

Europe and Asia and most of the countries of Asia and Africa, Dr. Supan has instituted special investigations. The varying estimates of the population of China and of the less known parts of Africa, which are little better than guesses, are the chief cause of the divergence between the computations of the world's population made by different authorities. The vagueness of the data relating to those and other regions makes it impossible to determine the total for the whole world within 50,000,000 or possibly 100,000,000. Levasseur, who in 1886 reckoned the earth's inhabitants at 3,000,000 more than Wagner and Supan in 1891, took higher estimates both for China and for Africa. Mr. Ravenstein, in his essay on "Lands of the Globe still available for European Settlement," printed a short time before Wagner and Supan published their results, accepted a lower estimate of the population of Africa than theirs by 30,000,000, and made the world's population 12,000,000 less than their total. The apparent growth of the world's population between 1866, when Dr. Behm made his first computation, and 1880, when the sixth edition of the "Bevölkerung der Erde" was issued, was 106,000,000. This was due rather to more accurate information, which led the editor to take higher estimates of the population of many countries. Two years later, while they reduced the estimate for China by 55,000,000, they added 33,000,000 to the figures for the rest of the world. Deducting the excess credited to China in 1880, the population of the earth, according to the tables of Behm and Wagner, was 1,401,000,000 in that year. In 1891 the estimate of 350,000,000 for China proper is retained, though that of Sir Richard Temple is about 68,000,000 less. The estimate for the continent of Africa has been reduced by 38,000,000, and 15,000,000 have been deducted from the total for Asia. Deductions have been made also from the former estimates for Arabia and some other regions. On the other hand, explorations have afforded data for estimating the population of countries that were left out in former calculations, or for increasing the former estimates, and natural growth has made the figures higher in countries that have precise statistics. The apparent increase since 1880, taking the subsequently corrected figures for China, has been 79,000,000. The estimate for 1891 is 56,000,000 higher than the one arrived at in 1882. There are still regions of wide extent which Wagner and Supan leave out of their calculations, because they have no data for an approximate estimate of the population. Such are the Niger Protectorate of Great Britain and the British East Africa Company's sphere. Houtum-Schindler's estimate of 7,653,000 for Persia, which was accepted by Wagner in 1882 and is still retained, is more than a million less than competent authorities have more recently credited that country with now having. Corea is credited with 10,500,000 by Wagner and Supan, who have reduced the population of Arabia to 3,472,000, less than a third of Rashid Bey's estimate of 10,725,000 made in 1875. Africa was believed a few years ago to have at least 220,000,000 inhabitants. This estimate has been reduced by Supan to 164,000,000, and Ravenstein cuts it down to 134,000,000. In 1880 there were data based on actual enumerations

and censuses for 626,000,000 out of the total of 1,401,000,000, or 44 per cent. of the estimated population of the world. Since then exact enumerations have been substituted for vague estimates in regard to 99,000,000, making 836,000,000 out of 1,480,000,000, or between 56 and 57 per cent. of the population of the earth, that can be calculated by means of precise data, although this includes the 103,000,000 of the Russian Empire, where a general census in the modern sense has only been taken in one or two provinces.

The area assigned to continents by various geographers differs not only on account of differences in the measurements, but because authors differ with regard to boundaries. Dr. Wagner, in giving the area of Europe, excludes the Canaries, Madeira, the Azores, and the Marmora Islands, as well as the polar and Atlantic islands and Iceland; that given for Asia is without the Arctic islands, and that of Africa does not include Madagascar and other islands, but in the area given for Australia is counted that of Tasmania. The area assigned to America does not include the polar regions. The area of Europe as given by Dr. Wagner varies only a few hundred square miles, within the same limits, from the results reached by Strelbitsky, who has spent years in measurements and calculations. The area of Europe in the narrowest natural limits, making the eastern boundary follow the crest of the Urals, the Manytch river, and the northern slope of the Caucasus, would be 3,570,030 square miles. Drawing the line along the Ural crest, the Ural river, and the crest of the Caucasus, the area is 3,790,504 square miles. This is the boundary accepted by Strelbitsky, who includes, moreover, Iceland and Nova Zembla, making the total 3,866,605 square miles. New calculations for the area of Asia have been made for Wagner and Supan's work by B. Trognitz, who makes it 167,570 square miles less than the previously accepted estimate. The results of Wagner and Supan's calculations of the area and population of the grand divisions of the earth's surface are as follow:

GRAND DIVISIONS.	Square miles.	Population.
Europe	3,756,860	357,379,000
Asia	17,580,686	825,954,000
Africa	11,277,864	163,953,000
America	14,801,402	121,718,000
Australia	2,991,442	3,230,000
Oceanic islands	733,120	7,420,000
Polar regions	1,730,810	80,400
Total	52,821,684	1,479,729,400

According to these estimates, the density of population, ranging from 16 to the square mile in Norway and Finland up to 365 in Holland, 480 in England, and 530 in Belgium, averages 94 to the square mile for the whole of Europe. In Asia the mean density is 47 to the square mile, in Africa it is 14, in the two Americas, not including the almost uninhabited Arctic regions, there is an average of 8 persons to each square mile, and the islands of both oceans have an average of 10, while the island and continent of Australia averages scarcely more than 1 inhabitant to every square mile of surface.

EAST AFRICA. Some of the enthusiasts who conceived the idea of founding a German colonial empire that would afford a market for German manufactures and divert emigration from the United States schemed to bring under German dominion the region of the great lakes in East Africa, where there are healthful and productive countries suitable for European colonization, and where a flourishing commerce already existed. The Sultan of Zanzibar exercised sovereignty along the coast, where all the harbors were held by him, and his officers collected duties on all goods passing through. In the interior he had armed forces at certain posts on the trade routes and furnished escorts to caravans. In 1885 the German East Africa Company obtained an imperial charter after having, through Dr. Peters, Count Pfeil, and other emissaries, made treaties of protection with native chiefs ruling over countries between the coast and the lakes. North of the lakes the Germans hoped to acquire the Equatorial Province, which Emin Pasha continued to administer after it was abandoned by Egypt. The company founded several stations, and began planting and trading in the coast region. The quasi-protection formerly exercised by Great Britain over the Sultan of Zanzibar having been relinquished, a lease was executed in April, 1888, by which the Sultan ceded to the German company for fifty years the customs and administration of the harbors and the strip of coast over which he exercised sovereignty as far north as Wanga, thus giving the Germans control of all the caravan routes. The English were chiefly anxious at that time to induce the Germans to give up the territorial rights they had acquired in Zululand and restrict their expansion on the west coast, where established British commercial interests were threatened. Subsequently the British Government determined to acquire a foothold on the east coast, in order to establish a presumptive claim to the region of the upper Nile and compete for the possession of the lake region. In 1886 the German and British governments came to an agreement, delimiting their spheres of influence. The Sultan of Zanzibar was recognized as the sovereign of a strip of coast 10 miles in width, extending from Cape Delgado, the northern limit of the Portuguese possessions in the south, to Kipini, on the Ozi river in the north, and north of Kipini, of the points where he had garrisons, viz., Lamu, Kismayu, Brava, Merka, Magadosho, and Warsheik. The German sphere of influence embraced the interior from the river Rovuma in the south to the Umba in the north, and the English sphere took in the whole country north of the Umba except the strip belonging to Zanzibar. A British East Africa Company, established by Sir William Mackinnon, obtained, on Sept. 3, 1888, a royal charter granting the privilege of administering and exploiting the British sphere. The British company acquired from the Sultan of Zanzibar the cession for fifty years of the coast and harbors and the right to collect customs from the Umba to Kipini. In 1889 the Sultan ceded also his ports north of Kipini and the islands of Lamu, Manda, and Patta. The sultanate of Vitu was claimed by Germany by virtue of a protectorate accepted by its sultan, while the English asserted that it was subject to

the Sultan of Zanzibar, and therefore was included in his cession to them. On July 1, 1890, a more complete treaty was made between Great Britain and Germany for the settlement of all territorial questions in Africa. Germany obtained from the Sultan of Zanzibar the absolute cession of the coast within the limits of the German sphere in return for a payment of 4,000,000 marks. Germany agreed to pay the further sum of 6,000,000 marks for the indemnification of private sufferers from bombardment and other operations in suppressing the insurrection in German East Africa, mostly Indian subjects of Great Britain. England renounced claims advanced to the shores of Tanganyika and the country between that lake and the Victoria Nyanza, and recognized the German sphere as extending to the bounds of the Congo Free State, and allowed the line of demarkation to be drawn from the Umba or Tana river northwestward, with a deflection to include the whole of Mount Kilimandjaro in the German sphere, till it strikes Victoria Nyanza in latitude 1° south. West of the lake it follows the first parallel till it comes to Mpororo, where an indentation is made to include Mount Mfumbiro in the British sphere. By this arrangement Germany gave up her pretensions to Uganda and to Emin's province, and agreed further to hand over Vitu to the British company, to renounce all claims to the port of Lamu and the islands of Manda and Patta, and to acknowledge an English protectorate over the dominions of the Sultan of Zanzibar, now reduced to the islands of Zanzibar and Pemba. When this protectorate was declared the northern ports of Kismayu, Brava, Merka, Magadosho, Warsheik, and Maroti were transferred to Italy, which declared a protectorate over the sultanate of Obbia in February, 1889, over the Somali coast northward as far as $8^{\circ} 3'$ of north latitude in the April following, and in November over the Benadir coast from Obbia southward to the limit of the British East Africa Company's territory at the river Jub. In 1891 England recognized the part of Somaliland as lying within the Italian sphere of interest. A full cession of its part of the Zanzibar coast and of the leased islands was obtained from the Sultan of Zanzibar by the Imperial British East Africa Company.

British East Africa.—The territory of the British East Africa Company is conterminous with German East Africa in the south, following the line that runs northwestward from the mouth of the Umba to the shore of Lake Victoria, and, crossing the lake, extends westward to the border of the Congo State, which forms the western boundary. The boundary between the British and Italian spheres of influence follows the left bank of the Jub river in a northwesterly direction up to 8° of north latitude, and thence extends westward along the borders of Gallaland and Abyssinia to the western watershed of the Nile. Thus, the region of the White and Blue Nile, including the Equatorial Province and parts of Kordofan and Darfur, which are still nominally subject to Egypt, is claimed and conceded by Germany to lie within the British sphere, which embraces further a great part of Somaliland, Usogo, Uganda, Unyoro, Gamaragara, Toro, Ankori, Mpororo, a part of Ruanda, Singo,

Buera, and Koki. The total area is estimated to be more than 1,000,000 square miles.

The Imperial British East Africa Company, which is empowered to govern and exploit these countries after the fashion of the old East India Company, has a capital of £2,000,000, of which £1,000,000 was subscribed by the public. Sir William Mackinnon is its president. The operations of the company were confined at first to the coast region. The harbor at Mombasa was improved and the town largely rebuilt in the modern style. The customs duties in 1888 were \$36,000, and in 1889 \$56,000. In 1890 the collections in the southern ports alone, exclusive of those ceded to Italy, were expected to amount to \$96,000. The trade is mainly in the hands of Banyan merchants from British India, many of whom have migrated from the German to the English part of the coast. The imports are cotton goods, iron and copper wire, and beads. The chief exports are cloves, ivory, sesame, gum arabic, copra, orchilla weed, coir, and hides. The company has a body of 300 Soudanese soldiers, many of whom served with Emin Pasha in the Equatorial Province, and 200 Sikhs from India, in addition to a large force of native levies, all trained and commanded by English officers. A railroad from Mombasa to Lake Victoria Nyanza, a distance of 450 miles, has been surveyed and construction begun, and along the route a line of forts is being built. Gen. Sir Francis de Winton, the chief administrator, has his seat of government at Mombasa. A permanent post has been established at Machakos, situated on a healthful plateau, 250 miles from the coast, and another at Mengo, the capital of Uganda.

Punitive Expedition to Vitu.—In September, 1890, after the transfer of Vitu to England, the natives rose against the Europeans and massacred nine Germans. Sir E. R. Fremantle, the British naval commander at Zanzibar, conducted an expedition to punish the Sultan and people of Vitu for these murders. A force of sailors and marines was landed at Kipini. After several skirmishes the main body of the Sultan's forces was routed on Oct. 28. The blue-jackets entered the deserted town and destroyed every building with fire or dynamite. The Sultan, Fumo Bakari, who was responsible for some of the murders, was deposed, and Fumo Omaree was declared Sultan in his stead. G. S. MacKenzie, director of the British East Africa Company and Consul Berkeley proceeded to Gongani, in the center of Vitu, whither the inhabitants of the city had fled, and there concluded a treaty with the chiefs and notables, who handed over the administration to the company's officials and agreed to the abolition of slavery, masters employing slave labor in cultivating plantations being allowed five years of grace, at the end of which, on May 24, 1891, all slaves shall be emancipated.

Zanzibar.—The sultanate of Zanzibar, comprising the island of Zanzibar, having an area of 625 square miles, and that of Pemba, 360 square miles, was proclaimed a British protectorate in accordance with the Anglo-German treaty signed at Berlin, July 1, 1890. The population of the city of Zanzibar is about 100,000, that of the rest of the island 25,000, and of

Pemba 40,000. The city has been the center of the export and import trade of East Africa, but now divides the business with the ports on the German coast. The exports were formerly \$4,000,000 a year and the imports from \$5,000,000 to \$6,000,000. Cloves are cultivated on the islands. The present Sultan or Seyyid, Ali bin Said bin Sultan, born in 1855, a brother of the late Seyyid Khalife and his predecessor Burghash, came to the throne in February, 1890. The sultans while they were independent ruled as absolute monarchs. In September, 1891, Gerald Portal, the English resident, induced the Sultan to reorganize the system of government, accepting a fixed sum as a civil list and appointing ministers who should act on the advice of the British consul-general, without whose consent no item in the budget can be altered. The Sultan's army and police were placed under the command of English officers and the harbor and the light-houses were handed over to the administration of Englishmen.

Uganda.—The most powerful of the native states in East Africa is Uganda or Buganda, occupying the northern shore of Victoria Nyanza. The area of the kingdom proper is 20,000 square miles. Beyond the Somerset Nile are Usoga and other vassal states, and others west of the Nyanza swell the area to more than 70,000 square miles. The ruling class are the Wahuma, a conquering tribe of Galla origin. The mass of the population, estimated at from 3,000,000 to 5,000,000, are of the negroid stock of Central Africa, speaking a language of the Bantu class. The country has been the scene of fierce war originating in the rival teachings of Mohammedanism and Christianity, and latterly the competition between French Catholic and British Protestant missionaries has led to civil war. Having a developed agricultural and pastoral industry and communications with the Congo valley, the Tanganyika region, the Nile countries, and the Zanzibar coast, Uganda has always been a central distributing point for the slave and ivory trade. Mtesa, a subtle and strong ruler, welcomed missionaries, and at one time nominally embraced Christianity, and at another Mohammedanism. Propagandists of both creeds were encouraged, and Protestant missionaries were invited to enter the field in competition with the French priests. Thus enlightenment and civilization displaced heathen savagery, and at the same time religious animosities were awakened between different schools of young reformers. He died in 1884, and his son and successor, Mwanga, likewise had both Christian and Mohammedan advisers, but reverted to paganism and older methods of rule and planned to get rid of both classes of reformers. The consequence was that they united and deposed him, placing his elder brother, Kiwewa, on the throne. He was inclined to Christianity and progress until the Germans occupied the east coast, when the King fell under the influence of the Arabs and Swaheli. He placed Christians of both creeds and Mohammedans in the chief offices and in command of the troops, but when the Arabs convinced the King and the people that the presence of white missionaries, more of whom were on the way, would lead to the subjugation of the country by the Germans and English and the suppression of

slavery, he consented to the expulsion of all the Protestant and Catholic missionaries in October, 1888. The Christians fled to the country of the Wasongora and to the islands of the lake. The heathen vassals of Uganda with whom they allied themselves had all the boats, and Mwanga turned to the missionaries and offered to embrace Christianity if they would form an army of their followers to restore him to the throne. While the Protestant missionaries advised him to apply to the British East Africa Company, many of their native adherents joined those of the French priests and, aided by the Englishman Stokes, who had been a missionary, then a trader, and has latterly been in the service of the Germans, the Christians defeated Kiwewa's army and re-established the exiled Mwanga in power in the summer of 1889. Not long afterward Dr. Peters arrived, and Mwanga, who had applied in vain to Mr. Jackson, the representative of the British East Africa Company for aid in his difficulties, made overtures for placing the kingdom under the protectorate of Germany. He was convinced that it must fall eventually under the dominion of the Europeans, who had established their power in the coast region, and thought that he could choose among the European rulers the suzerain that would offer him the most advantages. For an English protectorate he had an aversion, and when nothing came of his first proposals to Germany he turned to the Catholic priests and offered to give his allegiance to France, having first rejected Mr. Jackson's offer to assume for the British East Africa Company the entire government of the country. The company proposed to dispose of the revenues, control trade, and maintain order, and to retire the King and the chief dignitaries on pensions. After the Anglo-German agreement of July, 1890, confirmed their claim to the country, the British East Africa Company's officials, although the countries forming the Empire of Uganda were the immediate goal of their enterprise, contented themselves with making their position secure on the coast, hoping with the transit duties to keep expenses within the revenue and distribute some surplus among shareholders while building docks, roads, and a railroad, and extending gradually inland their political administration. When Emin Pasha advanced in the direction of Uganda they feared that accomplished facts might upset treaty arrangements. The news of the Anglo-German treaty assigning Uganda to England was brought by Mr. Walker, an English missionary, on Nov. 1, 1890, and was confirmed shortly afterward by Emin Pasha's note declining to take possession of the country in the name of Germany. The King and his ministers, all followers of the Roman Catholic priests, proclaimed a French protectorate, and were ready to fall upon the Protestant party and drive the British missionaries from the country, when an army of Mahdists, whose aid the Arab slave-dealers had obtained, appeared on the northern frontier to conquer the country for Mohammedanism before it could be occupied by Christian forces. All parties united and drove back the invaders. Lest the King's preference for Germany should impel him to place Emin Pasha in control of the country, the British East Africa Company ordered Capt. F. D. Lugard to

proceed to Uganda. He had ascended the Sabaki river, which he recommends as the route for the proposed railroad, and was engaged in building a station when the order came. With his force of 300 Soudanese and Zanzibaris he marched northward, entered Usogo through Kavirondo, and on Dec. 13, six weeks after he set out from Kikuyu, he was on the Nile, which forms the boundary between Usogo and Uganda, and five days later in Mengo. Seizing a position on a hill, he demanded that the King should sign a treaty. The Protestant natives were scarcely less hostile to the English than the Catholics, who were only restrained by their bishop from annihilating the British force. The King was too politic and timorous to consent to an attack, and on Dec. 26 he gave way to Lugard's threats and signed a treaty for two years. He had sent envoys to the coast to inquire into the political situation, and after signing he said that if the Germans had not abandoned Uganda to the English he would revoke the treaty and accept their protectorate. In February, Capt. W. H. Williams arrived with a body of troops to re-enforce Capt. Lugard, who had built a strong fort at Mengo. The Protestants suffered in consequence of the presence of the British. They were plundered and murdered by the King's party, Capt. Lugard not daring to interfere till Capt. Williams arrived, when he demanded that the King should see that they had justice. The Catholics and the heathen united with the intention of expelling the Protestant natives and attacking the British fort. To avert civil war, Mwanga turned to Capt. Lugard, and by his advice, supported by his prestige, the disputes about land and slaves, which were at the bottom of the difficulty, were equitably arranged. Lest the civil strife should be rekindled, Capt. Lugard proposed to the King to call his warriors to arms, and with the aid of his own troops, with their repeating rifles and Maxim guns, to give battle to the exiled Mohammedans and Arab slavers, who, having obtained aid from the Mahdists, and formed an alliance with the Wanyoro and Kabrega, were gathered in great force near the frontier, ready to overwhelm the Christians with an army of 10,000 men. In October the King's and Capt. Lugard's forces were reported to have met the Mohammedans and defeated them in a pitched battle in Unyoro.

The expense of maintaining an armed force in Uganda exhausted the capital of the British East Africa Company, which applied to the English Government for a guarantee of interest to enable it to raise fresh capital for the construction of the railroad from Mombasa to the lake. Such a guarantee would not merely pledge the credit of the Government, but would virtually commit it to send British troops to protect the property in which it was interested in case the East Africa Company excited the hostility of the natives. For this reason Sir William Harcourt declined to allow to pass through Parliament without full discussion a preliminary bill to grant £20,000 for a Government survey of the railroad route and for the exploration of the commercial resources of British East Africa. Unable to continue the expensive occupation of Uganda, or, perhaps, with the object of bringing the pressure of public opinion

to bear on the opponents of Government assistance, the company announced in the autumn that unless imperial aid was secured, it would be compelled to withdraw its forces and abandon Uganda. The company asked of the Government a subsidy of £40,000 a year for the period that was expected to elapse before the railroad could be built and a paying business developed. Without waiting for the action of Parliament, the company proceeded to make a final survey, obtaining the services of Capt. Macdonald, of the Royal Engineers, for the purpose. The cost of the railroad is estimated at £1,800,000.

German East Africa.—The German sphere of influence is bounded on the north by the territory of the British East Africa Company, and on the west it is divided from the Congo State by a line starting in the north 1° south of the equator near the head of Albert Edward Nyanza, and continued by the Rusisi river and the whole length of Lake Tanganyika. On the southwest it is divided from the British protectorate of Nyassaland by a line defined in the treaty of 1890 which is drawn from the south end of Lake Tanganyika to the north end of Lake Nyassa in such a way as to leave the Stevenson road on the British side of the boundary, which is continued southward through about half the length of Lake Nyassa till Portuguese territory is reached, from which the German sphere is separated by the Rovuma river flowing northeastward into the Indian Ocean at Cape Delgado. The area is estimated at 345,000 square miles, and the population at 1,760,000. The value of the exports in 1889 was 2,847,000 rupees. The export of ivory was 1,197,251 rupees; of gum copal, 364,289 rupees; of sesame, 250,679 rupees; of caoutchouc, 306,805 rupees. The German Government is represented in East Africa by an imperial commissary. The German flag was raised in the place of that of the Sultan of Zanzibar at Bagamoyo and other points on the coast on Jan. 1, 1891, and notice was given that goods would be allowed to be imported or exported only at the ports of Tanga, Pangani, Saadani, Bagamoyo, Dar-es-Salaam, Kilwa, Lindi, and Mikindani. A uniform duty of 5 per cent. was placed on imports from Zanzibar. Major von Wissmann, who organized the *Schutztruppe* or military force of the protectorate, and as the first imperial commissary acted also as commander-in-chief during the operations for the suppression of the Arab revolt in 1889-'90, was relieved in April, 1891, and in his place was appointed as civil Governor, Baron von Soden, formerly Governor of Cameroons. The command of the *Schutztruppe* was given to Lieut. von Zalewski, who had authority to act for the Governor when the latter was absent. Baron von Soden expected to reduce the *Schutztruppe*, changed into an imperial force, for East Africa was transformed into a crown colony under the immediate direction of the German Government, and to increase the revenue by raising import duties and taxing natives, so as to obtain 2,000,000 marks per annum, which was considered sufficient to defray all expenses of administration, improve communications and open roads, and protect missions and companies. A military force of 1,000 men, half the former number, was considered sufficient, 200 forming a flying column

and the rest being disposed of in garrisons. Major von Wissmann and Dr. Karl Peters each accepted the office of commissary for East Africa, at the disposal of the Governor.

Emin Pasha's Expedition.—When Emin Pasha reached the coast of Zanzibar with Stanley's relief expedition at the close of 1889 he took service under the German East Africa Company, and in April, 1890, departed at the head of a large military force officered by German military officers, with an abundant supply of military stores and trade goods, for the purpose of establishing stations in the interior and reopening the caravan routes that had remained closed during the rebellion of the coast tribes. Major von Wissmann had great confidence in the local influence and knowledge of Charlie Stokes, an old resident in the country, who was married to the daughter of a powerful chief, and expected Emin to work in conjunction with him in the peaceful extension of German influence and the development of trade with the people in the lake region. When Emin went on to Tabora and raised the German flag, Stokes made complaint, and when the Pasha advanced into Usonga, took sides in a local war and established one of the rival chiefs in power, and afterward broke up a caravan and released a large number of captive slaves belonging to influential Arabs in Tabora, Stokes wrote to Wissmann that he was destroying German influence. Emin went forward to make ready a station on Victoria Nyanza for floating a steamboat, severing communication with Stokes, and Wissmann, fearing that he might advance into Uganda and proclaim a German protectorate over that country, not knowing that a delimitation treaty had been concluded between Germany and England, sent orders for him to return to the coast as soon as he had established a lake station. Major von Wissmann's charges of insubordination against Emin Pasha, which were based on the representations of Stokes, were not approved by Chancellor von Caprivi, and this was one of the reasons for replacing him with a civil administrator. He complained that Emin had far exceeded the limit fixed for the cost of the expedition, but later enough ivory was sent to the coast to more than repay the expenses up to date. While Lieut. Langheld and Lieut. Sigl, two of his military subordinates, were fighting a number of battles with the hostile Wagonis, a warlike tribe of Zulu origin, whom they finally subdued with the aid of the Wanyamwesi, Emin was engaged in building a permanent station at Bukoba, on the west shore of Lake Victoria, where he arrived on Oct. 31, 1890, having first established a station at the south end. At Bukoba he obtained a large grant of land from the local chief with a view to establishing there the chief depot for the German trade, as the climate is mild and the place healthful. The place to buy ivory was the neighboring kingdom of Karagwe, which has always been the chief market for all the countries around. He received a cordial invitation from the ruler of Karagwe, and, in February, 1891, went to plant a small station there, leaving Lieut. Langheld with a garrison at Bukoba. In Karagwe he founded a German station at Kafuro, where he left an officer and a guard of soldiers. King Kigeri, of

Ruanda, a country that has hitherto been closed both to Europeans and Arabs, invited the Pasha to visit him, and when the central station in Karagwe was completed he went thither with his expedition, the most powerful of any that had visited this part of Africa with the exception of the force with which he and Stanley marched from Albert Nyanza to the coast. It was the proximity of Emin Pasha that impelled the British East Africa Company to bankrupt itself to fit out a hurried expedition and sent Capt. Lugard by forced marches to Mengo in order to be beforehand in making a treaty of protection with Uganda. King Mwanga desired a German protectorate. He had been willing to treat with Dr. Peters, whose action was disclaimed by the German Government. When Emin Pasha was on the lake, he sent envoys to offer his allegiance to Germany. Emin had then learned of the Anglo-German agreement, and he returned answer that Uganda was in the English sphere. After they had secured the treaty with Uganda the English were still afraid that Emin Pasha would return to Wadelai and raise the German flag over the province he had formerly ruled as the Khedive's Governor, as that was not explicitly resigned to England. Emin had a plan to go from Ruanda to Lake Tanganyika to prepare stations for trade and make arrangements for launching steamers. Such a continuation of the expedition would be dangerous, for the Arabs were massed at the north end of Tanganyika, killing people and carrying off captives, and they were prepared to make a desperate fight for the slave trade. He conceived an ambitious project, and to carry it out he only needed a few more rifles and a supply of cartridges. This was to pass through the northeast corner of the Congo State's territory into the unclaimed and unexplored regions lying north of the fourth parallel, which form the Hinterland of Cameroons, and make his way across the continent to the German colony on the western coast.

The Zalewski Expedition.—Trade revived and caravans began to come down to the coast along the old caravan routes as soon as the Arab revolt was put down by Major von Wissmann in 1890. The task to which the German military forces were confined was to guard the trade routes from the attacks of predatory tribes, such as the Massai in the north and scattered Zulu tribes in other parts of the German sphere. No attempt was made to defend the peaceful tribes that were being annihilated by Arab slave raiders, or to stop the new routes that the slave traders had made, though whenever a slave caravan was encountered by a German detachment, the slaves were liberated and the ivory was confiscated. In the Kilimandjaro region the two companies had to compete for the customs, and the Germans exerted themselves to improve the roads, prevent Massai depredations, and attract as much trade as possible to their ports. Major von Wissmann, in February, 1891, built a fortified station at the foot of the mountain, and left a body of soldiers there, after chastising the Great Arusha tribe and other Massai marauders. Dr. Peters, who had re-entered the service of the German East Africa Company, was active later in developing commerce and improving its security in the frontier region. The old routes of

the ivory trade to Bagamoyo and Dar-es-Salaam were the chief care of the German officers, who made no attempt to establish their authority over the wild tribes in the south between Lake Nyassa and the sea. The people of Usagara and the Swaheli half-castes of the coast, after Bushiri was hanged and Banaheri banished, and their fight for the slave trade was over, returned to peaceful planting and trading. The Germans did not interfere with slavery, but accepted it as a necessary condition of tropical agriculture, and employed slaves on their own tobacco and cotton plantations. The English found themselves compelled to do the same, but by their decree of future emancipation and their system of enabling slaves to earn their freedom, they prevented planting operations on their coast, except experiments instituted by the company. The Arab slave traders of the coast districts and of Tabora and other centers in the interior could still carry on their business in secret by avoiding German troops and the old trading stations. The semi-civilized natives of Unyamwezi and Karagwe were reconciled to German sovereignty by Stokes and Emin. Not so the warlike tribes in the north, the Watuta and Wangoni, extreme outposts of the Zulu migration. The latter were unsuccessfully attacked by Stokes, but were afterward so severely punished by Emin's lieutenants that they sued for peace in February. After that there was nothing to impede the regular channels of traffic and transportation in the neighborhood of Lake Victoria, although the small German forces were there only by the sufferance and support of the inhabitants, who aided them in putting down the unruly tribes. It was near the other end of the trade route, within striking distance of the coast, that a serious interference with trade continued to exist. Another Zulu tribe, the Wahehe, formerly occupied an elevated plateau north of the Ruaha river, about 100 miles southwest of Bagamoyo, and 150 miles from the north end of Lake Nyassa. They were successful cattle breeders and agriculturalists, and added to their possessions by frequent raids on their neighbors. About twenty years ago they conquered the great chief of the Warori, and extended their dominion over Urori, Ubena, and Usango. They received *hongo* or tribute from the whole country between the Ruaha and the Rufiji, and as allies of Bushiri, with whom their chief had sworn blood brotherhood, they continued to wage a savage war against the Germans by plundering the caravans that passed through Ugogo, and robbing villages. The chiefs were warned by Baron von Bülow, commandant at Mpwapwa, and made promises of amendment, but continued their depredations. He had not force enough to cope with them. When Baron von Soden and Lieut. von Zalewski were settled in their posts, they concluded that it was necessary to punish the Wahehe. An expedition was fitted out, which started from Mpwapwa on July 30. The chiefs, Mamkussa and Manamtua, in the Rubeho mountains, fled before them, and they burned the villages as they advanced. Passing through Marore, they crossed the Ruaha at Masombi, burned about fifty villages in the thickly peopled plateau of Mage, and on Aug. 17, when entering a thick forest on the march to Mdwaro, they were set upon by the Wahehe,

who, armed only with spears and shields, rushed in before the advanced guard could fire twice, and the Askari soldiers fled in confusion. Lieut. von Zalewski and most of his officers, with more than half the soldiers, died on the battle-field. Lieut. von Tettenborn, with a small band of Soudanese, took position on a treeless hill, where he was joined by Lieut. von Heydebreck, who first made a stand in a hut. They remained till the evening of the next day, in order to save any who had escaped from the fight, which took place about two miles from there. Including the wounded, 4 Europeans, 2 Arab officers, 62 soldiers, and 74 porters were brought away, while 10 Europeans, about 250 soldiers, and 96 porters perished. The chief, Kuava, and about 700 of his warriors, who numbered not fewer than 3,000 altogether, fell in the battle, and the Wahehe, being without a leader, did not attack the remnant of the expedition, but during the retreat marched in a parallel line, keeping at a distance.

The disaster that overtook the Zalewski column undid the work of months, destroying to a great extent the German influence that had been obtained through Emin's mission in the lake region, and rendering the caravan trade impossible, unless each caravan was accompanied by a strong armed force. Baron von Soden and the German Government were unwilling for the present to undertake the subjugation of the Wahehe and the many other tribes that were encouraged to fight the Germans by the reverse the latter had sustained. The determination of Baron von Soden not to develop military activity in the lake country made a change in the plans of Major von Wissmann, who was making arrangements to float a steamer on Lake Victoria. The steamer had been bought by popular subscriptions, and to raise money for transporting it to the Nyanza a lottery was proposed, which failed, however, to obtain the sanction of the Prussian legislature, although the King was in favor of the plan. After the Zalewski disaster, Wissmann proposed to recruit several hundred Soudanese and Zulu soldiers to enable him to carry out his intended operations on the lake. When the colonial authorities declined to incur the risk and expense, which the votes obtained from the Reichstag in the late session would not cover, Major von Wissmann asked leave to retire from the colonial service.

ECUADOR, a republic in South America. The executive power is exercised by a President, elected for four years by 900 electors chosen by the people. The Congress consists of a Senate, in which each of the 16 provinces is represented by 2 members, and a House of Representatives, the members of which are elected by the general vote of all Roman Catholic citizens of full age who can read and write, in the proportion of 1 to every 30,000 inhabitants. The term in the Senate is four years, and in the lower house two years. Gen. Antonio Flores was elected President on June 30, 1888. The President may summon an extraordinary Congress in certain contingencies, but has no power to dissolve or prorogue the House of Representatives. A bill to which he has refused assent can be passed over his veto by a simple majority vote.

Area and Population.—The area of Ecuador is in doubt because of boundary disputes be-

tween Colombia on the north and Peru on the south. A boundary treaty, somewhat reducing the territory formerly claimed, has been signed with Peru and ratified by the Ecuadorian Congress, but a section of the Peruvian Congress demanded further concessions. The area is estimated at nearly 120,000 square miles. The population is about 1,300,000. There are 100,000 whites, 300,000 of mixed blood, and an Indian population that is estimated at 900,000, but can not be determined by a census because these people will give no information about themselves. Quito, the capital, has 50,000 inhabitants, and Guayaquil, the chief port, about 45,000. The republic, though very backward in commerce and communications, has made progress in education, especially in the two chief cities. In the schools and higher institutions, according to an educational census taken in 1891, there are 1,137 teachers and 53,000 pupils.

Finance.—The receipts for 1889 were officially stated to be \$9,815,549 in the silver currency of the country, the silver *sucre*, or Ecuadorian dollar, being equal in value to the five-franc piece. This sum includes \$5,044,163 of loans. The custom-house receipts are more than half of the ordinary revenue, amounting in 1889 to \$2,473,740. The expenditures balance the receipts in the budget for 1889, the chief items being \$4,308,339 for the public debt, \$2,999,436 for financial and internal administration, and \$1,099,261 for war and marine. The public debt on Jan. 1, 1890, amounted to \$13,382,560, of which \$5,424,398 represent the internal and \$12,958,162 the foreign debt, which is mainly held in England.

The Army and Navy.—Although a national convention in 1884 fixed the strength of the standing army at 1,200 men, there were reported to be 266 officers and 2,492 soldiers in active service in 1890. The naval force of the republic consists of a small cruiser, a gunboat, and a transport, with an armament of 6 guns in all.

Commerce and Communications.—The value of the imports in 1889 was \$9,681,456 and that of the exports \$7,910,210. The chief exports were cacao, of the value of \$5,621,000; vegetable ivory, \$530,000; coffee, \$511,000; India-rubber, \$262,000; hides, \$171,000; tobacco, \$100,000. The figures given above do not include the export of precious metals, amounting in 1889 to \$810,000. The export of Peruvian bark, which amounted to over \$500,000 in 1882, declined to \$40,000 in 1889. The chief imports are dry goods, clothing, hardware, drugs, and wine. In 1889 the number of vessels entered was 669, of 383,346 tons. The only means of internal land communication, except a railroad 57 miles in length and an unfinished highway between Guayaquil and the capital, are bridle paths for pack animals, which are impassable during the rainy season, which lasts 7 months. At that time of the year the rivers Guale, Daule, and Vines, which traverse the low-lying agricultural lands west of the Cordillera, are navigable for river steamers, of which there are about a dozen of American construction. The capitals of all the provinces are connected by about 1,000 miles of telegraphs. In an extraordinary session called in 1890 the Ecuadorian Congress granted a concession for a railroad, in length about 150

miles, from Guayaquil to Riobamba, including the section already built to Chimbo, 7 per cent. interest on \$10,000,000 capital being guaranteed for thirty-three years by the Government, which will become absolute owner of the property at the end of fifty years. The line traverses the three ranges of the Andes before reaching Riobamba, and can be continued to Quito at comparatively small expense. Another line was authorized to connect Quito with the port of Bahia, the distance being 180 miles. On this railroad the Government guarantees 6 per cent. interest for fifty years, and will take it over without other compensation at the end of seventy-five years.

A new tariff, which went into effect on Jan. 1, 1891, increased the specific duties on many articles of import and added an extra *ad valorem* duty of 25 per cent. on ready-made clothing and of 20 per cent. on all other imports, and in addition to that a special duty of 10 per cent. to meet interest and provide a sinking fund, in pursuance of an arrangement made with the foreign bondholders. An export duty of 64 cents per quintal is levied on cocoa, coffee, and hides, and \$5 on rubber and tobacco.

EGYPT, a principality in northern Africa, tributary to Turkey. The Government is an absolute hereditary monarchy, under a prince who has borne since June 26, 1867, by a perpetual concession of the Sultan of Turkey, the title of Khedive or Viceroy. The reigning Khedive of Egypt and Sovereign of Nubia, the Soudan, Kordofan, and Darfur in 1891 was Mohammed Tewfik, born Nov. 19, 1852, died in January, 1892, who succeeded his father, Ismail, when the latter was compelled to abdicate, on June 26, 1869, by the English and French governments intervening in behalf of the European bondholders. From that time till 1882 the Government was conducted under a dual control, those governments each appointing a controller-general, without whose recommendation or consent no measure affecting the financial condition of Egypt could be taken. In 1882 Arabi Pasha, a colonel in the Egyptian army, headed a military revolt for the purpose of establishing a popular representative system of government and abolishing the rule of English and French officials. The French Government having declined to take part in the bombardment of Alexandria and the invasion of Egypt, British troops defeated the Egyptian army and occupied the country. The dual control was abolished by khedivial decree on Jan. 18, 1883, and an English financial adviser, whose concurrence is requisite in all financial measures and who has a right to sit in the Council of Ministers and to take part in the deliberations was appointed. The ministry at the beginning of 1891 was composed as follows: President of the Council, Minister of the Interior, and Minister of Finance, Riaz Pasha; Minister of Foreign Affairs, Zulfiakar Pasha; Minister of Justice, Fakhri Pasha; Minister of Public Instruction, Ali Mubarek Pasha; Secretary-General, Kahil Pasha. The British diplomatic representative and consul-general, who is the financial adviser of the Khedive, is Sir Evelyn Baring. Sir Colin Scott-Moncrieff has presided over the Department of Public Works since the British control was established, and Gen. F. W. Grenfell, hold-

ing the rank of Sirdar, has charge of the military organization.

Area and Population.—Egypt proper, to which the authority of the Khedive is limited since the evacuation of the Soudan at the demand of the British Government in 1884, extends to the second cataract of the Nile at Wady Halfa, beyond which a part of the Mudiriah of Dongola has since been occupied. In the east the governorships of the Isthmus of Suez, El Arish, in Syria, and Kosseir, or Suakin, on the Red Sea coast, are under the immediate dominion of the Khedive, and in the west the oases of the Libyan desert. The total area is 400,000 square miles, though 12,976 square miles, forming the narrow valley of the Nile and its delta, include the whole settled and cultivated area; and of this, 4,750 square miles are barren or covered with water. The population in 1882 was 6,817,265, divided into 3,401,498 males and 3,415,767 females. The foreign population at the time of the census was 90,886, about two fifths being Greeks, one fifth Italians, more than one sixth French, one twelfth Austrians, and one fifteenth English. The number of resident foreigners has greatly increased since then, and the proportions have changed in consequence of the British occupation.

Finance.—In the budget for 1891 the total revenue was estimated at 9,820,000 Egyptian pounds (1 £ E. = \$4.97). The land tax, date taxes, etc., were reckoned at £ E. 5,100,000; professional and urban taxes, etc., £ E. 155,000; customs, £ E. 1,380,000; *octrois*, £ E. 230,000; salt and natron taxes, £ E. 230,000; fisheries, £ E. 80,000; navigation dues, £ E. 74,000; railroads, £ E. 1,350,000; telegraphs, £ E. 25,000; port of Alexandria, £ E. 110,000; posts, £ E. 246,000; light-houses, £ E. 90,000; Ministry of Justice, £ E. 365,000; exemption from military service, £ E. 100,000; rent of Government property, £ E. 70,000; Governorship of Suakin, £ E. 13,000; pension fund, £ E. 55,000; other receipts, £ E. 147,000. The total expenditure was fixed at £ E. 9,320,000, divided under the several heads as follows: Public debt, £ E. 4,061,035; tribute to the Sultan, £ E. 665,041; the Khedive's civil list, £ E. 100,000; civil list of ex-Khedive Ismail Pasha, £ E. 114,127; the Khedive's private Cabinet, £ E. 54,420; Ministry of Public Works, £ E. 458,300; Ministry of Justice, £ E. 367,448; administration of provinces, £ E. 353,716; Ministry of Finance, £ E. 116,797; Ministry of the Interior, £ E. 110,793; Ministry of Public Instruction, £ E. 88,478; other ministries, £ E. 125,711; administration of customs, £ E. 116,469; *octroi* administration, £ E. 42,359; salt and natron monopolies, £ E. 63,157; fisheries, £ E. 8,392; navigation, £ E. 3,433; railroads, £ E. 635,211; telegraphs, £ E. 35,000; port of Alexandria, £ E. 195,000; posts and postal boats, £ E. 218,611; light-houses, £ E. 26,769; public security, military, police, prisons, and army of occupation, £ E. 679,839; Suakin, £ E. 111,428; pensions, £ E. 435,000; abolition of *corvée*, £ E. 250,000; other expenditures, £ E. 58,786.

The capital of the Egyptian debt at the beginning of 1891 was £ E. 106,937,760, made up as follows: Guaranteed loan at 3 per cent., £ E. 9,069,100; privileged debt at 3½ per cent., £ E. 29,500,000; unified debt paying 4 per cent.

interest, £ E. 55,988,480; Daira Sanieh loan at 4 per cent., £ E. 17,299,360; Domains loan at 5 per cent., £ E. 5,080,820. The interest on these various loans for 1891 amounted to £ E. 4,112,969, in addition to which there was to pay £ E. 198,800 interest on Suez Canal shares held by the English Government, £ E. 34,870 to the Daira Sanieh loan commissioners, and £ E. 153,846 on account of the Moukabala, or internal debt, which was commuted into an annuity of that amount running till 1930.

In 1890 the Egyptian Government collected a larger revenue than in any previous year since the reign of Ismail Pasha. The total was £ E. 10,237,000. Of the surplus, amounting to £ E. 599,000, only £ E. 270,000 was available for public needs and the remission of taxation, the balance being retained by the Commissioners of the Public Debt, in accordance with the conditions attached by France to her sanction of the conversion scheme. The reserve fund, which was constituted in 1887, amounted to nearly £ E. 1,745,000 at the end of 1890, including a special reserve of £ E. 400,000 that is likewise available against any extraordinary deficiency in the revenue or extra works of public utility. The regular expenditure of the Public Works Department in 1890 was £ E. 900,000, and in addition to this £ E. 435,000 were expended for extraordinary purposes, for which a further sum of £ E. 335,000 was appropriated in 1891. The sacrifices of revenue made in the last few years are stated to be £ E. 656,000, viz., £ E. 410,000 for the abolition of forced labor; £ E. 123,000 for the remission of professional taxes; and £ E. 123,000 for abolishing weighers' fees and other relief to tax payers. The net revenue from customs in 1890 was £ E. 1,300,000, the increase of £ E. 360,000 being chiefly due to the raising of the tobacco duties and the prohibition of the native cultivation of tobacco. Of the duty collected on tobacco, £ E. 510,000 was estimated to be due to importations in anticipation of the increased tax on tobacco. The remission of taxation carried out in 1890 amounted to £ E. 53,000, the sheep and goat tax and the *octroi* duty on oil having been abolished. Telegraph rates were reduced 50 per cent., making them as low as anywhere in Europe, and the price of postal cards was lowered. The total amount of fiscal relief involved in the measures carried through in 1890 was estimated by Sir Evelyn Baring at £ E. 175,000. The Daira Sanieh deficit, which was £ E. 268,000 in 1886, was reduced in 1890 to £ E. 80,000, and the European managers expected in 1891 to be able to show a small surplus. The powers were asked for their consent to the application of £70,000 of the proceeds of *octroi* duties to the improvement of the sewers and sanitary arrangements of Cairo. An edict prohibiting direct imports of tobacco from Greece, France, and Turkey, with the object of checking smuggling, was objected to and recalled as being a violation of the capitulations. A further step in the conversion scheme was consummated by a contract made by the Rothschilds of London and Paris on March 5, 1891, for the conversion of the Ottoman 5-per-cent. loan of 1877 into 4-per-cent. bonds, to sixty years.

Military Forces.—The Egyptian army, commanded by about 60 English officers, has at

present a strength of about 13,000 men. The British army of occupation, under the command of Gen. Sir James Dornier, numbered 3,300 men in the beginning of 1890.

Agriculture.—The cultivated area in Egypt is 4,963,460 feddans, about 5,112,000 acres. Over three fifths of the population are engaged in agriculture. The winter crops are corn, wheat, and various other grains. Summer crops of rice, sugar, and cotton are cleared off in time for the winter sowing in October or November. Between July and October sorghum and all kinds of vegetables grow from the seed to maturity. In Upper Egypt the old system of submerging the land at high Nile is still practiced. In the delta, for the sake of the cotton and sugar crops, this has been to a large extent superseded by simple irrigation. Land thus treated is not renewed by the fertilizing alluvium held in suspension in the Nile at flood time, and gradually becomes alkaline and sterile. The canals traversing the delta in every direction are kept full at low Nile by means of the great dam, called the barrage, that has been completed by Sir Colin Scott-Moncrieff. The average yield of cotton is 325 pounds an acre. In 1890 the cotton crop covered 864,400 feddans. The number of date-palm trees in Upper and Lower Egypt is 3,452,674. The number of farm animals and cattle, including camels, is stated to be 1,668,860. In 1889 the area of the wheat crop was 971,678 feddans; of maize and durra, 1,406,073; of clover, 864,680; of beans, 546,705; of barley, 485,651; of lentils, 47,182; of rice, 115,988; of fenugreek, 146,823; of potatoes and other vegetable crops, 46,747; of sugar cane, 58,611; of vetch, 27,624; of melons, 30,101; of lupins, tobacco, peas, flax, henna, indigo, castor-oil plant, sesame, etc., 42,679. The area producing two crops was 922,000 feddans. In Lower Egypt four crops are obtained in three years and in Upper Egypt seven crops in six years. In 1889 the failure of the Nile threw 298,745 feddans out of cultivation. In 1890 the yield of cotton was nearly 400,000,000 pounds, that of sugar was 60,000 tons, exceeding by 20 per cent. the great crop of 1886, and all kinds of cereals yielded abundant crops. Having completed the barrage, the Government gave its attention to a scheme for irrigating Upper Egypt by means of storage reservoirs. The ambitious scheme of the late M. de la Motte for damming up the Nile and making it navigable up to Khartoum was pronounced impracticable by an English engineer, Mr. Willcocks, who went over the ground in 1891 and worked out a plan for a barrage at the first cataract that would submerge the ruins of Philoe. Others proposed dams between Wady Halfa and Assouan, ponding up the river in the narrow valley, reservoirs in the delta, or the restoration of the Raiyan basin of Lake Moeris. Finally, the Government decided to call an international commission of engineers to meet at Cairo and fix upon a site for a storage reservoir within the present limits of Egypt.

Commerce.—The exports of merchandise in 1889 had a total value of £ E. 11,953,200, as compared with £ E. 7,738,343 in 1888 and £ E. 8,137,054 in 1887; the value of the imports was £ E. 7,020,960, as compared with £ E. 10,418,213 in the preceding year and £ E. 10,876,417 in

1887. The shares of foreign countries in the external trade of 1889 is shown in the following table:

COUNTRIES.	Imports.	Exports.
Great Britain and British possessions in the Mediterranean	£ E. 2,648,517	£ E. 7,775,905
Turkey	1,422,950	320,508
France and Algeria	715,700	908,651
Austria-Hungary	657,687	986,689
Italy	216,501	816,477
Russia	358,863	847,876
India, China, etc.	501,161	15,576
Greece	97,066	81,592
America	58,014	22,983
Other countries	384,502	245,414
Total	£ E. 7,020,961	£ E. 11,953,196

The import of cotton goods in 1889 was valued at £ E. 1,310,820; of silk, linen, woolen, and other textile manufactures, £ E. 599,349; of coal, £ E. 440,983; of clothing and hosiery, £ E. 317,711; of timber, £ E. 288,540; of coffee, £ E. 254,202; of wine, beer, and spirits, £ E. 243,810; of tobacco and cigars, £ E. 272,042; of petroleum, £ E. 351,276; of machinery, £ E. 103,943; of iron and steel manufactures, £ E. 264,207; of indigo, £ E. 177,057; of fresh and preserved fruit, £ E. 176,265; of live animals, £ E. 71,724; of wheat and flour, £ E. 219,635; of rice, £ E. 128,624; of refined sugar, £ E. 40,282. The values exported of the principal commercial products of the country were as follow: Cotton, £ E. 8,547,716; cotton seed, £ E. 1,453,892; sugar, £ E. 406,795; beans, £ E. 326,836; wheat, £ E. 165,608; rice, £ E. 74,809; Indian corn, £ E. 2,669; hides and skins, £ E. 86,118; onions, £ E. 63,214; wool, £ E. 63,000; flour, £ E. 5,678; lentils, £ E. 10,762; gum arabic, £ E. 2,566. Of the petroleum in 1889 the United States furnished 27 per cent. and Russia 73.

Internal Communications.—The railroads of Egypt have a total length of 1,123 miles. The receipts in 1889 were £ E. 1,301,529 and the expenses £ E. 585,000. There were 4,378,453 passenger tickets sold, and about 150,000 tons of goods transported. The telegraph lines of the Government had in 1889 a total length of 3,640 miles, with 5,704 miles of wire. The number of messages in that year was 693,640. The postal traffic in 1888 comprised 5,529,000 domestic and 3,110,000 international letters, 473,000 post cards, and 4,446,000 newspapers, samples, etc.

Navigation.—The number of vessels entered at the port of Alexandria during 1889 was 2,224, tonnage 1,549,961; the number cleared was 2,216, tonnage 1,528,977. Of the number entered, 521, of 666,383 tons, were British; 142, of 261,565 tons, were French; 1,154, of 259,255 tons, were Ottoman; 67, of 99,910 tons, were Russian; 69, of 58,004 tons, were Italian; and the rest were principally Greek, Swedish and Norwegian, and Spanish. At other ports besides Alexandria 4,328 vessels were entered or cleared, of which 1,816, of 2,958,291 tons, were British.

The Suez Canal.—The canal is 87 miles long, including 21 miles of lakes. The share capital is 197,338,500 francs. The indebtedness is 233,367,603 francs, paying 3 and 5 per cent. interest. The net profits, in excess of 5 per cent. interest on the capital stock, in 1889 were 37,212,821 francs, of which, according to the

statutes, 71 per cent. was divided among the holders of the 394,677 shares, 2 per cent. went to the employees of the company, 2 per cent. to the managing directors, 10 per cent. to the 100,000 founders' shares, and 15 per cent. to the Egyptian Government. Of the 394,677 shares, 176,602 are held by the British Government, having been purchased from the Khedive Ismail, who had alienated the dividends up to 1894, till which date the Egyptian Government is obliged to pay 5 per cent. interest on their face value. During 1889 the number of vessels that passed through the canal was 3,425, of 9,605,745 tons. Of these, 2,611, of 7,478,369 tons, were British; 168, of 547,602 tons, were French; 194, of 463,225 tons, were German; 103, of 279,331 tons, were Italian; 146, of 359,722 tons, were Dutch; 54, of 168,707 tons, were Austro-Hungarian; 33, of 101,792 tons, were Spanish; 48, of 90,046 tons, were Norwegian; 23, of 57,254 tons, were Russian; 22, of 31,376 tons, were Turkish; 8, of 6,743 tons, were Egyptian; 3, of 5,680 tons, were Japanese; 5, of 3,805 tons, were American; and the rest were Belgian, Chinese, Portuguese, and Danish. The number of passengers who made the transit in 1889 was 180,594.

French Obstruction.—British direction and supervision of the Government have increased the national wealth, though the present prosperity has been achieved at the cost of the permanent impairment of the soil by cotton culture. The finances of the Government have been placed on so secure a foundation that Sir Evelyn Baring asserts in his report for 1891 that it would require a series of untoward events, the occurrence of which is in the highest degree improbable, to endanger the solvency of the Egyptian treasury. There was a surplus of £ E. 599,000 at the end of 1890, much more than was calculated on, and for 1891 a surplus of £ E. 500,000 was anticipated. The unified debt, which is mainly held in France, fell to 30 in consequence of the rebellion of Arabi Pasha, and since the British occupation has risen to within 4 per cent. of par. A part of the surplus revenue, viz., £ E. 312,000 a year, was obtained by the conversion of the privileged debt and the loan of 1888 and the Daira Sanieh and Domain mortgage bonds. France gave a conditional assent to the application of the economies thus resulting to the abolition of the *corvée* and to increasing the military and police forces. All the other treaty powers having consented, there was no *corvée* in Egypt in 1890, probably for the first time in the history of the country, all the cleaning, repairs, and extension of the canals and embankments having formerly been done by the forced and unpaid labor of the *fellaheen*, who were often called away when their crops needed their attention, and compelled to maintain themselves during the sixty days when the Government required their labor. In 1884 the army of laborers thus pressed into the service of the state was 85,000 in number. This method was so uneconomical that the English engineers were able to reduce the number gradually and still carry out the most important achievement of the British control—the improvement of the irrigation system, by which the water distribution has been increased, the area of cultivation enlarged, and the fluctuations of the Nile regulated to a considera-

ble extent. Without contesting the benefits of English rule as manifested in the re-establishment of Egyptian credit and the restoration and completion of the barrage, which was originally a French work, and, in a minor degree, in the removal of some oppressive taxes, the abolition of forced labor, the reorganization of the hospital and prison services, and the suppression of the slave trade and gradual abolition of slavery, the French Government has preserved an obstructive attitude in regard to the diversion of revenues for the accomplishment of these reforms, in order to remind Great Britain of the broken promises concerning the evacuation of Egypt, which Mr. Gladstone originally declared should take place in a few months. In spite of the material benefits that they have conferred on Egypt, the English have not been able to extirpate the historical influence of the French, and have made themselves hated in the country, because they have superseded the native rule, reduced the Khedive and his ministers to ciphers, and governed as over a conquered people. All direct demands for the evacuation of Egypt come from the country immediately interested, Turkey, which is the suzerain power, prompted by France, and sometimes supported by Russia. But, having Germany and the central powers for allies, the Tory Government of England has treated with indifference the inquiries of the Porte regarding the date of evacuation, making the condition, which is the restoration of order and the re-establishment of the authority of the Khedive, appear more and more remote and impossible. The authority of the Khedive has been purposely reduced to a nullity and the spread of anarchy and the increase of crime, which are the direct result of English rule, are now alleged as the chief grounds for the continued military occupation. The same grounds are advanced for the substitution of a European judicial system for Mohammedan law, which is the boldest step yet taken to perpetuate British dominion in the Nile valley. To this the French Government made strenuous objections, which it could only enforce to the extent of revoking its qualified consent to the application of the sum saved by the debt conversion, compelling the Government to hoard uselessly in the treasury £ E. 312,000 a year until the veto is withdrawn. This does not interfere with the abolition of the *corvée*, which the prosperous state of the finances permits of being continued independently. The decree imposing the same professional tax on Egyptians and Europeans was also rejected by France, on the ground that the text differed from the proposition originally submitted to the powers, but the objection was withdrawn when it was restored to the original form. Notwithstanding the extraordinary efforts that have been made to supplant the French language, more than three fourths of the 7,307 pupils in the subsidized schools, of which there are 47, choose to learn French in preference to English, and 20 Egyptians are sent to France to be educated to one that is trained in England.

Judicial Reform.—Justice Scott, of Bombay, was intrusted with the task of working out a plan for reforming judicial methods. He proposed, among other things, the appointment of a committee to superintend the native tribunals. As this involved the resignation into English

hands of the administration of justice, which is connected with the national religion and the only department of Government still remaining under native control, the proposition was resisted by the Prime Minister and by the Minister of Justice, who declared that the courts worked satisfactorily. The Cabinet, notwithstanding Mr. Scott's protests, referred the question to a commission, consisting partly of officials of the Department of Justice and of judges. Before the idea of subverting the laws of Islam was entertained, and before Justice Scott, who had practiced law in Egypt for ten years before entering on his judicial career in India, had been sent for, the British officials gave their attention to the crime of brigandage, which has grown more frequent in proportion to the extension of foreign interference. It is an Oriental method of revolt against the rule of the infidel, consisting of organized attacks by bodies of armed men upon houses and villages. Sir Evelyn Baring supported the suggestion that when murder was committed the leaders of the band and the organizers of the attack should be held equally guilty with the actual perpetrator of the deed. This proposition was revolting to Mohammedan ideas of justice; and when the Sheikh-el-Abassi, the chief expositor of the sacred law, was consulted by the Government, he submitted a counter-project, proposing for a brigand caught before committing robbery imprisonment until he gave sign of real reformation; for one who has been convicted of robbery, amputation of the right hand and left foot; and capital punishment accompanied with amputation or crucifixion, according to the decision of the Faculty of the Iman, for all who are guilty of murder, without the right of pardon, either by the Khedive or the heirs to the victim. These suggestions, making the Mohammedan law more certain and severe, were rejected as savoring of barbarism by the English advisers of the Government, although approved by the Legislative Council. Notwithstanding the opposition of the ministry and of the commission of representative Egyptians, Sir Evelyn Baring insisted on the nomination of a committee of three to supervise the working of the Egyptian courts, to consist of Justice Scott, with Judge Moriondo, an Italian, and the Egyptian Procureur-Général as his subordinate colleagues, on the addition of another English judge to the Court of Appeals, and on the appointment of Justice Scott to the position of judicial adviser to the Government, with the right to attend Cabinet meetings and to be heard on all questions connected with the administration of justice. When the Khedive yielded to English pressure, although he is said to have told the French diplomatic agent, the Comte d'Aubigny, that he would resist if France would support him with her army and fleet, the ministers offered their resignations, but were induced to remain. The French Government recalled M. d'Aubigny because he failed to prevent the appointment of an English judicial adviser, appointing the Marquis de Reverseaux in his place. In Constantinople the French minister lodged a protest with the Porte against the appointment. When the Judicial Committee, appointed Feb. 10, 1891, had been at work for a month collecting statistics showing that there

was a murder to every 12,000 inhabitants, more than double the annual average in England, and that out of 6,500 criminal cases brought to trial in the preceding year the public prosecuting officers were non-suited in 2,500 cases and failed to convict in half the remainder, a Cabinet meeting was called, to which Justice Scott was not summoned, nor was he to subsequent meetings. On March 31 the Khedive appointed his English secretary, Corbett Bey, and M. Bernard, a Belgian judge of the native courts, to be additional judges of the Court of Appeals. On April 6 Kitchener Pasha, Adjutant-General of the Egyptian army, was appointed to take temporary command of and to reorganize the police. Johnson Pasha was appointed Inspector-General in the Criminal Investigation Department, and Coles Pasha Inspector-General of police. Reforms in the tribunals and the police that were proposed by the Judicial Committee comprised a law for the organization of village police on the basis of regular salaries and punishment for neglect of duty; the introduction of the French law of vagrancy to punish the bands without visible means of subsistence that infested the provinces; an increased number of petty tribunals of summary jurisdiction; provisions to secure co-operation of the police and the tribunals for the detection and repression of crime and an improvement in the *personnel* of the bench and the police department; and, in general, greater energy and stringency in the criminal administration in every branch. Justice Scott proposed further to introduce the system of fining villages in which crime is prevalent. For civil cases he suggested that courts should be established in every district within easy access of the suitors.

Change of Ministers.—Riaz Pasha, on May 12, after a hopeless struggle against the judicial reforms, handed his resignation to the Khedive. In making up a new ministry the Khedive's foreign advisers found few statesmen of established reputation ready to countenance their innovations. Mustapha Pasha Fehmy, who succeeded Riaz as Prime Minister and Minister of the Interior, had the portfolios of the Interior and War and Marine in Nubar's Cabinet, and remained as Minister of War and Marine under Riaz till 1890. Rushdi Pasha, the new Minister of Finance, was Minister of Public Works, and temporarily had charge of the Ministry of Education under Nubar. Zeki Pasha, who was made Minister of Public Works, held that post for a brief period under Riaz, and was Minister of Finance under Nubar. The Ministry of Foreign Affairs was given to Tigrane Pasha, a Christian, who had been Under Secretary in that department when Nubar Pasha was Prime Minister, and after serving for a time as Under Secretary of the Interior under Riaz was restored to his old post. Yacub Pasha Artin, Under Secretary in the Department of Education, was promoted to be Director-General of Education. He is a Christian. The only minister of the Riaz Cabinet who was retained was Fakhri Pasha, the Minister of Justice, who had renounced his objections to judicial reform and was willing to place his experience at the disposition of Justice Scott, who was to be the real head of the ministry. Choukdhi Pasha, the new Minister of War, had previously held a subordinate post. The

new ministry agreed to the vagrancy law and a disarmament act for the suppression of brigandage. By a decree of the Court of Appeals all clubs, hotels, lodging-houses, and places of amusement were declared to be subject to police regulation and supervision. Europeans protested against this decision and against the new professional tax. The Legislative Council passed the acts asked for by Mr. Scott and Col. Kitchener, including measures giving the police more power for the investigation of crime, punishing vagrants and able-bodied beggars, regulating by license the carrying of fire-arms, enforcing work and discipline in prison, giving single judges jurisdiction in minor cases, and providing for speedy trials and the execution of sentences.

The Occupation of Tokar.—In 1888 a strategic advance was made beyond the boundary at Wady Halfa, and since then the Egyptian Government has held a part of the Dongola district. A second and more significant move toward the reconquest of the Soudan was carried out in February, 1891, from Suakin, the Egyptian base on the Red Sea coast. The Arab robbers and slave dealers, who profited by the state of anarchy that for some ulterior motive the English Government promoted in the eastern Soudan, and who were known collectively as Osman Digma's dervishes, although their relations to that chieftain were not known, and it was not even certain that he was still alive, recommenced their depredations on Jan. 27, 1891, by carrying off cattle from under the very walls of the forts at Suakin. The raiders were pursued and beaten, and the Governor-General took the opportunity to begin the advance that had been planned. On the next day a force of Soudanese infantry and Egyptian cavalry captured, after some resistance, the town of Handoub, the nearest base from which the rebels have been permitted for years to defy the Egyptians and plunder friendly natives. This place was occupied and fortified, and on Feb. 3 the Arab irregulars in the Egyptian service pushed on to Tamai. Re-enforcements were drawn from the Nile frontier, and Sir F. W. Grenfell went to Suakin to direct the operations against Tokar, which was the objective point of the advance, being a fertile and populous district in the midst of the desert, the possession of which has enabled the hostile Arabs to continue their harassing operations in this region. A force of 2,000 Egyptian and Soudanese troops was landed at Trinkitat. On Feb. 16 they began the march through the desert to El Teb, which was occupied without fighting. At daybreak on Feb. 19 they advanced on Tokar, where they first saw the enemy. The Egyptian troops pushed on quickly, and succeeded in gaining possession of the ruined Government buildings. The dervishes secured the shelter of some of the other houses, and endeavored to surround the Arab position. At one time Osman Naib, the dervish commander, almost succeeded in gaining the rear of the Egyptian line with his cavalry, while his infantry kept up a determined attack in front on the center. The better arms and training of the troops told heavily against the Arabs, who numbered 2,000 in the fighting line and as many more in reserve. When they were driven out of the houses with severe losses the fight was virtually won, and at noon, after a

stubborn battle lasting an hour and a half, they were completely defeated and put to flight. The dervishes had been disposed so as to give battle from the cover of a thick wood, but the Egyptians flanked them by the quick march on the buildings, and thus spoiled Osman Digma's plan of battle. In the repeated assaults on the Egyptian position 700 dervishes were killed, and many more were shot during the retreat. Nearly every emir fell on the field of battle. The Egyptians took the rebel camp, with tents, stores, arms, and banners, 4 guns and much ammunition in the arsenal at Tokar, and 2 more guns, with supplies of various kinds, at Afaft, a large town 4 miles beyond Tokar, which was deserted at the approach of the troops. The Egyptians, who were commanded by Col. Holled Smith, lost an English officer, Capt. H. L. Barrow, and 12 soldiers killed, and another Englishman, Capt. J. R. Beech, and 4 Egyptian officers wounded, with 42 Egyptian soldiers. The dervishes were all members of distant tribes, Bagguras or Djaalin. In the district were found abundant growing crops, *dhurra* or sorghum and cotton. The conquered district of Tokar was placed under an Egyptian civil governor and under the military command of Capt. Hackett Pain, who had a garrison of 1,500 men at Afaft, with detachments at El Teb, Fort Dolphin, and Trinkitat. The hostile tribes on the coast took advantage of a general amnesty proclaimed by Gen. Grenfell before leaving Suakin on March 8, except 300 persons who were arrested and kept as prisoners or deported to Lower Egypt. The Soudan contains 14,125,000 feddans of cultivable land, of which only 212,418 feddans were cultivated in 1887. The most fertile part is the region of the Atbara and the Nile tributaries of Abyssinia and the affluents of the Blue Nile, where there are three months of rainfall, a soil containing the same constituents that enrich the delta, and a climate extremely favorable to the ripening of wheat and other cereals and of cotton, which is indigenous to the country and comes to maturity when there is no rain nor dew. The recapture of Tokar is supposed to be intended as a counterstroke to an Italian occupation of Kassala, confirming the Egyptian claim and the English reversion of the whole of the eastern Soudan. The power of the Khalifa or Mahdi, who has his seat at Omdurman, the political and spiritual chief of Osman Digma and his hordes in the western Soudan and the equatorial regions, is declining before the purely religious influence of the son or sons of Sidi Mohammed ben Ali el Snussi, whose residence is in the convent of Djarabub, in the western part of the oasis of Jupiter Ammon. The heir or heirs to the older Mahdi or final Mohammedan prophet can not come into actual conflict with the successor of the Don-gola Mahdi, because the Snussi are a religious order possessing small material means and no armed forces. Their teachings had penetrated all the oases west of Egypt, the whole region south of Tripoli, and the kingdoms of northern Central Africa as far as the Senegal some years before Abdallah ben Mohammed ben Achmed proclaimed himself Mahdi at Dongola in 1883, and in Wadai, Darfur, and Kordofan the followers of Sidi Mohammed Snussi have counteracted and effectually excluded the power of the Don-

gola Mahdi. In Algeria and Morocco the Snussi have not been able to gain a firm foothold, because in those countries the powerful order of Muley Thaib is established, the chief of which, Sidi el Sladj Abd es Ssalm, pretends to be the most direct descendant of the Prophet. When the Mahdists were driven out of Tokar the Italians were notified at Massowah, because Osman Digma was reported to have retired to Kassala. Afterward he was heard from in Omdurman, where he took counsel with the Mahdi.

EVANGELICAL ASSOCIATION. The following is a summary of the statistics of this Church as they were published in September, 1891: Number of itinerant preachers, 1,227; of local preachers, 619; of members, 150,234; of Sunday schools, 2,535, with 28,613 officers and teachers and 177,639 pupils; of catechumen classes, 761, with 9,514 pupils; baptized during the year, 2,390 adults and 9,833 children; 2,062½ churches, having a probable value of \$5,168,210; and 699½ parsonages, valued at \$873,058. Amounts of benevolent contributions: For conference claimants, \$8,825; for the Missionary Society, \$134,443; for the Sunday-school and Tract Union, \$2,445; for the Orphan Home, \$533. The controversy in this association, of which an account was given in the "Annual Cyclopædia" for 1890, has continued, and has resulted in the meeting of two bodies, each claiming to be the General Conference, and in the division of the Church. A General Conference representing the majority party (recognizing Bishops Esher and Bowman) met at Indianapolis, Ind., Oct. 1. It was supported by a large majority of the annual conferences as well as of the church members, and was recognized by all the boards and officers of the Church. The place of meeting was designated by a committee which the previous General Conference, failing to name the place, although it appointed the time for the meeting, had authorized to select the place. All the general officers of the Church but one (Bishop Dubs) and representatives of all the annual conferences but two were present. The conference was opened with an address in German by Bishop Esher. A temporary chairman was appointed preliminary to making the usual inquiry into the character of the bishops. The trial and suspension of Bishop Dubs were reported. Bishops Bowman and Esher made statements respecting certain disorders that had occurred at conference meetings growing out of the divisions in the Church and the charges against them, and their cases were referred to a committee for examination. This committee reported that the preliminary examination by three elders, on which they had been acquitted, and which they held, rendered nugatory their subsequent trial and condemnation, constituted a legal bar to further proceedings; and therefore, that the subsequent trial and suspension of those bishops were invalid. The report was unanimously adopted. The trial of Bishop Dubs was found by the committee appointed to examine the record to have been regular and the charges to have been sustained; and the conference, upon its recommendation, declared him deposed from his office as bishop and preacher and expelled from the Church. Bishops Esher and Bowman were re-elected bishops for another term of four years,

and the Rev. S. C. Breyfogel and the Rev. W. Horn were elected additional bishops. An appellate court was constituted, to be composed of fifteen members chosen by the general conference from thirty candidates nominated by the bishops. An order was adopted condemning the formation of a general conference by the minority party as a violation of the letter and spirit of the laws and usages of the Church and a grave offense against it; and declaring that "all persons who have heretofore actively supported, and now are actively supporting or participating in, such disorganizing movements have thereby thrown off their allegiance to our Church and have disenthralled themselves to any of the privileges of membership therein until, upon reformation, they have been duly readmitted"; and "that no preacher so acting heretofore is qualified to vote at any annual conference or to officiate as a preacher without being received anew after reformation and accepted in due form by some duly constituted annual conference of the Church." The Board of Bishops was given power, by an amendment to the "Discipline," to decide by a majority of votes all disputed questions of Church law, their interpretations to be binding upon all preachers and members of the Church. Presiding elders were authorized and directed during the interims of General Conferences to take steps to prevent ministers of the minority party from performing any official actions in any of the churches under their jurisdiction. An order was passed under which ministers and members of churches who adhere to the minority organization shall be regarded as having by that fact withdrawn from the Church, and their names shall be stricken from the roll. Steps were taken looking to the introduction of lay delegation in the General and annual conferences. The mission in Japan was constituted into an annual conference. A report on the proposition to submit the difficulties in the Church to arbitration was adopted unanimously, although the subject had not been formally presented to the Conference. It declared that there existed neither occasion nor ground for such a compromise; that if a wrong had been committed on the part of the majority, it only had to be removed to have it corrected according to the Word of God, "for to compromise between right and wrong would be treason and sin; that it would be a sign of weakness calling in question the right of assistance for the Church with its excellent discipline to submit the adjustment of its affairs to an outside board of arbitrators; that if each member was faithful to his obligations as such, and each preacher obeyed his ordination vows, all occasion for compromise would at once cease; and that the behavior of the minority was such that their proposals of compromise were a "sacriligious mockery," bore "the stamp of hypocrisy and deceit," and deserved no further attention.

General Conference of the Minority.—The General Conference of the minority party, which sustains Bishop Dubs, met in Philadelphia, Oct. 1. Its claim to legal constitution was based on a clause in the Discipline directing that when the General Conference and the bishops fail to appoint the time and place of the next session, the oldest annual conference shall do so. Holding that in view of this clause the General

Conference had no right to delegate the appointment to a commission, the East Pennsylvania Conference, as the oldest, named Philadelphia as the place of meeting, and the designation of Indianapolis by a committee of the former General Conference was regarded as invalid. There being, by reason of the suspension of Bishop Dubs, no bishops present authorized to act, the Rev. C. S. Haman was elected chairman. No delegates were present from seventeen of the annual conferences and none of the *ex officio* members of the conference. Bishop Dubs was invited to present the case of his trial and suspension before the General Conference for review. The cases of Bishops Bowman and Esher were also reviewed, but in their absence. The proceedings in the trial of Bishops Esher and Bowman were approved, and they were declared deposed and expelled, while the verdict in the case of Bishop Dubs was reversed, and he was reinstated in his episcopal and ministerial relations. Bishop Dubs was elected for another term, and the Rev. C. S. Haman and the Rev. W. M. Stanford were chosen additional bishops. Persons were chosen to fill all the official positions of the church which were under the control of the majority party, including the editorships of the official papers, their salaries to begin when they enter upon the discharge of their duties. The report on the state of the Church embodied a review of the transactions that had led to the division as viewed from the side of the minority party, and action was taken upon all the questions at issue with a view to establishing the lawfulness of the position of the minority. A measure of lay delegation was adopted, to be recommended to the annual conferences. *Ex officio* membership in the General Conference was abolished.

Laymen's Conventions.—Laymen's conventions met in connection with both general conferences. The Hon. W. Grote, of Elgin, Ill. was chosen president of the convention of the majority party at Indianapolis, and Mr. Isaiah Bower, of Pennsylvania, of that of the minority party in Philadelphia. Fraternal greetings and expressions of a desire for peace were exchanged by telegraph between the two conventions. The first message was sent by the convention of the minority to that of the majority, and embodied a unanimous request that the laymen of the majority would join those of the minority "in recommending to our ministerial brethren an adjustment of our present difficulties by arbitration by disinterested Christian brethren of other denominations, and save our beloved association from total disruption." The majority convention replied: "Dear brethren, we are yours for peace and unity, and shall be glad to give our influence to any measure looking to that end (the settlement of difficulties) which is in accordance with our Discipline and the Word of God." The minority convention responded proposing the names of eleven men of eminence in their several denominations and of recognized positions before the public as arbitrators. To this the president of the convention at Indianapolis answered that the convention had adjourned and many of the delegates had gone home. He had talked with some privately, and the opinion was that the proposition of the minority convention was not in accordance with the Discipline.

EVENTS OF 1891. The year opened with the Indians of the Northwest in armed revolt, but they all surrendered before the middle of January. The most considerable war of the year was that in Chili, which began on Jan. 7 and ended in August with the complete triumph of the popular party. The Government of the United States was obliged to take a firm stand with Chili because of an attack upon American sailors in Valparaiso. England by force of arms subdued a formidable revolt in her Indian possessions, and was very near hostilities with Portugal about certain conflicting claims in Africa. Apart from these the actual and possible wars of Christendom have been immaterial. Diplomatic negotiations of considerable moment have resulted in reciprocity treaties of great commercial importance between the United States and many foreign countries, and the threatened difficulties with England regarding the Bering Sea have been happily adjusted. The list that follows embraces only such occurrences as are held to be of somewhat general interest. More detailed accounts will be found under the proper headings, alphabetically arranged, in the body of the book.

January 1. Baltimore, Md.: Roman Catholic Memorial Church of Corpus Christi consecrated by Cardinal Gibbons. Pittsburg, Pa.: Strike of 500 Hungarian steel workers, 3,000 men out of work in consequence. Africa: Germany takes formal possession of her new territory.

2. Washington: A. L. Drummond, of New York, appointed chief of the Treasury Secret Service.

4. Ireland: The Viceroy issues a declaration regarding a famine in the western counties.

5. Fight with Indians near Pine Ridge agency. Supreme Court: Henry B. Brown, of Michigan, takes the oath as Associate Justice. Scotland: Fight between railway strikers and police at Motherwell.

6. Scotland: Continued encounters between strikers and the authorities at Glasgow.

7. Gen. Miles's forces surround the hostile Indians in Pine Ridge reservation. Secretary Tracy relieves Commander Reiter of his ship on account of the Barundia affair. Meeting of International Monetary Conference in Washington. Chili: Balmaceda assumes the dictatorship and part of the navy revolts.

8. Lieut. Casey killed by Indians at Pine Ridge.

9. Rochester, N. Y.: The great shoe strike declared off.

10. France: The Irish Nationalist leaders hold a conference at Boulogne. France: The new Government loan promptly taken.

11. Hostile Indians, 3,000 strong, approach Pine Ridge with a view to surrender. Mahoning Valley, Ohio: Sixteen blast furnaces shut down, 10,000 men out of work; object, to force railroads and coke companies to reduce prices.

12. Canada brings suit before the United States Supreme Court *in re* seizures of vessels in Bering Sea. San Francisco: St. Mary's Cathedral dedicated.

31. Washington: A reciprocity treaty signed with Costa Rica; presentation of the new French Minister, M. Patenotre. Texas: A raid has occurred of disaffected Mexican troops under Garza into United States territory, where they are strong enough for the time to defy the small border garrisons of regulars.

F

FARMERS' CONGRESS. The tenth annual session was held in Council Bluffs, Iowa, in 1890. Among the resolutions passed was the following, which settled the much-discussed question of the national floral emblem:

Resolved, By the National Farmers' Congress of the United States of America, that we adopt and declare the Golden Rod as the national floral emblem of the United States of America, and the same shall be so considered and recognized on and after the passage of this resolution, and that the secretary of the Congress be instructed to forward a copy of the same to the President of the Floral Association at Athens, Ala., to the President of the National Floral Association, and to the leading florists of the United States.

The eleventh annual session met at Sedalia, Mo., Nov. 10 to 12, 1891, and was welcomed by an address by Hon. D. R. Francis, Governor of the State; Hon. Charles Carroll, acting mayor of the city; and Hon. Frank D. Meyer, President of the City Commercial Club; to which responses were made by Hon. A. W. Smith, of Kansas; Col. Daniel Needham, of Boston, Mass., President of the New England Agricultural Association; and Hon. Benjamin F. Clayton, secretary of the Congress. Moore's large opera house was filled throughout the entire session. Many able speeches were made touching the productive and industrial interest of the country. Among the notable were those of Hon. William Freeman, of Maine; Hon. W. Pope Yeaman, of Missouri; Morris Mohler, Secretary of Kansas State Agricultural Fair; and Hon. J. M. Stahl, editor of the Quincy, Ill., "Call." The running debates were freely participated in by Congressman Foley, of Missouri, Joshua Wheeler, of Kansas, Hon. Richard Dalton, of Missouri, Senator H. L. Burkett, of Mississippi, and others. At the biennial election of officers, Hon. A. W. Smith, of Kansas, was made President; D. G. Purse, of Savannah, Ga., Vice-President; Hon. William Freeman, of Maine, Treasurer; Hon. Benjamin F. Clayton, of Iowa, Secretary; Harry C. Brown, of Atlanta, Ga., First Assistant, and J. M. Kelley, of Iowa, Second Assistant Secretary. The following resolutions were adopted:

We, the delegates of the National Farmers' Congress of the United States, appointed and commissioned by the governors of the several States in this the eleventh annual session at Sedalia, Mo., on this the 12th day of Nov., 1891, do declare the following

questions touching the agricultural and productive interest of the United States to be such as demand attention at the hands of the Congress of the United States, and we deem it to the best interest of the whole people that such laws will be enacted as will carry into effect those principles.

That the prosperity of the people depends to a great extent upon the uniformity and equality of the laws, both State and national, and that the laws should be so framed that no class or set of men should derive advantages and benefits at the expense of or to the detriment of the masses of the people.

That the President of the United States should be elected by the direct and popular vote of the people, and that United States Senators should be elected by the direct vote of the people of the several States.

That we demand that national taxation be limited to the wants of the Government economically and honestly administered.

That we respectfully ask of the Congress of the United States the enactment of such laws as will prevent the manufacture and sale of all compounds or substitutes as lard that may come in competition with pure lard produced from the farm, unless the same be distinctly marked and branded as such, showing the ingredients of which such compounds or substitutes are composed.

That we demand of our United States Congress the passage of such laws as will effectually prevent the buying and selling of agricultural and mechanical products with the sole view of settling the difference of price between the market value of such products at the time of purchase and the time of the contract delivery.

Certain associations known as live-stock exchanges have practically taken possession of the live-stock market of Chicago, St. Louis, Kansas City, and Omaha, and such associations by their rules prohibit organized producers of live stock from co-operating to market their stock through their own agent and deriving the profits of the business, largely diminishing the enormous commission charges. Therefore, it is to the interest of the business of selling live stock and for the benefit of the producer we earnestly recommend the legislatures of the States in which said live-stock associations are located to enact such laws as will effectually prohibit live-stock associations or other combinations from adopting rules which will prevent free competition in the sale of live stock.

That the National Farmers' Congress in session at Sedalia, Mo., does fully acquiesce in and indorse this great undertaking by the Board of Directors, and by the United States Commission of the World's Columbian Exposition as appointed by the President of the United States, in their united labors to bring the great undertaking to a full fruition.

That the National Farmers' Congress, composed of

representatives from the several congressional districts of the United States, is in full sympathy with this great undertaking to bring together the industrial enterprises of the civilized world in one great exposition, where may be shown the progress made in science, the arts, manufactures, literature, education, inventions, and agriculture from the earliest times, and especially since the last great Paris Exposition.

That this Congress is heartily in favor of the systematic and thorough improvement of our means of water transportation by the National Government, and we urge upon the Congress of the United States the importance of liberal appropriations for this purpose.

That while the Farmers' Congress does not approve of lavish expenditures of public money by the Government, it recognizes the importance of making the arid lands of the Western States and Territories available for settlement by means of irrigation from artesian wells, storage reservoirs, and canals, and we would therefore request Congress to make sufficient appropriations for making surveys and experiments that will demonstrate the practicability and probable cost of the different systems in the regions needing irrigation.

Believing that the future introduction abroad of corn product as human food will be of great benefit to the farmers of the United States in the increased demand for that important cereal, and while we congratulate the Secretary of Agriculture of the United States on his course in this matter, we urge that such additional help be appointed as will make the work more extended and complete, and we respectfully ask that the Congress of the United States make such additional appropriations as will thoroughly demonstrate the practicability of the experiment.

That we believe that the interest of the whole people can be the better subserved by the extension of free mail delivery in the rural districts than by the reduction of letter postage; therefore, we urge upon our Senators and Representatives in Congress the further extension of this branch of the mail service.

That we approve and commend the principles included in what is known as reciprocity.

That Hon. J. M. Rusk, Secretary of Agriculture of the United States, is entitled to and has the approval and thanks of this the eleventh annual session of the National Farmers' Congress of the United States in convention assembled at Sedalia, Mo., for the faithful, courteous, and diligent discharge of the duties of that office in behalf of the agricultural interests of the country.

FINANCIAL REVIEW OF 1891. The political, financial, and commercial history of the year presents some very unique features. Nearly all the chief states of South America were affected by revolutionary movements. A revolt of the Brazilians against the dictatorial policy of President Fonseca resulted in his resignation and the installation of Vice-President Peixoto as his successor. An uprising of the Chilians, instigated by the Congressional party, ended in the overthrow of President Balmaceda. Toward the close of the year a rebellion in China was suppressed only by the most vigorous measures on the part of the Government. There were at intervals troubles of a serious character in Spain and Portugal. The declaration by Emperor William of Germany of the *dreibund*, or union for offensive and defensive purposes between that country, Austria, and Italy, very naturally excited all Europe and induced Russia to make an alliance with France. The political tension among the European nations was so great that the visit of the Emperor William to England, the rendezvous of the French fleet in the harbor

of Cronstadt, and the failure of the Czar to meet the German Emperor, each in turn gave rise to grave apprehensions concerning the peace of Europe; and Berlin and Vienna were on one occasion panic stricken by an exaggerated report of a remark to a Polish deputy by the Emperor of Austria in which he referred to the strained relations with Russia. The landing of a company of British sailors on the island of Mitylene, in the Aegean Sea, and reports that the fortification at Sigri had been occupied, gave a shock to every European center until the incident was officially explained; but it served to call attention to the importance of this island as a strategic point, commanding, to a certain extent, the entrance to the Dardanelles, and it also elicited from the Porte a statement of his reasons for permitting vessels of the volunteer service of Russia to pass into the Black Sea. The concentration of Russian troops on the German and Austrian frontiers tended to keep the military authorities of those countries on the alert, and furnished material for alarming reports at intervals. The expulsion of Jews from Russia, accompanied, as it was, by relentless persecutions, excited the sympathy of the civilized world, and induced the leading Jewish bankers of Europe to retaliate by refusing to assist Russia in her financial negotiations. Early in April the Rothschilds, who had agreed to float a new loan for that country, notified the Russian Finance Minister that such was the feeling of the great banking houses of Europe against Russia, on account of her persecution of the Jews, that the loan could not be satisfactorily placed, and therefore they would be compelled to cancel their contract. Russia had at that time on deposit in London, Paris, Berlin, and Frankfort about £22,500,000, nearly half of which was subject to withdrawal on short notice. This fact and an intimation that a portion of the balance would be required induced the leading bankers of Europe to prepare to meet the demand, and accordingly gold was gathered from all possible sources. By directly or indirectly paying a premium therefor the banks of England, France, and Germany obtained large supplies from the United States, and the movement continued almost uninterruptedly until August. The withdrawals of gold by Russia from the European centers were comparatively small, and part of the metal was returned to London in July. There was a French loan for 868,750,000 francs issued in January. In February the German Government successfully placed a loan for 400,000,000 marks, and in the same month the Bank of England returned to the Bank of France the £3,000,000 borrowed during the Baring crisis in November, 1890. On March 6 the London market was disturbed by the financial panic in Buenos Ayres, and on the 12th there was a semi-panic at Paris due to the embarrassments of the Société des Dépôts et Comptes Courants, but the Bank of France and a syndicate of bankers promptly came to the assistance of the Société. On the 27th the Bank of Leghorn and a large commercial house in that city suspended, but further trouble was averted. In May the prospect of the withdrawal by Russia of part of her balance caused a financial crisis in Paris, during which Russian's fell sharply. On July 18 the

failure of the London Bank of the Rio Plate caused a flurry which, however, soon subsided. On Aug. 28 the news of a decisive battle at Valparaiso in which the revolutionists were successful, thus ending the war in Chili, imparted a firmer tone to all South American securities in London. On Sept. 13 the Mitylene incident above referred to temporarily affected the London, Paris, and Berlin bourses. In October a French syndicate undertook to place a Russian loan for 500,000,000 francs. It met with opposition from Berlin and London, and it was only partially successful, the syndicate taking the greater portion of it, thereby subsequently becoming embarrassed, and in the following month a decline in Russian securities, which it was feared would involve the syndicate in heavy losses, caused a very uneasy feeling in Paris. Toward the end of the month it was announced that the Russian Finance Minister had agreed to let about 200,000,000 francs of the loan remain until a more convenient season, and this relieved the situation. Commercial affairs in Great Britain and on the Continent were more or less disturbed during the year by the operation of the new American tariff. The prohibition by Russia of exports of wheat and rye excited the grain markets abroad and stimulated the movements of cereal products from America to Europe. There was a general deficiency of grain crops on the European Continent and almost an unprecedented yield of wheat, corn, and oats in this country, making our economical conditions surpassingly excellent. The export of breadstuffs to Europe during the last half of the year were enormous, although checked at intervals by speculation, by a scarcity of cars to move

the grain from the West to the seaboard, and by an insufficient supply of vessels for transportation of breadstuffs to Europe. Our cotton crop was large, and as there was an unusually heavy yield in the previous season the supply was in excess of the demand, and in the South Atlantic States there were some sections where the price was so low as not to remunerate the producers.

The following tabular survey of the economical conditions and results of 1891, contrasted with those of the preceding year, is from the Commercial and Financial Chronicle:

ECONOMICAL CONDITIONS AND RESULTS.	1890.	1891.
Coin and currency in the United States, Dec. 31.....	\$1,712,220,917	\$1,748,684,894
Bank clearings in the United States	\$60,829,090,000	\$56,636,886,237
Business failures	\$189,856,964	\$189,868,628
Imports of merchandise (year)	823,397,726	828,312,646
Exports of merchandise (year)	857,502,548	970,06,282
Gross earnings 148 roads (year)	528,948,718	562,098,962
Railroad construction, miles	5,700	4,100
Wheat raised, bushels	899,262,000	611,780,000
Corn raised, bushels	1,489,970,000	2,060,154,000
Cotton raised, bales	8,655,518	8,000,000
Pig iron produced (tons of 2,000 pounds)	10,307,028	9,273,455
Steel rails, Bessemer (tons of 2,000 pounds)	2,091,978	1,866,259
Anthracite coal (tons of 2,240 pounds)	35,855,174	40,448,886
Petroleum (runs) production, barrels	29,130,751	34,128,951
Immigration into the United States (year)	491,026	590,666

The prices of leading staples on or about the 1st of January, 1892, compared with prices at the same date in 1891 and 1890 were as follow:

STAPLES.	1890.	1891.	1892.
Cotton, middling uplands, per pound.....	10 $\frac{1}{2}$	9 $\frac{5}{8}$	7 $\frac{3}{8}$
Standard sheetings, per square yard.....	7 $\frac{1}{2}$	7 $\frac{1}{2}$	6 $\frac{1}{2}$
Wool, Ohio XX, per pound.....	85 $\frac{1}{2}$ to 84	88 to 84	30 to 31
Iron, American pig No. 1, per ton.....	\$19 50 to \$20 50	\$16 50 to \$17 50	\$16 to \$17
Steel rails at mills, per ton.....	\$35 00	\$25 50	\$30 00
Wheat, No. 2 red winter, per bushel.....	85 $\frac{1}{2}$	\$1 03 $\frac{1}{2}$	\$1 04 $\frac{1}{2}$
Corn, Western mixed No. 2, per bushel.....	39 $\frac{1}{2}$	59	52 $\frac{1}{2}$
Pork, mess, per barrel.....	\$10 25	\$11 50 to \$12	\$10 00

The Crops.—The cereal crops of the United States were almost unprecedented as to quantity and generally of excellent quality in 1891. Winter wheat had a good start; it grew rapidly in the spring; it was harvested under fair conditions and promptly marketed. Spring wheat, especially in the Northwest, yielded abundantly, and only in a few sections was it visited by frost, which, however, did little injury. Corn grew rapidly, and it matured under unusually favorable conditions, the weather during the latter part of September and early in October being warm and generally dry. The heavy yield of the crops was not accompanied by low prices. The European demand for wheat was urgent early in the season, owing to the deficiency in the foreign crops and also to the prohibition of the export of rye and wheat from Russia, and good prices were well maintained, stimulating the marketing of winter and spring wheat. A partial corner in old corn in September carried the price to figures which induced farmers to sell all that they could spare, and the old crop was pretty

generally disposed of before the new crop became available. Then there was a fair export movement of it to Europe, where it was used as a substitute for other grains. Producers of cotton were unable in some sections, particularly in the South Atlantic States, to realize the cost of growing. The large crop of 1890 depressed prices, and the necessities of the farmers compelled them to force the crop of 1891 upon the market, and this caused a very serious fall in prices, and late in December middling uplands sold at 7 $\frac{1}{2}$ cents per pound. Taking prices in New York Jan. 1, if the whole of the crops could have been laid down at that point on that date, the values would have been as in the table at the top of next page.

Manufacturing Industries.—Manufacturing and mercantile interests did not experience the full benefits from the excellent yield of the crops. General trade was dull, goods sold at very low prices, and the whole South, as well as all cotton interests, suffered in the fall from the decline in the staple, and print cloths, early in

ESTIMATES OF CROP VALUES.

Total values.....			\$2,054,505,615			\$1,707,922,794

December, touched 2½ cents per yard, the lowest price ever known. Later they rallied to 3½, with cotton at 7½ cents per pound. The iron trade began to improve early in the summer. A large number of furnaces went into blast toward the end of the year, and the output was increased by the good demand from railroads and for structural work. Cotton manufacturing statistics for the year ending Aug. 31 showed a consumption of 2,530,916 bales, against 2,349,478 for the previous year. The production of print cloths at Fall River in the calendar year was 9,985,000 pieces, against 9,937,000 in 1890, and the stock at the end of the year was 90,000 pieces, against 588,000 at the end of 1890. The dividends paid by 33 manufacturing companies in Fall River with a capital of \$18,658,000 averaged 4.81 per cent. in 1891, against 7.62 in 1890. The trade in wool and woolen goods was fair, and among the favorable features was the discontinuance of the heavy auction sales of flannels in New York. The stock of foreign and domestic wool on the Boston market at the end of 1891 was 32,942,000 pounds, against 27,798,500 Dec. 31, 1890. Anthracite-coal production was in excess of any previous year, and the total shipped to market was 40,448,336 tons, against 35,855,174 in 1890. Business failures included 25 banks with a capital of \$3,662,000, of which 13 banks in Kansas and Nebraska, having a total capital of \$1,137,000, failed in consequence of short crops in 1890. The number of mercantile failures for the year in the United States was 12,273, with liabilities of \$189,863,638, against 10,907 in 1890, with liabilities of \$189,856,964.

Railroads.—Although the tonnage was small from the cereal crops of the previous year and the iron movement decreased, railroad gross earnings were well maintained during the first half of 1891, the natural expansion of business and increase in cotton freights aiding materially, but the Granger roads showed small profits. With the movement of the wheat crop the situation was completely changed. The grain-car

rying roads were taxed to their utmost capacity in the fall, and late in November and early in December there was a serious blockade at Chicago of east-bound grain-laden cars, and the movement did not become free until the end of the year. Then the tonnage destined for the seaboard from Chicago and Buffalo was unprecedentedly large. The increase in railroad mileage was only moderate. There was a light demand until late in the year for new railroad bonds, and even old-established companies had difficulty in placing additional issues, and consequently new construction was deferred or confined to necessary improvements. The aggressive action of legislatures and railroad commissioners in some of the States in reducing freight rates had the effect of checking railroad building. In Iowa only 28 miles of new rail were laid, and in Texas only 155 miles. The total for the entire country was 4,100 miles, against 5,700 in 1890. Among the consolidations for the year were the Rome, Watertown and Ogdensburg with the New York Central system. The Beech Creek road was absorbed by the New York Central. The Pittsburg and Western passed under the control of the Baltimore and Ohio. The Suburban Rapid Transit system became part of the Manhattan Elevated.

The table below shows gross and net earnings of the principal trunk lines.

The Money Market.—The most important feature in the market for money was the drain of about \$70,000,000 gold by exports to Europe during the first seven months, a little over \$26,000,000 being shipped in May. The loss of this gold was offset to some extent by the issue of Treasury notes against purchases of 4,500,000 ounces per month of silver bullion. Mainly for this reason the rate for money on call was not greatly deranged, and indeed it did not rule above 6 per cent., except early in January during this period. Another reason why the market was not disturbed was that, except for a very brief period, when the Free Silver Coinage bill was under consideration in Congress, there seemed to be no

fear that the finances of the country would be affected by a redundancy of silver currency. The drain of gold to Europe and of money to the interior for crop purposes brought about a reduction in the specie holdings of the New York banks from \$90,268,900 at the end of January to \$58,769,000 by the first week in September, but the legal-tender notes were increased from \$26,571,700 on Jan. 3 to \$54,145,800 by Aug. 1. Subsequently the volume of these notes was reduced, by shipments to the interior, to \$29,238,700 by Nov. 7, but at the same time the specie in the banks was increased, through imports from Europe and Treasury disbursements for matured $4\frac{1}{2}$ -per-cent. bonds, from \$58,769,000 on Sept. 5 to \$96,392,500 on Dec. 26. The surplus reserve of the New York banks was at the maximum, \$24,089,775, Jan. 24. There was a fall to \$4,319,850 by April 18, a recovery to \$19,710,325 by July 25, and a reduction to the minimum of the year, \$3,102,750, Oct. 3, after which there was a gradual improvement to \$19,480,025 by Dec. 26. Money on call loaned at 9 per cent. early in January, but soon after there was a gradual fall, influenced by the accumulation of funds in the banks, and the rate fell to $1\frac{1}{2}$ per cent. by the close. Time contracts for thirty to ninety days declined from 6 per cent. at the beginning, to $4\frac{1}{2}$ by the end of the month, and commercial paper was 5 to $5\frac{1}{2}$ per cent. for prime indorsed bills receivable. Money was easy early in February, but more active toward the close by reason of a reduction in the bank reserves, and also because of the movement of gold to Europe, which then began; but the rate on call advanced only from 1 to 4 per cent. and thirty to sixty day contracts on time were made at 4 to $4\frac{1}{2}$ per cent. One feature during the month was the suspension of the American Loan and Trust Company, due to a run upon the institution caused by disclosures of bad management; but this had no effect upon the money market. In March the bank reserves were still further reduced by gold exports to Europe, but the supply of bankers' balances was ample for all requirements, and the range for the month was from 1 to 4 per cent. Time loans for thirty to ninety days were made at 4 to $4\frac{1}{2}$ per cent., and short commercial paper sold at $5\frac{1}{2}$. The Washington National Bank suspended during the month, in consequence of imprudent loans made by the president. In April over \$13,000,000 gold was shipped to Europe, and, although the supply of money on call was generally abundant, there were occasions when belated borrowers were required to pay 6 per cent. The lowest for the month was $1\frac{1}{2}$ per cent. Time contracts were freely offered at 4 to $4\frac{1}{2}$ per cent. for thirty to ninety days, and prime short-date commercial paper sold at 5 to $5\frac{1}{2}$ per cent. On the 25th the Treasury Department ordered that further redemptions of $4\frac{1}{2}$ -per-cent., under the circular in force since the previous year, should cease. In May loans on call were made at 6 and at $2\frac{1}{2}$ per cent., and although the movement of gold to Europe was large, almost \$26,000,000 being sent forward, the bankers seemed to be well supplied with unused balances, while the foreign houses who were not shipping gold were liberal lenders. There was a good demand for time contracts, which were quoted at 5 to $5\frac{1}{2}$ per cent. for thirty to ninety days, and at $5\frac{1}{2}$ to 6 per cent.

for four to six months, and in some instances lenders stipulated for repayment in gold. In June the range for money on call was 5 to 1 per cent. Short-time loans were offered at 4 to $4\frac{1}{2}$ per cent., but they were difficult to place, and the demand was chiefly for periods from four to six months, but lenders were unwilling to make engagements for these dates. Commercial paper was quiet and the demand was small because of failures of leather houses in Boston and also for the reason that the disclosures regarding the affairs of the Keystone Bank in Philadelphia kept buyers from that city out of the market. Rates for short double-name paper were $5\frac{1}{2}$ to $5\frac{1}{2}$ per cent. The gold shipments fell off to about \$16,000,000 during this month. In July there was a liberal offering of money on call, and those who could not lend on time on satisfactory terms employed their funds from day to day. The range for the month was 4 to 1 per cent. Time contracts were offered at 4 to $4\frac{1}{2}$ per cent. for thirty to ninety days. Commercial paper was in good supply, but the city banks were entirely out of the market as buyers. Early in August money on call loaned at $1\frac{1}{2}$ to 4 per cent., but later the increased business on the Stock Exchange led to a better demand, and rates rose to 6 per cent. The offer of the Secretary of the Treasury to extend the $4\frac{1}{2}$ -per-cent. at 2 per cent. resulted in the presentation of \$22,621,650, leaving nearly \$27,000,000 to be redeemed at maturity on Sept. 2. Time contracts were quoted at 4 per cent. for thirty to ninety days and commercial paper was dull at $5\frac{1}{2}$ to 6 per cent. for short-double names. In September money on call loaned at 25 and at $1\frac{1}{2}$ per cent. The higher rate was due to a flurry which followed the news of the suspension of S. V. White & Co. on the 22d. The lowest rate was recorded early in the month, and the average was not above 4 per cent. until after the 15th, when low bank reserves and a good demand resulting from the activity on the Stock Exchange caused the average to move up to $5\frac{1}{2}$ per cent. Time loans were in a little better demand, and the rate for thirty to ninety days was $4\frac{1}{2}$ to 6 per cent. Commercial paper was slow of sale at $5\frac{1}{2}$ to 6 per cent. for short double names. In October money on call loaned at 6 and at 3 per cent. There was only a light demand for time loans until toward the close, and rates early in the month were $5\frac{1}{2}$ per cent. for thirty to sixty days and 6 per cent. for three to six months; but after the 15th the offerings were more abundant and loans were made at 4 to $4\frac{1}{2}$ per cent. for thirty to sixty days, and $4\frac{1}{2}$ to 5 per cent. for four to six months. Commercial paper was dull and without feature until the 23d, when the city banks came into the market as buyers, and rates at the close were 5 per cent. for short bills receivable. During the early part of November the drain of money to Boston to meet the requirements of banks at that center caused a rise in the rate on call to 15 per cent., but before the middle of the month there was a fall to 3 per cent., and by the close to 2 per cent. Time contracts were 5 per cent. for thirty to sixty days until the call money market grew easier, and then offerings were liberal at 4 to $4\frac{1}{2}$ per cent. for these periods. The disturbance in Boston caused by the failure of the Maverick National Bank kept Eastern buyers out of the market for commercial

paper, and the inquiry from the New York city banks was light until after the 15th, when gradually the demand increased; but the supply of really choice names was small, and only a light business was done. Rates at the end of the month were 5 per cent. for short indorsed bills and 5½ to 6 per cent. for jobbers' paper and single-name notes. On Dec. 4 there was an advance in the call loan rate to 6 per cent., caused by the attempt to assassinate Mr. Russell Sage, but it immediately fell to 3, and money was easy at 2 to 3 per cent. until the 22d, when there was an advance to 4½. Subsequently it declined to 2, and there was a liberal supply at the end of the month. Time contracts were freely offered, and by the close the rate for thirty to sixty days was 3 to 4, while for from three to six months it was 4 to 4½ per cent. There was a good inquiry for commercial paper at 4½ per cent. for short indorsed bills.

The condition of the New York Clearing-House banks, the rates for money, exchange, and silver, and prices for United States bonds on or about Jan. 1, 1892, compared with the preceding two years, are as follow:

Foreign Exchange.—The imports of merchandise for the year ending Dec. 31, 1891, were \$4,914,920 above those for 1890, and the exports of domestic and foreign merchandise were \$113,003,734 more. The excess of merchandise exports over imports for the year was \$142,193,636 against \$34,104,822 for 1890. The excess of exports over imports of merchandise, coin, and bullion for 1891 was \$185,316,025, against \$42,051,476 for 1890. Gold exports were \$34,118,202 in excess of the imports in 1891, against \$3,832,984 in 1890.

In January sterling exchange opened at \$4.80½ for sixty days and \$4.84 for sight, and, influenced by a demand for investment and also to re-

mit for stocks sold for European account, rates rose to \$4.85½ to \$4.86 for long and \$4.88½ to \$4.89 for short by the 14th. The advance was stimulated by the fear of currency complications resulting from the threatened enactment of a free silver-coinage bill by Congress, and this induced some drawers to decline to sell bills, in view of the fact that the measure under consideration provided that all certificates issued against coin be made a full legal tender. But this distrustful feeling soon entirely disappeared, and drawers were so liberal with their offerings that rates fell off, and, under the influence of a reduction in the Bank-of-England rate to 3½ per cent., on the 21st there was a gradual decline, and the market closed at \$4.85½ for long and \$4.88 for short, advancing toward the middle of the month to \$4.86½ to \$4.87 for the former and \$4.88½ to \$4.89 for the latter, but subsequently it grew easier, and rates at the close were \$4.86 for sixty-day and \$4.88½ to \$4.89 for sight. Commercial bills were scarce, and there was a good

demand to remit for stocks sold for European account and also in settlement of mercantile credits, which adjustment had been deferred, because importers needed their money for the payment of duties on goods which were required to be withdrawn from bond on or before Feb. 1. Gold to the amount of \$3,100,000 was shipped to Berlin during the month as an indirect exchange operation. In March sterling opened firm at \$4.86 for sixty-day and \$4.89 for sight. On the 7th gold bars to the amount of \$600,000 were shipped to Berlin. The Treasury Department, under authority of an act passed at the last session of Congress, imposed a charge of 40 cents per \$1,000 on these bars, the intention

being, as far as possible, to check the export of gold. On the 18th an application for \$1,000,000 more gold in bars having been refused by the Treasury Department, the shippers were compelled to take coin in the proportion of four sevenths double eagles, two sevenths eagles, and one seventh half-eagles, and, as this added to the cost of the shipment, exchange advanced to \$4.87 for sixty-day and \$4.89½ for sight. On the 21st there was a further export of \$2,275,000 in gold coin. Exchange fell off on the 26th to \$4.86½ for long and \$4.89 for short, and \$700,000 gold coin was sent to Germany on the 28th, but the proportion was changed to two fifths each of double eagles and eagles and one fifth half-eagles. Exchange was strong early in April at \$4.87 for sixty-day and \$4.89½ for sight, but later, under the influence of dearer discounts in London, the long rate was reduced to \$4.86 and short remained at \$4.89½ until the 27th, when it advanced to \$4.90. Gold coin to the amount of \$13,140,000 was sent to Europe, principally Germany, during the month. Exchange was firm at \$4.86 for sixty-day and \$4.90 for sight early in May. On the 6th the tone became easier, because of a premium of a half penny per ounce paid by the Bank of England in order to attract American gold coin to London, and shippers of the metal were free sellers of sterling, thus causing a reduction in the rates to \$4.85 for long and \$4.89 for short. Subsequently there was a fall in the former to \$4.84½, because of dearer discounts in London. On the 16th the price of gold coin was further advanced by the Bank of England to 76s. 6½d. per ounce, and this caused a fall in sterling to \$4.84 for sixty-day and \$4.88 for sight. Soon after the price of gold was reduced in London to 76s. 6d. per ounce, and on the 25th exchange rose to \$4.84½ for long and \$4.88½ for short, and on the following day to \$4.85 for the former and \$4.89 for the latter, and gold coin to the amount of \$3,000,000 was shipped, making \$26,061,000 for the month. Exchange opened at \$4.85½ for sixty-day and \$4.89½ for sight in June. A reduction in the Bank-of-England rate on the 3d to 4 per cent. caused an advance in long bills to \$4.86, and a reduction in the bank rate on the 17th to 3 per cent. brought about a further rise in sixty-day bills to \$4.87½. During the last days of the month liberal purchases of securities by the arbitrage houses for European account, and a lighter inquiry, made sterling heavy, and it closed at \$4.86½ for long and \$4.88½ for short. Gold to the amount of \$16,200,000 was shipped to London and Paris during the month, but the movement to the first-named center was on special order after the 5th. In July exchange opened at \$4.86 for sixty-day and \$4.88 for sight, and under the influence of easier discounts in London and moderately large offerings of commercial bills it gradually fell to \$4.84½ for sixty-day and \$4.87 to \$4.87½ for sight. Gold to the amount of \$6,500,000 was shipped to Europe during the month, all of it on special order, and principally to the Bank of France, that institution contracting with a banker in New York to supply the metal, and entering into stipulations that when it should be required later in the season no premium would be demanded. In August exchange opened at \$4.84½ to \$4.85 for long and \$4.87 to \$4.87½ for short, and, influenced by offerings of com-

mercial bills and of drafts against stocks bought for European account, there was a gradual fall to \$4.83 for sixty-day and \$4.85½ for sight. The outward movement of gold had then ceased, and at the close of the month it was announced that \$750,000 of the metal had been shipped from the Continent for New York. In September exchange opened at \$4.83 to \$4.83½ for sixty-day and \$4.85 to \$4.85½ for sight, and under the influence of liberal offerings of arbitrage and commercial bills there was a fall to \$4.81 for long and \$4.84 for short by the close; but the tone then was firmer by reason of a demand to remit for stocks sold for European account. The imports of gold during the month were \$6,856,000. In October exchange opened at \$4.80 to \$4.81 for long and \$4.84 for short, but owing to a demand to remit for stocks sold for European account, and also because of a scarcity of commercial bills, there was an advance to \$4.81½ for sixty-day and \$4.85 for sight by the middle of the month. The tone was easier thereafter to the close, especially for short, lower discounts in London increasing the demand for long bills. The rates at the end of the month were \$4.81 to \$4.81½ for sixty-day and \$4.84½ for sight. The arrivals of gold from Europe during October were \$19,112,000. A better supply of commercial bills, chiefly drawn against cotton, caused the market to fall off to \$4.80½ for long and \$4.84 for short soon after the opening of November, and it was also effected by dearer money on the Stock Exchange, but during the second week a scarcity of grain bills, owing to shipments being delayed by the absence of vessels, tended to make the market firmer at \$4.81 to \$4.81½ for sixty-day and \$4.84½ for sight. Then came a rise by the 18th to \$4.83 for long and \$4.85 for short, and the tone was firm thereafter to the close, arbitrage as well as commercial bills being scarce. The arrivals of gold during the month were \$3,557,000. In December the market opened at \$4.82 for long and \$4.85 for short, but a light supply of commercial bills and, later, a good inquiry to remit for interest and in settlement of mercantile credits caused a gradual advance by the 15th to \$4.83 for sixty-day and \$4.86 for short. When the demand was satisfied, rates fell off to \$4.82 for long and \$4.84½ for short. The market closed at \$4.82½ to \$4.83 for sixty-day and \$4.85 to \$4.85½ for sight. Gold arrivals from Europe amounted to \$2,774,000.

The Stock Market.—The highest prices for leading stocks during the year were recorded in August and December, and the lowest from May to July. The market opened strong in January, and for the first ten days the tendency was upward, with the Grangers and Delaware, Lackawanna and Western leading. Louisville and Nashville was favorably influenced by the declaration of a cash dividend of 2½ per cent.; the Villards improved on news of the resumption of business by Decker, Howell & Co., who suspended in Nov., 1890, and the Gould specialties and all Western properties were freely bought on reports that the managers of these roads were entirely in accord as to the plan for new regulations for the Western Traffic Association. The tone of the market was strong until the 14th. A leading feature on the 12th was a rapid

rise in Sugar Trust on news that the receiver had been discharged, the trust organized into the American Sugar Refiners' Company under the laws of New Jersey, and that a dividend of 5 per cent. had been declared. The suspension of a bear trader and the closing out, for his account, of a large line of stocks made the market very active and higher until after the middle of the month, when there was free selling of the Gould specialties and the Grangers, followed by a dull and heavy movement. One feature was a sharp fall in New England on the disclosure of the fact that the advance in the stock had been assisted by a forged statement purporting to be signed by certain officials of the New York, New Haven and Hartford, in which they were declared to be in favor of the consolidation of the two companies. Chicago Gas was unfavorably influenced by the announcement that the dividend would be passed. Toward the close of the month there was an irregular recovery in the leaders due to rebuying to cover short contracts, and the majority of the stocks showed a very decided advance at the close of January compared with the opening. The sudden death of Secretary Windom on the 29th caused a sharp fall in silver in London and in silver-bullion certificates in our market, but there was an immediate recovery. In February the market opened strong with Delaware, Lackawanna and Western, Lake Shore, Manhattan Elevated, Pacific Mail, Manitoba and the Villards leading. Then followed a rise in New York, Susquehanna and Western on a report, subsequently denied, that there was a contest for control of the road between the Delaware and Hudson and the Delaware, Lackawanna and Western. Toward the middle of the month the market was unfavorably influenced by the withdrawal of \$1,000,000 gold for shipment to Berlin, and later the Grangers were freely sold on the announcement of a reduction of the dividend on Chicago, Burlington and Quincy, and the whole market was more or less affected by the suspension of the American Loan and Trust Company, and also by the withdrawal of \$600,000 more gold for shipment to Berlin. Toward the end of the month there was an irregular recovery, but in the last few days the Grangers were unfavorably affected by an attack upon Chicago, Burlington and Quincy, and the tone of the market was heavy at the close. Early in March Pacific Mail rose on news of the passage of the Postal Subsidy bill and the Northern Pacifics were favorably influenced by a decision of the United States Supreme Court in a land-grant case against the Manitoba, by which the claim of the first-named company to a large tract of land on the line of the road was sustained. Chicago, Burlington and Quincy was weak by reason of liberal selling, and the decline in this property more or less affected the other Grangers. On the 6th the news of a panic at Buenos Ayres was made the pretext for raiding the market, but there was a speedy recovery. The decision of the Interstate Commerce Commission in the matter of Coxe Bros. against the Lehigh Valley had a temporarily disturbing effect upon the coal shares. After the middle of the month Rome, Watertown and Ogdensburg rose on news of the absorption of the road by the New York Central, and later New York, Ontario and

Western advanced, in the expectation that this line would also be wanted by the Central. The financial troubles in Philadelphia, resulting from the failure of the Keystone National Bank, had a partially disturbing effect, but in the third week of the month there was a recovery, and the market continued generally strong to the close, and it was only slightly affected by the recall of Baron Fava, the Italian minister at Washington. One feature in the last days of the month was an improvement in the Grangers, caused by the defeat of the Nebraska Freight-rate bill and the adjournment *sine die* of the Legislature of that State. Early in April there was a sharp advance in Sugar Refiners' on a report that an agreement had been made with the Philadelphia refinery to regulate the price of sugar; a fall in the Northern Pacifics, due to selling for German account, followed by a recovery on the removal of the pressure; a decline in the Grangers and in other Western stocks, because of the failure to get a quorum at Chicago of the Advisory Board of the Western Traffic Association, but later there was a reaction, on the statement that the meeting would be held in New York. The Vanderbilts, and particularly Lake Shore, were strong. The movement of gold to Europe had some influence toward the middle of the month, but it appeared to be in great measure counteracted by the expectation that the bank reserves would ere long be augmented by the return of currency from the interior, and that after a while the gold would come back from Europe to pay for cotton and grain, the indications then being that there was an important deficiency in European crops of breadstuffs. The market was generally strong to the close of the month, and it was not disturbed by the discovery on the 27th that the late President of the Ninth National Bank was a defaulter, because assurances were given that the capital of the bank remained unimpaired. The course of the market was downward in May. The Advisory Board of the Western Traffic Association held a meeting in this city early in the month and the most important action taken was the dismissal, with the concurrence of Mr. Jay Gould, of the traffic manager of the Missouri Pacific for violation of the rules of the Association, thus indicating that Mr. Gould was co-operating in the efforts to maintain rates. The continued exports of gold to Europe had a depressing effect at intervals, the bears raiding the market on news of the withdrawals of the metal for shipment. About the middle of the month the flurry at Paris due to the financial and political crisis at Lisbon was reflected in the New York market, and there was a vigorous assault by the bears; but when the trouble in Paris ended, our market reacted. It was irregular and lower for the remainder of the month, influenced in great part by the large exports of gold and a renewal of bear attacks. Early in June Louisville and Nashville was unfavorably affected by news of the contemplated issue of \$7,000,000 new stock, the company being unable to sell its unified 4-per-cent. bonds. Rock Island was broken down on the announcement of the reduction of the quarterly dividend to $\frac{1}{2}$ of 1 per cent. Subsequently there was a recovery in the market under the lead of Atchison, Topeka and Santa Fé, this being affected

by a favorable decision in the suit brought by St. Louis and San Francisco first preferred stockholders. Chicago Gas advanced on news of a settlement of the differences between the company and the city of Chicago, and later the Grangers improved on favorable reports of the condition of the grain crops and confirmation of the statement of a large deficiency in the European crops. One feature after the middle of the month was an advance in silver-bullion certificates, caused by heavy purchases by the director of the mint at prices above the parity of the London quotation. Large withdrawals of gold for export to Europe had more or less of a disturbing effect upon the stock market for the remainder of the month, although the crop news continued good and the harvesting of winter wheat, then in progress, showed excellent results. The course of prices was generally downward in July. An injunction to restrain the payment of the dividend on Sugar Refiners' had a temporarily disturbing effect upon that stock. A report, which was not confirmed, that the Chicago, Burlington and Quincy would issue more bonds caused a fall in that stock. One feature was a rise in Edison Electric shares on the announcement of the decision of the United States Circuit Court in the Edison lamp case sustaining the patent. On the 18th the news of the failure of the English Bank of the Rio Plate had an unsettling influence in London, which was reflected here, and the movement was irregularly downward for the remainder of the month, with the Gould specialties, the Grangers, Louisville and Nashville, and Atchison, Topeka and Santa Fé about the weakest, and the market was more or less influenced by rumors affecting the standing of prominent financial houses in this city. Early in August the reports of a large deficiency in all the European grain crops were fully confirmed, and the Russian Government issued an order prohibiting the export of rye. The weather here was very favorable for the crops, harvesting of spring wheat was making rapid progress, and the conditions were good for corn. This excellent crop situation stimulated buying of American securities in London, and the denial of the disquieting rumors current at the close of July caused our market to open very strong in August. Soon after there was free selling of Union Pacific, due to reports, subsequently confirmed, that the floating debt had become embarrassing by reason of an inability longer to borrow on time, and the decline in this specialty had an unfavorable influence upon the whole market; but the announcement that a syndicate would be formed to carry over this debt later brought about a recovery, under the effect of which the whole list advanced. In the third week of the month there was a wild speculation in grain at all the distributing centers, which checked export buying and caused a rise in exchange and a fall in stocks; but in the fourth week repurchases to cover short contracts and a demand for stocks for European account carried prices steadily upward, and the market was active and higher for the remainder of the month. In September the speculation was active and the tone generally strong, influenced by European purchases through the arbitrage houses, by a return flow of gold from Europe, and by the very favorable

crop reports and increased railroad earnings. Early in the month Union Pacific was freely bought by the arbitrage houses and by the local traders on a report that the Vanderbilts were seeking control. But on the positive denial of this rumor Europeans freely sold it, and this was followed by a sharp decline on news that a loan by an impatient lender had been called and that the company was embarrassed for funds with which to meet this and other demands. This led to renewed efforts on the part of the managers to secure the assent of creditors to the plan for extending the floating debt, but these efforts were not immediately successful, and Union Pacific was more or less of a disturbing factor until after the middle of the month. On the news of gold shipments hither from the Continent during the first week in the month the Vanderbilts took the lead and the Grangers closely followed, stimulating a covering of short contracts in nearly all the active stocks except the Gould specialties and Richmond Terminal, the latter being affected by reports that the floating debt of this company had become embarrassing. After the middle of the month the market was very active and strong, with good buying of Atchison, Topeka and Santa Fé and the Grangers as the feature, and, although the Rock Island directors declared only $\frac{1}{4}$ of 1 per cent. dividend for the current quarter, the stock promptly recovered, and even the Gould properties participated in the upward movement. The suspension of S. V. White & Co. checked the rising tendency on the 22d, but the market was recovering on the news that this firm had little or no interest in stocks, when the failure of the Missouri Pacific directors to declare the usual quarterly dividend gave color to reports that it would be passed. A few days later these reports were confirmed, and this news encouraged a bearish demonstration upon the whole list, which was followed by a reaction led by the Vanderbilts. Then came an attack upon Union Pacific on a report that the syndicate would abandon efforts to extend the floating debt, and Missouri Pacific was broken down on the publication of the statement showing that unearned dividends had been paid for some time. Rock Island was subsequently raided, causing an important decline in the Grangers, and the market was more or less unsettled by bear attacks, accompanied by disquieting reports of the condition of Mr. Jay Gould's health, for the remainder of the month. The tone was feverish at the opening of October, with the Gould stocks and the Grangers weakest; but there was a sharp rally soon after, followed by an irregular movement, during which the bears sought to cover their short contracts, and gradually the market grew firmer under the influence of estimates of the cereal crops, based upon the reports of the Department of Agriculture, showing an unprecedented yield of all grains and more especially of corn, which had rapidly matured during the warm weather which prevailed in the latter part of September. In the last week of the month pressure by the bears, accompanied by disquieting reports from Boston, caused by the suicide of Mr. Irving A. Evans, of that city, made the market irregular and lower for the remainder of the month, although during the last few days there were occasional re-

actions, due to further imports of gold from Europe and a report that Russia would soon prohibit the shipments of all grain, which stimulated a rise in all Western stocks. One feature was a fall in the coal shares on news that an output of 4,000,000 tons of anthracite had been agreed upon for November, and another feature was a drop in Sugar Refiners', caused by a reduction in the price of sugar by the Philadelphia refinery. The market opened unsettled and lower in November, in consequence of news of the suspension of the Maverick National Bank of Boston. This institution had a large collection business all over the country, and its failure temporarily tied up considerable amounts of money. The other Boston banks drew upon their balances in this city, and this compelled a calling in of loans by institutions here, under the effect of which money grew active. There was free selling of Chicago, Burlington and Quincy, Union Pacific, New England, and Atchison, Topeka and Santa Fé by Boston houses, and the tendency of the market was irregularly downward for the first ten days. Then there was a recovery, stimulated by large purchases of stocks by the arbitrage houses for European account, and the market was active and generally higher for the remainder of the month. The coal shares were unfavorably affected during the second week by free selling of Delaware and Hudson, accompanied by rumors that a large holder of the stock was disposing of his property. This was denied, and then came a rumor that there was likely to be a dispute over the allotment of coal for next year. This was believed to be set at rest in the last week of the month by the harmonious action of the coal sale's agents in fixing the output for December at 3,250,000 tons, thus restricting production and indicating that the policy in force would be continued. The market was at intervals affected by reports of an unsettled condition of financial affairs on the Continent of Europe, but these subsequently proved to be exaggerations. On the 27th the failure of Field, Lindley, Weichers & Co. made the market irregular, but there was a partial recovery, although the feeling at the close of the month was not very confident because of the discovery that securities pledged with this firm by the Union Pacific for a large loan had been rehypothecated. Early in December the market was more or less influenced by efforts by the governors of the Stock Exchange to trace these rehypothecated securities. The attempt to assassinate Mr. Russell Sage on the 4th temporarily unsettled the market. Toward the end of the first week a buoyant tone for American securities in London encouraged buying here, and the favorites were the Vanderbilts, which were directly affected by the expectation that extra dividends would be declared. The tendency was generally upward for the remainder of the month, nearly all the active stocks participating, and the Vanderbilts rising sharply on the announcement of increased dividends for Lake Shore, Michigan Central, and Canada Southern. The market closed strong, and some of the leading properties sold at the best figures of the year. Total sales of stocks at the New York Stock Exchange for the year 1891 were 69,931,689 shares against 71,282,885 in 1890 and 72,014,600 in 1889.

The following table shows prices of leading stocks at the beginning of the years 1890, 1891, and 1892:

STOCKS.	1890.	1891.	1892.
New York Central.....	106½	101½	116½
Erie.....	26	19	34
Lake Shore.....	104½	106½	123½
Michigan Central.....	94½	91	106
Rock Island.....	9½	70	89½
Northwest, common.....	111½	104½	116½
St. Paul, common.....	66½	51	55½
Dela., Lackawanna and Western.	126	181½	139
Central New Jersey.....	125	106½	113

The following shows the highest prices of a few of the speculative stocks in 1890 and the highest and lowest in 1891:

STOCKS.	1890.	1891.	
	Highest.	Highest.	Lowest.
Atchison, Topeka and Santa Fé..	50½	47½	24½
Canada Southern.....	61½	64½	47½
Central New Jersey.....	12½	122½	105½
Central Pacific.....	31½	85	29
Chicago Gas.....	65	71½	34
Chicago, Burlington and Quincy.	111½	110	77½
Delaware and Hudson.....	175	141½	118½
Dela., Lackawanna and Western.	146½	146½	180½
Erie.....	29	34½	17½
Illinois Central.....	120	101½	90
Lake Shore.....	114½	127	105½
Louisville and Nashville.....	92½	87	67½
Michigan Central.....	104½	105½	87½
Missouri Pacific.....	73½	77	54½
New York Central.....	111	116½	9½
New York and New England.....	52½	43	31
Northwestern.....	117	118½	105½
Northern Pacific.....	31½	30	21½
Northern Pacific, preferred.....	86	78	58½
Pacific Mail.....	41½	41	31½
Pullman.....	222	196½	172
Reading.....	48	48½	27½
Richmond Terminal.....	28½	11	8
Rock Island.....	98	91	68½
St. Paul.....	79½	124	54½
Union Pacific.....	65½	52½	32½
Western Union.....	87	84½	76

FINE ARTS IN 1891. Under this title are treated the principal art events of the past year, ending with December, 1890, including especially the great exhibitions in Europe and the United States, sales and acquisitions of works of art, and erection of public statues and monuments.

Paris Salon.—The exhibition of the Société des Artistes Français, in the Palais de l'Industrie (May 1 to June 30), comprised 3,660 numbers, classified as follow: Paintings, 1,733; cartoons, water colors, pastels, miniatures, enamels, porcelain pictures, etc., 486; sculptures, 740; engraving on medals and precious stones, 54; architecture, 211; engraving and lithography, 436. The receipts were 315,000 francs.

Section of painting: No medal of honor awarded. First-class medal, none awarded. Second-class medals: Paul Jean Gervais ("Les Saintes-Maries"), Alexis Axilette ("L'Été"), Marius Roy ("Le Réveil: Lendemain de Solferino"), Claude Bourgonnier ("La Tentation"), Chevallier Taylor ("La Dernière Communion"), Jean Baptiste Duffaud ("La Mort d'Ourrias"), Émile Isenbart ("Le Matin au Bord du Doubs"), Charles Lucien Léandre ("Les Long Jours"), François Thevenot ("X..."). Fernand Just Guignon ("Les Régains"), Ernest Baillet ("La Berge, à Portejoie"). Third-class medals: James Guthrie, Louis de Schryver, Otto Fridreich, José Salgado,

Henry Bisbing, Henri Eugène le Sidauer, Vincent Chevilliard, Louis Paul Dessar, Maurice Henri Orange, Émile Noirot, Albert Rigolot, Léopold François Kowalsky, Charles Henri Franzini d'Issoncourt, Édouard Louis Bisson, Louis Grier, Georges Antonio Loppisgich, Henri Royer, Armand Guery, Pierre Ballut, Frank Brangwyn, Basile Lemeunier, Pierre Bellet, Gaston Mélingue, Lucien Berthault, Guillaume Romain Fouace, Louis Chalon, Edmond Borchard, Harry Van der Weyden, Anshelm Léonard Schultzberg, André Antoine Crochepierre, Étienne Csok, Jacqueson de la Chevreuse, Tancrède Bastet, Mlle. Caroline Bailly (miniature).

Section of sculpture: Medal of honor awarded to Alfred Boucher for his marble statue "À la Terre." First-class medals: Antoine Gardet (deceased), for his marble group "Sommeil de l'Enfant Jésus," and Édouard Pepin, for his allegorical group in plaster entitled "Le Jong." Second-class medals: Stanislas Lami, marble statue "Première Faute"; Jean Ernest Boutellier, plaster group "Nymphé Victorieuse"; Frederick MacMonnies, plaster statue "Nathan Hale"; André d'Houdain, marble statue "Faun" and plaster group "Repos de Diane"; Benoît Lucien Hercule, bronze statue "Turenne Enfant" and plaster statue "Naïade"; Edgard Henri Boutry, bas-relief "L'Amour et la Folie" and plaster statue "Chasseur"; Mlle. Renée Marcelle Lancelot, bas-relief "La Famille"; Félix Émile Gaulard, "L'Idéal." Third-class medals: Augustin Peene, Alexandre Anglade, Corneille Henri Theunissen, Léon Joseph Chavalliaud, Léon Julien Deschamps, Léon Grandin, Roger Bloche, René Rozet, Paul Aubert, Carlos Lagarrigue, Constant Demetrius Pauchard (engraving on precious stones).

Section of engraving: No medal of honor awarded, First-class medals—Etchings: Adolphe Alphonse Gery-Bichard (engravings for national edition of works of Victor Hugo), Émile Armand Mathey-Doret ("Rubens peint par lui-même"); Burin: Alfred Joseph Annedouche ("Vierge," after Bouguereau). Second-class medals—Burin: Jules Massard; Wood: Mme. Marguerite Jacob Bazin; Lithography: Ernest Guillon. Third-class medals—Etching: Alexandre Gravier, Charles André Coppier, Victor Louis Focillon; Wood: Pierre Gusman, Henri Dochy; Lithography: Jean Joseph Pelissier, Alphonse Audebert.

Section of architecture: No medal of honor. First-class medals: Pierre André, Raymond Barbaud. Second-class medals: Charles Nicolas Normand, Maurice Yvon, Antonin Durand, Victor Dutocq, Saint-Anne Auguste Lauzier. Third-class medals: Georges Chedanne, Marie Marcel Rouillard, Marius Paulme, Paul Dusart, Ernest Victor Charpentier-Bosio.

The picture that attracted most attention at the Salon this year was "La Mort de Babylone" of Georges Rochegrosse, an immense canvas representing the final episode in Belshazzar's feast. In a vast hall, fantastically decorated in the Chaldeo-Assyrian style, men and women, some nude, some half-clad, lie, stupefied by excess, amid the remains of a feast, lighted by the still burning torches. At the left, high up on a platform with many steps, stands the king, looking aghest at the sight before him, for in the

background, through an immense open arch, streams the morning light, and with it the mail-clad Persians who are to destroy him and his city. Though strongly painted, the work is somewhat theatrical in treatment, and wanting in unity. The eye is rather attracted by the nude women lying in the foreground, amid glittering stuffs and flowers, than by the composition as a whole. The work is said to have occupied the artist three years.

J. P. Laurens's "La Voûte d'Acier" is another immense canvas ordered for the Hôtel de Ville. It represents the arrival of Louis XVI at the Hôtel de Ville, July 17, 1789. The king, who has just left his coach, is received at the foot of the steps by Bailly, who offers him a tricolored cockade, and by Lafayette. The sheriffs, ranged on the stairs, form with their swords the "vault of steel," under which the king is to pass. In the background is seen the crowd kept back by the National Guard.

Paul Jean Gervais has illustrated on a large canvas a Christian legend, "Les Saintes-Maries," who, sent adrift in a disabled vessel, are miraculously stranded on the shores of the Provencal marshes. Three female figures, in modest nudity, are in a wreck in the reeds—one standing in the prow, another kneeling, a third stepping upon the flat shore. A brilliant sky with the rising sun gives a warm glow to the figures, which are chastely modeled.

Ulpiano Checa, whose "Chariot Race" was so popular last year, contributed another picture full of life and energy, entitled "Les Huns—Attila." A horde of savage warriors, led by their chief, are riding furiously along a dusty road, with a range of purple mountains in the background.

Louis Chalon's "Mort de Sardanapale" is nearly as large as Rochegrosse's immense canvas, but the subject is not treated with equal ability. Sardanapalus, seated on a golden throne on the summit of a pile of all his riches, including his women clothed in splendid garments and hung with jewels, calmly awaits his fate, while eunuchs below apply torches to the pyre.

Léon Bonnat's "La Jeunesse de Samson" shows a nude youthful athlete struggling at the mouth of a cavern with a lion, whose jaws he is endeavoring to pull asunder.

Jules Breton's "Le Pardon de Kergoat" is an interesting picture of a procession of young girls and women, headed by old Brittany peasants, with flowing locks, bearing tapers, going toward a church half hidden in trees. In the foreground are mendicants kneeling. "L'Été," another contribution, represents a peasant woman with bare arms seated on the grass at the edge of a corn-field.

Bouguereau's "Premiers Bijoux" depicts a peasant youth offering a maiden ripe cherries, out of which she makes ear-rings.

Gérôme's "Lion aux Agnets" is a lion in the desert on the watch for prey, upon which he is about to spring.

Henner contributed a "Pieta" and a "Pleureuse" in his usual style and strongly reminiscent of earlier works—his "Dead Christ" and "Magdalen."

Noteworthy among the sculptures was the late Henri Chapu's final exhibit, "Mme. la

Princesse de Galles," a marble statue representing the princess, in full dress, seated in a chair, with one hand resting on the arm. Alexandre Falguière's marble statue "*Diane*," an elegant work, and Bartholdi's "*L'Alsace et la Lorraine se réfugiant au pied de l'Autel de la Patrie*," a marble group destined for the Gambetta monument at Ville d'Avray, attracted much attention. Bartholdi's two figures, which personify Grief and Hope, are beautiful designs.

Paris: Société Nationale.—The new Société Nationale des Beaux-Arts, founded in 1890, under the presidency of Meissonier (died Jan. 31, 1891), held its second annual exhibition in the Pavillon des Beaux-Arts, in the Champ de Mars (May 15 to June 30). President, Puvis de Chavannes; Vice-Presidents, Carolus-Duran, Dalou, and Bracquemond. The society consists of 125 societaries and 71 associates. There are also 21 honorary members. No medals nor rewards were given. The exhibition comprised 1,441 numbers, classified as follow: Paintings, 951; designs, water colors, miniatures, etc., 318; sculptures, 102; engravings, 70. There were besides 88 objects classified separately as *objets d'art*. The receipts of the exhibition were 212,740 francs, an excess of 40,295 francs over the receipts of last year.

Puvis de Chavannes exhibited three decorative works: "*L'Été*," intended for the Hotel de Ville, and "*La Poterie*" and "*La Céramique*," panels for the staircase of the Musée Céramique, Rouen. "*L'Été*" is an immense composition, showing a blue river winding through a plain stretching to hills in the distance. In the foreground a woman is bathing with her child; other bathers are stretched on the grass. A fisherman, too, is throwing his line, and a peasant conducts a cart of hay dragged by oxen. The landscape has wonderful depth, and the figure groups are full of life.

Henry Gervex exhibited also a panel, entitled "*La Musique*," intended for one of the spaces in the ceiling of the Galerie des Fêtes in the Hotel de Ville. The lower part of the picture shows a corner of the stage at the opera, with a stage box and a few stalls seen from behind. On the stage Ophelia, on her knees, is singing. Above, among clouds and cupids, a courtier and marquise of Louis XV are playing, the one on a flute, the other on a violoncello, while a genius with a crown floats above their heads. At the top are nude muses on clouds.

Carolus-Duran exhibited nine portraits and a nude entitled "*Danaë*," a figure stretched upon a black mantle and with crimson draperies for background. Among the portraits, one of Gounod is remarkable.

"*La Madeleine chez le Pharisien*," by Jean Béraud, attracted much attention for its eccentricity. In a modern Parisian room, grouped around a table spread with the remains of a feast, are a dozen or more notabilities in fashionable morning costume. Beside the table sits Jesus in flowing robes, and at his feet, extended on the floor, is a *demoiselle* in ball costume. Aside from its incongruity, the picture is a strong and excellent piece of work.

Albert Edelfelt, the Finland artist, contributed a picture conceived in a similar spirit, entitled "*Marie-Madeleine (Légende Finlandaise)*." In a

bright northern landscape, the Christ, in a flowing white robe and sandals, advances along a road bordering a lake. A homely, coarsely clad, Finnish woman throws herself on her knees before him.

Still another in the same realistic manner is Christian Skredvig's "*Le Fils de l'Homme*," which represents Christ as a Socialist workman, surrounded by a crowd, who bring sick people to him. Some women are spreading their garments for him to walk upon, and a doctor and others behind stand for Pharisees.

Whistler sent a portrait and a marine piece, and John S. Sargent a portrait. Mr. Whistler's famous "*Portrait of My Mother*" has been purchased by the Government for the Luxembourg Gallery.

Paris: Miscellaneous.—The Académie des Beaux-Arts has elected as a member in the section of painting Jean Paul Laurens, to take the place of Meissonier, deceased. The number of votes cast was 35, of which Laurens received 18, Jules Lefebvre 16, and Édouard Detaille, 1. Antonin Mercié has been chosen in the section of sculpture by 30 out of 34 votes, to fill the place of Henri Chapu, deceased. The Academy also elected as foreign corresponding members: Section of painting, Francisco Pradilla, of Madrid; section of sculpture, M. Salmson, of Geneva.

The collection of the late banker Charles Noël, sold in February, realized the sum of 834,335 francs. Among the best prices obtained were: Théodore Rousseau, "*La Mare—Fontainebleau*," 82,100 francs; Corot, "*Étang de Ville d'Avray*," 39,900; Ziem, "*Le Bosphore*," 15,600; Troyon, "*La Forêt*," 11,200; Constable, "*Le Debarquement*," 15,600; Delacroix, "*Christ sur la Croix*," 18,850; Jules Dupré, "*La Rivière*," 13,600; Henner, "*La Madeleine*," 16,500.

The sale of the studio effects of the late Charles Chaplin, in April, produced 166,455 francs. Among the best prices obtained were: "*Dans les Rêves*" (Salon, 1887), 25,000 francs; "*Age d'Or*" (Salon, 1890), 16,500; "*Les Lilas*," 15,000; "*Les Roses*," 15,000; "*Offrande à Vénus*," 15,000.

The sale of the studio effects of Emile van Marcke, in May, produced in the aggregate 881,090 francs. The best prices were: "*Vache Brune et Blanche*," 31,000; "*Vache Suisse*," 30,500; "*Vache Blanche Paissant*," 25,000; "*Vache Blanche Merchant*," 25,000; "*Trois Vaches s'Abreuvant*," 20,000.

The sale of the Arosa collection produced 135,700 francs. Among the highest prices were: Delacroix, "*Lion dévorant un Chamois*," 16,100; Corot, "*La Pêche à l'Épervier*," 18,900; Daubigny, "*Gardeuse de Vaches*," 12,510.

The sale of the collection of the late Jules Røderer, former President of the Tribunal of Commerce at Havre, in June, produced 1,021,520 francs. Among the best prices obtained for oil paintings were: Corot, "*Cavalier*," 32,000; "*Le Passeur*," 45,000; "*Souvenir d'Italie*," 29,200; "*Le Sentier*," 11,000. Daubigny, "*La Sanlaie*," 44,000; "*Portijoie*," 54,000; "*Le Mare au Clair*," 47,000. Delacroix, "*Le Denier de Saint-Pierre*," 21,100; Fromentin, "*Les Prisonniers*," 12,000; "*Campement Arabe*," 15,100. Théodore Rousseau, "*La Mere au Chine*," 90,000; "*La Passerelle*," 72,000. Troyon, "*Pâturage en Norman-*

die," 67,000; "L'Abreuvoir," 46,500; "Le Retour à la Ferme," 55,000; "La Mare aux Canards," 81,000; Étude de Moutons," 16,200. Pastels and designs: J. F. Millet, "L'Angelus," 100,000; "L'Enfant Malade," 25,100; "Balayeuse," 27,100; "Jeune Bergère," 21,000; "L'Abreuvoir," 17,500; "Le Sentier," 10,200.

The collection of pictures of Georges d'ÿ, in June, brought in the aggregate 365,315 francs. Best prices: Alphonse de Neuville, "Attaque d'une Maison Crénelée" (Salon, 1875), 115,000. Detaille, "Bonaparte en Égypte," 50,000 (Dreyfus sale, 32,000). Van Dyke, "Portrait du Comte d'Aligre," 69,000. Delacroix, "Les Natchez," 15,600. Isabey, "Massacre dans une Église," 35,000; "L'Orgie," 12,000.

A monument to Gambetta, by Bartholdi, was unveiled, Nov. 8, at Ville d'Avray. A pedestal, on a handsome sub-base, supports a bronze statue of Gambetta; in its front is a group of two female figures, by Bartholdi, representing Alsace and Lorraine. On the face of the pedestal are the words: "À Léon Gambetta, les Alsaciens-Lorrains."

A statue of La Fontaine, by Dumilâtre, has been placed at the angle of the Avenues Ingres and Ranelagh.

A replica of Barrias's statue of Bernard Palissy, in the square Saint-Germain-des-Près, Paris, was inaugurated, July 5, at Villeneuve-sur-Loir.

A statue of Jean Houdon, by Tony Noël, was unveiled, June 28, at Versailles.

London: Royal Academy.—The Academy now consists of 41 academicians, including Thomas Brock, Andrew C. Gow, and Frank Dicksee (promoted from associates in January), and 29 associates, including David Murray (elected at the same time). There are also 3 honorary members, 4 honorary retired academicians, 4 honorary foreign academicians, and 3 honorary retired associates. Frank Dicksee was elected an academician in succession to Edwin Long, deceased.

The twenty-second winter exhibition of works by the old masters represented the English, Dutch, Flemish, Italian, and Spanish schools. A special feature was a collection of water-color drawings illustrative of the progress of the art in England. The English school was represented by Gainsborough, Reynolds, Romney, Hogarth, Turner, Etty, and Hoppner; the Dutch, by Vermeer, Van Goyen, Teniers, Ruysdael, Hobbema, Cuyp, Jan Van der Heyde, Adrian Van de Velde, William Van de Velde, Metsu, and Hals. De Hooghe's "Cardplayers," Terborch's "The Letter," and Teniers's "Village Festival" were sent from Buckingham Palace.

The one hundred and twenty-third annual exhibition of the Royal Academy contained 2,102 numbers, including oil and water colors, pastels, black and whites, and sculptures, classified as follow: Oil paintings, 1,162; water colors and miniatures, 393; etchings, drawings, and engravings, 171; architectural drawings, 213; sculpture, 163.

Sir Frederick Leighton contributed three paintings and a statue. "His Perseus and Andromeda," an upright canvas, represents Andromeda, chained to an isolated rock, rising from deep blue water, with gray headlands behind. She is stooping forward in terror at the dragon,

which has alighted on the summit of the rock so close as to overshadow her with its wings. High above, in the blue atmosphere, is Perseus mounted on Pegasus. He has already shot one arrow, which has transfixed the monster and forced it to turn from its prey, and is preparing to shoot another while it belches flame and smoke at him. "The Return of Persephone," also upright, depicts Ceres meeting her daughter at the entrance of Hades, whence she has come in charge of Hermes on her annual visit to the upper world. Ceres is in amber robes, Persephone in white tinged with rose, and Hermes in deep blue. Sir Frederick treats the subject as allegorical of the return of spring, and has set Ceres in a sunny Sicilian atmosphere in strong contrast with the dusk of Hades. This picture has been presented by Sir J. Kitson to the Leeds Gallery.

Luke Fildes's "The Doctor" was perhaps the most popular picture of the year. It represents a cottage interior, lighted by a lamp, with the doctor seated watching, with grave face, a child sick unto death, lying upon pillows on two chairs. The light of the lamp mingles with the wan blueness of dawn, which, coming in at a window behind, reveals the mother seated near the wall with her head bowed and her husband standing beside her with one hand resting upon her shoulder. This picture, one of the strongest and best of the exhibition, has been bought by Henry Tate for the new British National Gallery.

Sir John Millais sent two Scotch landscapes, both views near Birnam, one entitled "Lingering Autumn," the other "Glen Birnam." His "Dorothy" is a full-length portrait of a daughter of Mr. Henry Lawson, of the "Daily Telegraph." Of several portraits, that of Mrs. Joseph Chamberlain, seated at afternoon tea, with a cup and saucer in her lap, attracted most attention, as well for its graceful pose as for its excellent color.

Alma-Tadema's "An Earthly Paradise" represents a naked little girl, lying on a couch among her cast-off garments, and putting up her hands to clasp the face of her mother, who stoops over to kiss her. The artist contributed also a nearly life-size three-quarters portrait of the Right Hon. A. J. Balfour, Chief Secretary for Ireland.

P. H. Calderon's "St. Elizabeth of Hungary's Great Act of Renunciation" has probably created more talk than any other picture of the year, not so much on account of its merits as of its subject. The queen, entirely nude, having thrown off all her garments in token of her renunciation of the world, is kneeling in self-abasement before an altar, in presence of a group of grim monks and ladies grouped behind her. The picture, notwithstanding the protests of Cardinal Manning and others, who contend that St. Elizabeth's act involved the renunciation of only that part of her costume which savored of the world, has been bought with the Chantrey fund.

Britton Riviere's "A Mighty Hunter before the Lord" is a triptych. In the central panel an Assyrian monarch stands in a chariot drawn by white horses, which the driver, beside the king, urges to their greatest speed across a sandy waste. The king, having shot a lioness, has

slung his bow on his shoulder and is defending himself with a spear against a furious lion that clings to the back of the chariot, roaring as it is dragged along. The wings of the triptych show the lion's side of the question. In one a lioness lies dying, while her mate tenderly licks the bleeding wound; in the other the lion stands beside his dead, roaring her requiem, while another lion comes down the hillside.

J. W. Waterhouse's "Ulysses and the Sirens" shows the ship in a narrow rock-bound cleft of the Mediterranean, with the wanderer himself bound to the mast while his companions, with ears carefully guarded against the sirens' songs, busily ply their oars. Close around the vessel are gathered the sirens, with the heads of beautiful girls and the bodies of birds, doing their best to charm the wanderers.

John S. Sargent's "La Carmencita," representing the well-known Spanish dancer in a garish dress, was one of the most noteworthy pictures of the exhibition. A "Portrait of Mrs. M——," by the same artist, attracted almost as much attention.

J. C. Hook's "Summer Pleasures" shows an expanse of golden-white sand, with the sea beyond and black hulls and fishing boats at anchor. At the edge of the water a lad is loitering in a boat hauled up on the sand, and in the foreground a girl sits on a rock, with her bare feet in a pool, while beside her a naked child plays with a wreath of tangled weeds.

Val Prinsep's "The Emperor Theophilus chooses his Wife" is an episode from the history of the Eastern Empire. The emperor, attended by nobles and ecclesiastics in splendid attire, inspects, in a chamber of the imperial palace, a bevy of damsels, one of whom he is expected to choose for his empress.

F. D. Millet's "The Widow" shows a matron at the head of a table, her only companion a little child, who is peeling an orange. On the wall is the portrait of the husband and father, who fell at Waterloo.

Noteworthy among the sculptures are the marble version of Sir Frederick Leighton's "Athlete struggling with a Python," to go to the Copenhagen Gallery; Harry Bates's "Hounds in Leash"; Thomas Brock's "Genius of Poetry"; and T. Nelson MacLean's "Fountain and Statuette: La Source."

London: New Gallery.—The Guelph Exhibition at this gallery was a disappointment, as compared with the Tudor or Stuart exhibitions of previous years. There were a few good examples of Reynolds, Gainsborough, Hogarth, Romney, Lawrence, and Hoppner, and a fine collection of miniatures. There were also good collections of plate and china, ceramics and sculptures, painted fans, arms, dresses, manuscripts and books, a few coins and medals, and drawings and engravings.

Among the principal attractions at the summer exhibition at the New Gallery were two important works by Burne-Jones, who contributed nothing this year to the Royal Academy. "The Star of Bethlehem," painted for the Birmingham gallery, represents the adoration of the Magi. The figures are nearly life size. The Virgin, child, and Joseph are under a thatched shed at the left, the Virgin seated in the straw with the

child in her lap, and Joseph standing behind. On the right an angel introduces the Magi—Caspar in a blue mantle, Balthasar of Ethiopia in greenish blue, and Melchior in steel armor. The background is a wooded glade, with a vista through the center. The second picture, "Sponsa de Libano," a large decorative work in water color, illustrates the virgin bride of the Song of Solomon. The spouse wanders pensive in a garden of lilies beside a pellucid stream, while the North and South winds, depicted as two fair youths, float in the air behind her, the gale drawing their blue and purple mantles into loops about their shoulders.

Alma-Tadema's "Love in Idleness" depicts two Roman damsels resting on rugs and cushions spread on a pavement of colored marbles and mosaics, close to a fountain, musing in silence while the soft light of evening fades from the terrace, which overlooks a blue sea and an island with white cliffs.

W. B. Richmond's "Amor omnia Vincit" represents nude Venus, attended by the Graces richly clad, who hold white robes for her use, standing beside a bath, with a sunset glow in the background through tall cypresses and the moon rising above the sea.

Mr. Poynter's "Knucklebones," a small work, shows two nude Roman girls seated on a mosaic pavement beside a bath filled with clear water, which reflects the sky. One rests on her toes with her knees bent under her; the other has just tossed the bones from her knuckles and with an outstretched forefinger calls out the number to her antagonist.

Mr. Strudwick's "Elaine" depicts that maiden, in ivory-white attire, seated upon a coffer in her tower chamber, with Sir Lancelot's escutcheon hanging on a *prie-dûu* before her.

J. W. Waterhouse's "Circe" shows the witch enthroned in front of a mirror, holding up her cup and rod as if before her victims, several of whom, in the guise of beasts, fawn round her seat.

London: Art Sales.—The sale of the Haldon House collection, made by the late Lord Haldon, on Feb. 28, brought more than £8,000 for 46 pictures, mostly of the Dutch school. W. Van de Velde, "Departure of Charles II from the Scheldt, 1660," brought £1,963; Jan Weenix, "A Grand Garden," £1,102; Claude, "Embarkation of St. Paulina," £913; J. Ruysdael, "River Scene," £630; Rembrandt, "Elderly Woman," £535. On the same day Sir Joshua Reynolds's "Mrs. Butler" fetched £4,725, said to be the highest price ever obtained at auction for a Reynolds.

On April 25 were sold the modern pictures of the Marquis of Santurce. Among them were: Alma-Tadema, "An Audience with Agrippa" (1861), £2,672; a portion of the "Vintage Festival" (1871), £2,372; "Un Amateur Romain" (1869), £2,782; Fortuny, "The Moorish Guard," £1,575; Gérôme, "The Augurs," £798.

On May 2 the pictures and drawings from the London house of H. W. F. Bolekow, the late ironmaster, were sold, his collection at Marton Hall, Middlesborough, having been disposed of in 1888. The present sale excited almost as much interest as the preceding one, the collection fetching in the aggregate £69,380. The water-color drawings brought £15,475, and seventeen of the pict-

ures £45,643. Among the best prices obtained for water colors were: Fortuny, "Interior of a Morocco Carpet Warehouse," £1,050; Meissonier, "The Antechamber," £840; Turner, "Eridge Castle," £966; "Llangollen," £509; "Edinburgh," £913; "Rivaux Abbey," £960. For paintings in oil: Meissonier, "The Sign Painter," £6,772 (owner paid artist £8,400 for it); Troyon, "Going to Market," £4,930; Rosa Bonheur, "Mountainous Landscape" (1870), £1,260; Rosa Bonheur and Dubufe, "Rosa Bonheur," £1,312; Gérôme, "Carpets for Sale," £682; T. Webster, "Roast Pig," £1,207 (Gillott sale, 1872, £3,722); J. Linnell, "The Hillside Farm" (1849), £2,100; John Phillip, "Grape-seller of Seville" (1862), £2,410; Landseer, "Return from Deer-stalking" (1827), £1,785; Breeze, "Retriever with Game" (1842), £4,326; C. Stanfield, "Bay of Naples" (1867), £1,050; D. Roberts, "Interior of St. Peter's, Rome" (1862), £1,470; W. Collins, "The Minnow Catchers," £1,575; W. Müller, "The Chess-players at Cairo," £3,202 (Gillott sale, 1872, £3,950; Hough sale, 1874, £4,052); Turner, "Walton Bridges," £7,450 (Gillott sale, £5,250); Hogarth, "The Gate of Calais" (The Roast Beef of Old England), £2,572.

On May 23, at the sale of the collection of William Holdsworth, of Ayr, were sold the following: Turner, "Boats and Dutch Men-of-war," £1,312; "Whale Ship," £945; Gainsborough, "The Mushroom Girl," £2,572 (Dupont sale, 1872, £525); Millais, "Murthly Water," £1,522.

On June 6 was sold the collection of modern pictures of the late Charles P. Matthews, of Havering-atte-Bower, Essex, consisting of 125 lots. Among the noteworthy pictures were: Holman Hunt, "Finding of the Saviour in the Temple," £3,570. Sir F. Leighton, "Music Lesson," £2,467; "Iostephane," £1,071. J. F. Lewis, "Reception," £892; "Intercepted Correspondence," £1,764; "Turkish School, Cairo," £1,785; "The Seraff," £1,785. Millais, "A Flood," £1,680; "The Ransom," £840. Müller, "Island of Rhodes," £3,465 (Watts sale, 1885, £1,945). C. Stanfield, "Mazorbo and Torcello," £1,050. W. Frith, "Charles II's Last Sunday," £1,732. J. C. Hook, "Jetsam and Flotsam," £1,785; "Clearing the Nets," £945; "Hoisting Sail," £1,785; "Trawlers," £850; "Sea Urchins," £777; "From under the Sea," £945; "Brimming Holland," £1,701.

On June 20 and 23 was sold the collection of the late Miss James, including some fine Watteaus and Watteau and Turner drawings. A Watteau, "L'Occupation selon l'age," £5,460; "L'Accord parfait," £3,675. Meissonier, "La Vedette," £1,102 (sold, 1889, for £1,680); "Les Mousquetaires," £997 (1889, £1,312). P. Nasmyth, "Leigh Woods," £1,491. J. Linnell, "The Forest Road," £1,260. Rembrandt, "Jew Rabbi," £840.

On July 11 was sold the collection of the late Cavendish Bentinck, M. P., realizing more than £19,000. Among the pictures were: Reynolds, "Fanny Kemble" (1784), £2,960; J. Ruysdael, "Wooded Landscape" (figures by Berchem), £1,470.

Miscellaneous.—The Chantrey fund purchases for 1891 are as follow: P. H. Calderon's "St. Elizabeth of Hungary's Great Act of Renunciation," bought for £1,200; Harry Bates's

marble statue "Pandora," £1,000; Harry Dixon's water color "Lions," £100; and J. W. North's "The Winter Sun in the Wild Woodland," £315. Since the bequest was made, 58 works have been bought, of which 18 only were by members of the academic body.

An anonymous donor, generally understood to be Mr. Henry Tate, has given the Government £80,000 to found a National Gallery of British Art. The Government has granted a site for it at South Kensington, with a frontage of 300 feet on Exhibition Road.

The corporation of Glasgow has paid Mr. Whistler £1,000 for his portrait of Carlyle—the old man against a gray wall, with a rug over his legs, and his large, soft hat lying on his knee.

George Reid, R. S. A., was elected, Aug. 8, President of the Royal Scottish Academy, in succession to the late Sir William Fettes Douglas. Mr. Reid is a pupil of the Trustees' Academy, Edinburgh, of Israels and Mollinger in Holland, and of Yvon in Paris.

An exhibition of examples of the English pre-Raphaelites was held in the Birmingham Museum in October. Works by Ford Madox Brown, Holman Hunt, Rossetti, Sir John Millais, Burne-Jones, and others were shown. The permanent collection at Birmingham has been enriched by the purchase of Burne-Jones's "Star of Bethlehem," Watts's "Roman Lady," Millais's "The Widow's Mite," and J. F. Lewis's "The Doubtful Coin."

The Royal Hibernian Academy held its sixty-second exhibition in Dublin in April. It was in all respects equal to any of its previous ones.

A statue of John Bright, by Bruce Joy, was uncovered, on Oct. 10, in the square in front of Manchester Town Hall. Another, by Hamo Thornycroft, will shortly be unveiled at Rochdale.

The sale of the Post collection, Amsterdam, April 14, realized 273,113 florins, or about \$110,000. Among the best prices obtained were: Rosa Bonheur, "La Fenaison," 18,150 florins; Corot, "Le Ravin," 15,290; J. Israels, "Jour de Repos," 14,410; Jules Dupré, "Vue de Forêt," 13,860.

Prince Borghese, of Rome, has sold to M. A. de Rothschild the portrait of "Cesar Borgia," by Raphael, for 600,000 francs. The prince has replaced this famous picture by four other canvases: "Crucifixion," by Fiorenzo di Lorenzo; "St. Stephen," by Francia; "Madonna," by Lorenzo Credi; and an early work by Lotto.

The international exhibition of works of art at Berlin, organized by the Berlin Artists' Union to celebrate their fiftieth anniversary, was opened, May 1, by the Emperor William and the Empress-dowager Frederick, with a brilliant ceremony. Between four and five thousand works were contributed by artists of almost all countries excepting France, the American colony in Europe being well represented. The outer hall was devoted to sculpture. It was in every respect a remarkable exhibition. Among the American exhibitors to whom medals were awarded are Frederick H. Bridgman, Jules Stewart, Walter McEwen, and Messrs. Forbes, Stanhope, Story, and Shannon.

An international exhibition of painting was opened in Stuttgart in March by Prince William of Wurtemberg. Works were contributed by

German, Austrian, Belgian, Dutch, Italian, Spanish, and French artists. The catalogue represented 369 numbers, of which 11 were sculptures.

A statue of William Tell, by Antonin Mercier, has been erected at Lausanne, Switzerland, through the munificence of M. Osiris, in commemoration of the hospitality extended by the Swiss, in 1871, to the army of Bourbaki.

The first exhibition of paintings ever held in Egypt, at least in modern times, was opened in Cairo, Feb. 20, under the presidency of Théodore Ralli, a Parisian artist. It was inaugurated by the Khedive, in presence of the diplomatic corps.

At the Barcelona Fine Arts Exhibition, opened in May, four pictures contributed by Jan Van Beers were objected to by the jury of admissions on the ground of immodesty. The controversy was finally settled by putting them in a separate room, where no one less than thirty years of age was admitted.

At the Moscow Exhibition the fine-art gallery contained 800 oil pictures, pastels, and engravings, and 120 statues.

The new Museum at Vienna, in which has been grouped all the collections of the Crown, including those of the Belvedere, Ambras, Arsenal, Schatzkammer, Cabinet of Antiquities, etc., was solemnly inaugurated, Oct. 17, by the Emperor, in presence of the archdukes and a large number of other dignitaries. The building, which is situated on the Ringstrasse, nearly opposite the imperial palace, is one of the finest in Europe, and its collected treasures will take rank with the most important collections of the world.

New York.—The sixty-sixth annual exhibition of the Academy of Design (April-May) was superior to many of its predecessors. Among the noteworthy contributions were: Mr. Hovenden, "Breaking the Home Ties," an awkward country youth, about to go forth into the world, taking leave of his mother. Mr. Dewing, "Summer," four maidens in modern costume dancing in a row, while a fifth plays a harp. Will H. Low, "A Girl in Rose," a chaste semi-nude figure standing in a wood. Thomas Moran, a study of icebergs in mid-ocean. Edward Moran, "Notre Dame de Paris," a scene on the night of the "Fête des Étrangers," with the bridge and church illuminated; and "Funeral of John Ericsson—New York Bay." W. T. Trego, "The Color Guard," a French scene. Edwin H. Blashfield exhibited a showy picture representing a lady in white reclining on cushions. Among portraits were Daniel Huntington's "Professor Drisler," John S. Sargent's "Cornelius Vanderbilt," and others by Benjamin C. Porter, Carroll Beckwith, and William M. Chase.

The Hallgarten prizes, which were not awarded last year, were again passed, because fifty of the season's exhibitors could not be got together to consider them.

The tenth autumn exhibition of the National Academy (Nov. 23 to Dec. 19) was noteworthy for the large number of new names in the catalogue. Of the older exhibitors, Walter Shirlaw's "Harmonies," an old man playing a violin, Kenyon Cox's nude "Sketch," Remington's "Right Front into Line," and Childe Hassam's "Copp's Hill Burial Ground," attracted notice.

John Rogers, famous for statuettes, contributed a colossal group entitled "Eliot preaching to the Indians." The sales realized about \$10,000.

The American Water-Color Society held its twenty-fourth annual exhibition at the Academy of Design in February, with 661 pictures, a larger number than usual. Among the exhibitors were Arthur Parton, Bolton Jones, Edward Moran, Mrs. Nicholls, Miss Greatorex, and Childe Hassam. The exhibition of the New York Etching Club was held at the same time in the corridor.

The second annual exhibition of the New York Water-Color Club was held at the Fifth Avenue Art Galleries in December. Among those represented were Childe Hassam, George Inness, L. Crapo Smith, John A. Fraser, Miss Rose Clark, Mrs. Rosina Emmett Sherwood, Charles A. Vanderhoff, and Henry Sandham.

The Society of American Artists held its fifteenth annual exhibition at the Fifth Avenue Art Galleries, with between two and three hundred canvases, many of them very encouraging for the future of American art. Among the contributors were John S. Sargent, Robert Reid, and Abbott N. Thayer, who sent portraits, and Henry Walker and West Clinedinst, figure pieces.

New York Art Sales.—The sale of the Seney collection, in February, brought, in the aggregate, about \$664,000. Among the highest prices were: J. F. Millet, "Waiting," \$40,500; "Apple Harvest," \$6,500. Delacroix, "Tiger and Serpent," \$11,000; "Lion in Mountains," \$3,925. L. Knaus, "Old Witch," \$12,600; "Child's Funeral," \$10,000; "Thoughts of Better Days," \$5,300. Gérôme, "First Kiss of the Sun," \$6,000. Diaz, "After the Storm," \$4,350; "Virgin and Child," \$8,600. Rosa Bonheur, "Choice of the Flock," \$5,100. Meissonier, "Playing Bowls at Antibes," \$15,000; "Deliberation," \$7,600. Troyon, "Sheep in Forest," \$11,100; "Hounds," \$12,000. Corot, "Dance of Nymphs," \$7,100; "Bathing Boys," \$4,600. Dupré, "Sunset," \$9,100. Van Marcke, "Rich Pasturage," \$7,490. Daubigny, "River Front," \$4,700; "Village on the Oise," \$6,000. Israels, "The Frugal Meal," \$5,050.

The Aaron Healy collection, sold in February, brought \$130,855 for 70 modern paintings. Best prices: Daubigny, "Springtide," \$8,550; "Landscape," \$4,100; "Moonrise," \$6,850. Corot, "Morning," \$2,600. Bouguereau, "Far from Home," \$3,150; "Fraternal Love," \$5,200. Diaz, "Path in Woods," \$4,800; "Forest of Fontainebleau," \$1,600. Gallait, "Last Honors to Egmont and Horn," \$10,000. J. F. Millet, "Shepherdess," \$5,600. Knaus, "The Truant," \$5,050; "After the Bath," \$2,550.

The sale of the Vasilii Verestchagin collection brought a total of \$81,789, of which \$68,545 was obtained for 111 paintings. The picture "Crucifixion by the Romans" was sold for \$7,500; "Blowing from Guns in British India," \$4,500; and "The Future Emperor of India," \$4,125.

Miscellaneous.—The Astor Library has the nucleus of an art collection in the gift by William Waldorf Astor of 22 paintings, mostly of the modern French and German schools, from the gallery of his late father. Among them are Hector Leroux's "École de Vestales" (Salon, 1880), Robert Fleury's "Charlotte Corday," and

two Meissoniers, "L'Escalier" and "Condottier Français."

The Metropolitan Museum has received, through the munificence of Mr. Marquand, 7 paintings of the Dutch school—two portraits by Frans Hals, a portrait of Cranmer (?) attributed to Holbein, "The Old Mill" by Rembrandt, a "Landscape with Cattle" attributed to Cuyp, a portrait by Maroni, and "The Music Lesson" by Gabriel Metsu. The opening of the museum on Sunday afternoons was apparently a popular success, the average attendance being nearly 10,000 a day.

One of the most remarkable pieces of art work ever produced is a sitting statue, heroic size, of Washington Irving, which was completed in 1891 by a blind sculptor, Johnson M. Mundy, of Tarrytown, N. Y. Under certain conditions of light, with an opera-glass, Mr. Mundy can see a little; but his work on this statue was all done by the sense of touch. The plaster model, a view of the head of which is here presented, is at Tarrytown; the bronze casting has not yet been made.

Philadelphia.—The sixty-first annual exhibition of the Academy of Fine Arts was one of the largest and best in the history of the society. Many New York artists were represented, some of them by more pictures than were contributed to their home exhibition. The Temple gold medal was awarded to Abbott H. Thayer for his "Winged Figure," a girl angel with wings and drapery of white against a blue background. The Temple silver medal was given to Kenyon Cox for his portrait of a young lady.

Chicago.—The Art Institute's fourth annual exhibition in November was of exceptional excellence. It comprised 250 paintings and 14 pieces of sculpture. Of the paintings, 24 were sent from Paris, representing the American colony there. Thirty-nine of the exhibitors were Chicago artists, and most of the remainder were from New York studios. The J. W. Ellsworth prize of \$300 for the best work by an American artist painted in America was awarded to Frank Benson for his "Twilight," and the Art Institute prize of \$250 for the second best to Gari Melchers for "The Pilots." The latter picture was painted in Florida and not eligible for the first prize.

FLORIDA, a Southern State, admitted to the Union, March, 3, 1845; area, 58,680 square miles. The population, according to each decennial census since admission, was 87,445 in 1850; 140,424 in 1860; 187,748 in 1870; 269,493 in 1880, and 391,422 in 1890. Capital, Tallahassee.

Government.—The following were the State officers during the year: Governor, Francis P. Fleming, Democrat; Secretary of State, John L. Crawford; Comptroller, William D. Bloxham; Treasurer, Frank J. Pons; Attorney-General, William B. Lamar; Superintendent of Public Instruction, Albert J. Russell; Commissioner of Agriculture, Lucius B. Wombwell; Railroad Commissioners, George G. McWhorter, who died on May 21, Enoch J. Vann, and William Himes (on June 13 the Railroad Commission was abolished by act of the Legislature); State Board of Health, Richard P. Daniel, William B. Henderson, William K. Hyer; Chief Justice of the Supreme Court, George P. Raney; Associate Justices, Milton H. Mabry and R. F. Taylor. Justice Mabry was elected in November, 1890, to succeed Justice A. E. Maxwell. Justice Taylor

was appointed by the Governor late in 1890 to fill the vacancy caused by the resignation of Justice H. L. Mitchell, who accepted a seat on the bench of the United States Circuit Court.

Population by Races.—The following table shows the white and colored population of the State in 1880 and 1890, according to the Federal census:

COUNTIES.	WHITE.		COLORED.	
	1890.	1880.	1890.	1880.

In 1890 there were also in the State 101 Chinese, 14 Japanese, and 168 Indians.

Finance.—The following is a summary of the operations of the State treasury for the two years ending Jan. 1, 1891: Balance on Jan. 1, 1889, \$109,813.08; total receipts for the year ensuing, \$680,528.19; total expenditures, \$713,251.20; balance on Jan. 1, 1890, \$77,090.07; total receipts for the year ensuing, \$760,128.65; total expenditures, \$751,356.39; balance on Jan. 1, 1891, \$85,862.33. The general revenue fund statement for the two years included in the above summary is as follows: Balance on Jan. 1, 1889, \$33,053.59; receipts for the year ensuing, \$513,760.12; expenditures, \$538,912.80; balance on Jan. 1, 1890, \$7,900.91; receipts for the year ensuing, \$550,303; expenditures, \$550,078.90; balance on Jan. 1, 1891, \$8,125.01. Of the general revenue fund receipts for the year 1889, the sum of \$262,795.26 was derived from the tax on property, \$148,343.08 from license fees, and \$95,500 from borrowed money. For

HEAD OF WASHINGTON IRVING.

FROM JOHNSON M. MUNDY'S STATUE.

the year 1890 the sum of \$395,930.30 was derived from taxes, and \$150,119.94 from license fees. The expenditures from the fund for the former year included \$129,783.85 for jurors and witnesses, \$49,410.64 for criminal prosecutions, \$64,943 for interest on the State debt, \$27,589.20 for pensions, \$67,255.61 for expenses of the legislative session, \$42,031.67 for maintenance of lunatics, \$29,558.53 for expenses of collecting revenue, \$20,930.30 for salaries of the executive department, and \$29,412 for salaries of the judicial department. For the latter year the leading expenses were as follow: \$98,234.89 for jurors and witnesses, \$88,073.86 for criminal prosecutions, \$65,026 for interest on the State debt, \$36,669.05 for pensions, \$43,512.16 for maintenance of lunatics, \$53,927.44 for expenses of collecting revenue, \$21,450 for salaries of the executive department, \$37,292.72 for salaries of the judicial department, and \$11,177.34 for expenses of the State Board of Health. Since the adoption of the Constitution of 1885, the State expenses have largely increased from several causes, the most important being the constitutional provision that the State, instead of the counties, shall bear the expense of criminal prosecutions. This provision was presumably made with the hope that county taxation would be to that extent reduced. But such a result has never been realized, as the average rate of county taxation was less in 1884, when the counties paid the expenses of their own criminal prosecutions, than in 1890, when the State bore the burden. Further causes of increase are the laws of recent enactment pensioning Confederate soldiers, establishing a State board of health, and increasing the pay of jurors from \$1.25 to \$2.00 a day. The last-mentioned law added about \$40,000 to the State expenses for 1890. As a result of these increased demands upon the State treasury, it was found necessary early in 1889 to borrow \$100,000.

On Jan. 1, 1891, the bonded State debt, (deducting bonds held in the State sinking fund) amounted to \$1,032,500, of which \$673,500 is held by the various State educational funds, leaving only \$359,000 in the hands of individuals.

Valuations.—The assessed valuation of property in the State for 1890 is as follows: Value of town and city lots, including improvements, \$21,423,885; value of other land and improvements, \$39,350,931; value of animals, \$5,245,311; value of other personal property, \$10,906,811; value of railroads, \$14,877,014; value of telegraph lines, \$179,514; total valuation, \$91,983,466. Included in the assessment are 23,866,484 acres of land, 43,558 horses and mules, 463,667 meat cattle, 107,842 sheep and goats, and 198,132 swine. The State tax assessed in 1890 upon this valuation was as follows: General revenue, $4\frac{1}{2}$ mills, \$414,137.06; school tax, 1 mill, \$92,038.01; immigration tax, $\frac{1}{2}$ mill, \$11,605.57; Board of Health tax, $\frac{1}{2}$ mill, \$43,301.59; total, \$561,082.23. For 1891 the State tax rate is as follows: General revenue, $4\frac{1}{2}$ mills; schools, 1 mill; Board of Health, $\frac{1}{2}$ mill; total, $5\frac{1}{2}$ mills.

Legislative Session.—The regular biennial session of the Legislature began on April 7 and ended on June 5. A bitter and prolonged contest over the choice of a successor to United

States Senator Wilkinson Call marked the proceedings of the session and seriously impeded the work of legislation. The most important measures passed relate to State finances. A new revenue law was enacted, modifying in numerous details the method of assessing and collecting taxes and changing the amount of licenses to be levied on various occupations, so as to secure a greater revenue, but leaving the subjects of taxation practically unchanged. The license fee of liquor dealers was fixed at \$500 a year for each place of business, and for distillers and brewers at \$100 a year. Retrenchment was effected in State expenses by the abolition of the Bureau of Immigration and by the repeal of the law creating the Board of Railroad Commissioners. A new source of revenue was found in the phosphate deposits in the navigable waters of the State. By an act approved June 9 all persons or companies mining or removing phosphates from such waters are now required to pay the following royalties to the State: Fifty cents a ton for all phosphate deposits mined or removed analyzing 55 per cent. or less of bone phosphate of lime; 75 cents a ton for all deposits analyzing over 55 and not over 60 per cent. bone phosphate of lime; and \$1 a ton for all deposits analyzing over 60 per cent. The interests of the State in its phosphate deposits are placed under the control of a board of phosphate commissioners, consisting of the Governor, the Comptroller, and the Attorney-General. This board has authority to grant, for a term not exceeding five years, the exclusive right to remove phosphate rock from the navigable waters of the State, on certain conditions stated in the act.

The State tax for general purposes, to be levied in each of the years 1891 and 1892, was reduced from $4\frac{1}{2}$ to $4\frac{1}{4}$ mills, and the Governor was authorized to reduce the rate still further, if the revenue from other sources should be large enough to justify such reduction.

The Governor, the Treasurer, and the Comptroller were authorized to borrow not over \$200,000, to pay the outstanding obligation of the State for \$100,000 borrowed under the act of 1889, and to pay any debts incurred under appropriations of this or former sessions.

One hundred acres of State land were granted to the Old Confederate Soldiers' and Sailors' Home Association, as a site for a proposed home for ex-Confederates, and a further grant of 50,000 acres was made for the purpose of providing a fund for the support and maintenance of the institution, after suitable buildings have been constructed.

A new road law was passed, regulating the maintenance and repair of public roads and bridges.

The revision of the public statutes, prepared by a commission appointed pursuant to an act of the last Legislature, was submitted at this session and adopted as the law of the State.

No appropriation was made for the World's Fair in 1893. Other acts of the session were as follow:

Declaring all rates of interest above 10 per cent. to be usurious.

Prohibiting pool-selling, except that associations for driving or racing may sell pools between the first day of November and the first day of May, provided

the sale is made on the track and on days in which races take place. Such associations shall pay to the State, for the use of the school fund, 3 per cent. of the gross admission receipts to any race at which pools are sold.

To prohibit the sale and disposing of cigarettes, smokettes, and cigarette paper to persons under eighteen years of age.

For the better prevention of riots and mobs.

Securing to inmates of insane asylums in the State their postal rights.

Making atheists, agnostics, and persons who do not believe in future rewards and punishments competent witnesses.

Prescribing a short form for warranty deeds.

To prohibit the killing of any crane, egret, ibis, curlew, or heron for the purpose of sale or commercial traffic.

Providing that buildings hereafter constructed for public entertainments shall have the shutters to all entrances open outwardly and be so arranged as to allow persons readily to escape therefrom.

Declaring the anniversary of the birth of Jefferson Davis a legal holiday.

Authorizing Duval County to improve the navigation of the St. John's river, and to issue bonds in aid thereof.

Senatorial Contest.—Early in 1890 the opponents of United States Senator Call began an aggressive campaign to prevent his re-election. They circulated in the newspapers numerous charges against his public record, and sought to secure the nomination of legislative candidates who were hostile to him. The senatorial question thereby became a leading issue in the preliminary Democratic meetings for selection of candidates. Only partial success attended the movement, as more than half of the legislators chosen at the November election proved to be supporters of the Senator. After the Legislature convened, a caucus of Democratic members was called to meet on April 12. The friends of Senator Call elected the presiding officer, and after a long discussion the customary rule was adopted that a two-third vote should be necessary to secure a caucus nomination. On the first ballot Call received 60 votes and ex-Gov. W. D. Bloxham 35. After a second ballot had been taken, the opponents of Senator Call, nearly all of whom were adherents of the Farmers' Alliance, held a meeting and decided to support James G. Speer as their candidate. When the caucus re-assembled on April 15, the name of ex-Gov. Bloxham was accordingly withdrawn, and the third ballot resulted as follows: Call, 59; Speer, 37; Bloxham, 2. For nearly three weeks, and through about 50 ballots, the strength of the two candidates remained substantially unchanged. Early in May the Alliance members, finding it impossible to elect Speer, decided to transfer their support to D. H. Mays, but he too failed to break the column of Call's supporters. Meanwhile, in the Legislature a formal ballot had been taken each day since April 21, according to law, both factions agreeing to scatter their votes so as to prevent a choice until the caucus should agree upon a candidate. Meetings of the caucus were held day after day without any marked changes, Call being unable to secure a two-third vote, but having a clear majority. The eighty-sixth ballot, on May 25, gave Call 52 votes, Mays 42, and Bloxham 2. There being no prospect that either faction would yield, the Call men, after this ballot, voted to dissolve the caucus and

transfer the contest to the Legislature, where a majority vote only would be necessary to elect. The anti-Call members then adopted the policy of refusing to attend the joint session of the Legislature, and on May 26 only 15 Senators and 39 members of the House were in attendance. This was a minority of the Senate and a majority of the House. It was also a majority of the two Houses in joint session. On this day Call received 51 votes and Mays 1, and the presiding officer declared Call elected. The anti-Call members thereupon filed with Gov. Fleming, who is required by law to certify to the election of United States Senators, a statement showing the circumstances under which the joint session of May 26 was held, and arguing that there was no election of Senator because a quorum of the Senate was not present at such session. The Governor, after consideration of the legal questions involved, issued an address to the people, dated Aug. 4, in which he decided that, inasmuch as a quorum of the Senate was not present, the election of May 26 was of no effect, and that he could not issue a certificate of election to Senator Call. Pursuant to this opinion, the Governor, early in September, appointed ex-Congressman Robert H. M. Davidson to be United States Senator to fill the vacancy caused by the failure of the Legislature to elect. A new difficulty now arose, as the Secretary of State, John L. Crawford, who did not approve the Governor's course, refused to affix the seal of the State or to countersign the certificate of appointment issued to Davidson. The Governor then called upon Attorney-General Lamar to bring a writ of mandamus in behalf of the State against Secretary Crawford, to compel him to perform his duty in this regard. The Attorney-General declined to obey this order, on the ground that the person interested, ex-Congressman Davidson, should bring the suit rather than the State. The Governor himself then took out a writ of mandamus against the Secretary, in his own name, in behalf of the State, and the case was heard by the Supreme Court late in October. A decision was rendered in November, to the effect that the duty of the Secretary of State in signing the certificate of appointment and affixing the seal was purely ministerial, and did not commit him to any recognition of the legality of such appointment, and that mandamus should issue in this case. Secretary Crawford thereupon affixed his signature to the commission and sealed it, pursuant to the order of the court. The United States Senate must now decide as to the rights of the two claimants.

Education.—For the years ending Sept. 30, 1889, and Sept. 30, 1890, the public-school statistics are as follow:

ITEMS.	1888-'89.	1889-'90.
Number of white schools	1,691	1,746
Number of colored schools	598	587
White children of school age	60,782	60,782
Colored children of school age	52,865	52,865
White children enrolled in public schools	53,608	55,191
Colored children enrolled in public schools	32,782	37,281
Average daily attendance	68,652	64,819
White teachers	1,718	1,849
Colored teachers	694	661

For the year 1888-'89 the amount available for the support of public schools was \$476,490, derived from the following sources: From the county tax for schools, levied by the various counties, \$363,490; from the State one-mill tax, \$76,000; from interest on the State Common-school fund, \$37,000. The amount available in 1889-'90 was \$516,532.70, derived as follows: From the county tax, \$399,755.56; from the State one-mill tax, \$84,103.31; from interest on the State Common-school fund, \$32,673.83. In 1889-'90 the sum of \$336,405.52 was expended for teachers' wages. The average length of the school year was 120 days. During the year 79 new school-houses were erected, at a cost of \$32,554.62.

The State Agricultural College, at Lake City, had an attendance of 160 pupils on Jan. 1, 1890; but the number on Jan. 1, 1891, had fallen to 103, as a result of raising the standard of admission. At the West Florida Seminary 70 students were in attendance on Jan. 1, 1891, and at the East Florida Seminary 107. On the same date there were 84 pupils at the normal college for white teachers at De Funiak Springs, and 74 at the normal college for colored teachers at Tallahassee. The Institute for Deaf and Blind at St. Augustine cares for about 28 pupils.

Charities.—At the State Insane Asylum, on Jan. 1, 1890, there were 249 patients, of whom 127 were males and 122 females. During the year following 64 persons were admitted and 74 discharged, leaving 239 inmates on Jan. 1, 1891, of whom 118 were males and 121 females. Additions to the present buildings are in process of construction.

State Prisons.—For the two years ending Jan. 1, 1891, the population of the State Prison shows the following changes: Convicts on Jan. 1, 1889, 319; received during the year following, 269; discharged, 200; remaining on Jan. 1, 1890, 388; received during the year 1890, 233; discharged, 212; remaining on Jan. 1, 1891, 409. Since Jan. 1, 1890, all State convicts have been leased to E. B. Bailey, of Monticello, who has sublet a portion of them for work on turpentine farms, the remainder being employed during 1890 at farming, and during this year at phosphate mining.

Confederate Pensions.—Under the pension law, approved June 8, 1889, 503 claims had been filed up to March 10 of this year, of which 292 had been allowed by the Governor. Of the total number of claims, 105 were filed by widows, 69 of which have been allowed. Nearly all of the male pensioners receive from \$90 to \$100 annually, and widows receive \$150 annually.

World's Fair Convention.—The Legislature having failed to pass a World's Fair appropriation bill, a State convention was called, to meet at Orlando on Oct. 7, to devise other ways and means for securing a suitable exhibit of the resources of the State at Chicago in 1893. Only 14 of the 45 counties in the State were represented, by 111 delegates. Gov. Fleming presided. The convention decided to appoint a committee of 13 directors from the State at large, who should have entire management of the Florida exhibit. Each county was requested to elect a county executive committee, who should co-operate with the State committee. It was further provided that the sum of \$100,000

should be apportioned and raised from the several counties, on the basis of the tax assessments of 1891, each county committee adopting its own method of raising the amount. Not over 10 per cent. of the subscription shall be expended until \$50,000 have been collected.

FRANCE, a republic in western Europe, established on Sept. 4, 1870. The Constitution was adopted by the National Assembly on Feb. 25, 1875, and was revised on Dec. 9, 1884, and June 16, 1885. It vests the legislative power in the National Assembly, consisting of the Chamber of Deputies, elected by universal suffrage for four years, in the proportion of 1 member to every 70,000 inhabitants, and a Senate, composed of 300 members elected by electoral colleges in each department, made up of the Council General, the deputies for the department, and delegates of the communes. The life Senators, 75 in number, who were appointed before the revision of 1884, are replaced, as their seats fall vacant, by others elected in the regular way for the ordinary term of nine years. In 1890 their number had been reduced by death to 53. One third of the elective Senators are replaced every three years. The Deputies, of whom there are 584, are elected by *scrutin d'arrondissement*, each candidate being bound to announce his candidacy for a single district only within a fortnight of the election. From 1871 till 1876, and again from 1885 till 1889 the voting was by *scrutin de liste*, or a collective ticket for each department. Members of the active army can not sit in the Chamber or exercise the voting franchise. The majority of the state functionaries are ineligible, and by a special law members of the families that have reigned in France are precluded from sitting in either house. French citizenship and the age of twenty-five years for the Chamber and forty years for the Senate are the only other restrictions. The National Assembly meets regularly on the second Tuesday in January. The President is bound to call an extraordinary session when petitioned by a majority of the members of either house. He has power to do so on his own motion, and also to adjourn the session for a period not to exceed thirty days and not oftener than twice in the same year, and with the consent of the Senate he may dissolve the Chamber of Deputies, in which case he must appoint new elections within three months. The National Assembly meets in joint session for the election of a President of the republic or for the revision of the Constitution. The President is elected for seven years by the absolute majority of the National Assembly. The ministers are collectively and individually responsible to the Chambers, and every act of the President must be countersigned by one or more of the ministers. The President of the Republic is Marie François Sadi Carnot, elected Dec. 3, 1887. The ministry was composed at the beginning of 1891 of the following members: President of the Council and Minister of War, Charles de Freycinet; Minister of Foreign Affairs, M. Ribot; Minister of Finance, M. Rouvier; Minister of Justice and Public Worship, A. Fallières; Minister of Public Instruction and the Fine Arts, M. Bourgeois; Minister of the Interior, M. Constans; Minister of Public Works, M. Yves Guyot; Minister of Commerce, Jules Roche; Minister of Agriculture,

M. Develle; Minister of Marine, Vice-Admiral Barbey. This ministry was constituted on March 17, 1890.

Area and Population.—The area of France is 528,876 square kilometres, according to the cadastral survey, while the calculations of the Ministry of War make it 536,408 square kilometres. The legal population, including those temporarily absent, on May 31, 1886, when the last census was taken, was 38,218,903. The resident population was 37,103,689. The citizens of French birth numbered 36,700,342; naturalized citizens, 103,886; foreigners, 1,126,531. The number of marriages in 1889 was 272,934; of births, 880,579; of deaths, 794,933; excess of births, 85,646. The number of emigrants in 1888 was 23,339, most of whom went to the United States and to the Argentine Republic. The following cities contained more than 100,000 inhabitants in 1886: Paris, 2,344,550; Lyons, 401,930; Marseilles, 376,143; Bordeaux, 240,582; Lille, 188,272; Toulouse, 147,617; Nantes, 127,482; St. Etienne, 117,875; Havre, 112,074; Rouen, 107,163; Roubaix, 100,299.

The preliminary results of a census taken in April, 1891, make the population of France 38,095,000, a gain of 208,000 since 1886, when an increase of 565,000 since 1881 was shown. The growth of the city of Paris and its suburbs during the past five years was 249,000, and other large towns showed a similar increase, implying a considerable diminution in the rural population. In 28 departments an increase of population was noted, and in 59 there was an absolute decrease. The largest increase was 249,353 in the department of the Seine. In the Nord it was 77,276; Alpes-Maritimes, 43,627; Bouches-du-Rhône, 30,072; Rhône, 27,160; Hérault, 25,709; Pas-de-Calais, 29,981; Gironde, 21,508. The death-rate in France is low, and is constantly being reduced. Nevertheless the population is nearly stationary, for the reason that the number of births diminishes from year to year. In 1884 there were 937,750 children born; in 1885, 924,558; in 1886, 912,838; in 1887, 889,333; in 1888, 882,637.

Commerce.—The value of the general commerce of France, which embraces all merchandise entering and leaving the country, including foreign goods re-exported, was 5,320,000,000 francs for imports and 4,803,000,000 francs for exports in 1889. The special imports, confined to goods entered for domestic consumption, amounted to 4,317,000,000 francs; and the special exports, consisting of domestic products only, to 3,704,000,000 francs. The special imports of food products were 1,441,000,000 francs, and the special exports 837,000,000 francs; of raw materials 2,262,000,000 francs worth were imported, while the exports amounted to 941,000,000 francs; and in the category of manufactured goods the imports were valued at 613,000,000 francs, and the exports at 1,926,000,000 francs. The values of the chief imports for domestic consumption were as follow: Wine, 384,000,000 francs; raw wool, 371,000,000 francs; cereals, 366,000,000 francs; raw silk, 292,000,000 francs; coal, 212,000,000 francs; raw cotton, 203,000,000 francs; hides, skins, and fur skins, 180,000,000 francs; timber, 173,000,000 francs; oil seeds, 155,000,000 francs; coffee, 145,000,000 francs; chemicals, 86,000,000 francs; animals, 86,000,000 francs;

woolen manufactures, 68,000,000 francs; sugar, 65,000,000 francs; fruits, 64,000,000 francs, manufactures of silk, 58,000,000 francs; flax, 57,000,000 francs; meat, 49,000,000 francs; machinery, 44,000,000 francs; cotton manufactures, 41,000,000 francs. The following are the values given for the principal exports of articles of French produce and manufacture in 1889: Woolen manufactures, 364,000,000 francs; silk manufactures, 261,000,000 francs; wines, 251,000,000 francs; skins, 175,000,000 francs; raw wool, 169,000,000 francs; fancy or Paris goods, 145,000,000 francs; raw silk and yarn, 139,000,000 francs; leather goods, 135,000,000 francs; sugar, 121,000,000 francs; cotton goods, 116,000,000 francs; butter and cheese, 112,000,000 francs; leather, 108,000,000 francs; millinery, etc., 103,000,000 francs; linen goods, 103,000,000 francs; metal goods, 85,000,000 francs; liquors, 67,000,000 francs; jewelry, 57,000,000 francs; woolen yarn, 55,000,000 francs; chemical products, 49,000,000 francs; machinery, 42,000,000 francs; rags, 37,000,000 francs; novelties, 36,000,000 francs.

The distribution of the special commerce of 1889 among the principal countries of derivation and destination is shown in the following table, giving the value in francs of the imports from and the exports to each country:

COUNTRIES.	Imports.	Exports.
Great Britain.....	588,000,000	996,000,000
Belgium.....	473,000,000	571,000,000
Spain.....	355,000,000	194,000,000
United States.....	807,000,000	273,000,000
Germany.....	883,000,000	842,000,000
Italy.....	134,000,000	144,000,000
Argentine Republic.....	219,000,000	170,000,000
Algeria.....	201,000,000	179,000,000
British India.....	186,000,000
Switzerland.....	280,000,000
Russia.....	210,000,000

The imports by land amounted to 1,650,000,000 francs, and those brought by sea to 3,670,000,000 francs; of which 1,606,000,000 francs were borne in French and 2,064,000,000 francs in foreign ships. Of the exports, 1,557,000,000 francs were sent by land carriages, and 3,246,000,000 francs by sea; 1,780,000,000 francs being carried in French and 1,466,000,000 francs in foreign ships. The share of each of the principal ports of entry in the general commerce, comprising both imports and exports, was in 1889 as follows: Marseilles, 1,827,000,000 francs; Havre, 1,746,000,000 francs; Bordeaux, 879,000,000 francs; Paris, 678,000,000 francs; Dunkerque, 506,000,000 francs; Boulogne, 453,000,000 francs; Cette, 235,000,000 francs; Rouen, 218,000,000 francs; Dieppe, 205,000,000 francs; Tourcoing, 201,000,000 francs; Calais, 160,000,000 francs; Belfort, 162,000,000 francs. The transit trade in 1889 amounted to 653,000,000 francs. The imports of precious metals were 448,000,000 francs, and the exports 233,000,000 francs. The analysis of the special commerce of 1889 in regard to the nature and origin of its constituents shows that of the imports 47·9 per cent. were products of agriculture, 32·6 per cent. of animal origin, 5·8 per cent. forest products, 7·1 per cent. the produce of mines, and 6·6 per cent. manufactured articles; while of the exports, 16·7 per cent. of the total value represented agriculture, 26·5 per cent. in-

industries connected with the raising of animals, and 50·8 per cent. manufacturing industries.

Agriculture.—Out of 37,930,759 persons, the total population of France in 1886, 7,698,402 were dependent on agriculture, 8,324,196 on industry, 4,242,764 on commerce, 2,295,966 on invested savings, 1,020,721 on transportation, 965,010 on mining, 960,078 were of no known occupation, 711,027 were supported by public office, 613,363 constituted the public forces, 348,527 depended on teaching, 224,657 on religious worship, 207,401 on the law, 161,632 on the medical profession, and 152,016 obtained their livelihood from literature, science, and the arts. The farming class thus constitutes nearly half of the population. In 1889 the crops were generally abundant. There were 7,038,968 hectares sown to wheat, producing 108,319,771 hectolitres of grain (the hectare is 2·47 acres, and the hectolitre, dry measure, is equal to 2·84 bushels). The barley crop was 15,805,530 hectolitres, on 873,499 hectares; rye, 23,126,806 hectolitres, on 1,599,496 hectares; oats, 85,259,511 hectolitres, on 3,758,549 hectares; buckwheat, 9,334,800 hectolitres, on 590,811 hectares; Indian corn and millet, 9,683,594 hectolitres, on 603,292 hectares. Of potatoes, 106,998,419 metric quintals were grown on 1,454,794 hectares. The area given up to the sugar beet was 226,341 hectares, yielding 71,445,260 quintals, and 80,374,285 quintals of other roots were raised on 316,838 hectares. The colza crop covered 61,091 hectares; flax, 34,258 hectares; hemp, 53,825 hectares. The area sown to clover was 1,429,952 hectares, and 4,822,261 hectares were laid down in meadow or permanent pasture. The tobacco crop amounted to 205,929 quintals, raised on 16,264 hectares. Vineyards occupied 1,836,800 hectares, and wine crop amounted to 24,328,000 hectolitres (1 hectolitre = 22 gallons). The production of cider in France is large, though fluctuating, amounting in 1889 to 11,095,000 hectolitres. In 1890 the area under vineyards showed the contraction that has been going on for years, being 1,827,730 hectares, yet the success of the vine growers in arresting the spread of the phylloxera pest was evidenced by a larger vintage than in the preceding year, amounting to 27,416,000 hectolitres. The wine product does not suffice for the needs of the country, which imported 10,242,549 hectolitres in 1889. The foreign wines are improved and mixed with French vintages by the wine-makers, and the French exports of wine, though small in quantity, being 2,130,197 hectolitres, offset in value a great part of the excess of imports. Of the wine imported for blending and other purposes, two thirds is brought from Spain, and most of the rest from Algeria, whose product takes the place of the Italian imports, which have almost ceased since the expiration of the commercial treaty. The quality of the Algerian wine is inferior, being earthy and strongly alcoholic. The value of nuts, olives, and prunes gathered in 1889 was estimated at 109,516,741 francs. The exports of olive oil from Nice formerly contained twice as much of the fruitier Neapolitan oil as of the finer oil for which the district is celebrated. The trade of mixing oils for the foreign markets is threatened with extinction, owing to the raising of the duty on Italian oils from 3 to

15 francs per quintal, and already cotton-seed oil, disguised by a chemical process, is being introduced into the manufacture. The number of horses in France in 1889 was 2,881,153; of cattle, 13,508,252; of sheep, 21,996,731; of hogs, 6,037,743; of goats, 1,505,470. Sheep have decreased 34 per cent. and hogs have increased 13 per cent. in ten years. Silk culture is carried on in the departments of Drôme, Gard, Ardèche, Vaucluse, and less extensively in nineteen other departments. In 1889 the production was 7,409,830 kilogrammes of cocoons. There were exported 951,830 kilogrammes, of the value of 9,756,258 francs, besides 71,428 kilogrammes of silkworm eggs, valued at 5,714,240 francs.

The wheat crop of 1890 was 321,518,670 bushels. The cold and rain during the winter of 1890-91 destroyed a large part of the growing crop, and consequently the area under wheat was reduced to 5,819,507 hectares, or 14,548,767 acres, which was 3,105,580 acres less than in 1890, and the yield was estimated to have fallen to 81,889,070 hectolitres, equal to 225,194,000 bushels, nearly a third less than the previous crop. The rye crop also was estimated at 8,299,582 bushels less than in 1890, when it amounted to 66,468,453 bushels. To supply domestic needs it was computed that France would have to import from abroad over 40,000,000 hectolitres of wheat at a cost of nearly 1,000,000,000 francs.

Navigation.—The total number of vessels entered at the ports of France in 1889 was 97,653, of 19,547,133 tons, of which 76,844, of 10,822,585 tons, were French, and 20,809, of 8,664,548 tons, were foreign. Of the French vessels, 67,891, of 6,122,837 tons, were engaged in the coasting trade, and 8,953, of 4,759,748 tons, in the trade with foreign countries or the colonies or in the maritime fisheries. Of the coasting vessels, 54,716, of 5,266,949 tons, arrived with cargoes, and 13,175, of 855,888 tons, in ballast. Of the French vessels engaged in ocean commerce, 8,457, of 4,645,355 tons, and of the foreign vessels 18,455, of 8,190,494 tons, arrived with cargoes, while 496 French vessels, of 114,393 tons, and 2,354 foreign vessels, of 474,054 tons, arrived in ballast. The total number of vessels cleared at all the ports was 98,805, of 20,075,836 tons. Of 9,613 vessels of French nationality engaged in the foreign trade, of 5,126,445 tons, 7,883, of 4,530,636 tons, sailed with cargoes and 1,730, of 595,809 tons, in ballast, and of 21,301 foreign vessels, of 8,826,554 tons, 13,824, of 4,866,603 tons, sailed with cargoes and 7,477, of 2,959,951 tons, in ballast.

The French merchant navy on Jan. 1, 1890, comprised 14,128 sailing vessels, of 440,061 tons, having 69,651 men in their crews, and 1,066 steamers, of 492,684 tons, with crews numbering 13,447 men. Of the sailing vessels, 292, of 34,963 tons, were engaged in the European trade, and 392, of 151,051 tons, in ocean commerce, all the others being employed in the coasting trade or in the fisheries. The number of steamers navigating between France and other European countries was 246, of 166,572 tons, and the number in the transoceanic service was 178, of 293,320 tons. Of the total number, steam and sail, as given above, 12,791 were under 50 tons.

Railroads.—The French railroad system in March, 1890, had a total length of 33,189 kilo-

metres, besides 2,944 kilometres for local traffic. The Government owned 2,628 kilometres. Many of the railroads enjoy a state guarantee. The gross receipts of the French railroads in 1889 were 1,132,100,000 francs, as compared with 1,059,900,000 francs in 1888. The net revenue in 1888 was 509,600,000 francs, the number of passengers carried was 224,801,159, and the freight transported was 82,355,288 tons.

Posts and Telegraphs.—In 1888 the internal postal traffic comprised 566,300,000 ordinary letters, 17,300,000 registered letters, 38,000,000 postal cards, 354,000,000 journals, 25,300,000 samples, and 370,400,000 circulars and manuscripts. In the international service 116,500,000 letters, 3,000,000 registered letters, 3,500,000 post cards, 67,800,000 newspapers and periodicals, 6,900,000 samples, and 24,200,000 circulars and manuscripts were forwarded. The domestic money orders numbered 22,200,000, of the aggregate amount of 655,500,000 francs, and the foreign money orders 1,400,000, of the value of 75,900,000 francs, besides postal orders representing 8,300,000 francs.

The length of the state telegraphs in 1889 was 88,047 kilometres, having 276,527 kilometres of wire, in addition to which there were 237 kilometres of pneumatic tubes in Paris, by which 3,476,000 cards and letters were transmitted in 1888. The number of telegraphic dispatches was 26,703,597, including the pneumatic service.

The Army.—Every Frenchman fit for military service may be called upon to serve the republic in the active army or the reserves. The period of military service begins at the age of twenty. The men drawn for the active army owe three years of service with the colors, but, in order to train the largest possible number of soldiers, a part of the active army—the number being fixed annually by the Ministry of War—is replaced by new recruits at the end of one year of service if the men can read and write, or if they are illiterate at the end of the second year. Those thus furloughed are chosen by lot. Since 1887 no exemptions have been allowed, even to students in theological seminaries. After receiving their military training, the soldiers pass into the reserve of the active army, and can be recalled to take their place in the ranks for exercises or peace manoeuvres or for any military duty up to the age of thirty. From then till they are forty-five years of age they form part of the territorial army, which is organized by military districts and divisions, and during the first six years are summoned to the drill camp for two weeks every year, after which they are inscribed in the territorial army reserve. All who are incapacitated by physical defects for military service must pay a fixed military tax of 6 francs a year and a variable surtax. In the active army recruits from all parts of France are mingled without reference to their places of residence. Each of the 18 regions into which France is divided is garrisoned by an army corps, and Algeria is occupied by the Nineteenth Corps. Each of the 18 army corps has 2 divisions of infantry, 1 brigade of cavalry, 1 brigade of artillery, 1 battalion of engineers, 1 squadron of wagon train, and 1 legion of from 2 to 4 companies of gendarmerie. The Nineteenth Corps has 3 infantry divisions. Every division of infantry is composed of 2 brigades, each

of 2 regiments. There are 6 divisions of cavalry not attached to the army corps, each consisting of 1 brigade of cuirassiers, 1 brigade of dragoons, 1 brigade of chasseurs or of hussars, and 2 or 3 batteries of horse artillery. The 144 regiments of the line attached to the 18 army corps, and quartered each in one of the subdivisions of the regions, are divided each into 3 battalions of 4 companies and a complementary *cadre* of 9 officers, every regiment consisting of 62 officers and 1,591 men. Besides these there are 18 extra regiments, having 51 officers and 1,560 men, each of which is destined to occupy the strong places in one of the regions. The other classes of infantry are 17 battalions of mountain chasseurs, each consisting of 27 officers and 809 men; 13 battalions of foot chasseurs, each with 19 officers and 552 men; 4 zouave regiments, with 73 officers and 2,551 men each; 4 regiments of Algerian *tirailleurs*, with 103 officers and 2,632 men in each regiment; 2 regiments in the foreign legion; 5 battalions of African light infantry; and the Tonquin regiment of *tirailleurs*. The infantry is armed with the Lebel rifle, with the caliber of 8 millimetres, carrying 8 cartridges in the magazine. The weapon is used as a single-loader for volley firing and for all ordinary purposes, and only by special command in emergencies, such as an enfilading fire of the enemy or a cavalry charge, is the magazine to be emptied.

The cavalry consists of 29 regiments of dragoons, 21 of chasseurs, 13 of cuirassiers, 12 of hussars, and 6 of Algerian chasseurs—in all 80 regular regiments, each consisting of 37 officers and 829 men, with 722 horses. There are besides 3 regiments of Algerian *spahis* and 1 regiment of *spahis* in Tunis. The law of July 25, 1887, ordered the formation of 4 new regiments of dragoons, 1 of chasseurs, 6 of hussars, and 2 of African chasseurs. Instead of the 6 regiments of hussars a seventh division of independent cavalry was ordered to be organized by the law of Feb. 19, 1890, consisting, like the others, of 2 regiments of cuirassiers, 2 of dragoons, and 2 of hussars.

There are 19 regiments of artillery attached to divisions, of 12 mounted batteries each, each battery having 4 officers, 153 men, and 132 horses, and 19 other regiments of corps artillery, each consisting of 9 mounted and 3 horse batteries, besides 24 batteries of mountain artillery, making in all 480 batteries, each having 6 pieces of 90 millimetres bore for the mountain, and 80 millimetres for the horse artillery. The fortress artillery comprises 16 battalions, each of 6 batteries and numbering 4 officers and 152 men, besides which there are 3 batteries in Algeria and in Tunis, making 100 batteries armed with guns of 95, 220, and 270 millimetres and mortars of 15 centimetres caliber.

The French army in 1891 had 2 marshals, 100 generals of division, 200 generals of brigade, 33 generals of *cadres* and reserves, 3,199 officers in the general staff, 574 in the military schools, 2,797 on special duty, 11,872 in the infantry of the line, 3,922 in the cavalry, 3,719 in the artillery, 439 in the engineers, and 412 in the train, making 26,934, or in the army corps alone 20,364, or including 651 officers of gendarmerie and 82 of the Garde Républicaine, 27,667 altogether.

The strength and distribution of the army was as follows, including officers and men :

DESCRIPTION OF TROOPS.	France.	Algeria.	Tunis.	Total.	Horses.
Infantry.....	298,222	38,312	7,378	333,907	7,115
Cavalry.....	65,088	8,401	2,073	75,557	70,729
Artillery.....	76,110	2,720	704	79,534	35,341
Engineers.....	11,014	583	244	11,841	1,353
Train.....	6,755	3,816	1,269	11,840	9,752
Administrative....	11,658	3,678	598	16,134
Total army corps.	466,542	57,710	12,261	536,513	124,320
General staff.....	3,621	361	65	4,047	8,608
Military schools....	3,303	3,303	2,196
Unattached.....	2,359	850	110	3,319	558
Gendarmerie.....	21,586	1,058	183	22,747	11,460
Garde Republicaine.	3,048	3,048	738
Grand total....	502,909	59,979	12,589	575,477	142,870

In the autumn of 1891 the largest force ever mobilized for peace operations, except perhaps in Russia in 1890, took part in the annual manoeuvres, which took place in Champagne. Four army corps, the Fifth and Sixth, under Gen. de Gallifet, and the Seventh and Eighth, under Gen. Davoust, met as two hostile armies and went through a series of sham engagements, and then both armies were united and conducted against a skeleton enemy by Gen. Sausier. The reservists, who constituted two fifths of the total force of 120,000 men, bore the forced marches and the excessive heat even better than the active soldiers. The endurance, discipline, training, and intelligence displayed by the men, and proof of a highly organized staff service given by the efficient co-operation of all parts, convinced military critics of the complete restoration of the military prestige of France. The officers, a large proportion of whom have risen from the ranks, seemed to exercise great care to provide properly for the men and to command their respect and obedience; but the non-commissioned officers, few of whom are, like those of the German and other armies, old soldiers re-enlisted, failed to exercise the proper authority, though not through lack of intelligence. The chief characteristics of French tactics, as revealed by the manoeuvres, are the use made of the mobility of the well-trained artillery and the keeping up, regardless of sacrifice, of a strong front in an infantry attack, which proceeds in a direct line to the prescribed objective, each regiment having a certain space to occupy. The Lebel rifle is sighted up to 2,200 yards. In advancing upon an enemy's position the line breaks into sections, then into squads, and, finally, into a chain of skirmishers, but the lying position is not allowed, even for firing, which only begins at about 750 yards. No use is made of the intrenching tools on the offensive. Before the bayonet assault all the supports are brought up to form a strong front, and the magazines are not emptied till just before the final rush, the rifle being always used as a single-loader, except by command and in prescribed contingencies. In action not a single officer is with the firing line, whereas on the march the officers go at the head and the commanding general and staff in the very front. The infantry and artillery both use smokeless powder. The cavalry supports the other arms, always in strong force, wherever the nature of the ground permits and in all stages of an action.
